Drum (two species).	Family *Sciænidæ.*	Trout (black bass),	*Centrorpristis atrarius.*
Kingfish,	*Menticirrus nebulosus.*	Striped Bass, or Rockfish,	*Roccus lineatus.*
Sea Bass,	*Scienops ocellatus.*		
Sheepshead,	*Archosargus probatocephalus.*	Tailorfish,	*Pomatomus saltatrix.*
		Black Bass,	*Micropterus salmoides*
Snapper,	*Lutjanus blackfordii.*		*M. pallidus.*

FISH IN MARKET.—RETAIL PRICES.—Bass, 25 cents; smelts, 10 to 18; blue fish, 12½; salmon, 35; shad, per pound, 20; white perch, 15; green turtle, 15; frost fish, 8; halibut, 15; haddock, 8; codfish, 6; herring, 5; flounders, 8; eels, 18; lobsters, 10; scallops, per quart, 25; soft clams, per 100, 50 to 75; white fish, 15; pickerel, 15; salmon trout, 15; black bass, 18; red snapper, 10; smoked haddock, 12½; smoked salmon, 15; dry cod, 7; hard crabs, $2.50.

LAKE SUPERIOR.—We are pleased and somewhat surprised to learn that Sam Fifield, Esq., of the Ashland *Press*, has leased the Chequomegon Hotel at Ashland, Wisconsin, on the shore of Lake Superior, for a term of years from the Wisconsin Central R. R. Company. An addition to house and grounds will be completed before the next season opens, and several modern improvements are in contemplation. Eugene Prince, Esq., of the American Express Company, is to have charge of the yachts, boats, guides, etc. Under the new management the prospects of a beneficient season are more favorable than they have ever been.

NEW HAMPSHIRE—*Nashua, March* 6.—Pickerel fishing has been unusually good this winter. Several big strings have been brought in lately; the heaviest was caught in Reed's Pond; weight, six pounds. The club placed in Rocky Pond, May, 1877, 3,000 land-locked salmon. One was taken this winter that weighed ½lb. You see they don't grow as rapidly as in Michigan. WEBB.

MOVEMENTS OF THE FISHING FLEET.—The herring fleet are about all in. The number of arrivals reported the past week has been 2 from Fortune Bay and 5 from New Brunswick with moderate cargoes. Ten Bank arrivals (4 via Boston) have been reported since our last issue. The fleet report the gale less severe and disastrous upon Grand Bank than upon Georges. The weather has been unsettled the past month and unfavorable for fishing. The schooner *Thresher* reports rough weather, and that at one time she was unable to make a set for thirteen days. The fleet have averaged good fares, the *Epes Tarr* being high line with about 75,000lbs., which were sold to arrive at four cents per pound. Home receipts for the week, 300,000lbs. The Georges fleet continue to come along, with more or less damage in the late blow. Sixteen arrivals have been reported, with 500,000lbs. codfish and 15,000lbs. halibut. Whole number of fishing arrivals for the week, 33.—*Cape Ann Advertiser, March* 7.

CONNECTICUT.—A Brookfield Centre correspondent writes that excellent bass and other fishing can be had there in the Housatonic. Good accommodations will be found at the Goodsell House.

KENTUCKY—*Stamford, March* 3.—A few of the boys have thrown in dough balls to attract the suckers to a convenient landing, and many nice strings have been taken. Pete Hampton couldn't withstand the allurements of the first south wind last month, and a string of delicious half-pound newlights, or croppics, rewarded his enterprise and defiance of muddy banks and "chilling blasts." KENTUCKIAN.

TENNESSEE—*Nashville, March* 5.—A few gentlemen went to Mill Creek last Monday and took several bass. This is unusually early in the season, but if the weather continues fine a few days longer numbers of our enthusiastic anglers will be off. J. D. H.

SOLE AGENTS.—Messrs. Abbey & Imbrie, of 48 Maiden Lane, inform us that they have become sole manufacturers and agents for the following patented articles:

The Holt Fly book—They are now making them. They will be ready in about four weeks. When they are ready for sale they will be advertised in this paper.

The Gregg Rubber Worm.—These can be had at $1.25 per dozen. Discount to the trade.

The Hyde Fly Clip.—They have purchased from Messrs. Brainherd, Steele & Co. the sole and exclusive right to sell this well-known and useful article. Hereafter they will make only one quality—viz., the first—such as they use in their "South-Side" Fly-book.

THE MONADNOCK AND LAKE WINNEPISEOGEE TROUT.—We are pleased to receive the following notes from Fish Commissioner Webber, of New Hampshire. We think he makes a good point as to the Monadnock lake trout. Most certainly all the evidence shows that they are wholly unlike the trout of Winnepiseogee; that they are not lake trout but *S. fontinalis.* We wish we were quite as sure as to the Winnepiseogee trout not being a distinct variety. The investigation of competent naturalists has certainly not resulted in perfect harmony on that point. The difference in markings and the difference in habits would not of themselves, of course, determine the question. If Commissioner Webber will compare the structure of the Winnepiseogee fish with others of the family *confinis,* it will be early settled:

MANCHESTER, N. H., March 2, 1879.

MR. EDITOR—I note what you say in regard to the Monadnock and Winnepiseogee trout, and remain unconvinced, my good friend, Prof. Baird, to the contrary notwithstanding. In the same report of the U. S. Fish Commission to which you refer is printed "Suckley's" monograph of the salmon family, which I think Prof. Jordan sets aside entirely, though I have only seen the quotation from his book in a weekly paper. I have seen such great difference in color, shape and general appearance in *Salmo fontinalis* from two different brooks in which I have fished the same day, and even caught from different parts of the same brook, that I can find no cause for making a distinct species of lake trout, for

those coming from Winnepisoogee, as compared with those from the lakes of Maine, not many miles distant. I had a long conversation with Commissioner Stilwell, of Maine, at the meeting of the N. E. Fish Com. on Wednesday last, in Boston, and he agrees with me entirely, and I know that the Monadnock trout, which Livingston Stone had a few years since at his Cold Spring hatching ponds, were not to be distinguished from the brook trout in the same pond, except by a lighter shade of color. I think that when Prof. Baird and Jordan come to examine this fish more closely that they will agree that it is merely the brook trout modified by residence for generations under peculiar conditions. In fact this is all my point, that there are not nearly so many distinct varieties of the salmo family as has been supposed; but that local circumstances have so modified the appearances of the same species in different waters, and procuring different food, that they have been supposed to be different varieties. This, however, I stick to, that the trout of Monadnock Lake is in no sense the same as his cousins of Winnepisoogee, inasmuch as he has the red spots of *fontinalis*, which the Winnepisoogee fish is destitute of. Yours truly, SAM'L. WEBBER.

Since putting the foregoing into type, we have received the following very timely and gratifying letter from Prof. D. S. Jordan, whom all our ichthyologists will thank:

IRVINGTON, Indiana, March 3, 1879.

EDITOR FOREST AND STREAM:

In regard to the trout of lakes Monadnock and Winnepisoogee, I think that Messrs. Webber and Messenger are right in saying that the trout of the former lake is the *fontinalis*, and that of the latter lake is *S. confinis* or *Cristivomer namaycush*, which is the same thing.

The specimen from Monadnock Lake, referred to by Prof. Baird as belonging to the group of lake trout, probably closely related to what Dr. Prescott calls *Salmo symmetrica* (Rept. U. S. Com. Fish and Fisheries, 1872-3, 372), were afterward sent to me for fuller identification, Professor Baird having only given them a cursory examination, and supposed them, from their pale color, to be young lake trout. On examination, they prove to be brook trout (*S. fontinalis*), differing from the ordinary *fontinalis* only in their pale color. As Mr. Webber truly remarks, they are only "a bleached variety of *S. fontinalis*."

The Winnipisoogee trout, called by Dr. Prescott *S. symmetrica*, is a wholly different fish, belonging even to a different genus; for none of these small-scaled trout are true *Salmo*. This *Salmo symmetrica* is simply a local race of the much-named lake trout, which has been called by different writers *Salmo toma* in the lakes of Maine, *Salmo symmetrica* in New Hampshire, *Salmo pallidus* in Vermont, *Salmo adarondacus* and *Salmo confinis* in New York, *Salmo amethystinus* in Michigan, and *Salmo namacush* in Canada. The latter name —of Indian origin—is much the oldest, and must be used; and the species should be called *Salmo namaycush*, or, more correctly, *Cristivomer namaycush*. The real distinctions between these kinds of trout are given in my Manual of Vertebrates, pp. 350, etc., and more fully in a paper on the fishes of the Clackmas River, in proceedings of the U. S. National Museum. The Winnipisoogee trout are therefore simply ordinary lake trout in favorable waters, and the Monadnock trout are brook trout, for some reason curiously pale and bleached. The names *symmetrica*, *toma*, *confinis*, and *adarondacus* are simply useless and troublesome synonyms of a fish already too much named; but, like all such, they die slowly. D. S. JORDAN.

THE CANARIES FISHERIES.—*A New Field for Massachusetts Fishermen.*—The Journal of the Society of Arts of Jan. 17 announces the interesting and important discovery of apparently exhaustless supplies of fish in the waters off the Canary Islands. These fish are said to be about one-fourth codfish of great size and the remainder various and unknown to our fishermen. As the best season is from October to the end of March, this new find offers a tempting field for a resort of hardy fishermen from the severity of the season off our own frosty coasts; and with their great experience and skill, with arts and tackle unknown to the rude resources of those latitudes, the catch must, in all probability, be exceptional, seeing that, even with the imperfect means at the command of the natives of the Canaries, one fishermen, by the statement of Mr. Berthelot, now takes as many fish in one day as twenty-six men in Newfoundland. This will be good news to American fishermen, who are reported to have made a poor catch the present season, and who are liable to be plundered by the savage natives of Newfoundland when they make a good one.

It is asserted that the fish are in general inferior in quality to those of Scotland or British North America, but the imperfect and careless manner of curing them may account for this assertion. M. Berthelot, late French consul, in his work draws a comparison with the fisheries of Newfoundland. After elaborate numerical calculations derived from practical results, he comes to the conclusion that the quantity of fish caught by one man in the Canaries is equal to that caught by twenty-six men in Newfoundland. All evidence tends to show that the quantity caught is very great, and that the supply is inexhaustible. And yet neither the native fishermen nor the commercial community of the islands have endeavored to turn this immense field of wealth to any advantage, being satisfied thus far with confining their operations almost exclusively to the supply of the local consumption. The largest fish banks are said to be from the island of Fuerteventura to Cabo Blanco. The vessels fish down to the latter point, and the larger ones sometimes go very near to Cape de Verd.

The class of vessels employed in this occupation, formerly topsail, are now fore-and-aft schooners, varying in size from twenty-five to fifty tons; they carry crews of from eighteen and twenty to thirty and forty men and boys, and are provided with two, three or four boats. No nets are used, the fish being caught with hooks. Besides the different kinds of hooks and lines, they also carry rods or poles of from five to six feet in length, to the end of which is attached some six feet of line trimmed with several strong, rough-made hooks at a certain distance from each other. These are trailed along the surface of the water, a means of capture which frequently fills the vessels rapidly. The total number of vessels composing the fishing fleet in these islands is reckoned at twenty, of which fourteen belong to Grand Canary, the rest to Palma, Fuerteventura and Lanzarote.

According to the owner of one of these fishing schooners, one of those now under contract with a French company, four boats, under favorable circumstances, could deliver in less than two days more fresh fish than the steamer could carry. Ordinarily speaking a boat of forty tons might be loaded in three days. Other estimates give the catch per vessel per diem at from fifteen to thirty quintals of 900 pounds each. But there are days in which fifty quintals have been taken, and others again when not even ten quintals have been caught. Cases are numerous of a vessel of thirty tons or so filling up in two days, when they happen to come on a bank where the fish has been drawn or scared from other banks in large shoals.

The fishing ground may be considered as lying between the southern part of the island of Grand Canary and the same latitude on the African coast, or from about 15 degs. to 32 degs. or 33 degs. north latitude along the northwest coast of Africa. The annual quantity caught is estimated at from 5000 to 8000 tons; the salting is done on board the vessels. It must not be supposed that codfish is the sole fish comprised in these fisheries; it does not bear a larger proportion than one-quarter or one third, according to the season, of the total. —*Boston Transcript.*

RANGELEY LAKES TROUT.

EDITOR FOREST AND STREAM:

Seeing an article in your last paper on the "Big Trout of Rangeley," in which some figures were given as to Mr. Stanley's catch there last fall, I thought it might be interesting to your many readers to have an entire list of that wonderful catch, for I doubt if it can be beat. The memorandum I give below is taken from page 12, Commissioners' Report for 1878:

TROUT TAKEN AT OUTLET OF RANGELEY LAKE.

1878.							
Oct.	2.....	11	trout, (average	4½	pounds)	largest	10 pounds.
"	3.....	4	"	6½	"	"	7½ "
"	4.....	12	"	5	"	"	8 "
"	5.....	17	"	4½	"	"	9 "
"	7.....	10	"	8	"	"	7 "
"	8.....	4	"	5¾	"	"	9 "
"	9.....	6	"	6	"	"	8 "

TROUT TAKEN AT UPPER DAM, RICHARDSON LAKES.

1878.							
Sept.	22	11	trout in car, (av'g	3½	pounds)	largest	pounds.
"	23.....	5	"	3½	"	"	7 "
"	24.....	3	"	4½	"	"	6 "
"	25.....	5	"	3½	"	"	5½ "
"	26.....	13	"	3½	"	"	4½ "
"	27.....	2	"	5½	"	"	6 "
"	28.....	7	"	4½	"	"	6 "
"	30.....	9	"	5	"	"	7 "
Oct.	1.....	9	"	3	"	"	5¾ "
"	2.....	5	"	3	"	"	6 "
"	3.....	7	"	6 6-7	"	"	10 "
"	5.....	7	"	4½	"	"	6 "
"	7.....	6	"	4¾	"	"	9½ "
"	10.....	6	"	6	"	"	8 "

It will be noticed that the largest average of any one day's catch was that at the Upper Dam for Oct. 3, when the entire catch averaged the enormous weight of six and five-sevenths pounds each. The largest average of trout taken at Rangeley Outlet was 5¾ lbs. each, but as there were only four fish against seven at the Upper Dam, it would really be less than that. But taking the figures as they stand, there is a difference in favor of the fish taken at the Upper Dam of a pound and a quarter to a fish. As there has been some disputes among Rangeley fishermen as to what particular part of the lake region furnishes the largest fish, this statement may go some way toward settling it, as it is perfectly reliable.

Those of your readers who may wish to tackle some of the large fish at the Upper Dam will be glad to learn that the Maine legislature have repealed the law of last year, when the close season commenced Sept. 21. This year they will have the entire month of September to practice with their flies As some of these rabid fish society men seem to take the change in the law from Sept. 21 to Oct. 1 as a personal grievance, I would state that last fall I had quite a talk with Mr. Stanley. He came in through Andover, and crossed the Richardson Lakes to the Upper Dam, and I went up on the steamer with him. He told me that there was not the least objection in keeping the fishing open till Oct. 1, and thought that was the proper time for the close season to commence. This opinion coming from one of the Fish Commissioners of the State ought to have some weight.

Besides the hatching houses at Berna and Rangeley Outlet, there will be one at the Upper Dam next fall, as quite a sum of money has already been raised toward the enterprise, and more is promised. As the ice on the Rangeley and Richardson Lakes has been quite poor this winter it will probably go out early, and give a long season for spring fishing, which can commence legally the 1st of May. The steamers on the lakes commenced running last year the second week in May, and it is probable that they may begin to run about the same time this year. CHARLES A. J. FARRAR.

Jamaica Plain, March 3, 1879.

EFFECTS OF MOONLIGHT.—Here is another bit of testimony in favor of the moonlight argument:

KENDALL, McKean Co., Pa.

EDITOR FOREST AND STREAM:

In last week's issue of your valuable paper I noticed several articles in relation to the effects of moonshine upon men and fish. I sailed from Fairhaven, Mass., in the year 1867, for a three years' cruise in the Atlantic and Indian Oceans on the whaling brig *Abbott Lawrence*, Captain Marston.

Once upon a time I was careless enough, while in the Indian Ocean, to sleep on the fore hatch, the moon shining very brightly at the time. When I awoke one eye was nearly blind from the exposure, and it was a long time before I fully recovered. This I know to have been occasioned by the moon's rays, from the fact that during the day I could see as well as ever, but when the night came on I was partially blind. The sensation at night was very unpleasant. Your Florida correspondent would do well to ask whalers who have sailed in the southern seas a few questions before writing of that which only displays ignorance on his part.

Still another case. We had a foremast hand from Lisbon who was lost away one evening from the wheel, because he could not steer the time, first watch, 7 9. He also was all right during daylight. This I know, as I took his place at the wheel—he being one of our watch

I have a log book of my experience and can prove my statements by officers and crew of the good brig *Abbott Lawrence*

Wishing you a long life of happiness here and one eternally in the world to come I remain yours, D. S. COPELAND,

Pastor M. E. Church.

Mr. Editor: In the month of July, in the year 183—, one day while engaged in conversation with friends in the office of our village hotel, soon after my return from a tropical cruise, in that period when I had scarcely passed my majority, a rattle-headed itinerant, whose pious beat was up and down Cape Cod, entered the office of the hotel, and, after approaching the bar and partaking of a bumper of the juice of the grain, turned to me, and said he: "Young man, without opposition there is no information, and don't you forget it;" and I never have forgotten it, and I firmly believe it was on that day the slang phrase "Don't you forget it" was coined by the said itinerant. Abiding the itinerant's injunctions, I trust you will not consider me pugnacious for indulging in comments on certain articles, on which of late there has been a profusion of *pros* and *cons* in your, to me, almost indispensable journal.

Firstly, experience has taught me that moonlight on man and fish, and, for aught I know, on mice, is a phenomenon unmistakable, and therefore name circumstances. While cruising in the Caribbean Sea we frequently secured fresh fish, such as albicores and skipjacks. On one particular occasion, during a tropical full moon, the glaring and silvery brilliancy of which I have never witnessed save in the tropics, near nightfall I caught a skipjack, and with great care dressed and took out his back bone and spread him open with skewers and placed him on top of the round-house to dry off for a morning's breakfast. In the morning behold the old story in which I had never taken stock! That the moon would spoil fish was demonstrated as a fact. My fish was literally covered with a greenish-yellow slime of a decided sickening appearance, and on further examination the fish was found to be absolutely rotten. During the same cruise in the same waters several sailors were moon-stricken, the effects being semi-paralysis accompanied by blindness and frightful distorted countenances, the malady lasting them for several days.

C. L.

The Kennel.

THE IRISH WOLF HOUND

THE following interesting letter regarding this possible extinct breed of dogs is printed in the *Irish Sportsman*. Some time since, our late contemporary, the *Country*, printed a very interesting letter from Mrs. John C. Fremont, regarding a pair of dogs of this breed which were at one time at one of the frontier forts, and efforts were made, but without success, to trace them, or their descendents. Should the race still be in existence, and through the efforts of the Irish Kennel Club be resuscitated (so to speak), that body will have earned the gratitude of all lovers of the dog. The letter is as follows:

As the Irish Kennel Club purpose to hold their second exhibition in April next, I am anxious to bring the subject of the Irish Wolfhound before your readers, to obtain their information and co-operation, with the subject of taking measures to have a class formed for these dogs at the forthcoming show. It is a fact that there has been a generally-received impression amongst modern writers that this noble breed of dog is entirely extinct. That the breed in its "original integrity" has apparently disappeared cannot be disputed, yet there is equally little doubt that so much of the true breed is forthcoming, both in the race still known in Ireland as the Irish Wolfhound (to be met with, however, in one or two places only) and in our modern Deerhound, as to allow of the complete recovery of the breed in its pristine grandeur. The fact is well known to Mastiff breeders, that until within the last 30 or 40 years, Mastiffs, as a pure race, had become almost extinct, yet now we have them in a form equal, if not superior, to what it was of yore. Why should not such measures be taken to recover the more ancient and certainly equally noble race of Irish Wolf-hounds? It may be argued that the services of such a dog being no longer required for sport, his existence is no longer to be desired; but such an argument does not bear consideration for a moment, for how many thousands of dogs are there bred for which no work is provided—for instance, Mastiffs, Pugs, St. Bernards, etc., besides, there is no doubt this breed would be well suited to the requirements of our colonies. That we have in the Deerhound the modern representative of the old Irish dog is patent, and though the Deerhound is of less stature, less robust, and of slimmer form, the main characteristics of the original breed remain. It is a matter of history that the Irish Wolfhound is of very ancient origin, and was well known to and highly prized by the Romans, whilst it is remarkable, that although we have accounts of almost all the noticeable breeds, including the Irish Wolfhound, there is no allusion to any such dog as the Deerhound, save in writings of a comparatively recent date.

It may be safely assumed from evidence that the Wolfhound was of considerably greater stature than any known race of dogs existing at the present day, and the following is the nearest approach which we have to a standard of points:—

General Appearance and Form.—That of a very tall, heavy Scotch Deerhound, much more massive and majestic looking, active, and tolerably fast, but somewhat less so than the present breed of Deerhound; the neck thick in comparison to his form, very muscular, and rather long. *Shape of Head.*—Very long, but not too narrow, coming to a comparative point; nose not too small, and head gradually getting broader from the same evenly up to the back of the skull; much broader between the ears than that of the present Deerhound. *Coat.*—Rough and hard all over body, tail, and legs, and of good length; hair on head long, and rather softer than that on body; that under the jaws to be long and wiry, also that over eyes. *Color.*—Black, gray, brindle, red, and fawn, though white and parti-colored dogs were common and even preferred in olden times. *Shape and Size of Ears.*—Small in proportion to size of head, and half erect, resembling those of the best Deerhound. If the dog is of light color a dark ear is to be preferred.

	Dogs.	Bitches.
Probable height at shoulder	32 in. to 35 in.	28 in to 30 in.
Girth at chest	38 in. to 44 in.	32 in. to 34 in.
Round forearm	10 in. to 12 in.	8 in. to 9½ in.
Length of head	12½ in. to 14 in.	10½ in. to 11½ in.
Total length	84 in. to 100 in.	70 in. to 80 in.
Weight in lbs.	100 lb. to 140 lb.	90 lb. to 110 lb.

It has been ascertained beyond all doubt that there are some few specimens of the breed still in England and Ireland that have well-founded pretensions to be considered Irish Wolfhounds. I had a letter lately from Captain G. A. Graham, of Dursley, Gloucestershire, an experienced breeder of these dogs, and a recognized authority on the subject—to whom I am indebted for my information—in which he states that the breed was kept some few years ago at Killane, Thomastown, County Kilkenny; that he had dogs from there, and his blood went there; also a Mr. Mahoney had the breed ten or twelve years ago, and Mr. Baker, of Ballylattin Castle, County Kilkenny, had the correct strain, whilst we all know that Major-General M'Causland exhibited a fair specimen at the Earlsfort Terrace dog show last August.

If the whereabouts of any of these dogs mentioned by Captain Graham could be found it would, I fancy, be easy enough to induce their owners to exhibit them, when we should arrive at the true type, and, I trust, bring about the

resuscitation of this breed, the most noble of the canine race, which would be a glory to Ireland, and a source of infinite credit and satisfaction to the Irish Kennel Club. I trust that some of your readers will exert themselves in the matter, that this letter will promote friendly discussion in your columns, and that practical results will follow. B. ST. GEORGE.

CANINE OVARIOTOMY.

EDITOR FOREST AND STREAM:

From the numerous letters that have appeared lately, wishing information as to how this operation is to be performed, I send this, hoping it may be of use to some one, even after reading the very apt article on the subject by "Mohican," which appeared in *The Country* last year, and also the equally good one that was in FOREST AND STREAM from the pen of "South Fork." If beginners would take the editor's advice of first operating on the dead subject they would make themselves conversant with the anatomy of the parts which they expose, and know the proper relations they bear to each other and to the operation.

Suppose we have a bitch pup two months old, weighing six pounds, which is a good size to operate upon. First see that she has had no food for eight or nine hours, so that the stomach and intestines may be empty. Pour about three drachms of chloroform on a small piece of sponge placed in a rubber sponge bag; put the pup's head into this and hold it tightly around the neck, so that the air will be excluded. In about three minutes the breathing ceases, and, without a struggle, the subject is ready.

Place it on its back; make a long incision down the middle line, which should extend from the breast-bone (*sternum*) to the pelvis, taking care not to cut into the intestines. About the middle of this incision, on each side, make a cross incision, and thus a good view of the parts is obtained. Carefully press the intestines upward, and at the lowest point a whitish round body appears. This is the bladder, which may be verified by pressing, and the urine will flow through the natural channel. Immediately below this a cord-like organ is seen lying between the bladder and intestines, which latter adheres to the back. This organ is the uterus, which will be found to bifurcate or divide into two canals which lie at first on the intestines, afterward curve round it on each side, taking a direction upward and backward toward the kidneys. These canals are the horns of the uterus, which, if followed up, will be found attached to the peritoneum or serous covering of the intestines, at the lowest end of the kidneys. Just at their termination will be found the ovaries, which are hardish, nodular bodies, about the size of a small garden bean. The fingers should be passed gently along the horns till they become accustomed to the feel of them, for in the operation on the live subject very little is seen, everything has to be felt. I know it will well repay any one who wishes to operate to first study up the subject in this manner, so that when they do perform, they may be able to do so with confidence.

I still think that using a silver probe, or a No. 1 Bougie (gum elastic), through the natural opening is a great saving of time, as one can thus come at once on the body of the uterus, if not on the horns, which are often difficult to find, especially in fat puppies. M. B.

BOSTON DOG SHOW.

BOSTON, March 8, 1879.

EDITOR FOREST AND STREAM:

Dear Sir: The prize lists for our dog show are now nearly ready. We have made six divisions of the classes as follows:

Division A comprises English setters, consisting of champions, imported and native. Division B—Irish setters, champions, imported and native. Division C—Gordon setters, champions, imported and native. Division D—Pointers, champions, large and small sized, for the open classes. Division E—Spaniels, fox hounds, beagles, fox terriers, greyhounds, deerhounds, etc. Division F—Non-sporting dogs.

The special prize list will be a good one; four fine breechloaders are donated by the first class gunmakers of the country, besides valuable oil paintings by celebrated artists, one of which is valued at $350, besides many others which will all be given to you in detail. Our show this year will be held in the Music Hall, a capital place, and, as our famous Boston Common is within a minutes' walk from the hall, owners will have a grand chance to exercise their dogs. The club will endeavor to make a pleasant time for all distant exhibitors, while to visitors nothing will be spared for their comfort and pleasure. The show is to be held on the 6th, 7th, 8th and 9th days of May. Entries close the 31st of April. Mr. Chas. Lincoln is appointed our superintendent, and owners can rely on careful treatment of their dogs.

T. T. SAWYER,
Chairman Exhibition Committee Mass. Kennel Club.

LAVARACK OR LLEWELLIN?

NEW YORK, March 5, 1879.

EDITOR FOREST AND STREAM:

I inclose you pedigree of my English setter Czar. By referring to same you will see that both the dog Leicester and bitch Petrel, from which he is bred, were from the kennel of Mr. Llewellin; also, that the bitch Petrel is out of a pure Lavarack dog and bitch, and the dog Leicester is out of a pure Lavarack bitch. I have called him (Czar) a Llewellin setter, and objection has been made to my doing so, as it is claimed he is three-fourths Lavarack. Will you inform me whether or not I am justified in presenting Czar as a Llewellin? P. H. MORRIS.

We can scarcely understand your claim to call your dog a "Llewellin" setter when he has three-quarters Lavarack blood in him. Neither was he bred by Mr. Llewellin, although his sire and dam came from the kennels of that gentleman. We are of the opinion that a particular strain of dogs should be bred for more than two generations by one person before any one is authorized in dropping the name of the originator of three-fourths of the blood and calling the strain for another person.

EASTERN DOGS ON PRAIRIE CHICKENS.

NEW HAVEN, Feb. 25, 1879.

EDITOR FOREST AND STREAM:

I notice in your issue of the 20th a communication from "Ivanhoe," wherein he states that Eastern dogs are of no use in hunting on the prairie. I am entirely at a loss to account for the manner in which his dogs behaved, especially as he represents them to be as well broken and keen nosed as any to be found within a hundred miles of New York. Now, "Ivanhoe's" experience is entirely at variance with my own. I have hunted two seasons in succession, of eight weeks each, on the Iowa prairie, within fifteen miles of Garner.

The first season there were but two of us, and we took our own dogs that we had hunted with for the past three seasons in the bush. These dogs had been raised and broken in Connecticut, and were neither curs nor mongrels, but come of as good stock as can be found.

Our first day's experience with the dogs on the prairie was of a highly interesting character. Prairie land was something entirely new in their experience. Tired of being shut up so long on the cars, they seemed determined to make the most of their new-found liberty by running and racing wildly in every direction, flushing the birds without the least regard to whistle or call. After whistling and shouting ourselves hoarse in vain attempts to get them under control, we concluded to let them go until they got enough of it. At last we made up our minds the fun was altogether too much on one side, and it was time for us to have our turn, so we proceeded to take them in hand pretty severely. It required a good deal of nerve and strength, but the subduing effect was wonderful. As this performance occupied the greater part of the day, we bagged only a few chickens. The next days we had no trouble whatever; the dogs did their work nobly, beating the ground over well, and pointing their birds in every instance.

We started from the house where we were stopping one day, after we had finished our dinner, and rode to a stubble field about five miles away. We arrived at two o'clock. After hunting around the edge of the stubble and in the prairie grass until five o'clock, we then started for the place where we were boarding, and on counting found we had seventy-two chickens, which we called a very good three hours' work.

The second season there were five of us, all from Connecticut, and this time we had six dogs, all raised in our own State. One of these had been out before, two others were puppies. The three remaining ones were old dogs and had a record at home in the bush that would be hard to beat, and I can say they never spoiled that well-earned reputation from the first day they were let loose on the prairie until the last. One of the puppies had the distemper while there and died. The other one would have saved his master a small sum of money and a good deal of labor if he had died also. Moreover, his master brought him back to Connecticut and worked over him long and faithfully, but never succeeded in making anything out of him. He was very much like "Ivanhoe's" dogs (as likely to flush the chickens as he was to point them), and to get any game with him you would want a gun that would shoot five miles. In my estimation a dog that will not hunt prairie chickens is not worth having (with all due respect to "Ivanhoe").

In conclusion, I would say if I was going West next fall, with what experience I have had with Eastern dogs on the prairie, I would as soon think of leaving my gun here as I would my dog.

R. W. A.

HAMMONTOWN, N. J., Feb. 24, 1879.

EDITOR FOREST AND STREAM:

I have been very much amused by reading "Ivanhoe's" article, "Eastern Dogs among Prairie Chickens." He advises all Eastern sportsmen to leave their brush-broken dogs behind them if they contemplate going to the prairies, in order to save disgrace and $50 of good money. Now, I have had considerable experience shooting prairie chickens. In my first visit to Illinois in 1863, I took with me a pair of well-broken dogs—pointer dog and setter bitch. They had been hunted here by my father, Jac. L. Sharpe, on quail, snipe and woodcock, and a truer, stauncher pair of dogs never lived. They hunted prairie chickens in Illinois as if they had been used to them all their lives. The only difference I could discover was on the first few birds, the scent of which being new and so strong, that when they pointed they seemed to be turned to stone, they were so rigid. They never showed the least inclination to break, or run in or after the birds, nor do I believe any well-broken Eastern dog will do so. In 1864 I went out to Illinois with my bob-tailed pointer dog Jack, well known to many of the sportsmen of Philadelphia, who upon his arrival among the prairie chickens behaved nobly, in fact, was admitted by every one who saw him hunt in Logan, Menard and Mason counties as the best dog they ever saw. Many a day have I hunted with Capt. Bogardus, who also admitted that my dog Jack was the boss. I have had a number of dogs there, and never experienced any difficulty in having them point, back and retrieve. I have bought some dogs—both setters and pointers—raised in Springfield, Lincoln and Elkhart—all in Illinois, and the majority of them were hardly worth the powder and shot it would take to kill them. I have a pair of dogs now that I would be willing to stake all I have in the world would stand and back each other on prairie chickens as well as they do now on quail. "Ivanhoe," I think, is mistaken as regards his dogs; and I advise all sportsmen going West to take their brush-broken dogs with them, provided such dogs are well and properly broken. A well-broken dog will never intentionally chase or flush any game bird. LEWIS W. SHARPE.

A NEW REMEDY FOR FLEAS.

ELIZABETH, N. J., Feb. 19, 1879.

EDITOR FOREST AND STREAM:

Some years ago I learned from a druggist in this city that the managers of our orphan asylum freed the heads of their unfortunate waifs from parasites by applying tincture of fisherries to the scalp. I tried the same thing on my setter pup for fleas with perfect success. Since then I secured another setter who was also troubled with fleas, and one application cured him. I did not use in either case more than a few drops, rubbing them in on the nape of the neck and at the end of the back where the dog would be in no danger of licking the place to which the tincture has been applied. My care in this regard may have been excessive, but as the stuff is poisonous I preferred to run no risks. This is a sure cure, and can be obtained from druggists anywhere for a few cents.

I was much interested in the patterns of sporting garments printed some time ago in F. & S. It was really trying to one's modesty to look at the diagrams. Still the end justified the means. Allow me to make an important suggestion in this line: I never saw a satisfactory rubber overcoat for a sportsman's use. They are generally too short. You doubtless know the misery of sitting in the stern of a skiff during a pelting rain, while your knees are being insidiously assailed in front, when at the same time a small rivulet is trickling in at the waist, notwithstanding the buttons. Now for the cure: Let the overcoat be made long enough to reach almost to the ground. Then have a slit in front reaching from the collar to the middle of the breast. Below this the coat should be without any opening whatever. The affair would be a little awkward to get on and off, but the increased comfort would be more than a compensation for this disadvantage. Cannot some of our manufacturers of rubber goods furnish us such an article?

A prominent sportsman of our city related to me a few days ago an incident which is perhaps more remarkable than the story told by "Hix" in your last. He had flushed a partridge, and fired at it without apparently hitting the bird. Following it with his eye, he saw it fly about a hundred yards, when it suddenly fell. On coming up to where the bird lay, he found that while the bird did not have a shot in it, its head was completely severed from its body. The explanation of the phenomenon was this: it was about dusk, and the bird had flown against the wire of an almost invisible fence with such velocity as to produce the result named. Has any one else picked up a partridge that had beheaded itself? CLERICUS.

IRISH WOLFHOUNDS.—*Editor Forest and Stream:* Your readers and yourself will, I am sure, be glad to hear that the Irish Kennel Club have generously made a class for this rare and splendid breed of dogs at their coming show, which is to be held in the Exhibition Palace, Dublin, on the 1st, 2d, 3d, and 4th of April next. They give a first, second and third prize of £4, £2, and £1, and in addition a silver challenge cup, value £15 15s., and presentation medal. The rarity of the breed will, I fear, operate against the class being a largely filled one, but the offer of such prizes is sure to secure entries sooner or later. I intend to exhibit, and should any of your readers care to do so, and will ship their dogs to me at Liverpool, I will send them with mine free of expense from there to Dublin, see that they are properly shown, and bring them back to Liverpool and consign them to America. It appears to me that these dogs are capable of affording much sport and pleasure in your country, and I trust our American cousins will do what they can to support the efforts of the Irish Kennel Club.

Shevington Hall, near Wigan, Eng. FRANK ADCOCK.

PROPER NAME.—Mr. H. P. Dortch, of Goldsboro, N. C. writes: "My red Irish dog is named Ron and not Rose, as published in your paper of this week. Please make the correction. My Macdona-Waterford dogs are very handsome, a little under the size, but perfectly built. I have written to the Marquis of Waterford for pedigree of the dam."

—Mr. W. F. Sullivan, of Memphis, N. Y., claims the name of Dash for his liver and white English cocker spaniel, whelped Nov. 20, 1878, by Captain out of Daisy, from M. P. McKoon's cocker spaniel Kennel.

—Mr. H. C. Steadman, of Middletown, Pa., claims the names of Pat the Second and Biddie for his red Irish setters by York out of Countess, whelped July 29, 1877, both first and second prize winners at Baltimore, 1878.

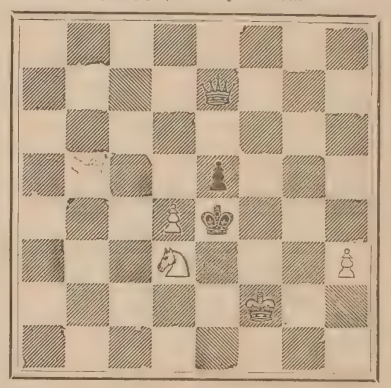
—Mr. Jos. E. Fisher's Gordon setter bitch Border Lily has whelped seven fine dogs and two bitches; they are by Dr. H. F. Aten's Gordon dog Glen.

—Any of our readers desiring to purchase a very handsome and prize-winning pug dog, and willing to pay in the neighborhood of one hundred dollars for the same, can hear of an opportunity by applying to us.

The Game of Chess.

Problem No. 47.

Motto:—He who dares these probs abuse,
May Krup-gun, sword or pistol choose.



White to play and give mate in two moves.

SOLUTIONS TO PROBLEMS—No. 43.

1—Castles	1—Any
2—R mates	

Game No. 105—STAUNTON'S OPENING.

We are indebted to the Canadian *Spectator* for the subjoined game and notes thereto. It was played in Mr. Shaw's correspondence tourney:

White. J. W. Shaw.	Black. A. Saunders.	White. J. W. Shaw.	Black. A. Saunders.
1—P-K4	1—P-K4	13—Kt-Q2	13—Kt-K2
2—Kt-K B3	2—Kt-Q B3	14—Q Kt-B3	14—B tks B
3—P-Q B3	3—Kt-K B3	15—Q R tks B	15—Kt-K Kt3 (c)

5—Q-B2	5—B-K3	17—K-R	17—Kt tks Kt
6—P-K R3	6—Castles	18—Kt tks Kt	18—R tks Kt (d)
7—B-K2	7—P-K R3	19—P tks R	19—Q-R3
8—Kt-R2	8—Kt-R2	20—P-K B4 (e)	20—Q tks RP ch(f)
9—B-Kt3 (b)	9—P-K B4	21—K-Kt	21—Q-Kt5 ch
10—P tks B P	10—B tks P	22—K-R2	22—Q tks B P ch
11—B tks B	11—R tks B	23—K-Kt2	
12—Castles	12—B-K Kt4	Black mates in three moves.	

NOTES.

(*a*) The preamble to his future bill of disabilities; P-Q4 is the correct move.

(*b*) Hampered as he is, this move only helps the development of his opponent's forces.

(*c*) A good move, and the commencement of a very neat combination well carried out.

(*d*) A very neat and brilliant sacrifice.

(*e*) His only move.

(*f*) If Kt tks P, White can play P-B3 and escape.

Game No. 106.—EVANS GAMBIT.

The subjoined game was played in the recent tournament held a Pittsburgh, Pa.:

White. J. A. Stephens.	Black. Dr. T. R. Davis.	White. J. A. Stevens.	Black. Dr. T. R. Davis.
1—P-K4	1—P-K4	10—P-Q5 (b)	10—Kt-R4
2—Kt-K B3	2—Kt-Q B3	11—B-Kt5 ch	11—B-Q2
3—B-B4	3—B-B4	12—B tks B ch	12—Q tks B
4—P-Q Kt4	4—B tks P	13—B tks K Kt P	13—R-K Kt
5—P-Q B3	5—B-Q R4	14—R-K B6	14—Castles
6—Castles	6—P-Q2	15—P-R5	15—Q-K R6
7—P-Q4	7—P tks P	16—Kt-R4 (c)	16—R tks Kt P ch
8—P tks P	8—B-Kt3	17—Kt tks R	17—R-K Kt
9—B-Q Kt2	9—Kt-K2 (a)	Black mates next move.	

NOTES (S. A. Charles, Cincinnati, Ohio).

(*a*) Of this move (the key move of the Paulsen Defence) an eminent authority says: "It should be preceded by Q Kt-R4."

(*b*) Black's last move having been premature, an opportunity was given White to play Kt-Kt5 to advantage. The move made allows Black to adopt the Paulsen Defence.

(*c*) Kt-Kt5 would have been better. The game follows the books closely.

CURSORY JOTTINGS.

—From the London *Figaro* we learn that a change has latterly taken place in the German diplomatic service, which, apart from any political interpretation, will be most interesting to chess players. The celebrated author of the German *Handbuch des Schachspiels*, Baron Heyderbrant von der Lasa, who has been for many years Imperial German Ambassador at Copenhagen, has been transferred in the same capacity to the court of the King of Wurtemburg in Stuttgardt.

—Cincinnati has fallen into line on telephonic chess. Belden of the *Times* first set the telephonic ball in motion. The *Commercial* says: "In a year or two it will be a very common form of social enjoyment and club routine."

—Mr. E. B. Holt has carried off the silver medal at the tournament of the Quebec Chess Club.

—Wilhlemj, the violinist, is very fond of chess, and plays a strong game.

—A chess column has made its appearance in the *Fortnightly Gazette*, under the management of H. F. Lee, of Brantford, Ontario.

—In Mr. Shaw's correspondence tourney between Dominion chess players, the leading scores are: J. Henderson, 7 won, 2 drawn; J. W. Shaw, 6½ won, 3 drawn; J. E. Narraway, 6 won, 3 drawn; W. Braithwaite, 6 won, 0 drawn; M. J. Murphy, 5 won, 0 drawn.

—We again invaded friend Belden's chess quarters, and our readers are indebted to him for this week's cursories. Among his numerous exchanges we noticed the Tasmanian *Mail*, the chess column of which is excellent, although rather restricted as to space.

—In the recent tournament between the strongest chess players of Pittsburgh, Pa. (each local club having two representatives), the two winners in which were to play a game of Living Chess, resulted as follows:

	Won.	Lost.		Won.	Lost.
J W Collins	5½	8½	Chas McEnulty	6½	11½
Maj R W Lowe	10	5	Alex Ballantine	12½	3½
Dr T R Davis	13	3	J A Stephens	9½	8½
Geo Lander	4	10	James Reed	½	13½
Geo Worthington	10½	6½	W C Shilvvagon	3	6

The game was played between Dr. Davis and Mr. Ballantine (which Dr. Davis won), and was a great public attraction.

—The Charlestown (S. C.) *News and Courier* calls for the re-organization of the chess club in that city. Before the war it had one of the largest organizations of the kind in the United States.

—Of our exchanges none are more welcome than the *Chess Players' Chronicle* when it chances to reach our hands. The February number of this paper is an improvement on its predecessor last on our tables The game department is *par excellence*, and the problem pages not only additionally attractive, but also interesting. We recommend it to our readers. Subscription, about $2, through W. W. Morgan, 67 Barbican, London, E. C., England.

—One of the most valuable chess columns that reaches us in exchange is that contained in the *Huddersfield College Magazine*, edited by Prof. John Watkinson. We also urge our readers to subscribe for it. Subscription only $1 10 for a magazine, one-half of which or thereabout, is usually devoted to first-class chess matter. Address John Watkinson, Fairfield, Huddersfield, England.

—The chess columns in the Canadian *Spectator* and Cincinnati *Commercial* are heartily welcomed by our contemporaries. We have not yet had the pleasure of seeing them.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

—See Bogardus' advertisement.

New Publications.

THE MARCH MONTHLIES.

—The *Popular Science Monthly* for March opens with an article by Prof. Tyndall, who writes of "The Electric Light." Professor Oscar Schmidt discusses "Science and Socialism," reviewing the ground taken by the German Socialists, who urge that their principles are in accord with the Darwinian theory. Dr. Geo. M. Beard contributes an entertaining paper on "Experiments with Living Human Beings," explaining some of the deceptions and errors into which experimentors are liable to fall. Warren Wilkinson discusses the question, "Is Conscience Primitive?" There are illustrated papers on "The Aarddark or Earth Hog," and "The Sting of the Honey-Bee." "The First Three Years of Childhood" describes the mental development of the human being for that period. The paper which will perhaps attract the greatest attention is that of Prof. J. Norman Lockyer on "The Chemical Elements." A number of other essays, with the editorial department, make up the number.

—Dr. Isaac I. Hayes contributes the opening story in the March *St. Nicholas*, "An Adventure on an Iceberg." It is told in Dr. Hayes' entertaining style, and is a capital leader. "The Obstinate Weather Cock," and its adventures with the unterrified Colorado beetle, furnishes a subject for Horace E. Scudder. "An American Mardi-Gras," with a number of suitable engravings, is descriptive of the New Orleans carnival. The serial stories of Susan Coolidge and F. R. Stockton are continued, and Julian Hawthorne's fairy story, "Rumpty-Dudget's Tower," is concluded. There are any number of stories and poems and puzzles and letters and pictures, and all the other good things.

—In the March *Atlantic* Mr. W. W. Story contributes the second installment of "A Roman Holiday Twenty Years Ago." Other papers are "Ghost Stories;" Mark Twain's "The Great Revolution in Pitcairn;" "Rosamond and the Conductor," a story by Katharina Carrington; "The Natural History of Politics," by N. S. Shaler; "Our Land Policy," by George W. Julian; "Presidential Electioneering in the Senate," and "Americanisms," by Richard Grant White. Whittier has two poems, Longfellow one; and there are poems by Rose Terry Cooke and Lucy Lee Pleasants. The "Contributors' Club," and the department of "Recent Literature," are each charactoristic in their way.

—*Appleton's* for March contains its usual quota of republications from foreign magazines, among the papers being Spencer Walpole's "English Literature, a Chapter from a New History;" the conclusion of "The Romance of a Painter," from the French of Fabre; "Musical Romanticism," by Vernon Lee; "The Evil Eye;" "Dr. Samuel Smiles' Works on Self Help;" Town Bred Poets;" "Two Ladies: Mrs. Jameson and Mrs. Fanny Kemble." Room is made for the long-promised story by Barnet Phillips, entitled "My Comedy," which is the romance of a playwright whose comedy comes very near being a tragedy. It is well told, and will hold the attention of the reader all the way through. The Editor's Table discusses "Paganism and Fiction," "Fitness in Art," "The City Beautiful" and "Water-Color;" and the Books of the Day department reviews a dozen of the principal recent publications.

—The sad death of Richard Realf has aroused much interest in that poet's unhappy life, and the pages of the March *Lippincott's* devoted to a sketch of Realf by Rossiter Johnson are especially timely. Edward King's "Hungarian Types and Austrian Pictures" is concluded, as is also "Women's Husbands." H. M. Robinson spends "A Day with Hudson's Bay Dog Sledges," and finds something new to say about a very old subject. "My Village in the South" is the first installment of the promised series of papers by Miss Annie Porter. "Monsieur Pampalon's Adventure" is a story by Anna Eichburg, and D. C. Macdonald has an entertaining story, "Joseph's Adventure." "Pottery and Porcelain" at the Paris Exposition is an illustrated paper by Miss Jennie J. Young. There are poems by Fawcett and "G. S." The Editorial departments are well filled.

—The *Golden Rule* has the usual installment of Mr. Murray's usual "Adirondack Tale." The biographical paper is devoted to Richard H. Dana. Mr. Bradford K. Pierce contributes an instructive paper on "The Rivereide Press," detailing the various processes through which books pass before coming from that world-famous establishment. There are stories, sermons, poems, editorials, discussions of social topics, literature and art, and, last of all, the fashion plates.

THE NATURALIST.—The February number of the *American Naturalist* opens with a very attractive article by Mr. I. C. Russell, entitled "A Sketch of New Zealand with Pen and Pencil." This paper, which is copiously illustrated by excellent wood cuts, is one of the most interesting of the number. "Notes on the Manufacture of Pottery among Savage Races," while in itself very instructive, derives an added interest from the fact that it is from the pen of the late Ch. Frod Hartt, whose excellent work as Chief of the Geological Commission of Brazil is so well known to all scientific men in this country. An attractive botanical article by Dr. Moses N. Elrod tells us about the "Seeds of the Violet and other Plants as Projectiles." "Instinct and Reason," by Dr. F. C. Clark, is a valuable essay presenting many interesting scientific facts and showing some of their bearings on evolution. It is to be continued. The number closes with an article on "The Discovery of Turtle-back Celts in the District of Columbia" by Dr. W. J. Hoffman. In the "Department of Recent Literature" we note an illustrated review of "Brehm's Thierlebra;" and in "General Notes" we see a correction by Dr. Packard of his statement in the preceding number of the *Naturalist* that he had discovered the male eel. It appears that the motile bodies, supposed to be spermatozoa were yolk particles with an unusually marked Brownian movement.

HUNT'S MAGAZINE.—Hunt's for February contains a *resumé* of Canadian yachting, in which the conservative elements of Toronto sound their horn, and show that the Royal Canadian is still in existence—something no one else was aware of, as the club has hidden its light under a bushel so far. The "Cruise of the *Cuckoo*," "The Season of 1878," and "Belaying the Binnacle" are continued from former numbers.

—The February number of *The Magazine of Art*, published by Cassell, Petter & Galpin, opens with a sketch of the President of the Royal Academy, Sir Frederick Leighton. The opening installment of a series of papers on "English Portrait Painters" is devoted to Gainsborough. Fully as interesting a sketch is that of James Clarke Hook, who is distinguished for his studies from fishermen's life. A variety of matter fill up the pages of the magazine. The price of each number is twenty-five cents.

MODEL YACHT BUILDING: A Treatise on the Construction of Model Yachts, with Remarks on Cruising and Racing and the Management of open Boats; also the Lines for a Racing Cutter, Suitable for a five to twenty-tonner. By Tyrrel E. Biddle. Chas. Wilson, Publisher, 157 Leadenhall st., London, England. Price $2.

The first of the year brings to light a new volume in the rapidly growing yachting literature of Great Britain, which is certain to receive a hearty welcome from all devoted to the fascinating sport of model yacht building and sailing, as well as by many others who may profit by reading the above volume in furtherance of the rapidly extending feeling in favor of testing vessels to be built by practically experimenting with models upon their lines. The long continued and most thorough researches of Prof. Froude at the Government establishment at Torquay, by which the most important developments that have given to naval design an almost entirely new aspect within the last decade or so, have been firmly established and accepted, have gone far to inspire the yachting public with greater confidence in the value of practical comparisons and inferences deduced from model or miniature yacht sailing. The work of Mr. Biddle comes to us at an opportune moment, and as his subjects are treated from a strictly practical standpoint, no exception can be taken to his views on the ground of their lacking the application of actual test. It is very concisely written, and the matter cleverly arranged. Though treating in the main of models smaller than we are accustomed to in America, the chapters on the three methods of construction—by lifts, by solid block and by rib and plank—will be instructive and useful; while all that relates to load keels, their casting and fitting, will apply to our model yachts with equal force as to the English, especially as in this respect our model sailors have discarded iron and taken to the "superior metal," showing that they are ahead even of their brethren owning large vessels. The leading chapters on draughting yachts are excellent, and cannot fail to be understood, as they explain the "three plans" in as lucid a manner as anything of that nature we have seen. They serve to show how intimately the draught and model—in other words, theory and practice—are blended, and how little sense there is in the attempts made by the ignorant to draw a line of demarkation between the two, when they are really one and the same, and leading to like results. The conclusions Mr. Biddle arrives at, in regard to the superiority of the moderately narrow deep keel cutter over the sloop, are equally borne out in our practice on this side of the ocean. Possibly some of his American readers may take umbrage at the very poor opinion he has of our small style of craft, concerning which he says: "If you have a very shallow lightly ballasted yacht with an open cockpit, by all means keep in smooth water and under a lee; if, on the contrary, you possess a fine weatherly little craft, with ballast stowed low, and a heavy metal keel, completely decked over, you need not scruple to venture forth in the channel. * * Indeed, a modern racing 5-tonner will keep the sea, and make good weather of it, when an old-fashioned hoy (ten times her size) would run for shelter." Testimony like this from one who has sailed all types of boats—in America as well as in England—should bear us out in our attempt to lift yachting and yacht seamanship to a higher plane that it at present occupies. In relation to this and kindred subjects Mr. Biddle's book will be found full of interesting passages. The book is well illustrated, and its make-up is excellent, commending it to the approval of model sailors, and others as well.

HOW WE SAVED THE OLD FARM, and how it became a New Farm. By "A Young Farmer." Boston: Loring, Publisher. 1879.

This is a book which may be read with great profit by the young men who are deserting their New England homes to wander away in quest of fortune. We hear much nowadays of the farms which are all exhausted and no longer fit for cultivation; but we suspect that in many cases there is lacking only the energy and thrift of of the fathers of these restless sons. Before the young farmer finally signs the deed of his land, and sets forth to seek a mythical fortune, let him read this book and reflect if there be not something still worth waiting for on the old farm.

THE GAMEKEEPER AT HOME: Sketches of Natural History and Rural Life. Third edition. Boston: Roberts Brothers. 1878. Cloth, $1.50.

We are glad to welcome another edition of this book. The English Gamekeeper is a prominent figure in rural life—a character in his way. He has not spent his life in the fields and hedges without learning a vast deal of Nature's craft, and none so wise as he when on his favorite theme of the birds and animals under his protection. We may naturally look for much woodland lore and much quaint philosophy in these pages which profess to show us just how the Gamekeeper lives and thinks and talks. The task has been one of love, and it is most delightfully successful. We have not for months come across a book which pleased us more, nor can we too strongly recommend our readers to secure for themselves an afternoon of pleasant reading by its perusal. We would wish that some one could enter as fully into the secrets of the animal life in our own woods and fields, and write of it as simply and charmingly.

A TREATISE ON THE HORSE AND HIS DISEASES. By B. J. Kendall, M. D., Enosburgh Falls, Vt. Claremont Manufacturing Co., Claremont, N. H. Price 25 cents.

The book contains, in a compact shape, much useful information about the diseases of the horse, with recipes for their cure, and practical instruction for their treatment. It will prove a valuable manual for horsemen.

—The "Spalding's Official Base Ball Guide" for 1879, published by A. G. Spalding & Bros., of 118 Randolph st., Chicago, contains a great deal of matter which is interesting and valuable to novice and professional alike. It is the standard guide in base ball matches. Mr. Spalding has done a very great service for the game, its present development being largely due to his efforts The firm of which he is a member have an extensive establishment for the sale of sporting goods in Chicago, where a full assortment of archery goods will be found.

—"Krick's Guide to the Turf" is the recognized authority on turf matters. It contains a great compilation of statistical information regarding the races of the whole country. Part I. contains a record of races run in the United States and Canada in 1878, and the earnings of all stallions and their progeny. Part II., which will be ready about the middle of April, will contain the nominations for all the stakes. The price is $1.50; published by H. G. Crickmore, *The World*, 35 Park Row, New York.

BOOKS RECEIVED.

ZIMMERMAN'S HISTORY OF GERMANY, Parts 33 and 34, New York: Johnson and Miles. John Beacham, 23 Liberty street sole agent.

Rational Pastimes.

THE SIX DAYS' WALKING MATCH.—The international pedestrian contest for the Astley belt began at Gilmore's Garden, this city, last Monday morning at 1 o'clock; the contestants are: Rowell, of England; O'Leary, Ennis and Harriman. The record at the end of the first twenty-four hours was: Rowell, 110 miles; Harriman, 100 miles; O'Leary, 96 miles; Ennis, 95 miles. At the end of the second twenty-four hours the relative positions of the men were: Rowell, 197; Harriman, 180; Ennis, 173; O'Leary, 164. At six o'clock last (Wednesday) evening the score stood: Rowell, 252 miles; Harriman, 245 miles; Ennis, 233 miles; O'Leary, 215 miles.

COLUMBIA ATHLETICS.—The annual winter games of the Columbia College Boat Club will be held at Gilmore's Garden on the evenings of April 4 and 5. There will be the usual contests open to amateurs. Entries should be addressed to J. T. Goodwin, Columbia College, New York.

—The *Evening Telegram* of this city, by its enterprise in reporting the International Walking Match at Gilmore's Garden, gained on its immense circulation over eight thousand the first day, twelve thousand the second and fourteen thousand the third day, and it is fair to presume that they will issue 100,000 on the last day of the walk.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

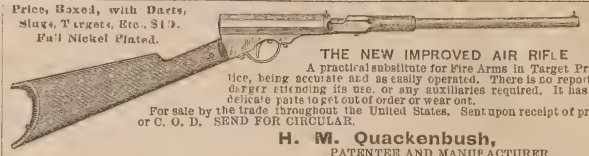
LAZELL, MARSH & GARDINER,
WHOLESALE AGENTS, NEW YORK.

SAMUEL CERRY & CO., Proprietors, Providence. R. I.

THE WHITE DOG.—James S. Clark, the well-known historian and antiquarian, has accomplished an end which he has been endeavoring to obtain for the past six years, that of obtaining a photograph and history of the peace belts, owned by the Iroquois, Onondagas, Senecas, Oneidas and Mohawks, and and held in trust by the Onondagas. On Saturday last, that tribe gave a burnt offering to the Great Spirit, at the reservation, north of Syracuse. Isaac G. Garfield, of Syracuse, who possesses great influence with the Indians, offered his assistance in procuring a picture of the belts. At half-past 12 o'clock the Indians assembled in the old council-house and began their ceremonies, which consisted of incantations and the like. A pure white dog, without a colored hair on it, was the sacrifice. During the exercises the animal was strangled, and when the order was gone through with, the Indians emerged from the council-house. One of them had the dog thrown across his shoulders. The procession passed to and through the new council-house, around the outside and back to the old council-house. They walked around this and proceeded to the fire midway between the two council-houses. On this the dog was cast amid nummery and manifestations. The animal was allowed to remain until it was burned to ashes. This ceremony is appointed by the chief to take place on a certain day, and all who wish may participate; but each must bring a gift from his own possessions. The chief requires a certain thing which he asserts the Great Spirit tells him in a dream. When in council, the chief goes to one Indian and asks what he has got. If that is not the article, he asks another and so on, until he comes to the one who possesses the required object. It is claimed that the Great Spirit dictates to the person who has the right thing, what the chief wants. In order to let the Great Spirit know that the article has been obtained, a dog is burned, and the soul of the dog takes the word to the Great Spirit. At half-past 2 o'clock the exercises concluded, and Mr. Wright pinned the belts on a piece of cloth and secured a negative of them. The belts, twelve in number, are made of beads formed of shells and fastened on with fine buckskin thread and closely woven. The largest is some four feet long and twenty inches wide. They diminish in size to two feet in length and three inches in width. The belts are embellished with figures and characters, consisting of men, wigwams and hieroglyphics. They are kept in a bag made of wood-fibers closely woven together, which has the appearance of coarse sacking. These belts, as has been stated, belong to the Iroquois nation, and some of them are over six hundred years old. They are preserved with zealous care, and heretofore the white man has never been allowed to touch them. Gen. Clark has achieved quite an accomplishment, and it is expected that he will soon lay his interesting researches before the public.—*Auburn (N. Y.) Auburnian.*

ANIMALS SENSITIVE TO RIDICULE.—Mr. Sidney Buxton, in one of his amusing papers on animals in the *Animal World* for February, says that dogs and horses are, as far as he knows, the only animals sensitive to ridicule, while cats and birds are wholly unaware that they are being laughed at. He tells of a pony of his own which gets very cross when disparaging remarks are made upon him, and "becomes furious, and stamps about his stall, putting back his ears, and attempting to bite" if he is openly laughed at, while praise greatly pleases him. The truth is, that it is only those creatures which can feel sympathy with men which can also appreciate ridicule. The horse sympathizes evidently with many of his rider's feelings and amusements, while the dog can enter into no small proportion of his feelings.

But birds and cats, though often exceedingly affectionate, and full of attachment to individuals, hardly ever attempt to enter into human feelings—as Cowper's dog "Beau," for instance, entered into the poet's desire to possess himself of the water-lily. The hatred of ridicule always accompanies a capacity for sympathy. Certainly dogs, and probably horses, know the difference between being laughed at in derision, as we laugh at a fool, and being laughed at in admiration, as we laugh at a good comic actor, and enjoy the latter as much as they resent the former. It is questionable, however, whether some parrots do not understand and enjoy the practice of making fun of their human acquaintances—do not appreciate the art of duping, and take pleasure in it.—*Spectator.*



Price, Boxed, with Darts, Slugs, Targets, Etc., $10. Full Nickel Plated.

THE NEW IMPROVED AIR RIFLE

A practical substitute for Fire Arms in Target Practice, being accurate and as easily operated. There is no report or danger attending its use, or any auxiliaries required. It has no delicate parts to get out of order or wear out.

CRAB.—A land crab, of about 24 inches between extremes, captured in the garden of N. A. Bascome, Esq., Port Royal, on Saturday last, was brought to our office yesterday. Young ducks and chickens in the garden had disappeared most unaccountably, and on the above day a man and women met the crab and were awfully frightened as he approached them, with his extended claw wide open; the man ran for his life, but the woman took up a large stone and struck the crab on its back and checked its progress; it was soon killed. It had two large claws, but one some six times as large as the other. —*Bermuda Royal Gazette.*

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

A GREAT INVENTION!

Imitation
STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window.** It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, Patentee & Mf'r's, 717 Sansom Street, PHILADELPHIA, Pa. (Sole Agt. for U. S. & Canada.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen, who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have nevertofore, in smoking cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

Alford's Practice Target.

PURDY'S PATENT, DEC. 1873.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shot-gun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desir to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and thy other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

Volume 12—No. 7.
No. 111 Fulton St., N. Y.

A ZOOLOGICAL ROMANCE.

NO sweeter girl ewe ever gnu
Than Betty Marten's daughter Sue.

With sable hare, small, tapir waist,
And lips you'd gopher miles to taste;

Bright, tambent eyes, like the gazelle,
Sheep pertly brought to bear so well;

Ape pretty lass it was avowed,
Of whom her marmot to be proud.

Dear girl! I loved her as my life,
And vowed to heifer for my wife.

Alas! a sailor, on the sly,
Had cast on her his wether eye—

He said my love for her was bosh,
And my affection I musquash.

He'd dog her footsteps everywhere,
Anteater in the easy chair;

He'd setter round, this sailor chap,
And pointer out upon the map

Where once a pirate cruiser boar
Him captive to a foreign shore.

The cruel captain far outdid
The yaks and crimes of Robert Kid.

He oft would wale Jack with the cat,
And say: "My buck, doe you like that?

"What makes you stag around so; say!
The catamounts to something, hey?"

Then he would seal it with an oath,
And say: "You're a lazy sloth!

"I'll starve you down, my sailor fine,
Until for beef and porcupine!"

And, fairly hoarse with fiendish laughter,
Would say: "Henceforth, mind what giraffe tar!"

In short, the many risks he ran
Might well a llama braver man.

Then he was wrecked and castor shore
While feebly clinging to anoa;

Hyena cleft among the rocks
He crept, sans shoes and minus ox.

And when he fain would goat to bed,
He had to lie on leaves instead.

Then Sue would say, with troubled face,
"How koodoo live in such a place?"

And straightway into tears would melt,
And say: "How badger must have felt!"

While he, the brute, woodchuck her chin,
And say: "Aye-Aye, my lass!" and grin.

* * * * * * * *

Excuse these steers. * * * It's over now;
There's naught like grief the hart can cow.

Jackass'd her to be his, and she—
She gave Jackal, and jilted me.

And now, alas! the little minks
Is bound to him with Hymen's lynx.

—C. F. ADAMS, *in Detroit Free Press.*

For Forest and Stream and Rod and Gun.

The Land of the Pointed Heart.*

NUMBER ONE.

THE Nez Percé and Bannock wars have attracted the attention of every one for so long a time to this section of country, that any especial reference to its whereabouts is unnecessary. Therefore, if the reader will turn to the map of Idaho Territory and cast his eye upon its western boundary he will see that about midway it is crossed by the Snake (or Shoshone) River. Following this boundary due north for about a hundred miles (the distance on the mad will depend upon the scale), he will see a splotch of irregular form, evidently designed to represent a body of water, as two or three rivers are seen to empty into it. This represents Cœur D'Aléne Lake, a magnificent sheet of water some thirty miles in length. The width is so affected by the jutting promontories that it varies from ten to two miles, and no more definite measure can be given.

The primeval forest comes to the water's edge, and the shadows of the tall pines are reflected in its pellucid waters; for these are never clouded, the springs and streams which feed it are never muddy, and the great Spokan River, which is its only outlet and which springs from it full-grown—one hundred and sixty yards in midth at the season of lowest water, with a swift current—has never a shadow cast upon its waters by contamination with any vulgar soil. In plain English, the waters of both lake and river are so transparent that the bottom can be seen anywhere and at any time to a depth of twenty feet.

On a dark night with one of Boudren's hunting and fishing lamps, when it is perfectly quiet, the bottom can be seen at over thirty feet. This same lamp, by the by, is a magnificent institution, and, if its inventor knew how often he had been praised and how highly his invention was appreciated by us while driving through the forests at night, how many accidents he had prevented, and how much he had saved our beloved Uncle Samuel in protecting his wagons from accident, he would be proud and at once apply for a pension. He should also receive the most heartfelt thanks from all Christain communities, for the amount of profanity he has prevented is simply incalculable. If he should be so unfortunate as ever to fall into the clutches of that estimable gentleman who is vulgarly supposed to be adorned with a large pair of horns and a long tail with a spear at its tip, he may rest ussured that a particularly warm corner will be assigned him and an extra hand put on to stir up the fire, for thwarting the many and carefully laid plans of that individual to take advantage of poor, weak human nature in the dark.

I trust I may be pardoned this panegyric, which can really be appreciated by no one save he who has had to conduct a train of six mule teams through a forest at night. Such a one will forever bless the man who invented a lantern that will throw a clear light so far ahead that he as well as his lead mules can clearly see the ground before them; and this the Boudren lamp will do, and none other that I have ever seen will in any way approach it. I have found it perfectly inestimable.

This is apparently a long departure from my beautiful lake. But place the same lamp, with its fishing reflector attached, in the bow of your canoe, and as you slowly glide over the smooth surface of the lake, with the bottom as plainly displayed as if it were in the palm of your hand, and see the great trout with gently waving tail and fins apparently within a few feet, you send down your spear, sure that you have got him, only to see how wide of your mark you were, for the great depth has deceived you. A passing shadow, and "Look out! There comes up your spear. You must try again and make more allowance for the reflection." The greatest objection to fire fishing is the depth of the lake and the miserable trick the shores have of vanishing. You follow up a beautiful gravelly bottom and suddenly find blackness. The shores are as steep as the side of a house. The depth is very great, and in most places a hundred-gun ship could lie so close to the bank that her gang-plank would reach ashore. As a rule, on one side of the lake the shore is abrupt; on the opposite one the declivity is gentle for a considerable distance, and then jumps off. The formation of the country is volcanic, and I have noticed on one flat, where at low water the depth is but a few feet, that the bottom is of rock and cracked in every direction, while a break here and there, where the piece has fallen out, shows that there is but a thin crust of rock, not more than an inch or perhaps a half inch in thickness, evidently a stratum of lava spread over the clayey surface. We have also noticed another peculiarity. When we sank some wells for the post we were surprised that we could get no water. This summer the water of the lake—our sole supply—became quite full of infusoriæ. So the commanding officer caused a well to be sunk within a yard of the water's edge, intending the drain to filter the water; but, to his surprise, at the depth of ten feet below the level of the lake the well was dry as a bone. The soil is impervious to water, but is not like ordinary clay. The shores of the lake are completely wooded. Here and there, where a stream comes in, or at the head of a bay, there may be a small marsh or grassy plain; but, as a rule, the trees overhang the water's edge. The mountains are very abrupt, their sides being apparently a continuation from the bottom of the lake. A narrow strand, caused by the debris washed down, is all that marks the division.

In the bygone days nature must have displayed some of her grandest feats in this vicinity, and the forest fires that occasionally show themselves on the tops of the mountains around the lake seem, volcano-like, a fitting adjunct to the ruggedness of the panorama. My tent is pitched on the bank of the lake, hardly fifty feet from the water's edge, beneath a cluster of lordly pines, the murmur of whose branches, with the lapping of the waves on the sandy beach, are my nightly lullaby. The view up the lake is simply grand. On either side the mountain ridges, pine clothed, come down to the water, chain beyond chain, until they melt into the distance. When the moon is at its full the scene is enchantment, and I often sit at the door of my tent, and, looking over the brilliantly illuminated waters to the densely wooded mountains beyond, think it must be the fairy land of which lovers dream. As a necessary consequence of the purity of its waters, it is the home of the trout. These are of many varieties, from the pure (Pacific coast) *Salmo fontinalis* to the great salmon trout six feet in length. The heaviest fish caught here with hook and line weighed exactly nine pounds, but many have since been seen which must have been far heavier. Trout three or four feet, and occasionally of six or more feet, are not infrequently seen; but they are wary fellows. None have been caught. Numberless lines have been carried away, and times without number socdolagers have been hooked, but so far none of these whales have been captured. Trout of one, two or three pounds are the rule, and their name is legion. An old trout fisherman who visited this lake some years ago, and having no boat, made a raft of logs on which he pushed out into the lake near its mouth, said it was "the best and most magnificent trout fishing in the world." The catch is often fabulous.

In July, August and September the fishing is poor for Cœur D'Aléne. One can catch a dozen of an evening, often three or four. The reason is plain. The trout seek the mouths of the ice-cold mountain streams and do not return to this part of the lake (its mouth) until the cold weather and high water. At the mouths of the streams above alluded to they are as numerous as the sands on the sea-shore, and one might think them crazy they are so anxious to be hooked. A short time since one of our men, fishing near the mouth of one of these streams, caught twenty trout with a coarse line and large hook in half an hour. Not one of them weighed less than two pounds. This is ordinary fishing here.

I have noticed a peculiarity of the heavy fish in these waters that I have never seen mentioned. After being hooked and rushing about wildly for a few minutes, they make for the bottom and pound. I can call it nothing else. The sensation is precisely as if some one had struck you on the wrist two or three sharp blows with a hammer; and, if the rod be a stiff one, the result is almost invariably that the barb of the hook is broken and the fish escapes. This is the invariable rule of large fish, seldom if ever of small ones: A short, deliberate, sharp stroke repeated two or three times. If the rod held by another be near you your attention will be attracted. You can hear the blow. It will sound as if struck upon the rod. I would be glad if some of the Rangeley fishermen would tell if this was usual in their experience, for I do not remember ever to have seen it mentioned. If you do not lose your fish when he pounds, you may expect a grand rush immediately after. I hooked a two or three pounder on one occasion in perfectly clear water, where I could see him plainly, and when he pounded I could see him tilt. The blow was plain. The motion and sensation were isochronous. The motion of the fish was exactly as if a pivot had been run through his centre, from side to side, and his extremities moved sharply up and down. At the second blow the fish was free.

Do not laugh at me about trout tilting. The ladies used to sport tilters. Mlle. Aimée, with her striped stockings, might explain why; but the Cœur D'Aléne beauties, with their bright scarlet-striped sides, have not that excuse.

The mountains around the lake teem with deer, bear, panther and all the varieties of smaller game. The cry of the loon on the lake is alternated with that of the panther in the forest. Every night after "taps" a din arises that makes one think that pandemonium has broken loose. The wolves, timber and coyote, when all has become quiet, steal in to see what they can pick up; and the dogs of the camp, jealous of their cousins, sound the alarm and are upon them. A grand saturnalia ensues, and for about half an hour the night is rendered hideous.

The osprey and the white-headed eagle are very abundant. I had a very beautiful exhibition of the skill of the former in fishing, and of the predatory habits of the latter, not long since. Going out fishing one day, I had hardly left the shore when a sudden "whish-sh" sounded in my ears and a shadow passed over my head. A moment afterward, hardly fifty yards off, an immense osprey rose from the water with a large trout in his talons. We had seen him before we started, but at such a height that we could hardly imagine it possible that he could have made the dash. As he rose with his struggling prey, and heavily beat the air with his broad wings, a sharp "chack! chack!" in the distance informed him that danger was near. Two specks that had been swaying about among the clouds rapidly increased in size, and the mighty hawk, with his finny prey, made frantic efforts to reach the woods across the lake. But he soon found that his efforts were of no avail, yet he would not give up his prey. Then he began to mount. Higher and higher he rose, and 'round and 'round him, in broad circles, swung his relentless pursuers. Suddenly the larger bird made a plunge at him. By a sudden swoop the hawk evaded her, and at the same moment the other bird, with a shrill scream, darted at him. It was of no avail to struggle further; he could not recover in time. It was neck or fish, and he wisely chose the former. A white streak in the air explained his action, and the black one, which like a ray of light flashed after it,

* It is impossible to get the exact meaning of the name "Cœur D'Alene." Alene means an an awl or other sharp pointed instrument. The descendants of the old Hudson Bay employees and the few of the original voyageurs left, say that "Cœur D'Alene" means "Pointed Heart." The Indian name of the Cœur D'Alene tribe is Stehilawe, pronounced St-tchitswee, but no one, not even themselves, can give its signification. The name "Cœur D'Alene" was bestowed upon them by the old voyageurs, wherefore is unknown. MONMOUTH.

was equally comprehensible. As the white spot neared the surface of the water the black one joined it, and like a flash the broad wings flew out and the course was averted. Slowly the robber bore off his ill-gotten booty. Meanwhile the other bird had not been idle. Balked in her first attack, she returned to the charge, and, with an angry screech and a rush of her broad pinions, she again dashed at the osprey. She was evidently taking her revenge. A few scattering feathers floating through the air proclaimed her victory; and, with a grand swing, she rejoined her mate who was bearing off the unlawfully gained spoils. The poor hawk, with tattered plumage and discordant cries, slowly and sadly made his way toward the forest, and soon all the actors in this grand aerial drama were lost to view.

On a calm summer morning our lake presents one of the finest views that can well be imagined. Everything seems so peaceful and calm that one feels he could lay himself down on the sandy shore and rest forever. As the sun comes over the eastern hills and glitters on the surface of the placid waters, scarcely rippled by the gentle morning breeze which is hardly felt, the solemn silence, broken only by the far-off, lonely cry of the loon, makes itself felt, and the mind of the poor mortal goes up in a prayer of adoration and thanksgiving to the Most High. It is a beauty that can be felt, not expressed. The solemn, pine-clad mountains, the deep shadows in the lake, the perfect quiet, the impression of majesty and power, the awful stillness, the wreaths of mist on the lake tinted with the beams of the morning sun, the tall pine on yonder point with gilded head gracefully bowed as the sunbeams kissed his brow. What wonder that those in Eastern clime bend in mute adoration as their Deity lifts his gorgeous crest above the horizon.

But our lake has another aspect. Not long since the day was hot. The glare of the August sun was almost insupportable. The placid waters, reflecting the torrid rays of the summer sun, drive all life to the forest shades. The gorgeous monarch of the heavens rolled on, and all nature, oppressed with his glory, was mute. A deathly silence pervaded everything. Anon the glorious sun sunk to his evening rest. The insect buzz began to charm the ear. The dreaminess of nature seemed to pass away. The pine leaves murmured. The evening breeze fanned the cheek. The sky lost its brazen hue. One by one the stars peeped out and the twilight thickened. Presently a dark spot, "no bigger than a man's hand," came over the mountain from the south. Slowly it grew and gradually it widened out until the heavens were overspread. A darkness "to be felt" came gradually on. A low sigh passed through the tree tops, a gentle bend, then all was quiet as before. The darkness increased. A deep sigh came over the lake. Suddenly a lurid blaze lit up the sky, bringing out every leaf and crag as clearly defined as if painted on the eye. A low mutter in the far distance; then a deathlike stillness. The pine boughs drooped. The waves on the pebbly strand ceased to murmur. A wailing cry, as of some lost spirit, came across the lake. Then all was still. The darkness grew intense. Suddenly a blinding flash, a zig-zag bolt of fire, a blaze, a crash, and a tall monarch of the forest went down. The deep, low roll of the far-off thunder stole gradually on the ear. Flash after flash gleamed in the horizon, a deathlike blackness between. The silence was painful. Then came again a broad glare. The clouds above seemed to writhe in agony. Fitful gusts tore among the tree-tops. Then stillness, as of death. Then glare on glare. Then inky darkness. And now the pent-up voice of the storm broke over the lake. The tall pines bowed their haughty crests. The lake was lashed into a foam. The white caps danced, tipped with the golden splendor. Then pealed forth the deep-toned thunder. The reverberations from the thousand hills kept up the grand and awful roll. Flash after flash lit up the heavens. Hither and yon danced the gorgeous bolts. Pandemonium seemed let loose. The air was full of fire. The unceasing crash of the thunder shook the earth. The spirit of the storm rode triumphant in his wrath. The flash of the lightning and the roll of the thunder were incessant. Then broke forth the deluge, and "the waters covered the earth." Gradually the heavy rain slackened, the lightning flashes occurred at longer intervals, and the thunder peals grew less violent. Slowly and majestically the storm moved on. Even the rain fell more and more lightly, and, ere long, only in drops, dying away in a slight drizzle. As the heavy clouds passed over, the moon stole out for a moment through the rifts. The thunder rumbled in the distance. The lightning flashed forth with but an occasional gleam. It grew lighter and brighter. Soon the only sounds heard were the pattering of the drip from the pines and a faint ripple on the beach. The clouds passed away. The moon shone out with renewed brilliancy. The air was clear, pure and cool. The quiet beauty of the lake returned. The white tents gleamed against the dark background of pines, and a peaceful quiet pervaded all nature.

For many days past the forest fires have been traversing the mountains. Through the negligence of some heedless persons the dry, heavy grass and thick brush took fire and gradually spread itself, until fanned into activity it went roaring through the forest and up the mountain sides. For many nights the summits of the mountains have been in a blaze, and the lake has seemed to be bordered with volcanoes in full blast. The effect is very fine, but the destruction of timber has been immense. An area of probably a hundred square miles has been burned over. I was riding home a few evenings ago, and, as I came out upon a small prairie some six miles from camp, the darkness came down and the fires on the distant mountains became exceedingly distinct. Presently a tall dead tree caught fire and burst into a beautiful blaze, while the flames shot up into the heavens, resembling a gigantic torch. It was so brilliant that the fires among the brushwood became comparatively deadened. For awhile the bright flames shot on high, and then the tree fell with a crash—a deep boom, heard even at the distance I was—and the flying embers closed the display with a little glory. The whole scene was one of the most exquisite I ever witnessed. Not long since the fires crept down within a few miles of our camp. One day I had been out with a couple of friends shooting prairie chickens some ten miles distant, and when we returned it was quite dark. After riding a few miles through the woods we found the fire had crossed our path, and we were obliged to ride through it or pass the night in the forest. The woods were full of smoke, which rolled, curling up in high volumes, wreathing itself in fantastic forms, while the fire, having burned off the undergrowth, had crept up the trees and out on the branches, until pillars of flame were frequent and arms of fire were stretching in every direction. The heat was intense and the smoke blinding; we could not see twenty feet ahead. Our horses were wild with fright; and at first we could hardly force them forward; but soon becoming accustomed to the glare, and perhaps influenced somewhat by that fascination which causes horses to rush into flames, we passed on at a gallop. The only danger was from falling trees or branches; but, providentially, none fell while we were passing. The belt of fire was about a mile wide, and, as we dashed through, presented one of the most weird and grand spectacles I ever beheld. We must have looked like a band of robber-fiends as we dashed on with our guns on our shoulders and our figures gleaming red in the firelight. The ride was very exciting, and I would not have missed it on any account. There was just enough danger to give it zest, and we enjoyed the dash amazingly. MONMOUTH.

For Forest and Stream and Rod and Gun.

A MORNING WITH THE TURKEYS.

"WELL, boys, is it to be turkeys or no turkeys in the morning?"

The foregoing important motion was laid before a committee of three somewhat sleepy individuals by our host, Tom Snapshot, as we knocked the ashes out of the last of many "last pipes" into the dying embers of what had once been a roaring old Virginia log fire. Woodhall was an immense and venerable pile, and in former days, lying as it did, and does now, far from cities, villages or railroads, enjoyed a great reputation for the rural hospitality characteristic of those times. This night its very chimneys rocked in the winter wind that swept from the distant ranges of the Blue Ridge, the gutter spoutings leaped in their rivets and gave out unearthly groans and cries. The Venetian shutters slammed and banged, till the whole structure trembled again. The windows rattled as only Virginia windows can rattle; the topped locust trees in the yard waved their meagre branches to the sky, where the moon in her first quarter seemed to be rushing wildly through a stormy ocean of clouds. Borne on the wind in fitful gusts came the sullen roar of the Roanoke River, swollen with melting snows, rolling and raging past the ruins of bridges; past gutted lowlands; past islands, rent and torn by its waters in the great freshet two months before. A year or two ago, quail, though not much hunted, were, however, still in season during January, and in the course of the day in question, while following a scattered covey into the woods, five wily gobblers had been flushed and scattered. Hence the point of the remark with which this paper opens.

I am bold enough to confess a lukewarmness for turkey hunting. I use the expression "bold" advisedly; for how many sportsmen—and yet more would-be sportsmen—are there who are ready to admit that they are not enthusiastic about everything that savors of fur and feathers, more so, perhaps, among Englishmen than Americans? Americans are too matter-of-fact for this unaccountable eccentricity to be very common, and the social *eclat* of sport is not so all-powerful on this side yet as to infuse all its followers with a nervous anxiety to be, at any rate, thought enthusiastic on occasions that in reality bore them. As I before hinted at, we were not by any means "death" on turkeys. However, as the week was to be devoted to shooting, the stern sense of duty common to the Anglo-Saxon on such weighty occasions, urged us not to throw away a chance, and the decision was given in favor of a campaign against the turkeys, an hour before daylight on the following morning being fixed, with a groan, as the time for starting.

At a very uncomfortable hour, and in a very uncomfortable manner, Tom, who is one of those dear creatures full of animal spirits who thinks nothing of emptying a bucketfull of cold water over you in the morning, just to show there is no ill-feeling, roused us effectually.

Why should I dwell on that miserable hour before servants move on wintry mornings?

Who—I care not how ardent a sportsman he may be—who, I say, does not shudder when he calls it to mind? The tugging on of boots still wet from the previous day's expedition; the toddy tumblers like a broken covey scattered over the room; the chairs standing in grim mockery round the ashes of a dead fire; the stealthy footfall of your companions in misery creaking up the stairs and through the silent corridors.

There was as yet but such a slight tinge of day in the east as the most practiced early riser could alone decipher, as we blindly followed our leader over level stubbles, floundered through miry corn fields, where the ungathered blades of fodder rattled dismally against the dried up stalks, scrubbed our faces against lonely persimmon bushes, dropped helplessly into treacherous ditches till the cold water oozed over the tops of our boots,—in short, went through most of those pleasing experiences that fall to the lot of sportsmen who turn night into day.

At length as the first rays of light spread over the outer world, we entered the gloom of pine forests that covered the land for miles in every direction, and a ten minutes cautious advance brought us to an old field in the neighborhood of our previous day's encounter with the gobblers. Tom had the "call," and after throwing up hasty "blinds" and setting ourselves as comfortably as circumstances would permit a hundred or so yards apart, the clear tuk-tuk with the proud ascending trill, with which the stateliest of game birds calls its fellows, rang through the silent woods.

Again and again from Tom's persuasive throat those imploring notes pierced the gradually lifting gloom; again and again were our ears strained for the wished-for response, but in vain. The only sounds that greeted them were the insulting jeers of a flock of crows who mocked at us from the dead limbs of a monster oak.

A red fox stole by within ten yards of me, and the temptation to become a vulpecide was for the moment strong, but I contented myself with making a mental note of him for Col. B. and his hounds, and let him pass. All was dreary, cold and miserable. The dead of winter had laid its iron hand on everything, and the sad dripping woods seemed hardly to be the same as those through which, in the glorious sunny days of the Indian summer, the joyous ring of our barrels had dealt out death to the scattered coveys of quail. There in the "slash" before me, the water, still unthawed, held the sad colored weeds and the leafless alders in iron bonds. As the light grew I recognized it as the spot where the first woodcock of the season, dashing out of what was then a tangled chaos of vegetation, had just shown himself for an instant too long at the end of my barrels in the sunlight of an October evening. But hark! Tom is answered, and from away in the wilderness of pine stems comes the long-looked-for tuk-tuk. Once more his call, two hundred yards to my right, becomes eloquent as he converses with the now advancing turkey. Nearer and nearer comes the prey, and now not one, but two or three, join in the "confab." Cold feet are forgotten, and with numbed fingers I grasp my trusty weapon as two black objects come slowly into view. Not for me, however, was the honor (if there is any in shooting a turkey on the ground) this day reserved. Whether by chance, or whether the keen suspicions of these wariest of birds were aroused by any movement, I know not, but certain it is that at this moment they appeared to altered their course, though only to move steadily forward to their doom at other hands.

The other two guns had apparently moved to the same blind, for a couple of shots almost simultaneously told that, whether for good or bad, our morning's work was done. On going forward, I had the satisfaction of finding both birds lying dead at Tom's feet, proving, as we had thought them to be, gobblers, and also, as every turkey that I ever heard of being killed in this part of the world, "real whalers," "regular busters," "the two biggest turkeys as ever I seed, sure." KINGWOOD.

Fish Culture.

Fifth Annual Report of the State Fish Commissioners of Minnesota, for the Year 1878.

The Fish Commissioners of Minnesota have, during the past year, been very successful in their work of hatching and distributing fish, and have also secured a much enlarged capacity for the production of the future. The water accommodations at Willowbrook have been doubled, and various other improvements will render the work of the present year of much greater magnitude. The total number of fry distributed was 230,350. There were received 40,000 eggs of lake trout, which, owing to a mortality, dwindled down to only 3,500 fish fit to be planted. There are now in the trough some 60,000 eggs which promise well. With the land-locked salmon eggs the result was equally discouraging, but 8,000 surviving out of a shipment from Grand Lake Stream, Me., of 55,000. The brook trout is a favorite in the demands for fry, and gives great satisfaction, thriving well in waters where it has never been known before. The distribution to different counties the past year was 88,200 fry, and there are now on hand in the hatching troughs 600,000 eggs, besides 3,700 breeders three years old, 1,700 two years old and 4,000 one year old.

Although a careful inquiry has been made into all the rumored occurrences of shad in the upper Mississippi, the Commissioners have failed to find the true *alosa*, all the specimens submitted to them proving to be thread shad, gizzard shad or herrings. A liberal supply of shad fry has been promised by U. S. Com. Baird for the Great River the coming year.

A lot of 200,000 whitefish eggs have been received from Northfield, Mich., and are to be planted at once. There are also in the hatchery some 200,000 eggs of the Madison Lakes whitefish. There have been distributed of the California salmon hatched last year 113,600, leaving now in the ponds 25,000. There are also about 800,000 young fry recently hatched from the eggs received in October last.

Thirteenth Annual Report of the Massachusetts Commissioners on Inland Fisheries, for the Year Ending September 30, 1878.

THE Report of the Massachusetts Commissioners for 1878 is now before us. Much improvement has been made in the facilities afforded the fish for free passage up the rivers of the Commonwealth, and by continued efforts in this direction the artifical obstructions will in time be remedied.

The importance of cultivating the alewife, not merely for their own consumption but as food for attracting to Massachusetts waters the larger and more valuable fish of the deep sea, has been repeatedly urged by the Commissioners; and in the present report the same recommendations are repeated. The returns from inland fisheries show the total catch of alewives to have been about 4,700,000, a number which would be materially increased if the unreturned catches were added. With this increase of the alewive fishery there has been a corresponding improvement in the bay and shore fisheries, and it is suggested that it might be a matter of economy for the United States to co-operate with the States in stocking with migratory fishes all the rivers and streams leading to the sea. This would do much to restore the shore fisheries to what they were sixty years ago.

The returns of the Connecticut and Merrimack Rivers show an increase of shad over the catch of last year. The Merrimack will be stocked by the two States, Massachusetts and New Hampshire, but the Commissioners express their despair of accomplishing anything in the Connecticut until some more equitable arrangement can be made whereby the rights of the State may be respected by Connecticut.

From Grand Lake Stream, Me., there were received last season 270,000 land-locked salmon eggs, from which 245,000 healthy young salmon were hatched and distributed among some thirty ponds, whence favorable reports of their condition have been received. There will be about 200,000 fry ready for distribution next May.

Two hundred thousand spawn of California salmon were received last year from the United States Commissioners, which were hatched with a loss of ten per cent. These were turned into the Ipswich, Nashua, North, Saugus, Bridgewater, Merrimack and Pemigewasset. The fish survived the winter and were seen in considerable numbers up to last July, when they disappeared. The last report calling in question Mr. Livingston Stone's assertion, contained in his report published by the United States Commission, that the California salmon spawn but once and then die, has had the effect of bringing out several communications from observers familiar with the habits of the fish, all of which go to disprove Mr. Stone's theory. The most full and explicit of these replies, addressed

to Professor Baird and written by Fish Commissioner B. B. Redding, of California, is given *in extenso*. The concurrent testimony taken by the California legislature from some fifty experienced fishermen of the Sacramento River, goes to show that in October and November, in that river, they caught from 5 to 15 per cent. of fish that had spawned. Most of these were taken in the "back of nets," and were drifting toward the ocean with their heads up stream. The fish are black, hooked-mouthed, have dog teeth and do not feed. Mr. Redding farther says of the habits of these fish—(his letter is dated March 13, 1878):

"I know of my own knowledge that some of the McCloud River salmon remain in the river until the next year. On the 5th of July last I was fishing on the head waters of the McCloud River, about fifty miles above the United States fishery, catching salmon and trout. The salmon that season had just arrived, and would take the hook, but in the pools there were also numerous salmon of the previous year—hook-mouth and dog-teeth—which could be tempted to take anything. Sir John Reed, who was fishing in the same pool with me, improvised a long gaff with which he caught one of these fish of the previous year. Although thin, it weighed twenty-two pounds. We saw several others, but did not attempt to take them. These fish certainly must have remained in the water six or eight months without food, and for some unaccountable reason failed to return to the ocean. It is certainly true that large numbers do die and get injured, but from the testimony of the fishermen I am satisfied that large numbers return to the ocean each year. The opinion of the fishermen is that they return to the ocean after spawning, with the first rains on the head-waters. The coast-rivers salmon spawn in January and February, in the short streams that empty into the ocean, and immediately return after spawning. Most of our coast rivers have bars at their mouths, thrown up by the waves, and when these rivers and streams are low, fresh water passes through these sand-bars to the ocean. When the floods come in the winter they tear open a passage through these bars. The salmon immediately enter, and work up into all the small branches in the hills where it is possible for them to reach, spawn in a few days, and immediately return down stream into the ocean. It was but last Saturday I took seven of these salmon in pools in a small stream which ran through a pasture within twenty miles of San Francisco. This stream empties into the bay. Our winter rains have been more heavy than usual, and all these short coast and bay streams are full of salmon spawning,

"Now, as regards young fish, I have repeatedly taken young salmon, one year old, with a fly, at the United States fishery in July or August. These young fish were always in the centre of the river, while the trout would be taken in shoaler water near the shore. I am therefore certain that some of them remain in the river for one year after they are hatched. Many grilse are taken in the bay here from the wharves, weighing from three-quarters of a pound to five or six pounds. I have never seen any taken in salt water which I thought was younger than two or three years. I am certain that Mr. Stone is in error in reporting that California salmon die after having spawned."

The run of salmon in the Merrimack last year was mainly from the planting of 1873. No fry were introduced in 1874, and therefore no dividend was looked for in 1878. But few were seen at the Lawrence fishway, and only eleven were taken at Plymouth. Experience with the salmon in these rivers demonstrates that they go down to the sea in the third year. Those planted in 1876 have been carefully watched, and were found to be very numerous all along the river near the mouths of trout brooks until the middle or last August, when they began slowly to change their quarters and move down stream, and after the first of September none were found above Livermore Falls.

The Report closes with a review of the economic importance of the fisheries of a nation in comparison with its agricultural and manufacturing interests, and a suggestion that the increasing population of the various States demand that every resource should be thoroughly and fully developed.

THE BELASTOMA GRANDIS.

[A Paper Read before the American Fish Cultural Association Feb. 26.]

By Mr. H. D. McGovern, of Brooklyn.

THE question has been asked me more than once, "Why is it that our streams, which used to abound with fish, are so depleted, particularly of the young trout?" I at once commenced an investigation, and began to think why it was that the good old streams of Long Island, that used to furnish so much pleasure to the sportsman, were now almost untenanted by large trout. The question, I thought, could be easily answered; knowing that there were so many pot-hunting sportsmen around, in and out of season, who would not hesitate to kill a large trout even if they knew that it was on the spawning bed and in the very act of spawning. This, with the assistance of the mink and snake and other enemies, I thought, would answer the question; but I was mistaken. I will pass the large trout for the present and give you the result of my investigation of the small fish. When I say small I mean from one year to eighteen months trout. I was in the habit of placing some of the fish in a spring well for general observation. As the water was clear and the space narrow, it afforded me a good opportunity to watch the growth, habits and movements of the speckled beauties. Several times I came to my spring and found some of the number missing. I examined the screens and found there was no chance of escape by that means. I then placed six eighteen months old fish in the spring. Next morning I found one missing. At 4 P. M. on the same day two were missing. On the following morning only two remained. Then I became alarmed, and thought the fish were playing cannibal; so I determined to solve the problem, if it took me the balance of the year. Knowing that one of the fish was taken or disappeared between 10 A. M. and 4 P. M. the previous day, I began to watch, and was rewarded at 2 P. M. by noticing something crawl from under a bunch of water cresses which grew on the edge of the spring. It first appeared like a mouse. When it reached the water it dove down and like a flash it was up again, with something attached to it. I was not slow in capturing the intruder, and found to my surprise that it was a large bug, resembling a good sized locust, having one of my small fish in his grasp.

Now, gentlemen, as I am no entomologist, I do not know the name of it, but from the manner in which it held the trout I should call it a bear bug, for indeed the poor fish was getting a bear's hug. Having placed it in a jar of water it still held on to the fish, and seemed to enjoy its imprisonment. From observations with the naked eye, while the bug was in the glass jar, I could see that it tortured the fish from a tubular prong, which it cast from the tail and fastened on the fish. In a second it became inflated to double its size. Now, gentlemen, as our worthy treasurer remarked, I think this is a "blood-sucking fisherman, and largely the cause of the depletion of our small fish." Being inquisitive to know if the thief would live out of water, I emptied the jar and placed some screen work over the mouth for the purpose of procuring air. Next morning I found the bug with his toes turned up and his victim beside him; so I found, good fisherman as he was, he differed from the many anglers of the present day. Nothing but spring water would suit his bugship, and enable him to feast on his dainty morsel.

Now, to return to the large fish. It is not very pleasant to find a large trout dead or dying without any seeming cause, as the fish would look healthy, and as proof of such, when captured and opened, you find that it has eaten a good feed a short time previous. One day last month I was feeding some large trout that had come down from the spawning beds. Suddenly I noticed one of the number jump clear out of the water, wriggle a moment and then keel over. I took it on the bank and first examined to see if it had choked itself; but that was not the cause of death. At once opened it and discovered a four-inch red worm coiled up near the heart. I closed up the fish and folded it in paper, intending, as I did afterward, to take it to Mr. Blackford until we could hold an inquest. In the meantime some friends came to the pond. I went to show them the fish and worm, but, to my surprise, the worm was gone. I searched all the intestines, but without success, and was about giving up the search when, noticing a small rise in the skin of the fish, close to the ventral fin, about the size of a small pea, I cut the same, and found the worm coiled up under the skin as it was in the breast when I first discovered it. I have not yet received the name of the worm from the men versed in such matters, but I know, gentlemen, that it is able to enter a fish, that it may attack or make its exit from it in less than a minute. From later observations of fish, I have seen the worm crawl out and then disappear in the body of the fish in about half a minute. The spot attacked in this case was also near the ventral fin. Gentlemen, that this worm, in connection with the bug, accounts for the scarcity of fish in our streams, I have not the slightest doubt, and hope that all of you engaged in fish culture will look out for such things.

Professor Fuller said there was but one thing in the United States that would do as the insect described would do. It was the bug, scientifically known as *Belastoma grandis*. It was about three inches long and one inch broad, with powerful claws and a long probosis.

We can scarcely imagine anything more horrible than this armor-clad cold-blooded monster which runs like a swift on land, darts through the water and out of it, like a fish torpedo, soars high in air and drops like a fish hawk, a shooting star, or a hot potato, upon some devoted trout's back which is momentarily exposed at the surface of the water in which he swims. No strategy of trout can outwit this frightful beast. At some opportune moment he quietly drops from aloft and fastens his sharp hooks into his sides; he pins him fast with the point of his tail; and sucks his blood with his awl-like proboscis. No effort can shake him off. Though he dive to the deepest part of the pool, or scour himself against the sharpest stones; though he leap from the surface, or drag himself ashore in his agony; this big bug is there all the same, and all the time. He hangs to him like the Old Man of the Sea, and never lets go until the trout is sucked dry and succumbs to the loss of all his juices. Were the Belastoma grandis as large as the octopus, he would be infinitely more terrible. Inasmuch as we once had knowledge only of the little cuttle fish, but now know of the existence of his gigantic relative, even so may there not somewhere exist a Belastoma to which the little chap now called "Grandis" is but as a trifle in comparison? We shudder at the possibility.

LAND-LOCKED SALMON IN MICHIGAN.

Chicago, March 8, 1879.

Editor Forest and Stream:

I have been waiting for some one to give an answer to Mr. Metheany's letter in Forest and Stream. Ever since the planting of these species of the *salmo* tribe I have watched with a great deal of interest the sportsmen's journals and such Michigan papers as often come to my hands for some accounts of them. My interest in them has sprung from a desire to pit the skill of a troutist against one of these fine fish, and know of one location in Northern Michigan that has always been watched with keen interest as a likely place to see salmon rise and dash up the rapids from Lake Michigan to another chain of lakes. We have reason to think these views are correct.

In the spring of 1875 some 316,000 salmon trout were put into Traverse Bay, and the same number in Lake Michigan at the mouth of Pere Marquette River. In the fall of 1876, in November, I think, 100 of these salmon trout were caught in the east arm of Traverse Bay, in a gill-net, averaging 5 lbs. each. This seems to be a fair growth, a little more than 18 months, in that time they had attained the weight of 5 lbs. The following spring a fish was caught at Elk Rapids that was unknown to those who saw it. This was not a bass, or lake trout, or pickerel. From description sent me by friends residing there, we concluded it was one of this fry deposited by Mr. Jerome's assistants in 1875. This fish was undoubtedly watching its chances to ascend the rapids to get into the chain of lakes connecting with Lake Michigan at that point.

The salmon caught in Log Lake we think belonged to fry put in there May 19, 1876, by Mr. Bleazby, of Calkaska, who put in 5,000. This fish compares favorably with others caught in different localities. Some of the same species were put into Rapid River connecting with Torch Lake, and Lake Michigan at Elk Rapids. In connection with this fact, we would say that in all these small rivers and creeks, we have noticed swarms of young fry (minnows), that must be counted in as food for these salmo. In Rapid River, in the small creeks up in the Boardman Swamp wherever cold running water was found—in creeks not over a foot wide—we have noticed these little minnows, that as they grow larger must run down stream and thus furnish food for trout and salmon. Under these circumstances these fresh-water kings are bound to thrive and take on flesh, and will be found where food is plenty. The same may be said of almost every stream up in this fishing region. For five summers we have noticed these points, and have found that at the mouth of such streams we find the biggest trout, lying in wait for the small fry that come down stream.

We, who year after year delight to find fresh trout streams, but time confines us to this famous State, will look with a great deal of pleasure forward to the summer, when, with the Doctor, or Silver Jock, or Montreal, we can lay out a line and attempt to allure these fine fish to take our flies, and feel something of the peculiar sensation of one who takes his first salmon, although they may not be so game as the King of Fishes, "The Salmo Salar." W. David Tomlin.

Growth of Michigan Land-Locked Salmon.—The first fry planted in twenty-one months attained an average growth of 5lbs. The salmon caught in Log Lake, in little more than two years' growth, weighed 8lbs. and some ounces.

California Salmon in Virginia.—The Fish Commissioners for the State of Virginia have planted 75,000 California salmon in the Rapids near Nason, Orange Co. Efforts are now being made to secure an approved fish paddle for the mill dams on the streams.

Natural History.

For Forest and Stream and Rod and Gun

URSUS AMERICANUS.

THE American black bear has always been a favorite theme of story among both white and red men. They have been found in all the States from Maine to Florida. The climate of the Northern and Middle States seem, to be well adapted to the nature of the animal, although individuals differ somewhat in size and shape, even in the same localities; some having shorter legs, shorter body, the head broad and flat between the ears, and a short peaked muzzle of light gray color, while others have longer legs, longer body, a head equally broad between the ears, but more rounded, longer and larger, and the muzzle of brown color. He is a formidable antagonist when wounded or provoked, but seldom makes battle when allowed to escape. He has wonderful vitality, and, to use a hunter's phrase, will carry off more lead than any other animal. I believe that an old lean bear can travel more miles over a rough country in the space of one week than any other wild animal. The gray wolf might gain a few lengths during the first three days, but at the end of the week I think the bear would come out several miles ahead. Who ever heard of a lean bear tiring down. Let him thoroughly understand that he has got to "git up and git," and he will lead off a race that will surprise both men and dogs. When closely pursued by dogs, he has a peculiar trick of changing ends; that is, making a sudden whirl rearward, and woe to the unlucky dog that is within the sweep of his murderous paw. This sudden turn causes a momentary halt among the pack, while the speed of the bear don't seem to be diminished, and he gets about a quarter of a mile the start before the dogs begin to comprehend the trick.

The bear can subsist on very short allowance, and will thrive fast when food is plenty, and at such times will frequently become extremely fat, when he becomes a more easy prey to the hunters. The flesh of the bear, when fattened on mast, is of excellent quality and fine flavor, and was highly prized by the early frontier inhabitants. He is not carnivorous by nature, but in the absence of vegetable diet will eat mutton and young pork with evident relish. He will tear the bark from rotten or decayed logs in search of snails, grubs and worms, which he eats with avidity.

He destroys wasps' and humble-bees' nests; will demolish ant-hills, simply for the small amount of sustenance contained in their eggs, but his natural food is esculent roots and nuts of all kinds, blackberries, whortleberries, black cherries, and wild fruits of all kinds, also green corn in the milk.

Their depredations in corn-fields were frequent among the early frontier settlements, and various were the ways and means resorted to for the purpose of capturing the nocturnal depredator, sometimes causing ludicrous baps and mishaps. I remember an old backwoods farmer, having three or four boys, who discovered that a bear had been making sad havoc every night in the middle of the corn-field, pulling down the roasting ears at a fearful rate. The boys held a council of war, and decided to invite all the boys from the neighboring settlements that had dogs, and by sundown a small army of boys and dogs had collected. The plan of operation was that the boys and dogs should get under cover of a brush fence at the opposite side of the field from where the bear was expected to enter, while the foreman, or commander-in-chief, should lie concealed in a bunch of basswood sprouts; a short distance in front of the rear guard, and wait for the first sign that would indicate the arrival of the bear, when, at a given signal, the dogs were to be let loose, and trust the chances of war for the result. In the meantime the old farmer, without consulting the boys, had built a staging about eight feet high, against a dry hemlock tree that stood at the opposite side of the field, and near where he supposed the bear would pass in coming in; and in the dusk of the evening he mounted the scaffold, having an old musket, well charged with buck-shot, and, as it was full moon, he was determined, if possible, to vanquish the enemy before the canine forces should be called into action.

The best laid plans are liable to failure, as the result will show. The night was still and quiet, the old farmer clung to his perch until the moon rose high in the heavens; he could see shadows plenty, but not a shadow of the bear, and while he was about to pronounce the whole campaign a failure, there arose a horrid discord of yelps, barks, hallooing and screeching. The bear came dashing down through the corn, with the whole yelling pack in close pursuit, and in less time than it

takes to write it, was climbing that same dry hemlock, and precisely opposite the old man, who was still clinging to his frail support. Now if the bear had gone straight up, as a bear should do,—but no, he did just as a bear always would do, he took a spiral course, and by the time he got about sixteen feet up he was squarely even with the old man's head, and, as bad luck would have it, the loose bark gave way, and down came the bear, old man and scaffold (as he afterward said) all in one promiscuous heap. The bear soon separated and put for the woods, with every dog in full chase, while the boys carried the old gent to the house, with one shoulder broken, a sprained ankle, and, as he said, otherwise badly demolished, and he ever after contended that bear hunting was an uncertain investment, and that he would take no more stock in that business. ANTLER.

SPRING NOTES.

SALEM, Mass., March 17, 1879.

Among spring birds recently noticed have been red-winged and crow blackbirds, song sparrows and bluebirds; also tree sparrows, crows and bluejays are mating. Harbor open; Rowley and Ipswich rivers partly open; Essex River all clear. Johnson, of Rowley, shot eight black ducks last week. Greenwood, of Ipswich, shot some whistlers. Snow bunting about gone. Some shore larks left. R. L. U.

BUFFALO, N. Y., March 15, 1879.

The first snipe in the vicinity this season was reported by Mr. W. C. Jacus as shot on the 13th inst. Bluebirds, and robins were seen in number on the 10th. Mergansers in the river for nearly a week. A woodcock was brought in one day this week, killed by flying against a telegraph wire. UNCAS.

GOOD MICROSCOPES.—One of the most necessary aids to the study of Natural History is a good microscope, and, besides its value in this respect, it is one of the most interesting articles which one can own, simply for amusement. We have recently examined with great interest and pleasure a number of microscopes at Gall's, of Union Square, and we desire to recommend these instruments to any of our readers who may be thinking of purchasing one. Mr. Gall's stock includes stands of all descriptions, from the most highly finished ones by the greatest London makers down to those of the most simple and inexpensive style. Of object glasses, eye pieces, and all the other belongings of the complete microscope, their stock is not less full. We have ourselves used one of these instruments, and do not hesitate to highly recommend it. Sportsmen will find at this establishment a splendid lot of telescopes and field glasses. Mr. Gall is one of the oldest opticians in New York, and he and Mr. Lamke will be found very agreeable people to deal with.

RACCOONS AND MUSKRATS—*Clams and Coon Oysters.*—These interesting subjects are likely to attract some attention. The clam question elicits two letters this week. Doubtless the Southern coast dwellers can tell us how the coons go down to the oyster reefs at low tide and fillip the precious mollusks out of their gaping shells. Sometimes the bivalve closes so quickly that it catches Mr. Coon by the paw, and he dies a horrible death as the tide rises slowly. You can hear the moaning of the "tied" as the sound of his last suffocating gulp mingles with the gentle swash of the incoming flood. At such a time the happy mollusk releases his hold and there is a gurgle down below, while the drowned coon and a bubble rise together from the bottom. We have heard that the coons have a habit of slyly dropping a pebble into the open shell of the oyster, whereby they can extract the luscious morsel at leisure. It is only where pebbles are scarce that the raccons run any serious risk. A corner on pebbles would be likely to corner the coons. D'ye see:

BEDFORD, O., March 2, 1878.

EDITOR FOREST AND STREAM:

If Dr. E. Sterling will examine the shells of fresh water clams that have been opened by muskrats, as I have often done, he will find nearly all of them with one or more places nicked out of the thin edge of the shells. The rat holds the shell with his fore-feet and inserts his strong incisor teeth between the two valves, and by a long and strong pull he overcomes the resisting power of the bivalve, and by means of his fore-feet and the incisor teeth he tears asunder the strong muscles and eats at his leisure.

This is no guess work, for I have seen the muskrat do it more than once at a certain place in the Mahoning River when fishing for the Ohio River pike. T. GARLICK.

BARABOO, Wis., March 5, 1879.

EDITOR FOREST AND STREAM:

With regard to the muskrat, and the way they open the fresh-water clams, my experience is that the rats disable the back of the clam with its teeth in some way or other; or, in other words, force the the hinge where most of the strength lies, then pry it open with ease. ED. HOLLAND.

LINNEAN SOCIETY.—The meeting of March 8 being the annual meeting, the election of officers was first in order. Mr. E. P. Bicknell, of Riverdale-on-the-Hudson, was elected President; Mr. H. B. Bailey, of Orange, N. J., Vice-President; Mr. N. T. Lawrence, of New York City, Treasurer; and Mr. F. Benner, of Astoria, L. I., Secretary. Mr. C. Hart Merriam, the efficient president of the past year, goes to his home in Locust Grove, N. Y., to take up the practice of medicine.

Mr. W. C. Osborn read a paper on the distribution of the *genus Helminthophaga*. This small group of warblers is chiefly characteristic of the United States, only one or two species being found as far south as Columbia, in South America. Mr. Bicknell read a paper, continuing the subject of the autumnal northward migration of several species of southern nesting birds. This paper was a fuller *resumé* of the subject than one read some time before by him. Taking New England as a field of observation, he noted—first, that accidental occurrence of birds out of their usual habit are usually in the fall; second, the great fondness or knowledge of locality which birds have, as their annual return to the same nesting-places proves. Then, since formerly the zone of tropical life extended northward even to the extent of including the now frozen regions of Labrador and Greenland, the fauna naturally had a more northern distribution, and these constant recurrences of southern birds would seem to indicate traces of embryonic origin, especially as they are mostly birds of the year, where this tendency to reversion is most predominant. Instances were cited of the occurrence of the cardinal grosbeak (*Cardinalis virginianus*) and the great and little egrets (*Ardea egretta* and *candidissima*), both of the latter being taken as far north as Massachusetts and the Gulf of St. Lawrence. Some birds which formerly bred in New England have entirely disappeared, and these will be found to be centrally distributed, while those occasionally represented are inhabitants of the Atlantic sea-board.

Mr. Merriam said, on the authority of a resident, that a pair of white egret, with their young, had for a number of years been in the habit of coming to Lake Saltonstall, near New Haven, Conn., late in August and remaining for some weeks. An extract from a letter from Mr. Thos. W. Wilson, of Lentes Landing, Florida, giving an account of his taking some fine specimens of the ivory-billed woodpecker (*Campephilus principalis*) at that place this winter. This bird is not at all abundant, and specimens may be regarded as good additions to one's cabinet.

COST OF IMPORTING MIGRATORY QUAIL.—Our readers know that there is a general movement on foot to import migratory quail to America in quantity, several parties in different parts of the country having filed their orders with the Boston gentleman who has undertaken the shipment. There has been some indefinite idea as to the exact cost of importing these birds. The following letter will make the matter plain:

BOSTON, March 17, 1879.

EDITOR FOREST AND STREAM:

Dear Sir—In answer to many inquiries for definite figures as to cost of migratory quail, I have written my correspondents, and now give you the following statement: I have received orders for more than 1,000 birds, and the price is consequently reduced to Mr. Braim's 10-cage basis, as follows:

Cost of birds at Messina per cage of 100 birds	$13 00
Transportation to New York	1 60
Foreign exchange, say 1 per cent	19
Total	$191 9

Any person desiring to have his order go forward with ours can send me a postal order for $19.19, with the full address to which he wants the birds sent. Upon their arrival at New York they will be forwarded to him by express, at his expense. Upon receipt of his postal order I will purchase the foreign exchange for him and forward his order, with the other, to Mr. Braim. All orders must be here on or before Wednesday, March 26. No orders can be filled for less than one cage. HORACE P. TOBEY, 17 Oliver st.

MIGRATORY QUAIL.—We publish the following extract from the letter of a gentleman whose club imported some migratory quail last season:

"As regards the success of the experiment, I am perfectly satisfied so far, as the birds nested immediately on being turned out and raised fine broods. I myself put up one brood of young migratory quail the last of July, of some fifteen birds over half-grown; and from the reports of the farmers and others, who were more in the fields than I, I am satisfied that the two hundred birds imported by our club raised from eight hundred to one thousand young during the past season. The only question now in my mind is the proportion of our birds that will return to us the coming spring. Judge Everts, of Rutland, Vt., imported two hundred a year ago last spring, and his first birds returned in considerable numbers to him last season; so we are satisfied that they will stay somewhere in the country and will increase rapidly. Our birds reached us here in splendid condition on June 8th, every bird alive. They are a trifle smaller than our own Bob White, but I am satisfied they will make a most valuable addition to our game birds. They have a larger spread of wings than Bob White, and know how to use them. They nest in meadows, grain fields and the like with us, near running water."

TALMAGE ON QUAIL.—*Rutland, Vt., March 1.—Editor Forest and Stream:* The following is an extract from a recent sermon by the Rev. Mr. Talmage. Who would have supposed that such fearful danger lurked under the wings of the pretty little "migratory?" Well, danger or no danger, I am willing to take my share of the responsibility, and, Talmage or no Talmage, I mean to encourage in every way I can the importation and protection of this the coming game bird of the Northern and Middle States. Here is the extract from the sermon:

"The next turning point is when man comes to his first great success. That is your trial—your test hour. At that point hundreds of men make a great mistake, and whole caravans of camels are going through the needle of their meanness. They become lofty and walk arrogantly through the streets, as though saying to every one else, 'Get out of the way, for here comes $300,000!' [Laughter.] Many men, before amiable and kind, when wealth comes are arrogant and haughty. They go driving along at a rapid rate, until too late they find that they are being driven by the fiery feet of eternal disaster, as they come clattering down on the pavements of hell. Winged success often destroys men. It is not the hardship of life that destroys men; it is the flocks of quails."

M. G. EVERTS.

EPIZOA—*Plattsburgh, Feb. 26—Editor Forest and Stream:* While out shooting about three years ago I killed a red squirrel, on which was a worm—at least, that is what I should call it. It was in a kind of pouch in under one of the squirrel's hind legs. The worm was about 1½ inch long and ½ inch wide. It was of a dark brown color. Last fall I shot a gray squirrel, and under one of its fore-legs there was the same kind of a worm in the same kind of a pouch. I removed the parasite, and tried to crush it, but found that I only pushed it into the ground and could not crush it. The fur of the squirrel around the pouch was all worn off.

Can you tell me if this worm is often found on squirrels, and if it is found on squirrels only or also on other animals? I would like any information on the subject.

Yours respectfully, F. B. JOHNSON.

These grubs are frequently found on squirrels and other animals. For a more detailed account of them than we have now space, for see FOREST AND STREAM, Vol. XI., p. 482, Jan. 16, 1879.

ALBINO WOODCOCK—*Augusta, Ga., Feb. 17—Editor Forest and Stream:* There is in the possession of a gentleman in this city a white woodcock. It is entirely of white, with the exception of a slight brown ring around the neck. It was killed two years ago by a negro hunter a few miles from the city. R.

A "MARKET HUNTER."—This is the way the Boston *Herald* market reporter dishes it up for the intelligent people of the Hub:

The novelty in the meat market the past week has been some moose meat, probably from Maine or Canada. The moose, so called, is properly an elk, belonging to the reindeer family. It is a clumsy, awkward, disproportioned creature, larger than a horse; can run, trot, leap or swim when occasion calls. Its head is too large for its body, and, Audubon says, "forcibly reminds us of that of an enormous jackass." But Audubon must have forgotten the enormous horns which the male moose carries and the jackass does not. The horns of an adult moose are said to weigh from 50 to 75 pounds, while the creature itself weighs from eight to twelve hundred weight. The "majesty" of the moose, which is occasionally spoken of, is rather difficult to see. Both sexes have a mass of coarse hair pendulous under the neck, resembling a short tail, which is anything but graceful. As to the eating qualities of the moose, the flesh is coarse, seldom fat; the yearlings are preferred by hunters; steaks are juicy and sometimes tender; the tongue is much relished, the marrow of its bones is used for butter, and, upon the whole, it may be made tolerably useful in a hunter's life; but, excepting in the name, does not amount to much in a well supplied market, and very little of it ever gets here. We are impressed with the idea that it is here now in violation of law in Maine. Moose, it is said, have been domesticated like the elephant, and taught to draw carts and sleds, but they sometimes get a little impatient and wrathy at particular seasons.

And the best of it all is that it was caribou!

WINTER IN THE NORTH.

RADNOR FORGES, Prov. Quebec, Canada.

EDITOR FOREST AND STREAM:

I have just returned from a hunt among the lakes and mountains of the Ste Maurice region (47 deg. N. latitude), and am now once more within the bounds of civilization, feasting on the delicious meat of the caribou, with FOREST AND STREAM for mental pabulum. A few brief notes of living objects observed may interest your readers. A record of the thermometer fifty miles south of my camp showed 30 degs. below zero for the coldest day. Snow three feet deep and light when I left camp, rendering snow-shoeing bad.

Caribou (*Rangifer caribou*) I was so fortunate as to see on the first day of my hunt. The largest herd discovered numbered but nine, and in previous hunting I have found no more than thirteen together. Herds of thirty or more are not rare, especially where the snow accumulates to a depth of five or six feet in March. But I have never hunted caribou later in the winter than the month of January, and now there is a law prohibiting the killing of them later than Jan. 31st of each season. A family of five beavers (*Castor canadensis*) were residing in their house near my camp. While cautiously approaching some caribou one day, I saw a marten (*Mustela americana*) in full chase after a red squirrel ("chickaree," *Sciurus hudsonius*) upon the trees. It is a rare occurrence to see a marten alive in the woods. The one in question, a very fine dark-colored specimen, was arrested by a view of me, and poised himself on a branch, where I could have easily killed him by a shot from my rifle. Upon the borders of the lakes and streams the northern hares (*Lepus americanus*) abound in limited numbers, and there are a very few foxes in the locality. The tracks of a species of mice were seen, but none of the animals themselves. No other animals than those mentioned were observed. I was surprised at the entire absence of those usual camp habitues, the Canada jays, known by the various local names of "Moose-bird," "Pee," "Pork-bird," "Whiskey-Jack," etc. Nor did I see a single cross-bill (*Curvirostra*). No willow grouse (*Ptarmigan*) have as yet been seen in the vicinity. The Tete de Bull Indians have a saying that "When it rains in the North the white partridges (*Perdrix blanche*) move South," and it is usually in the spring that they are most frequently seen in Canada. They are very plentiful here at times, and some years none at all are seen. The ruffed grouse and Canada grouse were seen near camp, the downy woodpeckers (*Picus pubescens*), three-toed woodpeckers (*P. arcticus*), titmice, snow buntings, red-poll linnets, and one owl. The latter was seen flying across a lake at too great a distance to determine the species. Two days were needed to come out from camp, and the night I passed in the house of an "habitant." There I saw in a cage a male goldfinch (*Chrysomitris tristis*), one of several caught from a flock of about sixty of the same species on Feb. 15, 1877. This occurred at about 46 degs., 45 mins., north latitude. The snow was very deep at that time, and the weather so cold that some of the birds were found in the snow chilled beyond recovery.

Caribou hunters know the advantage of having a companion, yet few among my many sportsmen friends in various quarters of the globe desire the long and arduous hunting trips that I improve at opportunities of taking, and on this last hunt I was alone.

EVERETT SMITH.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN, SATURDAY, MARH 8.—One Bactrian camel, *Camelus bactrianus*, born in the garden six prairie chickens, *Cupidonia cupido*, presented by Chas. W. Mathews, Esq., Philadelphia; one otter, *Lutra canadensis*, purchased.

ARTHUR E. BROWN, Gen. Supt.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR THE WEEK ENDING March 15.—Two garter snakes, *Eutainia sirtalis*, presented by Dan Williams, Phila.; one quail, *Oryx virginianus*, presented by A. J. Onderdonk, Phila.; one male leopard, *Felis pardus*, purchased; three sirens, *Siren lacertina*, presented by Dr. G. E. Manigault, Charleston, S. C.; one canvas-back duck, *Aythya vallisneria*, presented by H. W. Biddle, Phila.; one black bear, *Ursus americanus*, presented by John B. Fry, Johnstown, Pa.; one flecker, *Colaptes auratus*, presented by John Pearsall, Phila. ARTHUR E. BROWN, Supt.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING March 8.—One mink, *Putorius vison*, presented by Gen. L. L. F. Appleby, New Jersey; two polar bears, *Ursus maritimus*; two black leopards, *Felis leopardus*; one black camel, *Camelus dromedarius*; thirty-five monkeys, various species; gray parrots, yellow-crested and Rosa cockatoos. W. A. CONKLIN, Director.

—The Governor of Florida has signed the joint Legislative bill authorizing the construction of a railroad between Jacksonville, St. Augustine, and the Indian River. This will be a most important link to tourists.

Woodland, Farm and Garden.

How to Sow Wild Rice.—This interesting question which we have answered so very many times within the past five years, seems still to perplex some of our "attentive" readers; and as the following note to a gentleman to whom a quantity was consigned by Mr. Valentine, affords us an excuse for gratifying these attentive readers at the expense of many others less attentive, we print it:

Janesville, Wis., March 14, 1879.

Dear Sir—To secure the best results, soak the seed until it will sink; then sow it broadcast on the water over a mud bottom, where the roots will always have at least six inches of water over them. Three feet of water over them is still better. The idea of soaking is merely to cause the seed to sink at once and thus escape the birds and prevent floating away. Once rooted it spreads rapidly both from the roots and its seeds; therefore it may be sown sparsely. I do not think it can be exterminated where once introduced, even if the seed was not allowed to ripen. In our Lake Koshkonong, although the blackbirds pick the rice off before it ripens, still it increases, or at all events holds its own. It never grows except from under the water. R. Valentine.

Texas—*Mason, Feb. 25, Editor Forest and Stream.*—Mason is the capital of Mason county, named in honor of Col. Mason, U. S. Army. Its location is beautiful. This was selected by Maj. H. W. Merrill, 2d Regiment, U. S. Dragoons, in Aug., 1851, on which he established the frontier post of Fort Mason. This was on the hill which now overlooks the town. At this time there was not a solitary house within the limits of the present county, nor any north or west 600 miles to the Rio Grande. Now we have a flourishing city. The county is about half timber half prairie, and game is plenty. We have a daily mail and a live weekly paper—the *Mason News-Items*—which tells all about the country, etc. The U. S. Military Telegraph, which connects all the extended frontier posts, and which is open for telegrams, passes through the town to the headquarters at San Antonio, thereby placing us in ready communication with the most of mankind. Peach trees are now in blossom, the weather is quite warm, and corn is being planted, while some is up. Our garden vegetables look well, and the prairie grasses and numerous wild flowers are peeping forth. Our farmers are hard at work in putting in their crops. Deer are quite numerous among the hills just south of town; wild turkeys have commenced their spring strutting and gobbling, and the Nimrods are preparing their shooting-irons to gobble them up. The Llano River, a small, clear and rippling water, eight miles south of us, is the place for them. Camping on its pleasant banks, as we often do, there comes sweet music from among its spreading trees, especially just at the "peep-'o-day." Now listen but for one moment as the morning star announces the coming day. From way down the stream there comes the clear wooble-wooble-wooble of the distant bird. A moment more we listen for the answer. Here it comes; this time way up the stream. "Wooble-wooble-wooble!"—both young ones, I know. And now comes from right over our heads the voice of the old patriarch himself, "Gobble-gobble-gobble-thuze-thuze-thuze-ee!" "I hear the 'thuz,' boys—up and at 'em! Good for twenty-five pounds, at least, and 'no bones in his throat, sure!'" The maidens all answer "Quit-quit-quit!" of course, but they don't mean it. And now, bang! bang! bang!—you can imagine the rest.

The cattle owners are busy hiring their men and "rounding-in" their roving herds, to drive them north 600 miles through the Indian country and over the great green grass plains to Arkansas and Nebraska. Here they herd and graze them for awhile; then sell them, and return for more. About 225,000 head will go the overland routes this year, while other vast numbers will be shipped to St. Louis, Chicago, etc. About 14,000 head will go from this section. Mr. J. Gamel, of this place, will drive about 3,000 head of one, two and three years old, besides beeves and other stock cattle, to graze on his intended auxiliary ranch on the Platte River, Nebraska. Values: yearlings, $6; two years old, $9; three years old, $12.

Llano County joins us on the east. G. W. Norris and Gen. Westfall, of said county, are amusing themselves in trapping beaver along the streams, and coons and civet cats in the woods. They have caught four beavers, five coons, one civet cat, and many other animals. Norris is 67 and the General 80 years old. Truly, "this ruling passion" is strong to the end, and a good old end it is; it serves to lengthen our days. In conclusion, there is money to be made here, Mr. Editor, besides much real pleasure to be found. Will you and your friends pay us a visit? You will be most heartily welcomed to the feast. You will here find on all sides nature's broad fields spread out before you, where you can roam with either "rod or gun," and with none to make afraid. X.

Varieties of Potatoes Compared.—Mr. John I. Carter writes to the *Country Gentleman* the following results of his trial of different kinds of potatoes on the Pennsylvania Experimental Farm this season. A piece of fallow ground, planted in beets last year, was selected for this trial. It was manured lightly with barnyard manure in the previous fall and again in the spring, with another coat of pig-pen manure, which was plowed down. Rows were struck out three feet apart and an application of five hundred pounds of ground bone was put in the row. The sets were planted fifteen inches apart in the row and covered with three inches of earth with a hoe. They were planted April 9 and well worked. The potatoes were dug August 27 with the following result:

Variety.	*Time of Ripening.*	*Per cent. small ones.*	*Yield per acre.*	
Extra Early Vermont	Aug. 1	8.0	249 bu.	38 lbs.
Carpenter's Seedling	Aug. 1	8.0	151	31
Victor	Aug. 25	2.0	375	11
Beauty of Hebron	Aug. 5	5.0	216	27
Seedling No. 33	Aug. 25	10.0	366	33
Brownell's Beauty	Aug. 20	5.0	316	20
Farmer's Glory	Aug 20	5.0	242	26
Peerless	Aug. 25	5.0	291	44
Lat. Rose	Aug. 15	6.0	129	52
Seedling No. 21	Aug. 1	8.0	187	35
Brownell's Success	Aug. 15	3.0	262	57
Compton's Surprise	July 25	8.0	127	—
White Grainger	Aug. 20	3.0	319	16

Snowflake	Aug. 10	8.0	270	21
King of the Earlies	July 20	8.0	144	15
Brownell's Eureka	Aug. 1	4.0	195	50
Early Rose	Aug. 1	10.0	115	50

The Kennel.

THE NEW YORK DOG SHOW.

INDICATIONS are that the coming dog show in this city will surpass in interest any of its predecessors. Both in quantity and quality the dogs will be ahead of what has formerly been seen within the spacious walls of Gilmore's Garden. The boarding over of the floor this year will be a great improvement, as the dust which has hitherto been so annoying will be avoided. The champion classes promise to be particularly well represented, as will all the non-sporting classes. Fox terriers will be out in stronger force than at any previous show held in this country. A number of special prizes have been offered, and these will follow the awards in the general classes, where the special judging is not required. All, or nearly all, of the railroads centering in New York have offered to carry dogs, when accompanied by their owners or attendants, without charge. Express companies carry them for one-half rates. Lithographed letters of railroad superintendents will be forwarded to exhibitors. Dr. J. B. Coleman, M. R. C. V. S., has been appointed veterinary surgeon and will examine all dogs before they are admitted. Entries close March 28.

The judges, of whom there will be three for each division, have not yet been all appointed, but those who have thus far accepted are: John Davidson, Esq., of Monroe, Mich.; Col. DeLancey Kane, and John I. J. Granger, Esq., of this city, and John A. Wise, Esq., of Richmond, Va., son of ex-Governor Wise, of that State.

The following specials have already been classified:

Messrs. Parker Brothers, of Meriden, Conn., have donated one of their best breech-loading shot-guns, value $200, for the best native English setter dog or bitch that has never won a first prize.

Messrs. Conroy, Bissett & Malleson have donated a splendid split-bamboo fly-rod to be given to the best Irish setter dog or bitch that has never won a first prize.

Messrs. Remington & Sons donate one of their famous long-range Creedmoor rifles for the best brace of English setters.

Messrs. Thompson & Sons donate a complete hunting suit and gun case, value $30, for the best pointer dog or bitch that has never won a first prize.

Mr. Francis O. DeLuze offers two very elegant gold scarf pins; one for the best fox terrier dog, the other for the best fox terrier bitch.

Messrs. Conroy, Bissett & Malleson have also donated a ladies' silver-mounted, snake wood, silk wrapped club-bow, with arrows, etc., to be given to the best toy or pet dog exhibited by a lady.

Mr. Louis B. Wright gives a silver flask, valued at $75, and manufactured by Tiffany & Co., for the best black and tan setter dog that has never won first prize previous to this show.

PHILADELPHIA DOG SHOW.

WE have received and print below the premium list of the first dog show to be held by the Philadelphia Kennel Club in the Industrial Art building in that city on April 21 and four following days. The premium list is on a most liberal scale, and in the hands of the gentlemen whose names appear as the committee of management the affair will undoubtedly be a great success. The number of dogs is limited to 735, as the committee wisely decline to receive more than they can comfortably care for, and we doubt not that this number will be reduced before the date of closing the entries, which, by the bye, is April 5, three days before the opening of the New York show.

This will be somewhat embarrassing to exhibitors who desire to enter their dogs at both shows, as first-prize winners at New York would be either debarred from competing, or else have to go in the open class. We presume the latter is the plan which would be followed. Five days seems rather a long time for the show to continue, but as it does not open until noon of the first day that may be looked upon as a *dies non*. We do not print the rules under which the show will be held, as they are those adopted jointly by the Philadelphia and Westminster Kennel Clubs, and were printed week before last. The regulations, however, being local, are given. The most striking thing in the way of a departure we find in them is the clause restricting the age of competing puppies to eight months and over. The plan of charging an extra fee of one dollar where dogs are for sale we consider a good one, and much better than the mode of charging an imaginary commission which is never, or "hardly ever," paid. The committee, judges, etc., are as follows:

Committee.—John C. Johnson, James B. England, Dr. L. H. Twaddell, Benj. W. Richards, John Markoe, Frank Furness, William D. Winsor, George Emlen, Alfred Biddle, James N. Whelen.

Judges—For Pointers, Setters and Spaniels.—John E. Long, Detroit, Michigan; Maj. J. M. Taylor, Lexington, Kentucky; J. D. Sargeant, Philadelphia, Penn. For Beerhounds, Greyhounds, Foxhounds, Beagles and Dachshunde.—Dr. J. Howard Willetts, Port Elizabeth, N. J.; William C. Hay, Winslow, N. J.; Josiah Hibberd, Philadelphia, Penn. For all Non-Sporting Dogs.—Dr. Theodore Fassitt, Philadelphia, Penn.; William Struthers, Jr., Philadelphia, Penn.; Edward Dudley, Camden, N. J.

Veterinary Surgeons.—John W. Gadsden, James A. Marshall.

Regulations.

1. All entries must be made on forms which will be furnished in blank by the Club and, after being filled and signed by the owner of the dog, or his agent as such, must be returned to the Club.

2. The entries will close Saturday, April 5, unless 735 dogs (the limited number) shall have been entered prior to that date, after which no entry can be made.

3. Every exhibitor must see that his dog is entered in the class designated for his kind. If not so entered he will be disqualified from competition.

4. It is desirable to have every dog's weight, color and marks stated in the entry for the purpose of identification. In classes designated by weight the dogs will be again weighed at the time of judging them. The variety or breed of the dog entered in the miscellaneous class must be stated on the entry form.

5. A fee of two dollars must be paid at the time of entry for every dog over eight months of age, entered in a regular class; and an additional fee of two dollars must be paid for every dog entered in a class for a special prize. No dog can be entered for a special prize until he has been entered in a regular class.

6. Puppies under eight months of age on the day of opening the show cannot compete for prizes. A fee of one dollar each must be paid at the time of entry for every weaned puppy under eight months of age, and they must all be entered in the Extra Class 72. Each litter of unweaned puppies is included in one entry fee of two dollars paid for the dam, and they must all be entered in the Extra Class 72, except when the dam is entered in a regular class for competition.

7. Exhibitors will not put a value on their dogs, unless for sale. If for sale, it must be so stated on the entry form, when a fee of one dollar for each, except for unweaned puppies, in addition to the entry fee, must be paid. When unweaned puppies are for sale a fee of one dollar must be paid for each litter, in addition to the entry fee paid for their dam. No commission will be charged on any sale. Cards printed "For Sale" will be furnished and attached to the kennel.

8. No card or notice of any kind can be placed over a dog, or his kennel, without permission of the Committee of Management.

9. In the Foxhound and Beagle classes a dog or bitch competing as one of a couple cannot compete singly for another prize; and it must be stated in the entry whether it will compete as one of a couple or singly, and it will be assigned a kennel accordingly.

10. Every exhibitor will receive, after his dog is entered, a certificate of identification and a tag, numbered to correspond with the number of his kennel while on exhibition. When the dog is brought to the exhibition this certificate must be shown and the tag attached to his collar before he will be received.

11. Exhibitors need not accompany their dogs to the place of exhibition, but may send them, and printed cards of direction for this purpose will be furnished on application to the Club.

12. When a dog is sent by express he must be consigned to "The Philadelphia Kennel Club, Industrial Art Building, Broad st. above Vine, Philadelphia." His number, together with the name and address of his exhibitor, must be plainly written on his box or crate, or plainly written or printed on a card and securely nailed thereto. Printed cards of direction for this purpose will be furnished by the Club on application.

13. After the dog has been received his exhibitor will receive an admission ticket which will admit him to the hall during the exhibition without charge. Such ticket is not transferable, and if lost will not be replaced by another. Any one falsely using it will be arrested and the ticket forfeited.

14. All dogs must be at the place of exhibition, Industrial Art Building, Broad st. above Vine, on Monday, April 21, in time to be placed in their kennels before 11 o'clock.

15. No dog whatever, except puppies to be kept in pens, will be received without a suitable collar and chain. And vicious or dangerous dogs must be attended to and exercised by their exhibitors.

16. The show will open on Monday, April 21 at 12 o'clock noon, and on Tuesday, Wednesday, Thursday and Friday at 10 o'clock A. M., and will close every evening at 10 o'clock.

17. No exhibitor will be permitted to take his dog from his kennel, except at such times as will be designated by the Committee of Management. A dog not found in his kennel when called for by the Judges, forfeits his right to compete for a prize.

18. An exhibitor may take his dog away any evening after 10 o'clock, after showing his entry receipt and depositing his identification certificate and five dollars with the check clerk, which will be returned to him when the dog is returned to his kennel next morning before 10 o'clock. If the dog is not so returned, the money will be forfeited. If prize winners are taken away and not so returned, their prizes will be forfeited.

19. Exhibitors must take their dogs into and away from the building by the Wood-street entrance only.

20. The prizes will be paid after 9 o'clock on Saturday morning, at the office of the Committee, upon showing the entry receipts and surrendering the indentification certificates.

21. Exhibitors will have Saturday, April 27th, until 12 o'clock noon, to remove their dogs from the building, up to which time they will be watched and cared for as usual.

22. It must be distinctly understood by every exhibitor at this show, that he enters his dog at his own risk, and that the Committee of Management will not be responsible for any damage to, or the loss, under any circumstances, of any dog entered for exhibition.

The Committee of Management will be in constant attendance during the exhibition, and give particular attention to the care of the dogs.

Two competent Veterinary Surgeons will be present daily.

Experienced and efficient assistants have been engaged, who will feed, exercise, and attend to the dogs at the expense of the Club. Exhibitors are *particularly requested* not to fee the assistants.

Watchmen and policemen will be on duty night and day, so that all proper care will be taken of the comfort and safety of the dogs.

Railroads centering in Philadelphia will transport *free* all dogs consigned to the Philadelphia Kennel Club for the Bench Show, when accompanied by the owner or a man in charge.

When dogs are forwarded by Adams' Express, consigned to the Philadelphia Kennel Club, for the Bench Show, and the freight paid to Philadelphia, they will be returned by the Express Company *free* to the original point of shipment.

Exhibitors at a distance are requested to give notice in due time, to the Club, of the train by which they will send their dogs to the exhibition, when not accompanied by an attendant. All expense attending their transportation to and from the exhibition must be borne by their exhibitors.

The Colonnade Hotel, at Fifteenth and Chestnut sts., will the headquarters of exhibitors from distant points during be the show.

The office of the Committee, at the north-east corner of Thirteenth and Chestnut streets will be open from 9 o'clock A. M, until 5 o'clock P. M. for entries.

All communications must be addressed to the Philadelphia Kennel Club, as above, or P. O. Box No. 1811, Philadelphia.

CLASSIFICATION OF DOGS AND PRIZE LIST.

CHAMPION CLASSES—(See Rule 6).

Class 1—Champion Pointers.—Dogs, 1st, $40.
Class 2—Champion Pointers.—Bitches, 1st, $40.
Class 3—Champion English Setters.—Dogs, 1st, $40.
Class 4—Champion English Setters.—Bitches, 1st, $40.
Class 5—Champion Irish Setters.—Dogs, 1st, $40.
Class 6—Champion Irish Setters.—Bitches, 1st, $40.
Class 7—Champion Black and Tan and Black, White and Tan Setters.—Dogs, 1st, $40.
Class 8—Champion Black and Tan and Black, White and Tan Setters.—Bitches, 1st, $40.

OPEN CLASSES—(See Rule 6).

Class 9—Pointers exceeding 55 lbs.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 10—Pointers exceeding 50 lbs.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 11—Pointers not exceeding 55 lbs.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 12—Pointers not exceeding 50 lbs.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 13—Pointer Puppies over 8 months.—Dogs and Bitches, 1st, $10; 2d, silver medal.
Imported English Setters, and their Descendants of any Generation, without Admixture of any other Blood.—Class 14—Dogs, 1st, $40; 2d, $20; 3d, silver medal. Class 15—Bitches, 1st, $40; 2d, $20; 3d, silver medal. Class 16—Puppies over 8 months—Dogs and Bitches, 1st, $10; 2d, silver medal.
Class 17—Native English Setters.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 18—Native English Setters.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 19—Native English Setter Puppies over 8 months.—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 20—Red Irish Setters.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 21—Red Irish Setters.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 22—Red Irish Setter Puppies over 8 months.—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 23—Red and White Irish Setters.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 24—Red and White Irish Setters.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 25—Red and White Irish Setter Puppies over 8 months.—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 26—Black and Tan, and Black, White and Tan Setters.—Dogs, 1st, $40; 2d, $20; 3d, silver medal.
Class 27—Black and Tan, and Black, White and Tan Setters.—Bitches, 1st, $40; 2d, $20; 3d, silver medal.
Class 28—Black and Tan, and Black, White and Tan Setter Puppies over 8 months.—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 29—Cocker Spaniels exceeding 20 lbs.—Dogs and bitches, 1st, $20; 2d, $10.
Class 30—Cocker Spaniels not exceeding 20 lbs. (Puppies are excluded from this class—Dogs and bitches, 1st, $20; 2d, $10.
Class 31—Spaniels exceeding 30 lbs., excluding Cockers and Irish Water Spaniels.—Dogs and bitches, 1st, $20; 2d, $10.
Class 32—Irish Water Spaniels.—Dogs and bitches, 1st, $20 2d, $10.
Class 33—Chesapeake Bay Retrievers—Dogs and bitches, 1st, $20; 2d, $10.
Class 34—Poodles exceeding 25 lbs.—Dogs and bitches, 1st, $20; 2d, $10.
Class 35—Deerhounds.—Dogs and bitches, 1st, $20; 2d, $10.
Class 36—Greyhounds.—Dogs and bitches, 1st, $20; 2d, $10.
Class 37—Foxhounds.—Dogs, 1st, $20; 2d, silver medal
Class 38—Foxhounds.—Bitches, 1st, $20; 2d, silver medal.
Class 39—Foxhounds.—In couples (without regard to sex), 1st, $25; 2d, $20.
Class 40—Foxhound Puppies over 8 months.—In couples (without regard to sex), 1st, $15; 2d, silver medal.
Class 41—Beagles.—Dogs, 1st, $15; 2d, silver medal.
Class 42—Beagles.—Bitches, 1st, $15; 2d, silver medal.
Class 43—Beagles.—In couples (without regard to sex), 1st, $20; 2d, $10.
Class 44—Beagle Puppies over 8 months.—In couples (without regard to sex), 1st, silver medal.
Class 45—Dachshunds.—Dogs and bitches, 1st, $15; 2d, $10.
Class 46—Sheepdogs or Collies.—Dogs and bitches, 1st, $25; 2d, $15.
Class 47—Sheepdogs or Collie Puppies.—Dogs and bitches, 1st, silver medal.
Class 48—Newfoundlands, all black.—Dogs and bitches, 1st, $25; 2d, $15.
Class 49—Newfoundlands, black and white.—Dogs and bitches, 1st, $25; 2d, $15.
Class 50—Mount St. Bernards, rough-coated.—Dogs and bitches, 1st, $25; 2d, $15.
Class 51—Mount St. Bernards, smooth-coated.—Dogs and bitches, 1st, $25; 2d, $15.
Class 52—Mastiffs.—Dogs and bitches, 1st, $25; 2d, $15.
Class 53—Great Danes or Siberians.—Dogs and bitches, 1st, $20; 2d, $10.
Class 54—Bull Dogs.—Dogs and bitches, 1st, $15; 2d, $10.
Class 55—Bull Terriers.—Dogs and bitches, 1st, $15; 2d, $10.
Class 56—Fox Terriers.—Dogs and bitches, 1st, $20; 2d, $10.
Class 57—Fox Terrier Puppies over 8 months.—Dogs and bitches 1st, silver medal.
Class 58—Black and Tan Terriers exceeding 10 lbs.—Dogs and bitches, 1st, $15; 2d, $10.
Class 59—Wire-haired (Irish and Scotch) Terriers exceeding 10 lbs.—Dogs and bitches, 1st, $15; 2d, silver medal.
Class 60—Rough and Broken-haired Terriers exceeding 10 lbs., excluding Wire-haired (Irish and Scotch), Skye and Yorkshire (silk haired) Terriers.—Dogs and bitches, 1st, $15; 2d, $10.
Class 61—Skye Terriers exceeding 10 lbs.—Dogs and bitches, 1st, $15; 2d, $10.
Class 62—Yorkshire (silk-haired) Terriers.—Dogs and bitches, 1st, $15; 2d, $10.
Class 63—Pugs.—Dogs, 1st, $15; 2d, $10.
Class 64—Pugs.—Bitches, 1st, $15; 2d, $10.
Class 65—Pug Puppies over 8 months.—Dogs and bitches, 1st, silver medal.
Class 66—Italian Greyhounds.—Dogs and bitches, 1st, $15; 2d, $10.
Class 67—King Charles and Blenheim Spaniels.—Dogs and bitches, 1st, $15; 2d, silver medal.
Class 68—Japanese Spaniels.—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 69—Black and Tan Terriers not exceeding 10 lbs. (Puppies are excluded from this class).—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 70—Rough and Broken-haired Terriers not exceeding 10 lbs., excluding Yorkshire (Puppies are excluded from this class).—Dogs and bitches, 1st, $10; 2d, silver medal.
Class 71—Miscellaneous.—Dogs for which no class has been assigned. For the best three dogs or bitches of different breeds, three prizes of $10 each; and for the second best three dogs or bitches of different breeds, three prizes of a silver medal each will be awarded or withheld, at the discretion of the Judges.
Class 72—Extra Class.—Puppies under 8 months of age and suckling bitches. No competition and no prize in this class (See Regulation 6.)

As only 735 dogs can be received, owing to limited space, when that number is entered, no more entries can be made.

Apply as the north-east corner of 13th and Chestnut Sts., second floor, entrance on 13th St., or address the Philadelphia Kennel Club, P. O. Box No. 1811, Philadelphia.

Entries close April 5th.

THE PHILADELPHIA DOG SHOW.

PHILADELPHIA, March 17, 1879.

EDITOR FOREST AND STREAM:

Since distributing our circulars and prize list and the publication of the latter in your valuable paper, applications for entries have been coming in quite fast, and from appearances we will have our full complement of entries, to wit: seven hundred and thirty-five. We have just completed arrangements for the use of a large lot adjoining our building, and accessible only from the interior, for exercising our dogs, which, together with the large lot we already have, will give us grand facilities for that purpose. Our committee have paid great attention to this matter, and they are desirous of giving the exhibitors personally, or their attendants, every facility for exercising their dogs.

From receipt of letters from the West and East we will have many valuable animals on exhibition, among them Mr. Arnold Burgess' kennel with Rob Roy, Druid and Rufus; Mr. Luther Adams, of Boston, with Drake and others; also the well known kennels of Mr. C. W. Gause, of Wilmington, Delaware; Mr. John C. Higgins, of Delaware; Mr. Wm. Magraw, of Maryland, owner of Royal Duke; the Nassau and St. Louis Kennel Clubs, and also the Massachusetts Kennel Club. Our natives will be strongly represented and will be quite a feature in our show. As we have no "blue bloods" here, and are strong in our natives, we have made a class for them; for, although no doubt the day will come when the two will have to compete together all over the country, we are of the opinion that as yet, in this city at least, we must give our natives a chance in a class by themselves.

We expect to have a grand list of foxhound entries, and we think that in this class we can compete with any section of the country. Among the numerous packs we hope to get entries from are the Rose Tree, Gulf, West Chester, Marshalltown and Leopard packs. These packs number from twenty-five to eighty dogs in each pack, and should we have from six to ten of the best couples from each pack, the display will be truly a grand one. Our committees are all working hard, and our arrangements completed, and when our special prize classification is all filled up, there will be nothing left to be done but to abide the time of the opening of the show. We will notify you from time to time as to our entries, etc.

Very truly yours, A MEMBER.

"IVANHOE" TO THE RESCUE.

JANESVILLE, Wis., March 8, 1879.

EDITOR FOREST AND STREAM:

I have long thought of advertising my kennel of dogs, but my natural timidity has deterred me. But I am at last determined to brave the flings of ignorant persons who have heretofore considered themselves sportsmen, my sudden accession of courage being derived from the communication of "Ivanhoe" in a recent number of FOREST AND STREAM, giving his experience with his "keen-nosed (?) brush broken dogs" on our Western prairies. Please insert the following: "For Sale—One full-blooded mongrel dog, parentage uncertain, but supposed to be a cross between a bulldog and a window-shutter; thoroughly broken on prairie chickens, but not on 'brush;' also, one half-blooded coach-dog: having been kicked by a mule in early childhood, the coach-dog's spine is bent at an angle of 45 degs.; he carries his tail well curled over his back, and, barring his crook, is the *beau ideal* of a bird dog. Price for either, 4 bits. Young stock constantly on hand. Address Wisconsin Kennel Club, Janesville, Wis."

"Ivanhoe" is the first man who has dared to tell the truth. He is the man "I long have sought," etc.

When any of us out here start off for a few hours' shooting, we simply blow a whistle anywhere on the street, and in two minutes we have dogs enough for a regiment; bulldogs, foxhounds, collies, Newfoundlands, Spitz, yaller dogs, anything you choose, and all first-rate on chickens, but good for nothing on "brush." What the dash is the use of keeping dogs when other people will do it for you. Right here I want to ask for information from "Ivanhoe." I haven't dared to ask it before for fear of being laughed at. I have a dog—that is, I mean a female dog—that puzzled me for a long time. I can't make out what breed she is. She is black and white ticked; has long silky ears, a long slender head and nose, muscular body and legs, the latter being covered to the back of each with long silky hair, a straight tail fringed with long hair. Her father and mother, I have heard, were of the same general build, and would hunt and stand birds as well as any bulldog or collie in the country. Now, what the dickens kind of a dog is she? I am so ashamed of her that I keep her chained up, and never allow her to go with my bulldog-window-shutters, for fear she will contaminate them, but always take her out alone. The strangest part of it is that whenever she crosses a field in which there are birds she always stops as if she was afraid of stepping on them, and she acts the same on a snipe marsh or in the thickets. In fact I have often taken advantage of this peculiarity to flush up and shoot the birds she was afraid of. Now, "Ivanhoe," can you tell me what she is? I shall anxiously await your reply, as against your profound wisdom the pretended knowledge of Morford, Horace Smith, Seitzinger, and others sinks into insignificance. To be sure they come out West year after year and pretend to hunt with their "brush" dogs, but we know well enough that they are arrant humbugs, and that as soon as they are out of sight their "brush" dogs are tied to the wagon, and they take the first farmer's dog they can find. I have taxed them with this deception, but they wouldn't admit it. You are the first man who has dared to tell the truth. And yet these men, especially Morford and Smith, are constantly selling dogs to unsophisticated gentlemen for big prices. I reckon, however, my advertisement will stop all that.

You must be the same fellow whose fish always jump nine feet in the air, who never kill a bird under forty-five yards, and in double rises always drop the second bird at full sixty yards dead, without a kick.

Every true sportsman should wish you godspeed in your crusade against the false ideas prevalent in the East regarding Western dogs. Nine-tenths of them, as you say, are mongrels, and as for setters, why I never saw a setter, and I don't believe half-a-dozen men in Wisconsin know what a setter is. As for Minnesota, it is too ridiculous to suppose there is such a thing in the State. BADGER.

P. S.—If I pull the long hair out of my dog's tail and legs do you suppose it will grow again? I am very anxious to make her look like a bird dog. I am told she now resembles one of your "brush" dogs. B.

WHO IS "DRACO?"

EDITOR FOREST AND STREAM:

A friend of mine has inclosed me an article clipped from a recent number of the "Great Unconsolidated," asking if "Draco" is bilious. Now, to use the language of our dear Western friend, I have not the remotest idea of who "Draco" may be, but will credit him with being something of a literary hawk, who soars about, watching each article as it appears in print until the proper time comes, when he swoops down upon and tears it all to pieces. In answer to my friend's question, I should say that, judging from "Draco's" article, he must be somewhat bilious, or otherwise out of order.

He has torn me into so many pieces that I hardly know where to begin to put myself in shape again. The day we started out from Worthington, among the friends who accompanied us was one who owned an English bitch, which was highly prized by her master. This master asked permission to work our dogs that day, as we, being green, would not do so well by ourselves. This we agreed to. My dogs, when hunted at home, at no time ranged more than 100 or 150 feet from me. This our friend laughed at, and in company with his bitch, sent them off ranging half a mile over the prairie. "That," he said, "was the way to have a dog range in the West," and to that one afternoon lesson I attribute a big share of my misfortunes while on that trip. My dogs became wild, and although the breaker was a man in whom I had every confidence, after that lesson his breaking seemed to have to begin over again. How far "Draco" agrees with me I do not know, but as I have asked for information I am anxious to get it from most any source. The above may in a measure explain why they ran in, etc., for I confess I never saw them do it before. I now find that I must explain that when my friend referred to the cross between a "bull-bitch and a window-shutter," he simply meant a mongrel dog. I make this explanation because "Draco" seems to think either that such a cross is possible, or else that we thought so. It makes no difference which is correct. There are some men in the West who have had almost as much experience in hunting, etc., as "Draco" (though, of course, he will deny it), and from a number of these I received the information that mine was no unusual experience; that it was a common thing for Eastern brush broken dogs to act so. I had no reason to doubt it then, nor have I now, when my own experience rather confirms it. I think I admitted (for none but a fool would deny it) that there are many fine dogs out in that country; but I said then, and say now, that the vast majority of the dogs we saw used were mongrels. I hunted one whole morning with a shepherd dog. Another day a hound was used. The old lop-sided, etc., was admitted by his owner to be a cross between a Newfoundland dog and a setter bitch. Of the "setter," he showed nothing whatever. We used the "droppers" often, but our bags were no larger than those got over the mongrels of whom I spoke. Our hunting was not confined to Worthington's district. We passed over a great deal of prairie in other localities, so don't thing Worthington produced all the "droppers" nor "long-eared." Of course "Draco" knows best whether I saw what I say I saw, but it is awful hard work to convince a man that he don't see what he is looking at. If "Ivanhoe" had been acquainted with "Draco" before writing his (Ivanhoe's) article, and the suggestion had been made soon enough, he might have been induced to ask Mr. Hallock his silly questions and have been answered privately. It would have been a good thing in one sense, if no more, for it would have saved "Draco" an awful lot of gas, though being so well supplied I presume he won't miss it any. Next fall when I go West perhaps I may meet "Draco," and then I shall be pleased to show him, what he does not believe to exist anywhere, right in his own beloved Western country. As to the libel on Western sportsmen, I have simply to say that there is nothing in the article in question which can possibly be construed into one; add to that the fact of an absence of such intention, and your libel vanishes.

I am glad to learn that the West has just five times the fine-blooded dogs which the East has, and shall try to remember it always. As to the Western kennels sweeping the prizes at the bench shows and field trials of the present day, I have been led to suppose a great deal depended upon how much or how little a certain editor and his friends had to do with them in the capture of prizes; though of that I am not certain. Perhaps "Draco" can inform me.

Is it possible "Draco" has lived in this country so long and does not know that Mr. Hallock can doubtless inform him of many interesting things of his own Western country. Why, my friend, Mr. Hallock has visited your country a number of times, has written about you, and found you (as we all do) a most hospitable people. In conclusion, let me say that because "Draco" never has seen dogs act as mine did is no proof whatever that other dogs have not acted so, and that while no doubt he has seen many things, yet still there are many things he has not seen. His article is worthy of the sheet in which it appears. And now, "Mr. Draco," before flying into a passion over "libels" which do not exist, let me advise you to pause. I never libeled anybody. I like your country—I like your people. They have ever treated me well, and I am always ready and anxious to return that hospitality. I don't deny you have fine dogs, and many of them, nor must you deny that there are on your prairies many dogs in whom it is hard, if possible at all, to trace either the pointer or the setter. IVANHOE.

BLUE vs. NATIVE.

EDITOR FOREST AND STREAM:

Sir—I do not wish to enter into any controversy in regard to the merits of blue blood or native, nor do I handle the pen in a manner that would warrant my doing so, yet being a practical sportsman, and desiring only the best working dogs for the field, I wish to say something on this matter of "Native versus Blue," showing, if possible, to make myself clear, why I have taken up the "blue" in preference to the "native," and why, as I understood it, many other sportsmen have done the same thing.

"A Plea for the Native," by H., in your last issue, and particularly an article by the kennel editor of a contemporary sheet, are calculated, in my opinion, to give erroneous impressions. I fail to see where any injustice has been or is being done to the natives, while on the other hand great injustice is done to the imported dog by such articles as those referred to. No doubt the kennel editor has many fine dogs. No doubt also they are nearly if not fully as good as imported dogs. In many instances, perhaps, being superior to the recently imported English broken dog, yet he has been very unfortunate with those he has imported and is not to be blamed for his big disgust in regard to them. His experience is not similar

to mine, for I own dogs from imported stock that are the equal of any "native" that I have ever seen, I will not say better for fear of doing injustice to the faithful friends that are gone, but fully as good. Without doubt there are but few of what can be strictly called natives in this country, and even they came from imported ancestors. I mean by "natives," dogs that have been bred for a number of years without an infusion of imported blood. When the breed has been kept pure without cross with curs, they should equal the imported dog, but here is just where the trouble comes in, for but very few can be reliably claimed as well or purely bred dogs. Until of very late sportsmen paid but little attention to pedigree or breeding, that is, the majority of them. Of course some did, notably the breeders mentioned by "H." There is not a particle of doubt, however, that the greater portion of hunting dogs had some cur in them acquired in this country, and certainly they were not improved thereby. Many of the best native strains had from time to time an influx of imported blood, which was always mentioned with pride by their owners. This in a very great degree has kept the native up to the mark. It was always possible before the war to get a good or very fair dog by those who were posted, but since the war it must be remembered that gunners have increased tenfold, consequently there has been a tenfold demand for dogs. With increased knowledge of what constituted a good dog through the medium of new papers devoted more to their interest than that of the horse, sportsmen were not contented to use the ill-bred dog that they knew the average setter and pointer to be; at the same time the few breeders of good stock were little known, and possibly could not have supplied the demand for dogs had they been known. They therefore turned to the British Islands for their stock, and in my judgment found exactly what they wanted. The English have always been noted for attention to purity of blood. The original native stock came from England, and what more natural than that the sportsman should look to England for his new and pure stock. The record of imported dogs at Field Trials proves to me that they are what their friends represent them. My own experience, and that of many friends, prove them to be first-class dogs in the field, which is the first consideration. Why should not the imported dog equal the best of the natives, and excel the badly bred ones. They are certainly well bred, and it is ridiculous to suppose that a hunting country like England has bred only for show purposes. Were the imported dogs from which sprang our "native" good for nothing, and did it take generations before they became perfect? and is there something in the nature of our country that will make an improvement in the dog after several generations? or has Great Britain allowed her dog to degenerate while America has kept the breed pure? All nonsense, for all evidence points to Great Britain as the careful breeder, and America just the reverse.

Perhaps some importers who have dogs to sell have cracked up their dogs too high, but what more natural? It is possible also that inbreeding has been practiced too much in some strains to the detriment of the enduring and lasting power of the dog, but the most of them are perfect physically, and show as much endurance as the natives, with greater speed. The American sportsman has never been noted for dullness. He is fully capable of choosing the best dog without having the glimmer of blue blood affect him in the least, and will always give preference to good blood, all other things being equal. After all, it is merely a question of the "survival of the fittest." Through natural increase in numbers the blue-blooded dog has fallen in price, and in a very short time anybody that can afford to own a dog at all can afford a "blue blood." The poorer dog will have to succumb, and unless I'm not very much mistaken the "blue blood" will be found on top of the heap. E.

DEATH OF QUAIL II.

NEW YORK, March 15, 1879.

EDITOR FOREST AND STREAM:

My imported Irish setter bitch Quail II. died suddenly on the morning of Feb. 22d. I gave her a bowl of gruel about 7 A. M. and hurried away. I had not the least suspicion that anything ailed her, as the night before she was in first rate health, never better. About an hour after my folks telegraphed me that she was dying. I hurried home and found her lying on her side, tongue protruding and covered with the gruel. She must have dropped while in the act of eating and immediately after my leaving her, about three hours before, as she was then cold. I sent her to the American College of Veterinary Surgeons to ascertain the cause of death. The following is a concise account of the post-mortem held by W. J. Coates, D. V. S.: "On opening the right ventricle of the heart a fibrinous clot was found adhering to the auriculo ventricular valves, and on removing it a parasite (filaria immitis) measuring twelve centimetres was found twisted around the chordæ tendineæ, thereby producing syncope. All the other organs were healthy. I am told this is a rare case, and that to all outward appearances she was well up to the moment she dropped dead. Yours, etc., EDWARD LOHMAN.

A DOG'S DEVOTION.—A correspondent sends us the following instance of a dog's devotion to his master. The incident is one of many to which public attention is drawn from time to time. New York papers have recently recounted the case of a Long Island dog which persisted in remaining upon its master's grave during the severest colds of the present winter:

BUFFALO, January 20, 1879.

EDITOR FOREST AND STREAM:

"John Cassidy, of Drummondsville, was found frozen to death in the road about a quarter of a mile from Chippewa last Thursday. His dog was frozen stiff near by. Cassidy, it is said, imbibed too freely on the 24th of December, and had not been seen till his lifeless body was found."

When a genuine lover of the noble canine race reads the above item, clipped from one of our daily journals, how forcibly impressed he is at the unswerving fidelity shown by this noble dog to his wretched and depraved master. Still, many people would only say, "poor man," and never give the faithful dog a passing thought. If they did, it would only be to wonder why the "fool of a dog" did not go home and save himself. Under the impulse of a moment a man will risk his life for a fellow man; but it is doubtful whether you could find one who would be willing to lie down in the road and freeze to death, even to oblige his nearest and dearest friend. A mother might do it for her child. Generally speaking, in the human race, "self-preservation is the first law of nature." In canine nature no such law is known in the well bred and well educated dog. Some one has said, "Dogs look up to man, as man should look up to the Supreme Being." He has within his control their life and happiness, and even their generation. He decides their lot in life and is justly responsible for their good and evil qualities, and when he blames or despises them for faults or imperfections, he stultifies himself. Dogs are naturally moral, and their virtues should put many professing Christians to the blush. Unswerving fidelity, constant watchfulness, and unselfish devotion are traits in which the majority of mankind fall far short of the canine standard. The dog is resigned under suffering and hardship, and grateful for benefits. Can all of us say we possess these positive virtues? There are big religious lessons to be learned in these things. I would I had the pen of "Podgers" to express my thoughts upon this subject.

P. S.—A lady friend, who is a staunch friend of the dog, says Mr. Cassidy's dog should be buried with masonic honors, for is not one of the chief characteristics of the craft, "Fidelity." She does not wish you to infer from this that she could give a "fellow mason" the "grip" should she meet one, for honestly her own knowledge of the mysteries of the order was a ludicrous goat shown at a "Humpty Dumpty" entertainment some time ago. J. B. H.

BOSTON DOG SHOW.—We have received the premium list of the second annual dog show of the Massachusetts Kennel Club, to be held in Boston during the first week in May. The crowded condition of our columns prevents us from publishing it before next week. The prizes are on a very liberal scale and the show promises to be very successful.

DOG COLLARS.—Something new and extremely tasty in dog collars consists of the celluloid collars now sold by Schuyler, Hartly & Graham. Their beauty and elegance will recommend them to prize winners at the coming dog show.

EASTERN AND WESTERN DOGS.—*Cleveland, Feb. 28.—Editor Forest and Stream:* My experience has been through a series of twenty-five years, perhaps, with chicken shooting in Minnesota, Iowa, Wisconsin, Indiana and Illinois, during which time I have taken out with me twelve to sixteen setters and only one pointer—that one last season in Kankakee Co., Ill.—and during that time never had but two of the lot that acted any differently from what any dog will act occasionally on any large fresh game. One (a setter) not many years since broke shot before he was ordered to retrieve, the chicken not being quite killed. That was the first and last time, and that you might expect some times. Last fall the pointer broke also, the chicken fluttering some, but he (the pointer) I did not consider fully broken. I have always found dogs readily useful to point the very first opportunity that presented itself, back, drop to shot and retrieve as at home. Would say our dogs here are broken in what you may call bush hunting, except snipe, cock, grouse and quail. Our quail invariably go to either brush, after the first rise, or standing corn, which is similar or in most instances worse, as far as the dog breaking is concerned. Must think that "Ivanhoe's" dog was "off" a great deal, or the breaking was imperfectly done. I have seen others with dogs in company that have not behaved well, but think, with what experience I have had, it makes but little or no difference what or where the dog, if well broken and well hunted, except on snipe, he is at home in a very short time. I have known a dog good on almost every other game and not worth a cent on snipe. You rarely get a good good snipe dog—one that will point every time, all day almost. CHUBB.

A NIGHT DOG.—The first thing to be done is to obtain a very large animal, whose growls alone are somewhat terrifying, and whose size is bound to inspire respect. The object is to break him to fly at any body, and to take his death, if need be, rather than desert his master. You procure a promising puppy of vicious strain, and you proceed systematically to tease him. The most effectual plan would be to bother him at his meals, but that would be a mistake, since it would interfere with his digestion, and consequently with his growth. So you must give him a bone some hours after the regular repast, and then proceed to pretend to take it from him. He will get angry and fly at you. Whereupon, having equipped yourself with the toughtest leather gloves, you are to twitch his legs, his tail and his ears, hissing at him till he is beyond himself with passion. Having effectually soured his temper so far, you are to lead him out to a field in leash, and set some stranger to trying similar experiments. This fictitious enemy is to blacken his face, to crouch down, etc; and as the dog is meant to lay hold of him in a state of incipient insanity, the confederate is strongly recommended to wear his oldest suit of clothes, and pad them, by way of further protection, with straw. Meanwhile the growing dog is to be kept in seclusion and teased habitually. The final stage of his education is to take him out by night, to let a daring volunteer glide past an ambush by preconcerted arrangement, and then to excite the animal, still holding him by the leash. Should the leash slip or break, the man's position would be awkward. Finally the man is to make a bolt for a tree, when the maddened animal is let loose; the man by that time ought to be safe among the branches, but he is to throw down a dummy presentment of himself, which will be promptly rent to pieces.—*Saturday Review.*

DOGS FOR TENNESSEE—*Nashville, Tenn., March 11—Editor Forest and Stream:* Captain J. H. Drew, of Maury County, is about leaving for Europe, in company with Mr. Bishop, of Cincinnati. Their intention is to import some of the finest dogs that money will buy. I understand that Mr. Drew has $4,000 in hand to spend on his own account. The fever for breeding fine dogs about here is very hot, and no doubt it will result in our State adding fresh laurels to those already won by increasing her numbers of dogs at future bench shows all over the land. J. D. H.

—Mr. A. J. Hart, of Farmington, Ct., claims the name of Roxy for his red Irish setter bitch pup, born, January 30, 1879, out of Bridget Plunket by Champion Elcho.

—Mr. J. L. Locke, of Portsmouth, claims the name of Dash Elcho for his red Irish setter puppy, by champion Elcho, out of Rose, whelped Oct. 11, 1878.

—Mr. Herbert F. Deane, of Boston, writes that imported English setter bitch Bute (Royal-Nina) has whelped seven puppies—five dogs and two bitches—by Sumner's Lelaps (Leicester-Doll), winner of first in imported English setter class, Boston, 1878; there are six blue belton and one orange belton.

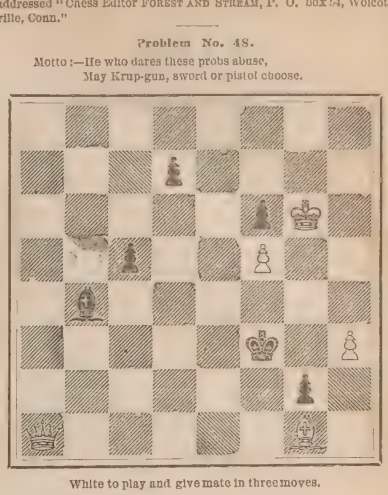
—Dr. Benton, of Ogdensburg, N. Y., will exhibit his staghound at the coming dog show in this city.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 48.

Motto:—He who dares these probs abuse,
May Krup-gun, sword or pistol choose.



White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—No. 46.

1—B-Q B$_4$	1—P moves
2—R tks P	2—K moves
3—R mates	

Game No. 107.

The following game with Mr. Staunton may be taken as a fine specimen of Mr. Cochrane's style. The notes are by the London *Field:*

White. Mr. Cochrane.	Black. Mr. Staunton.	White. Mr. Cochrane.	Black. Mr. Staunton.
1—P-K4	1—P-K4	11—K P tks P	11—B tks P
2—K Kt-B3	2—P-Q4 (a)	12—P-K6 (h)	12—Q-Q B3 (i)
3—Kt tks K P (b)	3—Q-K2	13—Q-K R5 ch	13—P-K Kt2
4—P-Q4	4—P-K B3 (c)	14—Q tks B	14—K Kt-K2 (j)
5—Q Kt-B3 (d)	5—P tks K Kt	15—Q-K5	15—Q tks B
6—Kt tks Q P	6—Q-K B2 (e)	16—Q tks R	16—Kt-K B4
7—K B-Q B4	7—Q B-K3	17—Q B-K R3 (k)	17—Q-Q Kt5
8—Castles	8—P-Q B3	18—Q tks B ch	18—Q tks Q
9—P-K B4 (f)	9—P tks Kt	19—B tks Q	19—K tks B
10—B P tks P	10—Q-Q2 (g)	20—P-K Kt4	Surrenders.

NOTES.

(*a*) This form of defence used to be in fashion at the time this game was played, but has now been practically abandoned.

(*b*) P tks P is slightly superior, and, at any rate, does not necessitate the hazardous sacrifice to which White afterward resorts in order to keep the attack in hand.

(*c*) This move is the main resource relied upon by the second player in this form of opening. It apparently forces an equal position in any case, and also induces the delusive attack of Q-R5, which might catch some weak opponent, who would find that after Black interposes the P-Kt3, and White's answering Kt tks Kt P, a piece is lost by the reply Q tks P ch, which enables Black to win the Kt with the Q.

(*d*) One of those brilliant inventions of Mr. Cochrane's which he found most suitable to his dashing style. Nor has Black any means to avoid the challenge by P-Q B3, for White has now protected the K P against being taken by the Q, and might safely reply with the sally of Q-R3 ch We may state our belief that White would gain a slight advantage in position by simply playing the Kt-Kt4, whether Black answered by taking the Kt, followed by exchanging Queens, or not; but this move was probably too dull for the spirited combative inclinations of Mr. Cochrane.

(*e*) In another game between the same opponents, published in the "Chess Players' Companion," the following continuation arose:

White. Mr. Cochrane.	Black. Mr. Staunton.	White. Mr. Cochrane.	Black. Mr. Staunton.
	6—Q-Q3	10—P-B5	10—Q-K4
7—P tks P	7—Q tks P	11—Q B-K B4	11—Q tks Kt P
8—B-Q3	8—B-Q3	12—R tks B	12—P tks B
9—P-K B4	9—Q-K3	13—Kt-B7 ch	

And the game was also eventually won by Mr. Cochrane.

(*f*) Pursuing the assault at all hazards in a most vigorous manner.

(*g*) When the pieces are not well developed the Q has sometimes proved a match for four pieces, including one R. In the present instance White would have kept a formidable centre if Black had captured the B with the P and allowed the Q to be taken. Nevertheless, we would have either adopted that expedient, or else Q-B2 in preference. Black evidently overlooked the fine *coup* White had in store two moves later on.

(*h*) A beautiful move, which recovers one of the pieces sacrificed, with a full equivalent for the other.

(*i*) Black could not well now give up the Q by taking K P, *e. g.* 12— ——, 12—Q tks K P; 13—R-K sq, 13—B tks B; 14—R tks Q ch, 14—B tks Q; 15—Q-K2 (threatening P-Q5), 15—K-Q2 (If K-B2, White proceeds at once by Q-K B3 ch, winning the Q Kt P and the R); 16—Q-Q Kt5 ch, followed accordingly, either by Q tks Kt P, or Q-K5 ch, or B-B4 ch, winning in each case.

(*j*) Had he exchanged Queens, White would have still retained a powerful game, with three well-supported Pawns for the piece.

(*k*) A beautiful finish to a fine game throughout. Play as Black may he cannot save the game.

—At chess to play an useless move
Of hurtful consequence will prove;
A skillful player, without design,
Shifts not a soldier from his line.
Your time is short—try to foresee
With speed what the event may be
Of every move. But first attend
Where you can best your King defend.
Place him in a well-guarded square,
The most remote from hostile snare;
And, above all, this a rule make—
Be not in too much haste to take.
With heedful eye your men survey,
And with slow hand point out their way.
Your head suggests a scheme: look round,
Perhaps a better may be found.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2839.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 20, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

"PALMA" MATCH OF 1879.—Whether we are to have an international long-range match during the current year can and must be decided very quickly. If the matter is left to the team now holding the "Palma," as it should be, we have no doubt a match would be brought about. If it be kept under the stifling control of the present managers we have as little doubt the other way. Capt. Jackson is very active in the matter, and a few days may decide the question.

PRESERVE THE ANCIENT.—The St. Augustine *Press* utters a very reasonable and earnest plea for the preservation of the quaint features of the old Spanish town, which have always been of so great interest to tourists, but which have very materially disappeared within the past few years under what progressive people would term the march of improvement, but which antiquarians consider Vandalism. It says, very truthfully:

There are more travelers in search of novelty than health. Peculiarities of a place are usually more attractive to tourists, than even climate. The oft-repeated expression on the part of strangers who visit St. Augustine, that they regret to see the constant modernizing of the old dwellings and old landmarks, which from year to year is taking place, is more so this year than ever before. No one regrets these changes more than ourself, and we wish the same feeling might become more universal among our people. This renovating process will undoubtedly continue, but we earnestly hope that when these innovations can be prevented by our public officers, they will be. Let us retain every particle of St. Augustine's past history which has been handed down to us by the old Coquina walls, the fort, dwellings, gates, churches and streets. Let such be retained as far as possible in the same old form and style as originally built. The old, quaint and ancient relics of the past are among the most important and valuable attractions which St. Augustine offers to visitors. Every additional house should be built with some pretensions to the style existing during the Spanish regime, and to obviate too great sameness a few might be Gothic. In any case avoid the "modern." People do not come here to see feeble and ugly imitations of New York and Boston dwellings, and the additions to some of our hotels, which look like huge packing boxes, are positive disfigurements. The folks of St. Augustine should regard the removal of a Coquina wall, to be nothing less than sacrilege, and the older and quainter their buildings, the more carefully should they prop and preserve them. As regards the exterior of their dwellings, they should regard all innovations as deadly sins, and revel in the grotesque—so will they fill their hotels and their pockets.

PROTECTION OF GAME.

ROCHESTER, N. Y., March 14, 1879.

EDITOR FOREST AND STREAM:

I wish to indorse every sentiment expressed by your correspondent, "S A.," in your issue of the 6th inst. on "Game Preservation." A change in the method of protection of game is at hand; let us hope that it may result in a simple, efficient reform, based on the desire to preserve our game intelligently on the one hand, and to pursue it in a true spirit of sport on the other. Now seems to be the time to emphatically protest against the anomaly of summer woodcock shooting. Something has been said about permitting woodcock shooting during July, then closing it to reopen it in October. It is ardently hoped that no such puerility will impede the way to intelligible legislation, and the settlement of shooting and the shooting season on a basis of sport. Whatever happens, let us have no plurality of seasons. Let us have no earlier date for the commencement of shooting than some day in September, when a comprehensive season should begin. A brief recapitulation of some of the points in favor of this view may be opportune. The young woodcock are not fully grown in July—some of them are only just out of the shell. Their pursuit is, it must be admitted, unsportsmanlike, and is a process devoid of comfort from the heat and general unpleasantness. The great plea of the diminishing few who favor summer shooting, that a short migration of the birds is a warrant for their early slaughter, is more a pretext than a reason. The birds are obliged to change their feeding-places by the dry weather; they frequently find suitable ground near, and if undisturbed, often remain in the immediate locality of their breeding-places throughout the summer and autumn. But, under any circumstances, a general summer slaughter must impair general autumnal sport, and therefore the practice should be discontinued. Opening the covers in summer does more to deplete them by the pot-hunting of non-migratory game than legitimate shooting in the fall. A multiplicity of close days applied to a confusion of species render the preservation of game impossible. A farmer goes into his cover to protect grouse, for instance, and is told by the pot-hunter that he is after woodcock. The office of game constable under these circumstances is an absurd one. How far in summer cover can one man tell what another is shooting at? How many constables would be reasonable guard to three acres of cover? It would seem there may be cause enough to abolish so stupid and spiritless a custom as summer woodcock shooting. In speaking of the advantages of a fall opening for a general season to many sportsmen during the past year, I have not heard a dissentient voice. One gentleman said he could himself guarantee five hundred signatures in its favor in Monroe County. And who, on reflection, will not coincide with this view? The autumnal is the most enjoyable season; the clear, crisp air, and the million-tinted woods, harmonize with the true instinct of the sportsman, and inspire him, as no other season can, with the transports of his art and "the glory of the sylvan scene divine." The farmer who hears a gun on his land before the specified day in September will know that the pot-hunter is abroad, and he will be encouraged to order off the trespasser, or give information against him, now that he can follow him without an almanac and a game-list to dovetail dates to species, or indeed invite ridicule by any action at all. Now, too, the game constable, under the powers of a new and comprehensible act, may emerge from a nonentity to a useful officer, and under a plain, intelligible system an efficient corps of deputies would willingly enroll themselves in every town. Lastly, it must be a gratification to every true sportsman to lend a hand in expunging a practice which is certainly not born of sport, but which seems devoted to extermination.

JOHN ALDERGROVE.

KEYPORT, N. J., March 17, 1879.

EDITOR FOREST AND STREAM:

It is all very well for us farmers to catch quail and keep them through the winter, and turn them out in the spring to breed. Who pays us for this, as we are not rich gunners? Who gets the first shot at them in the fall? We cannot get our sowing done and corn gathered before the 15th of November. On the 1st of November we see the New York bloods appear on our cars and boats, with guns strapped on their backs and dogs on their chains. Next day they come across our farms. We are busy. The first thing we hear is some one among our quail, which we wintered over. We leave our work and go see. We find some "beer gag" running around in our sprouts, looking for something he never killed at all. We ask him to leave the birds alone. We want them for our own shooting. He will give you some of his slang, shoot till he scares all the birds out of his reach, then leave when he gets ready. Along will come another with his setter tearing through our berry vines, destroying them more like a lion than a bird dog of high blood. Tell the man to let the birds alone, and he will tell you to "Go there yourself." Along he goes till he meets some one's flock of turkeys, lets go on them and bags one, and his retriever bites three or four more so that they die.

That's keeping quail over.

We want a law to protect us. We will protect the game for ourselves the same as any other property.

I met one of the bloods last fall, and he knocked down a woodcock and shot it all to pieces on the ground. No man should be allowed to hunt in the United States unless he owns a farm and helps winter game; that's the law we want. I don't wonder that those two Eastern dogs would not work on ruffed grouse, that I read of in one of your late issues. When they get into the country they are crazy. I have got a setter that doesn't get crazy. He will work on any kind of grouse, rough or smooth. He don't run over a field and flush them. If he goes where they have been he trails them, if they are not over twenty miles off, and always waits till you come up, if you get there any time inside of a week. Please spare room for this screed. I will not trouble you again. It may fit tight on some, but sign my name in full.

WILLIAM CURTIS.

The foregoing are two important letters touching correlative branches of the same subject, namely: the Protection of Game, and the Punishment for Violation.

With a uniform law which so defines a close season or seasons that no error or plea of ignorance in violation thereof is possible, constables will be encouraged to act, and the law will be respected and enforced. Farmers having ascertained that the laws are so respected and enforced, by failing to discover sportsmen traversing over their territory in prohibited seasons, will no longer find inducement to anticipate their advent by skinning their premises of game. As it is now, the law of trespass is as lax as the law for prosecuting defiers of close seasons, and it becomes the alternative of the farmer either to kill the game himself or see it destroyed and obliterated by men who have no right to jump his boundary fences. With the assurance that the sportsman is the protector of game as well as the respecter of property lines, the farmer will be encouraged to winter birds through, and provide them with food and shelter. From being the sportsman's natural hereditary enemy, he will become his fast friend. Most farmers are sportsmen and appreciate genuine sportsmen. Recognizing any such they will be ready to admit them to shooting privileges on their domains, either by courtesy or from mercenary motives. Sportsmen of means are ever ready to pay for their sport; so that the mercenary farmer will be able to gather more and larger gains from granted privileges than from the sale of slunk game trapped out of all season. Poachers do not pay for privileges; they steal them. Their theft from the farmer, their infraction of the game law, and their cutting under of the genteel sportsmen, are coincident and simultaneous, so that they become the common enemy of the three respective interests. Only make the protective law simple, sensible, positive and intelligible, and paid or volunteer constables will rise up in legions to arrest the intruder and violator. Every interested person will become a prosecutor, because prosecution will be easy, and the result and penalty certain.

Many of our readers seem not to have noticed the very simple co-operative plan of uniform laws for all the States which was printed in our issue of Feb. 27th, and we beg to call their attention to it. *The time has come to close debate.* Every point has been thoroughly discussed time and again during the past twenty years. What we want now is a definite plan based upon the outcome of this discussion. We have devised one plan, as referred to. It has been submitted to the Legislature of each State now in session, and will be submitted to the rest when they meet. If it needs modification, we trust the sage legislators will have wisdom sufficient to modify it so judiciously that it will be deemed perfect. In a year or so we hope to have a uniform game law throughout the whole country.

RAILROAD MEN IN COUNCIL.

THE annual convention of the General Passenger and Ticket Agents Association was held at the Metropolitan Hotel, in this city, during the past week. Nearly every road of prominence in the country was represented, and also many others, whose prominence was not sufficient to entitle them to the distinction, were represented. In fact, this feature was so marked that on Monday the Association was dissolved and a new organization formed, with a constitution under which no transportation line not engaged in through passenger traffic may be represented, and other lines may be represented only by the head of the passenger department of each.

This change was accomplished by a *coup d'etat* which was most successful in its results, and now gives to the through trunk lines the representation which before they shared equally with side lines, some of which, while possessing but a few miles of rails, had an equal vote with the representatives of great corporations controlling thousands of miles. The new association having been formally organized, the following officers were elected:

President—S. C. Boylston, of the Savannah and Charleston Railroad.

Vice-President—W. B. Shattuc, of the Atlantic and Great Western Railway.

Secretary—A. J. Smith, of the Cleveland, Columbus, Cincinnati and Indianapolis Railway.

Executive Committee—F. R. Myers, of the Pittsburg, Fort Wayne and Chicago Railway; C. P. Atmore, of the Louisville and Nashville and Great Southern Railroad; C. E Follett, of the St. Louis, Vandalia, and Terre Haute Railroad; Lucius Tuttle, of the Hartford, Providence and Fish kill Railroad; John R. Macmurdo, of the Richmond and Danville Railroad; Thomas L. Kimball, of the Union Pacific Railroad; L. M. Cole, of the Baltimore and Ohio Railroad.

General Committee—E. A. Ford, of the St. Louis, Iron Mountain and Southern Railway; J. Waldo, of the Houston and Texas Central Railway; W. P. Johnson, of the Illinois Central Railroad; E. R. Dorsey, of the Georgia Railroad; E. Gallop, of the Boston and Albany Railroad; S. S. Parker, of the Louisville, Cincinnati and Lexington Railway; L. P. Farmer, of the Pennsylvania Railroad.

The duties of the meeting have not prevented the members of the convention from enjoying themselves while in the city. On one day the officers of the Long Island and Brooklyn, Flatbush and Coney Island Railroads placed a special train at their disposal, and conveyed them to Brighton Beach, via Garden City. At both places they were entertained with the hospitality for which these roads are noted. The Hotel Brighton was opened specially for the occasion, and at the *dejeuner* addresses were made by Col. Sharp, Senator Murphy, and Messrs. Chittenden, Spencer, Dorwin, Laffan, Hinsdale, Ford, Heald, Walliston, Sweet and others. In the evening of the same day a dinner was given them by Mr. Claire, of the Metropolitan, the distinguishing feature of which was the bill of fare, which was gotten up in imitation of a book of coupon tickets. The convention adjourned on Wednesday, to meet at Louisville, Ky., in September next.

THE GREAT WALK.

THE walk at Gilmore's Garden last week having afforded six days of excitement to the community has now gone on record as the third competition for the Astley belt. The most remarkable thing about the contest was the intense and universal interest which the general public manifested in its progress from day to day. It was the absorbing theme of conversation at all times and in all places, was made the subject of a vast amount of newspaper description and comment,

and finally was discussed more or less sensibly in half a score of city pulpits. The six days' walk was a seven-days' wonder.

And now that it is all over, the crowds dispersed from the bulletin boards, traffic once more unimpeded and business again in its ordinary ruts, we may consider for a moment the utility of all this *furore*. If we look for any real benefit which has accrued to any one, or which is at all likely to follow, we shall look long in vain. Certainly these feats do not subserve the interests of "physical culture." Anything tending to properly and normally develop the human body deserves and will receive the hearty approval of every sensible man. But it is the veriest bosh to dignify a six-day's trial of endurance as an incitement to physical culture. Such a contest is solely an artificial exertion under artificial stimulants to surpass the bounds of normal human endurance, and tax to its utmost limit the reserve force which nature has given to every man for the emergencies of disease and calamity. The short history of the belt has already demonstrated that this cannot be done without very serious consequences to those who are so foolish as to undertake it. The sudden collapse of O'Leary, concerning which there have been so many needless speculations, was due simply to the fact that the man's vital forces had been exhausted in his previous walks; and the human machine, like everything else in this world, has its limit of use and abuse. O'Leary is not by any means the first to illustrate this truth, nor will he be the last. Whether four men or forty men are willing to subject themselves to these tests and their possible consequences is of course a question for themselves to decide. But it behooves those who have more respect for a man than for a horse to withhold their sanction and countenance from these feats of endurance. Human endeavor and pluck are worthy of all praise when put forth for some high or useful end. When expended for money reward, cheap notoriety, and as a means of the personal aggrandizement of gamblers and men who know not what it is to earn an honest dollar, this same pluck and endeavor may not only lose all its merit, but deserves no uncertain condemnation. The hippodroming of human beings at Gilmore's and the attitude toward it assumed by the community are not at all creditable to the culture and civilization of the day.

It is questionable if Sir John Astley deserves the thanks of the better portion of the community for his belt and the performances induced by it. Rather shall we say that in so far as many of the surroundings of the competitions for its possession have been thoroughly bad, it is to be hoped that all men, who have at heart the interests of manly, healthful recreation and physical development, will discourage the repetition of six-days' walks.

FISH COMMISSIONERS' REPORTS.—The reports of the various fish commissions, from Maine to California, are as alike in one respect as peas in a pod, accounts of country fairs, Congressional doings and dog shows. Their history of fish culture in one State is strikingly similar to that of another State. There is in each of them the same abundance of fish food in the early settlement of the country, the same reckless and unreflecting consumption and waste of this abundance, and the same subsequent depletion of fisheries. Then the work of restocking the streams is undertaken, meeting with exactly similar opposition from certain interested and short-sighted classes, illegal netting, spearing, lack of fish-ways, insufficient appropriations, and so on to the end of the chapter. And with all this one cannot but notice the uniformity with which the Commissions of every State cheerfully call for more money. Money here means capital at heavy interest. The old tale of the treasure cast into the sea and brought forth again by the lucky fisherman, who found it in his creel, has its modern parallel in the returns which now come from fish cultural expenditures.

GAME PROTECTION.

NEW HAMPSHIRE.—It is estimated that ten tons of bass and four tons of smelts have been taken from Great Bay and its tributaries this winter. No action is taken to suppress the destruction of the fisheries, and the work goes bravely on.

NEW JERSEY STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—This association will meet at the Clarendon Hotel, 95 Broad st., Newark, on Saturday, the 29th inst., for the perfection of arrangements for the State Tournament some time in June. Delegates from all authorized clubs as well as other sportsmen throughout the State are cordially invited to be present. By order of the President,

GEO. B. EATON, Pres. DR. J. Q. BIRD, Cor. Sec.

LEHIGH ASSOCIATION—*Allentown, March* 15.—At a stated meeting of the Lehigh Game and Fish Protective Association, held last evening, the following officers were elected: Pres.,-Wm. H. Kramer; Vice-Pres., Rev. A. J. G. Dubbs, Dr. Herman of Benningsville, and Dr. Arnold Stub of Brooklyn, N. Y.; Treas., Mr. Henry Bitting; Sec'y, Mr. H. Bleckley; Ass't Sec'y, C. H. Bitting; Cor. Sec'y, P. W. H. Deshler; Board of Directors—Mr. W. H. Kramer, Mr. Ephram Ritter, Mr. Henry Bitting, Mr. C. Lewis Huber, Mr. E. D. Leizering, Mr. Edwin Fink, Dr. Laroche and Mr. C. Foster; Com. on Printing—Mr. Edwin Fink, Rev. A. J. G. Dubbs and our attorney, Mr. Morris L. Kaufman. The Board of Directors will hold their meeting on March 15, when they will appoint committees on fish and committees on game. C. H. B.

FISH PROTECTION IN TENNESSEE.—Thanks to the zeal and untiring efforts of Col. Geo. Akers, the proposition to protect and propagate fish in the waters of Tennessee has nearly become a law. It has been presented to the legislature and meets with general approval by all those who have read the bill or even heard of it. Of course there are a number of persons bitterly opposed to the bill, but they are ignorant of the good the State and individuals will derive from it. In a few years the increase will be so large that fish in the greatest abundance can be obtained by all classes and at exceedingly low rates. Besides, once the fact gets abroad that our beautiful State is noted for its fine fishing grounds, every year we will have a large influx of sportsmen from the North among us. We will all get better acquainted, and as a natural consequence get to like each other better. Fancy a month spent on the Cumberland or Tennessee Rivers, with occasional excursions up their many tributaries, after they are again as they once were, stocked with Jack, bass, perch, stripped bass and the channel cat; with a lovely country on all sides stocked with quail, ruffed grouse, wild turkey, deer and bear, to say nothing of the endless amount of water-fowl, cheap living and a hospitable people to meet on your road. Once the sport can be assured there need be no fear about the lovers of it not coming to enjoy it. Col. Akers thinks that three or four years close preserving the streams will see them so abundantly stocked as to allow of legitimate angling for fish strictly in season. J. D. H.

Nashville, Feb. 27, 1879.

MINNESOTA.—The bill introduced into the Minnesota Legislature to prevent the exportation of game from the State failed to pass. The need of such a law, however, should be apparent to all.

The winter spearing on Lake Minnetonka threatens to exterminate the fish there. The method of capture is thus described by a correspondent of the St. Paul *Pioneer Free Press*:

"The time the ice is strong enough to bear until the warm days and rains of March have completely honey-combed it, the detestable "fish-house" is a common sight upon Lake Minnetonka. It consists of a box-like house of about four feet square, with a slightly slanted roof, no floor, a little door, a little stove on a shelf in a corner, and a board seat on one side. On this seat sits, day after day, a man or boy, too lazy for active work, dangling a decoy minnow through a hole in the ice, and murdering the fish with a spear as they stop motionless directly under the fish-house, astonished at the sudden withdrawal of the decoy that has attracted them. No ray of light enters the fish-house, except through the ice below, and the bottom, under twenty feet or more of water, is as distinct as if seen through the air. Absolutely invisible himself, the occupant has every motion of the doomed fish in perfect light. Of these fish-houses there are probably a hundred or more on the lake, and at least twenty-five daily in use, Sundays not excepted. Some of them are even large enough to contain a bunk or two, and are inhabited day and night throughout the winter."

The estimated catch of one man per month is 1,200 pounds, 48,000 pounds for the four months' work, or total work for the daily average of twenty-five men, 120,000, or sixty tons. The depletion consequent upon this yearly drain is already apparent, and as the plunder is on the increase, the fishing in Minnetonka must in time be wholly destroyed.

THE ENGLISH SEA BIRD ACT.—The English law providing for the protection of sea birds is having its natural result with a vengeance, and English fishermen are finding themselves in something of the predicament of the good people of old with their St. Anthony's pigs. The birds have doubled and trebled and quadrupled and grown more voracious than ever before. They swarm the estuaries, bays and river mouths and destroy the fish by wholesale. And now the English law-makers are called upon to repeal the protective law and give the fish and the fishermen a turn.

The Rifle.

THE FOREST AND STREAM TOURNAMENT.

The second FOREST AND STREAM AND ROD AND GUN Tournament was a complete success in the interest excited, in the number of competitions, and in the excellent scoring shown. The conditions had been so carefully drawn that there was little room for discussion, and from the opening shot on the evening of the 10th inst. through the entire five days of the contest there was nothing but the best of feeling manifested. The referees and umpires became mere spectators of the excellent marksmanship displayed, and the object of the F. and S. in instituting the contest was fully gained in the impetus given to the sport of off-hand shooting and the development of a high degree of expertness in this most popular form of rifle practice.

With the preliminary arrangements of the match all readers of these columns are familiar. In brief, it was to be the only test which can conveniently be made, within doors, of allowing the men to shoot with .22 cal. rifles at reduced targets. Each team consisted of ten men and each man was given ten scoring, with a privilege of two sighting, shots. The utmost care and deliberation was taken with every detail; nothing was left to chance. It is safe to say that, with a few such setbacks as doubtful cartridges, the men shot fully up to their average, though in some of the clubs it was claimed that the practice had been better.

For the purposes of comparison and to show the progress made in the year the following figures are taken from the report of the Tournament in March of 1878:

Zettler Club Team	454	Seppenfeldt Club Team	427
New York Club Team	445	Centen...l' Rifle Club Team	423
Hellwig Club Team	442	Irish-American Team	420
Scottish-American Team	437	Yorkville Team	419
Newark Amateur Club Team	428		

These averages were good, but all felt that better work was to be done, and it came with a vengeance on the first night, when the New York Club, first team, opened work with J. H. Meeker as referee. The close way in which the bull's eye was hugged showed the wisdom of Mr. Conlin when he arranged that clever sliding sheet to go behind the target and there to catch a second record of the work done. So that in addition to the punched-out bull's-eye there was a line-drawing of the work on the second sheet. S. W. Sibley began the performance with a centre, then a second and a third, while the crowd of close watchers at the target-end of the galley began to wonder when he was going to get to work and into the bull's eye. It came on the next shot, and then, with the ball regularly opened, it was hot, close work to the end. Of course there was not a shot of lower grade than a centre in the whole team and the men felt pretty confident as they sat down with their total of 468.

New York Rifle Club, 1st Team—L. V. Sone, Captain.

Fred Alder	4	5	5	5	5	4	5	5	5	5—48
A J Howlett	5	5	5	4	5	5	5	4	5	5—48
S P Wells	5	5	5	5	4	5	5	4	5	5—48
F J Donaldson	4	4	5	5	5	5	5	5	5	4—47
J B Blydenburgh	4	5	5	5	5	5	4	5	5	4—47
L V Sone	4	5	4	5	4	5	5	5	5	5—47
S W Sibley	4	4	4	5	5	5	5	4	5	5—46
H D Blydenburgh	4	5	4	5	5	4	4	5	5	5—46
Fred Conlin	4	5	4	5	5	4	5	5	5	4—46
D A Davis	4	4	5	4	5	4	5	4	5	5—45—468

Average, 46 4-5ths.

The Zettler first team came to their work with a bad look in the eye. They one and all meant business. Mr. H. E. Oehl was, the referee and Dr. M. M. Maltby, the umpire of the evening looked on in idleness. C. G. Zettler led off for his men, but got only a forty-seven, when Farrow, the champion of the Fest, stepped forward and put in, not the fifty that was expected of him, but a magnificent forty-nine. Then followed other equally excellent scores, until a total of 478 put the team in first place, beyond any possibility of defeat. The wise decision to keep old men in the team helped much to bring about the Zettler victory. In one case a glass on the stock called out a seeming show of opposition, but it was decided that there was too much of an appearance of telescopic sight about it, and Col. Riggs contented himself with the use of eye-glasses. The full Zettler score stood:

Zettler Rifle Club, 1st Team—B. Zettler, Captain.

W M Farrow	5	5	5	4	5	5	5	5	5	5—49
W Klein	5	5	5	5	5	5	5	4	5	5—49
C Judson	5	5	5	5	5	5	5	4	5	5—49
D Miller	5	5	5	5	5	5	5	4	5	5—49
P Fenning	5	5	5	5	5	5	4	5	5	4—48
C G Zettler	5	4	4	5	5	4	5	5	5	5—47
M Dorrier	5	5	5	5	5	4	4	5	5	5—47
B Zettler	4	5	5	5	5	5	5	4	4	4—47
M L Riggs	4	4	5	5	5	4	5	5	5	5—47
M Engel	4	5	4	5	5	5	4	5	5	5—47—478

Average, 47 8-10ths.

The second night brought together two German clubs, with G. C. Walters as referee for the Seppenfeldt Team, R. Faber for the Hellwigs, and Col. Gilon as umpire of the evening. Capt. Seppenfeldt led off with a good score, but there were too many centres, and with four inners the score was brought down to an average of 43 4-5ths per man, the score standing:

Seppenfeldt Rifle Club—W. Seppenfeldt, Captain.

E Holzmann	4	5	4	5	5	5	5	5	5	4—47
John Maher	4	5	5	4	5	5	5	5	5	4—47
Wm Seppenfeldt	5	4	4	5	5	5	4	4	5	4—46
John Rein	4	5	4	3	5	4	4	5	5	5—44
P Brennan	3	4	5	4	4	4	4	5	5	5—43
M Kern	4	3	4	4	4	5	5	4	4	4—43
O Fitzpatrick	5	5	4	3	4	4	5	3	5	5—43
T Garrison	4	4	5	4	4	4	4	4	5	5—42
J W Adams	4	4	5	4	4	4	4	4	4	5—42
H W Janine	5	4	4	4	4	4	4	4	4	5—42—438

The Hellwig Club team had many strong men in its ranks, and, with a single "inner," an excellent average was maintained:

Hellwig Rifle Club—F. Kessler, Captain.

J L Paulding	5	5	5	5	4	4	5	5	5	5—48
A G Hellwig	5	5	5	4	5	5	5	5	4	5—48
W Hahn	4	4	5	5	5	4	5	5	5	5—47
J Seurs	5	5	4	5	5	5	4	4	5	5—46
A B Van Heusen	4	5	4	5	5	5	5	4	4	5—46
F Kessler	4	4	5	5	5	4	5	4	4	5—45
W Widemann	5	4	4	5	4	4	4	5	5	4—45
A C Reynolds	5	5	5	4	4	4	4	4	5	5—44
L Vogel	5	4	4	4	3	4	5	5	4	5—43
P Myer	4	5	4	4	5	4	4	4	4	5—43—434

The second team from the New York Club, under Capt. J. F. Duckworth, and the team from the South Brooklyn Rifle Club filled out the third night of the match. It seemed to be an "off" night, for the two lowest aggregates of the meeting were made, and South Brooklyn, with a record well over centres, found its team at the bottom. Fred Alder, for the New Yorkers, and John A. Henry, for the Brooklynites, acted as referees, but the shooting passed off without a ripple, and the scores were accepted with the philosophic, if but slightly comforting, remark that somebody must fill the bottom places on the list. The New York men scored first, as follows:

New York Rifle Club, 2d Team—J. F. Duckworth, Captain.

J W Mangam	4	5	4	4	4	5	4	3	4	4—41
P J Cullinan	4	4	5	3	3	4	3	4	5	5—42
C E Palmer	5	5	5	5	4	5	4	4	4	4—44
E T Davis	5	5	4	4	5	4	4	4	4	3—44
W H Cadwell	5	5	4	4	5	4	5	5	4	3—44
A C Wurtele	3	4	5	4	4	5	5	4	4	4—43
C F Prendergast	4	5	5	5	5	5	4	4	5	5—42
J N T Lewick	4	5	5	4	5	4	4	4	5	5—41
F H Lord	3	4	4	5	5	4	4	5	5	5—45
T Fitz	5	4	5	4	4	4	4	5	3	4—41
	5	4	5	4	4	4	4	5	5	5—45—436

The teams were so evenly matched that only a single point separated them, the scores standing:

South Brooklyn Rifle Club—J. A. Roche, Captain.

W H McKune	4	4	4	4	5	4	5	4	4	4—42
J F Burns	4	5	5	5	4	3	4	4	4	4—42
F A Stratton	4	5	4	4	5	4	4	5	4	5—44
J H Roche	5	4	5	5	4	4	5	4	5	5—44
J B Hazelton	5	4	5	5	4	5	4	5	4	5—46
Dr G W Welty	4	5	5	4	4	4	4	5	4	4—43
A H Anderson	5	5	4	5	5	5	4	4	3	5—45
D Trotter	4	5	4	5	3	3	4	5	5	5—43
J F Halligan	4	4	4	3	4	4	5	4	4	4—40
J Norton	5	4	4	4	5	4	5	4	5	5—44—435

The next evening the scoring ability of the two teams was very close again. A team from the Catholic Institute, Newark, and the team representing the Empire Club doing their share of the contest. The visitors from the distance shot first, in order to get back to their homes. The scoring was creditable, and did not reduce the average of the tournament to any material extent. The figures stood:

Catholic Institute Team of Newark—R. P. Conlon, Captain.

E Dennin	5	5	5	5	5	4	5	4	4	5—46
R P Conlon	5	4	4	5	5	5	5	5	5	4—46
M Walsh	4	4	5	4	5	4	5	5	5	4—45
T J Roche	5	4	5	4	4	5	4	5	4	5—45
T J Ryan	5	4	5	4	4	4	5	5	4	4—44
H Smyth	4	4	5	5	4	5	5	4	4	4—44
C Conlon	5	4	5	4	4	4	4	4	4	4—42
E P Berrs	4	5	4	5	4	4	5	3	4	4—42
C Smyth	4	5	4	5	4	4	4	4	4	4—42
J J Mullin	4	4	4	4	4	4	4	3	3	5—40
	4	5	4	5	4	5	5	5	5	5—46—441

The Empires, next on the target, were responsible for the only outer in the match, yet the score held well up, and the team shot well together, as follows, with Capt. Miller as referee for them and Jas. S. Conlin, of the gallery, as umpire:

Empire Rifle Club—Dr. S. T. G. Dudley, Captain.

J W Todd	4	5	5	4	5	5	4	5	5	5—47
S T G Dudley	5	5	4	5	4	4	5	4	5	5—46
M M Maltby	4	5	5	4	4	5	5	4	4	5—45
D A Davids	4	5	4	4	5	5	4	4	4	5—44
H W Gourley	4	5	4	4	5	5	5	5	5	5—45
F H Holton	4	4	5	5	5	4	5	5	5	5—43
A H Cobb	4	5	4	5	5	4	4	4	4	4—43
J H Brown	4	5	5	4	5	5	4	4	4	5—43
J E Irwin	5	5	4	5	5	4	2	4	5	4—43
T A Carmen	4	3	4	5	4	5	4	4	4	5—42
	4	4	3	4	5	4	4	4	5	5—41—433

The wind-up night of the tournament brought two more strong teams together. The Zettlers are a powerful club, and their second team was barely second in any respect to the leaders of the first night, while the Newark club, with such a man as Hayes in its ranks, cannot be called a sickly body. Averages of 46 made through the evening, and only two shots of the Newark men strayed from the centre circle, and the total showed as follows:

Newark Amateur Rifle Team—Wm. Hayes, Captain.

J F Hill	4	5	5	5	5	4	5	5	5	5—48
W Hayes	4	5	5	5	5	5	5	5	5	4—48
W C Gardner	5	4	4	5	5	5	5	5	4	4—46
T S Harrison	5	4	4	5	5	4	5	5	4	5—46
F Brown	4	5	4	4	5	4	5	4	5	5—46
G Bauman	4	5	4	5	5	5	4	5	4	5—46
J L Tobin	4	5	5	4	4	5	5	5	5	5—46
V Hesse, jr	3	4	5	5	5	5	5	5	4	4—45
W P Merkel	4	5	5	4	4	5	5	5	4	5—45
J Beyer	4	4	5	5	5	5	5	4	4	4—44—460

The Zettler men went in to win, but though they could tie on total, the N. R. A. rule of tie decisions left them out of the lead, they having three shots in the inner circle out of the 100 fired at the bull's-eye. M. Engel acted as referee.

Zettler Rifle Club, 2d Team—N. D. Ward, Captain.

A E Moore	4	5	5	5	5	4	5	5	5	5—48
R Zimmerman	4	5	5	5	5	5	4	5	5	4—47
J Levy	5	5	5	5	4	4	5	5	5	4—47
L G Bates	4	4	5	5	5	5	4	5	5	5—47
F Fabarius	5	5	3	4	5	5	5	5	5	4—46
L F Treubel	5	5	4	5	5	4	4	5	4	5—46
H Oehl	5	4	4	4	5	4	5	5	5	5—46
G A Sherman	3	5	5	5	5	4	4	4	5	5—45
D Gulhane	4	5	4	4	5	4	4	4	5	5—44
N D Ward	5	4	4	5	5	4	5	3	5	4—44—460

The match had now closed; 1,000 counting shots had been fired, of which 494 were bull's-eyes, and among the rest a single outer, and not a solitary miss. No accident had happened to the weapons, and the excellent character of the ammunition from the Winchester and Union Metallic Works was evidenced by the uniformity of the work done. The list of prizes included the ten gold monogram badges presented by the FOREST AND STREAM AND ROD AND GUN; an American Express rifle, the first one ever manufactured in this country, presented by the Winchester Arms Company; a Ballard sporting rifle presented by Schoverling & Daly: a gallery rifle presented by the Remingtons; two badges presented by T. M. Shepard; a fine revolver from the Union Metallic Cartridge Company, and a similar weapon from Schuyler, Hartley & Graham. The summary of the shooting gives the order of merit as follows in the possible 500:

Zettler Rifle Club, first team	478
New York Rifle Club, first team	465
Newark Amateur Club	460
Zettler Rifle Club, second team	460
Hellwig Rifle Club	454
Catholic Institute of Newark	441
Seppenfeld Rifle Club	438
Empire Rifle Club	435
New York Rifle Club, second team	426
South Brooklyn Rifle Club	409

Average score, 450 8-10

The presentation of the prizes on Tuesday evening took place at the gallery, and drew together the leading shots of the several teams. All were satisfied with the work done, and with pleasant words from Judge Smith—himself an excellent marksman—the evening passed in the most agreeable manner, and the tournament went into record as the best general exhibition of off-hand shooting yet made.

MASSACHUSETTS—*Medford*, *March* 15.—The following are the best scores made at the first meeting of the March series at Bellevue range; 200 yards:

First Class.

Henry Withington	5	4	4	5	4	5	4—31
H Davis	4	4	4	5	4	4	4—29
C H Russell	5	4	4	4	4	4	4—29
A B Archer	4	4	5	4	4	4	4—28
E W Archer	3	4	4	4	4	4	4—27

Second Class.

J Barker	4	3	5	4	4	4	4—29
E P White	4	4	4	4	4	4	4—28
A T Howard	4	4	4	4	4	4	4—28

Third Class.

O T Perry	4	4	3	4	4	4	4—27
S A Brown	4	4	4	3	3	4	4—26

Boston, *March* 15.—There was a good attendance of members of the Massachusetts Rifle Association and visitors from other organizations of the same kind from a number of the adjoining towns and cities at the Walnut Hill range to-day. The weather conditions were fair, but the wind, which blew with force, caused the marksmen considerable difficulty. The best scores made in the "Winchester Rifle" match stood:

C Edwards	4	4	4	4	4	5	4	5	5	5—63
E B Soutmer	5	5	4	5	4	4	4	4	5	5—66
W H Jackson	5	5	5	5	4	5	4	4	4	5—66
J B Rogers	5	5	5	4	4	4	4	4	5	5—65
W J Stephens	5	5	4	4	4	5	4	5	3	5—64
W Pollard	5	5	4	4	4	4	4	4	4	4—63
W E Guerrier	5	4	4	3	5	4	6	4	5	4—63
H Tyler	5	4	4	4	3	4	4	4	4	4—62
H Lee	5	4	4	4	4	4	3	4	4	4—62
C C Meigs	5	4	4	4	4	4	4	4	4	4—62
J N Frye	4	4	5	4	4	4	5	4	5	5—61
N Bausman	4	5	4	5	4	4	5	4	4	4—61
S S Rice	4	5	4	4	4	3	4	4	4	4—60
H Davis	4	4	4	5	5	5	4	4	5	4—60
J R Shaefer	4	3	4	3	4	3	4	4	5	5—60
D F Hunt	2	4	4	3	4	4	4	4	3	4—57
C R Griffin	4	4	4	4	3	3	2	3	3	4—52

Boston.—The regular monthly prize shoot at the Mammoth Rifle Gallery is progressing finely. The second week of the month was even better than the first. For the second week the best scores are:

E S Tobey, Jr.	5	4	4	5	5	5	5	5	3	4—38
C Leslie	5	4	4	5	5	5	5	5	3	4—38
A L Baines	4	5	4	4	5	5	5	5	5	5—37
W Bradford	4	4	5	5	5	4	5	5	5	5—37
C Edwards	5	4	5	4	5	5	5	5	3	5—37
G E Everett	5	5	5	4	4	5	4	5	3	5—37
C J Foye	5	5	4	5	4	5	4	5	3	5—37
M L Pratt	5	4	4	5	5	5	4	4	3	5—37

Medford.—The second of the March series of competition class matches occurred on Wednesday; good weather. The following are the best scores made out of fifty-eight entries:

First Class.

H H D Cushing	5	4	4	5	5	5	5	4	3	4—43
C H Russell	5	4	4	4	4	5	5	5	4	3—43
C H Russell (re-entry)	4	5	5	4	4	5	4	5	4	3—43
H Withington	5	5	5	4	5	5	4	4	5	3—43
H Withington (re-entry)	4	5	4	5	5	5	5	5	3	3—43
J B Osborn	4	5	4	4	5	4	4	4	4	4—42
J B Osborn (re-entry)	5	4	4	5	5	4	4	4	4	4—42
E Wyman	5	4	4	4	4	4	5	5	4	3—42
E Wyman (re-entry)	4	5	5	4	4	4	5	4	4	4—43
J H Eames	4	4	5	5	5	4	4	4	4	4—43
J H Eames (re-entry)	4	5	4	5	4	4	4	4	4	4—42
C Hathaway	4	5	4	4	4	4	4	4	4	4—41
C Hathaway (re-entry)	4	4	4	4	5	4	4	4	4	4—41
C D Harrison	4	4	4	4	5	5	4	4	4	4—42
C D Harrison (re-entry)	4	4	4	4	4	5	4	4	4	4—41

Second Class.

E S Piper	5	4	4	5	4	4	5	4	3	4—42
E S Piper (re-entry)	4	4	4	4	4	4	5	4	3	4—40
E F Kendrick	4	4	5	4	4	4	4	4	3	4—40
E F Kendrick	4	4	4	4	4	4	4	4	3	4—39

CONNECTICUT—*Collinsville*, *March* 6.—At a regular meeting of the Canton Rod and Gun Club, held to-day, the following scores were made off-hand, 200 yards, 10 shots:

	Mass.	Creed.		Mass.	Creed.
O B Hall	93	41	J Hamilton	84	38
John Pfister	86	41	Henry B Moore	83	40
J Laubenstein	86	40	Henry Konold	70	36

On the 13th inst. the score stood:

	Mass.	Creed.		Mass.	Creed.
O B Hall	94	41	J Laubenstein	86	40
J Hamilton	92	42	H Konold	84	40
J D Andrews	90	40	John Pfister	73	37

NEW CLUB.—A club has been formed at Jamestown, N. Y., for the prosecution of sport and the protection of game, with the following officers: Pres., H. V. Perry; Vice-Pres., Samuel G. Love; Sec'y, A. R. Barton; Treas., R. H. Burns. The club has a shooting gallery fitted up; target, 8-inch bull's-eye and 4-inch rings, reduced from 200 yards. Among their best scores are the following ten—ten shots out of a possible 50: H. V. Perry, 49; D. W. Prosser, 49; R. H. Burns, 49; Samuel G. Love, 48; W. J. Fenner, 48; W. S. Jenkins, 48; H. W. Watson, 48; S. W. Ayers, 47; A. F. Ward, 47; D. J. Langworthy, 47.

—The politicians are firing preliminary paper billets at each other, and next week we shall publish the challenge from the Fifth to the Ninth Assembly Districts of the Fifth Senatorial District, with the scores to be made on Monday evening, 24th inst., at Hellwig's Gallery.

NEW JERSEY—*Union Hill*.—A practice shooting of the Jersey Schuetzen Corp took place last week at Union Hill Schuetzen Park; distance, 200 yards; off-hand; ten shots; 25 ring target:

Max B Engel	241	J B Raschen	164
C G Zettler	235	F H Jacobi	162
Wm Hayes	209	Herm Raschen	151
Capt A Ermisch	191	A Steffens	124
A Appel	173	Dr R Lienau	118

Each of the above received a prize from $5 down to 50c.

—The Jersey Schuetzen Corps held a practice shooting the 12th inst., at Union Hill Schuetzen Park; distance, 200 yds., at ½-inch ring targets; ten shots each: M. Engel, 212; Chas. Zettler, 199; John Raschen, 197; and Jacobi H. Raschen, F. Hansen, Jul. Demke and others. Next shooting takes place the 26th.

—The members of the New York Schuetzen will also begin practice next Friday, the 21st inst., and continue every other Friday. Open to all comers.

—The Board of Directors of the United Schuetzen Park of Union Hill, N. J., elected, at their meeting of the 7th instant, Mr. Henry Wollens, of Hoboken, Superintendent of said Park, in place of Wm. Walbaum, who resigned.

Washington, *D. C.*—At a recent meeting of the executive committee of the Columbia Rifle Association, Commander L. A. Beardslee, U. S. N.; Alvey A. Adee, chief of the Diplomatic Bureau, State Department; H. W. Illman, of the Engraving and Printing Bureau, and Benjamin Chambers, machinist, were elected active members of this popular rifle organization. All of the above named gentlemen have stood before the targets at Benning's recently and showed their skill with the rifle.

OHIO—*Cincinnati*, *March* 9.—The Cincinnati Shooting and Fishing Club had their second competition for club prizes today; distance, 200 yards; position, off-hand:

First Class.

W Caldwell	5	5	4	4	4	4	4	4	5	4—43
D T Disney	4	4	4	5	4	4	4	4	4	4—42
L Fender	4	4	5	4	4	5	5	4	4	4—43
G Heuson	5	3	4	4	4	5	4	4	5	5—42
T J Baum	4	4	4	4	5	5	5	4	4	4—43
W Hall	4	4	4	4	4	3	3	4	4	3—38
M Gendelin	4	4	4	3	5	5	5	3	5	4—43

Second Class.

Campbell	4	5	4	1	2	4	4	2	4	3—33
A Koehler	3	1	3	4	4	1	1	0	1	3—22
Whetstone	4	4	3	5	4	4	3	3	4	3—35

C.

ILLINOIS—*Lake View*, *March* 15.—The regular weekly shoot of the Lake View Rifle Club came off to-day. 200 yards. Score:

Colehour	5	5	4	4	4	4	5	3	4	5—43
Cram	4	5	4	4	4	4	4	4	4	4—41
Tilt	4	4	3	4	4	5	5	4	4	4—41
Bradley	5	5	4	4	4	4	3	4	5	4—41
Macauley	4	3	4	3	4	4	4	3	5	4—40
Burns	4	5	4	3	4	4	4	4	2	4—39
Henrotin	4	3	3	3	4	4	4	2	4	4—35
Chatfield	3	3	3	3	5	3	5	3	4	3—35

Chicago, *March* 15.—The Thomas Rifle Club, at the Northwestern Rifle Range to-day, made a score as follows. Distance, 200 yards; 15 shots; wind strong at 2:30:

W H Chenoweth	5	5	4	3	5	4	4	4	4	5	5	3	4	4	5—63
S M Tyrrall	4	5	4	5	4	4	4	5	5	4	4	5	3	4	4—64
T A Freeman	4	4	5	4	5	4	5	5	4	4	4	4	4	4	4—63
L H Drury	4	4	4	4	3	4	5	4	5	4	4	4	5	4	4—62
D B Freeman	4	4	4	4	5	4	4	4	4	5	4	4	2	4	5—61
J W Morse	3	3	3	5	4	4	4	4	3	4	4	4	3	4	4—54
E D Swain	4	3	4	4	4	3	4	5	4	4	3	4	0	4	4—54
A B Clark	4	4	3	3	4	4	2	2	3	0	3	4	4	0	2—46

LU. H. DRURY.

MICHIGAN—*East Saginaw*, *March* 8.—At the eighteenth weekly practice of the Amateur Rifle Club to-day the following scores were made, 200-yard target reduced, possible 50:

Captain W J Shaw	5	4	5	4	5	5	5	4	5	4—46
G C Yawkey	4	4	5	4	4	5	4	5	5	5—45
H P Corbyn	4	4	5	4	5	4	4	5	4	4—43
F R Osborn	3	5	4	4	5	4	4	5	4	3—43
J H Hamilton	3	4	4	4	4	5	4	4	4	4—42
H G Hamilton	3	4	4	4	4	5	4	4	4	4—40

A DOUBTING THOMAS.—*Denver*, *Col.*, *Feb.* 23—*Editor Forest and Stream:* In your issue of January 9, I see you record some remarkable shooting done by two remarkable shooters, Messrs. J. M. T. Partello and J. P. Burnside, both gentlemen from Washington, D. C., Mr. Partello making the miraculous score of seventeen bull's-eyes in twenty shots, at the distance of 200 yards, off-hand, in twenty seconds, together with Creedmoor target. Mr. Burnside fourteen out of twenty. You gave what style of holder do these gentlemen were? Just think of it; snowing, too. Only for the snow they might have scored them all. Now, Mr. Editor, allow us to say, and hundreds of others here in the West, who fully understand all the nice points in rifle shooting, that we don't believe (at this altitude) that the score was ever made. Anyway, the aforesaid gents can't make the scores mentioned at 200 yards in fair weather, for money, soap or marbles, and they can name the amount they wish to shoot for.

C. COVE AND W. Y. SEDAM.

A RANGE SCENE.—*Any range and any time.*—The regiment was ordered out for target practice, and to the unspeakable disgust of the instructor, the soldiers made bull's-eyes on barns and centres on the planet Uranus.

"Gimme that rifle, you cross-eyed son of an old smoothbore Tower musket," yelled the instructor, "and watch me!"

He fires and misses the target, the bullet striking about two hundred yards short, and a quarter of a mile to the right.

"That's the way you gawks do," said the instructor calmly, putting in another cartridge; "never make any allowance for windage—pay no attention to your elevation—nothing."

He fires again, and sends the bullet over the target.

"And that's the way some more of you do—get a good aim on the mark, but when you pull your trigger, up goes your muzzle, and the ball goes up among the little stars and all around the moon, fair regent of the heavens."

Fires again, and makes a bull's-eye.

"And that's the way you ought to do!"

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*	Grouper, *Epinephelus nigritus*.
Drum (two species).	Family *Sciænidæ*.
Kingfish, *Menticirrus nebulosus*.	Trout (black bass), *Centrarchistis atrarius*.
Sea Bass, *Sciænops ocellatus*.	Striped Bass, or Rockfish, *Roccus lineatus*.
Sheepshead, *Archosargus probatocephalus*.	Tailorfish, *Pomatomus saltatrix*.
Snapper, *Lutjanus blackfordii*.	Black Bass, *Micropterus salmoides* *M. taltoides*.

FISH IN MARKET—RETAIL PRICES.—Bass, 15 to 20 cents; smelts, 10; blue fish, 12; salmon, 35; shad, per pound, 18; white perch 15; green turtle, 15; frost fish, 8; halibut, 18; haddock, codfish, 6; blackfish, 15; flounders, 8; eels, 18; lobsters, 10; scallops, per quart, 30; whitefish, 15; pickerel, 15; salmon trout 20; muscalonge, 18; red snapper, 12½; hard crabs, per doz., 35.

—Brooklyn anglers will find a full assortment of all kinds of tackle at E. D. Madison's, 564 Fulton street.

—As the trout season is about to open, Mr. Chas. F. Murphy, of 76 Burnett st., Newark, wishes it understood that he is still in the field and is ready to furnish to order as good a split bamboo rod as can be found in the market. We have used his rods for a number of years and found them give perfect satisfaction.

MOVEMENTS OF THE FISHING FLEET.—Only 6 fishing arrivals have been reported at this port the past week, 1 from the Banks with 50,000lbs. halibut, 4 from Georges with 50,000lbs. codfish and 5,000lbs. halibut, and 1 from New Brunswick with frozen herring. The stock of fish is slender in all departments, and the market firm.—*Cape Ann Advertiser*, *March* 14.

NEW YORK—*Eldred*, *Sullivan Co.*, *March* 10.—Fishing is good here now; pickerel, perch and pike are the kinds caught. The weather was too cold through the winter months to fish on the lakes, or ponds as they were called. The ice is 18in. thick. The streams in this town were cleared of racks last year and we expect good brook trout fishing in April.

J. M. B.

GOOD MATERIAL FOR RODS.—I should like to inquire if any one has ever used the wood known as shad-blow or shadflower (*Amelanchier canadensis*, is it not, Mr. Editor?) for rod making? I have rods made from bamboo, lancewood, greenheart, ironwood, etc., but, aside from split bamboo, I think a rod made of well-seasoned shad-blow will hold its own with any of them. All of my rods are of my own make, and I have always selected the wood with great care. I have a rod that I made this winter, the but and second joint of shadblow and the tip of split bamboo. It is 11ft. 2in. in length, 7¾oz. in weight, and when joined I can hold the but and tip in one hand. Shad-blow, like all tough and springy woods, is of slow growth and is very close grained. I should like to hear if any one besides myself has used this wood and what they think of it. SHAD-BLOW.

EFFECT OF MOONLIGHT ON FISH—*Editor Forest and Stream:* I have read the various articles on "Moonshine" with much interest. As some of the land sailors seem to scout the idea of baneful effects from the rays of the moon, allow me to state a few facts known to me. In the year 1853, when running in a bark between San Francisco and Humboldt Bay, our provisions consisted on the down trip, in most cases, of elk meat purchased at Humboldt Bay, and invariably hung up in the rigging, covered with canvas. Upon two occasions, when two land quarters from the same animal were hung up side by side, the crew some time in the night uncovered one of them to cut off some pieces for bait for the numerous fishes following in our wake, and neglected to replace the canvas covering. In the morning the cook noticed that the meat had a slimy appearance, but not suspecting anything, cut off sundry slices to cook for breakfast. The result was that the whole ship's company were made sick, myself included, which the captain, on inspecting the quarter of meat, decided was owing to the effect of the moon's rays, and ordered it to be thrown overboard; but the mate, ridiculing this idea, directed the steward to slice off more of the same for his dinner, and at the same time two of the crew ate of the tainted meat. The result was that all three were made extremely sick, with symptoms resembling those of cholera—viz., vomiting, cramps, etc. The rest of the crew, who ate from the other leg, were not affected, and we ate from the one that remained until our arrival in San Francisco.

I have seen in the China seas two or three instances of men, who had slept on deck exposed to the rays of the full moon, being attacked with "moon blindness," that is, unable to see in the night, although perfectly able to see in the day time. These attacks after a time wore off. Although not superstitious, I fully believe in the baneful effects of the moon's rays. I think that these effects are more prevalent in the tropical waters, especially in the Pacific and Indian oceans, and only under cloudless skies. CORINTH.

New Bedford, *March* 14, 1879.

WASHINGTON, D. C., March 8, 1879.

EDITOR FOREST AND STREAM:

Little did I think, when I sent you my simple interrogatory last November, that I was dealing with a subject of such general interest, or that I was to be the means of inaugurating such a prolonged discussion as has since been developed through the columns of your paper. The result, however, has not been such as to make me regret the asking of the question. I have carefully read all of the opinions which you have published, and have derived much information and amusement from them. The general result of the discussion is not such, however, as to make it very clear to my mind which side is right. As nearly as I can judge, it may be summed up about this way:

Editor—Trout never take a fly that way.
Mr. Van Sicklin—What, never!
Mr. Holberton—No, never.
"T. S. U."—What, *never!*
"Joe."—Hardly ever.
Mr. Prime—Hungry trout *most often* strike
With the tail before they bite.
"Oregon"—Frequentlee
I agree.

Now, Mr. Editor, among all this conflict of opinion I am wholly unable to decide whether or not trout actually do strike the lure with their tails, but I am very clearly of the opinion that whether they do or not, they ought to; for

Salmo fontinalis is a soaring soul,
As free as the bird on high,
His energetic tail should be ready to nail
The ar-ti-fi-cial fly.

His tail should flop and his body curve,
And from this plan he should never swerve;
His eye should flash and his fins protrude,
And this should be his customary attitude.

Very truly, J. A. H.

—Mr. Edwin Tinsley, of Hamilton, Ont., has bred his cocker spaniel Gypsey, winner of first prize at Detroit, to his Dash-Daisey. The dam of Gypsey was bred to Dash on Feb. 25.

EXTRAORDINARY CATCH OF TROUT.—The following is a statement which was published in the Rodgers City *Advance*, Michigan, last August. That paper says it is the best speckled trout fishing that ever came to its knowledge, either in that State or out of it:

Mr. Edward Erskine, of this village, started last week to the Ocqueoc with some five others for the purpose of testing the fishing in this justly celebrated stream. Strohn's lumber road took them right to the river. Three of the party did the fishing and it was soon found that the trout could be caught faster than one man could catch, bait and take off, so the remaining three stood behind to take off the fish and have bait in readiness. The party fished two hours the evening of arrival, and three hours the following day, and brought home with them one thousand and eight speckled trout, besides what they ate. The fish were far beyond the average in size, more being over five ounces than under, and fully one-fourth of them going over half a pound in weight, and fish of three-quarters of a pound to a pound and a quarter being fairly sprinkled among them. This fishing is beyond anything in our recollection. Each of the three fishermen must have caught sixty-seven fish per hour, besides what they ate, which were probably not over twenty to thirty. Had we not seen all the fish brought home ourselves, and ate some of them, we should have been inclined to doubt the correctness of this statement, but we know it to be true. Luckily Mr. Erskine and party had a two-horse team along, or they never could have brought the fish and their camping blankets and utensils all home.

The adventure seems to have been a test between the physical endurance of the men and how long the supply of fish would hold out.

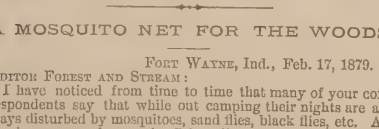
—The Chequamegon Hotel at Ashland, Wisconsin, on Lake Superior, will be opened for visitors on May 1.

A MOSQUITO NET FOR THE WOODS

FORT WAYNE, Ind., Feb. 17, 1879.

EDITOR FOREST AND STREAM:

I have noticed from time to time that many of your correspondents say that while out camping their nights are always disturbed by mosquitoes, sand flies, black flies, etc. As I enjoy an annual camp in July, allow me to describe my scheme for repelling the night biters and buzzers. I have never seen it used nor described, though perhaps thousands like it may be in use. I take two mosquito bars, each eight yards long; double each end for end, which leaves them four yards long, (I use them double for strength); sew together two sides; lay the bar, which is now nearly square, on the floor; lay an army rubber blanket in the centre of the bar; then at each corner of the blanket tie into the bar a button



with tape, leaving ends about six inches. Take off the blanket and tie a button in the centre of the bar. When I go camping I tie four laths to my tent poles, or oars. I have now four nice stakes made for the purpose. The stakes are four and a half feet long, one inch and a quarter in diameter; around the top of each stake a narrow ferrule. In top of each stake a quarter-inch hole bored one and a half inch deep. Take quarter-inch round iron long enough to go from one stake diagonally across to another, bend the end of iron one and a half inches to go into top of stake. This arrangement does away with the twine, which shrinks in wet and stretches in dry weather, and therefore requires re-adjustment. This plan will also give more room in a tent, and then we have nothing to trip over as in the case with the twine running from long stake down to short one. The stakes and irons add but little more weight to camp equipage and are easier put up. The whole can be built for two or three dollars. In camp spread down the rubber blanket, at each corner drive a lath, take stout twine, attach to a small stake about two feet out from lath, run up to top of lath, thence diagonally across to lath, thence down to opposite stake; this prevents the lath from being pulled inwardly. Then take the bar and tie a button to each lath, about two feet up from ground, which leaves sides and ends hanging. Tie the centre button to lines where they cross at top. This makes a cupola of the bag, then lay down the rubber blanket under the bar, fold the bar under the blanket on all sides but one. Place a stone at each corner to hold down the blanket and the sides of bar. Then I fill my bed-tick with straw; make my bed, crawl in at the open end and fold that under also; then all is safe from the stingers, etc. If a snake wants to crawl in he goes under, through, and out at other side; nothing can get in unless able to break the "safe" open. I think the arrangement a good one, have used it for years. I never sleep in a tent other than the above, barring stormy weather. It keeps off all dew as well as pests; is large enough for two, and can be used in a tent by using stiff poles instead of lath, so that the twine need only be run from top of poles and net down to ground. It is full length and does not get out of kilter every time one turns over; it need not be touched. WILLIS D. MAIER.

"THE TROUT-PERCH."

LAKEVILLE, Ct., March 6, 1879.

MR. EDITOR—Last fall a strange fish was caught in our town by parties who were putting up shiners for pickerel fishing. I secured it and sent it to Dr. Hudson, of the State Fish Commission, to identify. He submitted him to the meeting of New England Commissioners, at Boston, and here is the information he gives me in a copy of letter from Col. Theodore Lyman:

DEAR DOCTOR—You hit a strange fish in your phial. It is the *Percopsis guttatus* (Agassiz), see "Agassiz Lake Superior," p. 286, and plate 1. It may be called the trout-perch, having characters of the two, and represents a set of fishes that more properly are fossil (in the Cretaceous). Its habitat is from the Great Lakes westerly, never from Connecticut before. May it not have been sent in some invoice of whitefish or of black bass? Pray tell me the exact locality, as Mr. T. W. Putnam, who looked it up, wishes to label it.

Truly yours, THEODORE LYMAN.

YACHTING NEWS.

SPREADING—The taste for mechanics.—An erratic scribe, who suddenly pounced upon New York with the object of upsetting the world in general and the yachting community in particular, and who succeeded in making about as much impression as the squeak of a mouse would upon the equanimity of an elephant, has turned up in Boston, with his pen wildly discoursing about *hydronamics*. As he evidently cannot live without his FOREST AND STREAM, we have no doubt but that by the time we graduate him in the rudiments of mathematics and mechanics he will have imbibed sufficient respect for the conventionalities of science to kindly call it *hydrodynamics*, even though he may never be equal to the conception of the word's full meaning. It sounds so much nicer. Only compassion for our kind friend induces us to caution him to "go slow" awhile until we have grounded him well in the subjects so dear to his heart, lest he lose caste with our minor contemporaries, who in their incapacity have hitherto welcomed him to their journalistic bosoms. Snugly cosconsed in "the old homestead," our friend will have more leisure to study his FOREST AND STREAM and to deal out to our little contemporaries at second hand what he will learn from us. But watch those long foreign words with care, and always get in all the syllables, for they really mean something.

WE SPEAK FOR THEM.—A minor contemporary hints that admission to the yacht club meetings is a conventional courtesy extended to the press. When the journal in question shows itself possessed of a tithe of the gentlemanly instincts yachtsmen have a right to expect from all who attend their meetings, its representative will be admitted. Until then the probabilities of its ever receiving recognition at the hands of gentlemen are exceedingly slim.

POPULARIZE THE SPORT.—We have had occasion of late to record with pleasure the efforts made by one of our leading clubs to diffuse a popular appreciation for the theory underlying yachting. With similar feelings we learn that Mr. A. H. Siegfried, of the Louisville *Courier-Journal*, an ardent follower of canoeing, has given a very interesting and exhaustive lecture before a large audience in Columbus, Ind., on canoeing of the modern times, relating a large amount of experience with the paddle on our vast net-work of inland waters. America ought to take the lead in canoeing, for no other country presents facilities for combining traveling by the paddle, hunting, fishing and camp life to the extent and variety that can be found in our broad land. Popularize the sport, we say, and an army of canoeists will soon bear witness to the love for outdoor sports, which is, after all, as innate with us as with our British cousins across the water.

ATLANTIC YACHT CLUB.—At a regular meeting of the Atlantic Yacht Club, held Mar. 10, the following officers were elected for the ensuing year: Com., Latham A. Fish, schr. *Agnes*; Vice-Com., William Cooper, sloop *Orion*; Rear Com., Augustus Norton, sloop *Winsome*; Rec. Sec'y, Fred T. Peet; Treas., Richard C. Field; Measurer, H. C. Wintringham; Corresponding Secretary, J. Lawrence Marcellus; Trustees—Geo. A. Thayer, Wm. W. Beebe, Jacob W. Cooper, Wm. H. H. Beebe, J. L. Marcellus, J. G. Johnson, M. D.; Regatta Committee—J. L. Marcellus, C. T. Lippitt, Geo. A. Weber. The time fixed for the regular June regatta was Saturday, June 7, and the course the same as heretofore—viz., for schoners and first class sloops, around the lightship; second class sloops, around Bar Buoy, in Gedney's Channel; and third class sloops, around southwest spit.

J. L. MARCELLUS, Cor. Sec'y.

The selection of Mr. Wintringham as measurer is one which will confer credit upon the club, for there are few gentlemen in America more fully acquainted with the theory of yacht design than the new measurer of the Atlantics. As, sooner or later, the question of an equitable system of measurement is certain to come to the surface, the value of having measurers of some mathematical proficiency at the head of all leading clubs is not to be overrated.

SUNBEAM-GAEL MATCHES.—We are informed by Mr. W. S. Nickerson that no call having been made upon the *Sunbeam* to pay half the expenses of the judges' steamer, he was ignorant of any such liability until the recent review of the *Gael-Sunbeam* matches appeared in our columns, and that Mr. F. E. Peabody has since informed him that the steamer was hired by the judges without any expectation of having expenses reimbursed by the racing yachts. No blame, therefore, attaches to Mr. Nickerson in the case.

SEAWANHAKA YACHT CLUB.—The "Center Cup" (value, $500), which was announced as open to first class sloops only, will be open to all sloops, to sail without time allowance. Here is a chance for the sloop owners, should Providence favor the club with a breeze of wind to show the stuff they are made of. The course from Sandy Hook Lightship to Five Fathom Lightship, off Cape May, and return—distance, 250 miles—will give a fine opportunity for a thorough test for big and little. The cup has hitherto gone begging for entries. It remains with the sloop men to show by a full muster this year whether it was from lack of interest or from a suspicion that their vessels are unfit for the work, that so valuable a prize has hitherto failed to draw. Eastern skippers should send down their solid keel craft, and see whether wholesome lead cannot carry the day with us as it has done abroad. The course and the inducements are there; let us see what our cracks can do in some honest outside work, alongside of which our summer matches in sheltered waters are child's play.

THE AMERICAN MEDITERRANEAN.—The schooner *Intrepid*, Mr. Lloyd Phœnix, is logging knots and fathoms of the real sort among the romantic West India Isles. When last heard from—Feb. 18—she was at Port Spain, Trinidad. All well, and vessel behaving excellently.

SCREW SHARPIES.—Steam yachts of the sharpie type are no longer a myth. Messrs. Clute & Co., of Schenectady, inform us that they have very satisfactory reports of a big one on Florida waters, which they engined a short time ago. She is 86ft. over all, 79ft. on keel, 14ft. beam, and has an engine 14in. square with screw 4ft. 10in. diam. Speed, over sixteen miles. Several others have been built for the same latitudes, and Mr. Clapham, of Roslyn, L. I., has undertaken their construction nearer home.

CITY POINT MOSQUITO CLUB.—This Boston organization is about to be incorporated by the Massachusetts Legislature. The opening match will be held April 3, with numerous entries. Ex-Commodore McDonald has been elected honorary member. His boat having been lengthened beyond the rules of the club necessitating his resignation.

GOLDEN GATE (SAN FRANCISCO) YACHT CLUB.—The officers for the year of this club are as follows: President, H. W. Coffin; Vice-President, E. A. O'Connor; Secretary, C. W. Hubner (re-elected); Treasurer, John E. Broderick (re-elected); Commander, E. F. Cluin; Vice-Commander, E. R. Brady; Commissary, George R. Coates. What has a President got to do with a yacht club?

JERSEY CITY YACHT CLUB.—At the twenty-second annual meeting of the Jersey City Yacht Club, held March 6, the following officers were elected for the ensuing year: Commodore, John A. Nugent; Vice-Commodore, A. P. Ball; Treasurer, John H. Carnes; Secretary, James T. Grady; Measurer, George N. Weston; Board of Directors, the above-named officers and Messrs. John A. Hilton, J. F. Roberts, C. E. Gardner, R. M. Sherman, D. H. Bennett, C. W. Beamis; Finance Committee, John A. Hilton, J. F. Roberts, C. E. Gardner; Regatta Committee, J. T. Roberts, John E. Carnes, D. H. Bennett; Executive Committee, G. C. Doyle, H. Searle and Edward Gilbert. Friday, May 30, has been set apart as opening day, when the squadron is expected to be ready for inspection.

BROOKLYN YACHT CLUB.—New rooms have been engaged for the club in the Halsey Building, Fulton street, opposite City Hall, Brooklyn. The annual match has been set down for June 10.

HAVERHILL (MASS.) YACHT CLUB.—The following are the officers of this club for the year: Commodore, E. F. Brown; Vice-Commodore, J. E. Meadowcroft; Fleet Captain, F. Harris; Measurer, H. Doane; Secretary, J. E. Collins; Treasurer, W. M. Draper; Trustees, G. A. Luxbury, W. S. Greene, C. H. Heath; Regatta Committee, A. Jutras, S. F. Woodman, C. H. Heath. The Commodore has long been known to us as a spirited yachtsman, and we congratulate him upon the assumption of his new office.

NEW BEDFORD YACHT CLUB.—The following officers have been elected for the coming year: Commodore, J. A. Hawes; Vice-Commodore, W. Nye, Jr.; Fleet Captain, W. K. Wagner; Secretary, G. W. Packer; Treasurer, W. A. Mackie; Measurer, J. H. Beetle. H.

WILLIAMSBURGH YACHT CLUB.—In consequence of some very puerile dissensions among the members of this club, it was resolved at their meeting, March 5, to disband and sell all their property. We regret that a club with such an excellent field before it should have allowed petty quarrels to summarily cause its demise. However, other junior clubs will profit by accessions to their ranks, and perhaps it is best after all that yacht clubs should gradually merge into a few strong and permanent organizations rather than eke out a more or less precarious existence as separate and lifeless bodies.

SOUTHERN YACHT CLUB, NEW ORLEANS.—Twenty-five new members were added at our last meeting, and a good deal of minor routine attended to. We look forward to a renewal of old times, when the Crescent Yacht Club flourished in all its glory.

ST. AUGUSTIN (FLA.) YACHT CLUB.—The club opened the season by a series of aquatic festivals. Thirty entries were made for their annual match, March 12.

PORTLAND YACHT CLUB.—Officers of the club for 1879 Commodore, John P. Thomas; Vice-Commodore, Alfred K. Paul; Fleet Captain, John E. Bradford; Secretary, George Doane Rand; Treasurer, Fritz H. Jordan; Measurer, A. K. P. Cobb; Trustees, Com. John P. Thomas, *ex officio;* C. W. Goddard, A. M. Smith, C. E. Somerby; Membership Committee, C. G. Richards, S. B. Kelsey, T. Hale Chase, Sec. Geo. Doane Rand, *ex officio;* Regatta Committee, Com. John P. Thomas, *ex officio;* J. Hall Boyd, B. J. Willard, T. K. Jones, G. W. Rich; Room Committee, J. Hall Boyd.

THE NEW YORK REGATTA COURSE.

EDITOR FOREST AND STREAM:

As your valuable paper has taken so prominent a place in yachting matters, I would like through it to present a subject for consideration to the New York, Brooklyn and Atlantic Yacht Clubs. After an experience of about thirty-four years by the N. Y. Y. C. of making their races out, by and around the S. W. Spit, would it not be well to take a retrospect, and see if they can still feel justified in clinging to the old track? Has it not proven a very unsatisfactory course to sail over if races are made with any desire to test the sailing qualities of the first-class yachts of these clubs? The writer has been on most of the annual races of the N. Y. Y. C. for fifteen years past, either as a participant in them or spectator on one of the steamers. I think fully one-third of the races in that time have proved complete or partial failures, principally from trying to turn the Spit Buoy either when going or on the return. With this statement I would suggest to these clubs that this year they try the course down the Bay (Swash Channel) and around the Scotland Lightship, and thence to the Hook Lightship—or to the Hook Lightship first. This course would give a better opportunity to test actual sailing qualities and seamanship, as it would involve some close-hauled work with any wind, and avoid the doldrums so often experienced near the Spit Buoy. M. A. T.

The proposed change would take our racing craft out to sea a little more and show up their weaknesses. For our part we would go further than our correspondent and advise sailing club matches from the Hook twenty miles to sea and back, though we are well aware of the improbability of getting three vessels to the line when it comes to real work outside. We are not yet ripe for that sort of yacht racing.

THE QUESTION OF TYPE.

NEW YORK, March 7, 1879.

EDITOR FOREST AND STREAM:

You seem to me a little unfair to small sloops in your article on *Freda*. You compare that 5-tonner to boats like the *Lee*, *Brown*, etc., and triumph over the unfortunate who should meet *Freda* in a breeze in such a craft. The *Lee*, *Brown*, etc., are only sloops in rig; they are sand-bag sailboats in class, and only fit for certain work. In their proper place they are effective enough, but are, cabin trunk or not, useless for cruising. A fairer comparison would be with *Midge* or *Julian*, and with them I question whether the 5-tonner would show so great a superiority. After having seen the sailing of both sorts of vessels, I would bet on the sloop in any ordinary weather. As for really bad weather, any man who gets caught in it in any sort of a small craft is to be pitied; but I question whether the sloop hove to would not live as long as the cutter. G. M.

The impression that small yacts are necessarily uncomfortable and dangerous in heavy weather is the natural result of experience in just such vessels as *Julian* and *Midge*, and leads to the erroneous idea now prevalent that small boats are fit only for sheltered waters. It is to combat this impression that we wish the cutter model introduced, so that comfort and safety both may be obtained in any weather at a small expense in a small yacht, enabling the many to take to the sea, and not only the few who are fortunate in the possession of big craft. How well a small craft is able to go through high seas, if properly modelled, we know full well from our own experience, to which may be added the testimony we publish in this issue in the shape of a letter from England as well as from "Freda's" doings as under:

It was blowing very hard; all the racers had snugged down to two or three reefs, and in many cases trysails, they being bound to Dartmouth. We were told we would be swallowed up in the sea off the Berry, so made all snug before starting by setting our trysail, double-reefed foresail and storm jib and making all secure on deck and below. There certainly was a very big sea on, which was all the better for us as we had plenty of room between it to go up and down; so much so that I am sure we made *better weather of it than the Oimara* (over 100 tons!), as when she passed us I often lost sight of her bowsprit, and her foresail looked just a little damp. A good many big racers who passed us came very close, on purpose, as they said, to see how we were getting on, since we seemed "quite comfortable," which was quite true. We got into Dartmouth as dry as any of them.

Surely pretty strong evidence for *Freda's* seagoing abilities. The idea that small boats are uncomfortable will not hold. They are, on the contrary, easier and safer than larger vessels, when properly modelled.

Imagine the terrible commotion the cork-like proclivities of the American sloops who try to climbs over everything instead of easing through it, would create in the seaway *Freda* thought less of than the hundred tonners! Apart from this, they are so poorly and lightly built that they would speedily wreck themselves through their own straining and jerky working did they ever attempt to make rough water and weather a matter of business and not an occasional exception. We are anxious to see the cutter introduced in our waters to render cruising at sea in small boats a possibility and because we desire to see yachting in America advanced from mere dawdling child's play to a manly, intelligent and instructive pastime; the difference between the two being just about the measure between the sloop and the cutter.

The opposition to the cutter proceeds from a false conception of the highest aims of yachting and will vanish as suddenly as has the opposition to the yawl in San Francisco.

Many years ago when we battled single-handed for the cause of that rig our schemes were lightly spoken of as visionary. How visionary the annihilation of the clumsy sloop rig and its replacement by the yawl bear testimony. When the love of adventure and a pride in seamanship shall have taken a firmer hold of the yachting public, when the arts of sailing and navigation shall be held in higher esteem than picnics, fireworks, jolly good times and the like, then will the cutter model not only be accepted, but welcomed as the yawl rig has been in San Francisco, by even the most stubborn.

OUR CORINTHIAN CUTTER.

LYNN, Mass., Jan 10, 1879.

EDITOR FOREST AND STREAM:

Having read "Martin Gale's" rejoinder, I will tell him what I "really did mean" when I said his boat would not have displacement enough to carry four tons of lead in "such a place." According to the draught in the paper, his boat would have a keel about 25ft. long, of an average depth of 18in. The average thickness of a keel of the size generally used in a yacht of that build, below the garboards, would not be over 4in. That would give a keel below the garboards measuring 18in.x4in.x25ft., which is certainly as much as keel yachts of that size generally have. In this keel he proposes to build, or hang, 4 tons of lead, or 8,000 lbs. He would, in building such a yacht, probably leave some wood below the garboards, or he would have a very light keel, indeed. If he should leave 3in. below the garboards his keel would measure 15in.x4in.x25ft. Now, a cubic foot of lead weighs about 700 lbs., in round numbers, and 4 tons would make over 11 cubic feet, and would require a keel 15in.x4in.x27ft., nearly, to contain it; or if he allowed no wood at all below his garboards, and made his lead 18in. deep, it would still take over 22ft. in length to contain it. Besides his 4 tons of lead in his keel he would have to carry from 2 to 3 tons inside to get his 9 tons displacement; and from the shape of her floor timbers this would also have to spread a long distance fore and aft to get it under her floor, and this in connection with a lead keel nearly as long as the boat. Any man who ever ballasted a boat and tried it in a seaway, knows that a boat ballasted in such a manner is bound to "dive like a loon;" and topsides 6ft. high instead of 3 would not keep her deck dry. A boat to be dry, able, fast and work well has got to carry her ballast as near the centre of buoyancy as possible, and not hanging to the ends of her keel. I do seriously deny that the smaller English yachts are any abler, faster, or more comfortable than our deep centreboarders until it has been proved by actual trial, which, I believe, has never yet been done. I have written nothing in any previous communication against the cutter *rig*, but I have said that, everything else being equal, the centreboard *hull* is abler, faster and more comfortable than the keel. Even our fishermen, the most conservative class of sailors in the country, are beginning to build their vessels with centreboards instead of keels, but on the same general lines, and I think they are well satisfied with the change. It seems to be the fashion among a certain class of yachtsmen to invariably class a sloop as a flat centreboard boat, and that if a boat is spoken of as a cutter she must be deep of necessity. Can't you impress the fact upon yachtsmen that the rig does not modify the hull, but the hull often dictates the rig? I find from descriptions of English yachts that nearly the same style of hull is rigged indiscriminately as cutter, yawl, schooner, or lugger, more according to the fancy of the owner than the lines of the hull itself. GRAMPUS.

FACTS ABOUT THE CUTTER.

GREENWICH, KENT, England, Feb. 25, 1879.

EDITOR FOREST AND STREAM:

In FOREST AND STREAM of Jan. 23 I observe a letter signed "Podgers," in which the writer seems to be under the impression that when, on long passages, we encounter adverse winds and a heavy sea, it is our custom to heave to and suffer ourselves to be drifted to leeward. In the course of a tolerably long experience this has never happened to me, nor to any sea-going yacht of fair draught of water that I am aware of.

My notion of heaving to for bad weather on a passage is to back one of the headsails, lash the tiller, and trim the other sails so that the vessel, lying close to the wind, will forge ahead at a sufficient speed—say one or two miles an hour—to be under command of the helm in case of need. Vessels that by reason of their build or other disabilities cannot do that, had better be in port.

The very interesting discussion upon the comparative merits of small American sloops and of small sea-going English yachts is confused by your correspondent's letter; because, after referring to me and to my first book ("Down Channel"), he starts upon an imaginary competitive cruise, and gains an easy triumph by assuming that we sail in vessels whose midship section is represented by the letter V, and that we must heave to when the wind and sea are strong ahead. This is, however, erroneous. My three cutters, built at intervals of about eight years, had a full U shape section, as have most other cutters. *Leo* was 2¾ tons, 4ft. draught, 23 cwt. bialast; *Sirius*, 11 tons, 6ft. draught, 7 tons ballast; *Orion*, 16 tons, 7ft. draught, 11 tons ballast. The latter has been lengthened 6ft. by the stern, and is now a yawl of 19 tons.

In the first I sailed 5,000 geographical miles in the open sea, the longest cruise being 1,380 miles; in the second, about 9,000, the longest cruise 2,640; in the last about 18,000, longest cruise 2,200. I recollect heaving to only four times in the sense of your correspondent's letter—once in the *Sirius* in a heavy sea off the Land's End, with three reefs down, during the night; once in the *Orion* (cutter), running up channel, with three reefs down, during the night; and once reaching under close-reefed mainsail (four reefs) in the Irish Sea, during the night; and once in the *Orion* (yawl), beating down channel, when we took the mainsail off her at dusk, and hove to under third jib, reefed foresail, and reefed mizzen. In the early morning the foresheet horse was carried away. The foresail was taken in, sheeted with tackles and hoisted again. Next the mizzen bumpkin went short off under the taffrail. As this accident necessitated stowing the mizzen altogether, we set the mainsail with three reefs in it, and beat down to Beachy Head, fifteen miles further, against one of the heaviest gales I encountered in my experience. It was very problematical if the anchorage would be available when we got there, but as we were bound to Scotland, and I consider it demoralizing to turn back, I preferred to take my chance. I mention these particulars as a proof that, in regard to the power of the vessel, there was no necessity for heaving to at all; but having resolved not to proceed further than Beachy Head while the gale lasted, and being afraid to attempt to anchor there without daylight to show if it would be prudent to do so, I preferred heaving to with plenty of sea-room until morning. The two other instances in the *Orion* were, as before stated, fair winds. In the case of the *Sirius*, we had been turning to windward two days and nights under double-reefed mainsail, and for the last few hours before arriving off the Land's End under three reefs, wind S. W., with thunder and a tremendous sea. As every sailor knows that the Land's End under such circumstances is not a place where we should sail in the dark, it was only a matter of common prudence and of comparative comfort to heave to until daylight to leeward of its irregular and strong tidal currents.

Your correspondent says he will endeavor to procure a copy of my first book. To save trouble to himself and others I think it right to state that "Down Channel" is sold out. I shall probably reproduce it some day in an improved form if the demand for facts as have come under my observation seems to warrant it, which will be decided by the sale of the more recent book, "Orion; or, How I Came to Sail Alone in a 19 ton Yacht."

I have read somewhere, or have been told that one of my books is lacking in stirring incidents. That I repeat it here is a proof that I do not object to the criticism. To the mind of a skilled yachtsman the relation of a persevering and successful cruise is presented in a different aspect; but the unskilled are naturally more entertained with a cruise in which you "swing the boat to adjust compasses" before starting on a little cruise out of the river, take an observation for latitude in the neighborhood of a light-house; encounter in shoal water such high and heavy seas as Perry and Maury never saw in the Atlantic; and having put up a text in the cabin signifying your complete dependence upon Providence, turn tail at every breeze of wind to prove it. To those who delight in positions obviously critical, the meeting of the tides at sea with two waves breaking toward each other and engulfing the boat—although to be true to nature they should break in opposite directions—is not an ineffective illustration, albeit somewhat alarming to the neophyte who contemplates taking to seasailing as a pleasant recreation.

It stands to reason that cruises of the latter description will be more lively reading, since the enthusiastic impressions of those who publish after their first thousand miles of sea-sailing are so innocently erroneous in regard to speed and technical details, that they have a fund of matter to draw upon for the delectation of readers which is denied to others who, hampered with knowledge derived from experience, are bound to be careful in their writings and illustrations not to violate the laws of nature; and if they are interested in the encouragement of pleasure cruising at sea, are equally bound not to gratify the taste of readers for the marvelous at the expense of truth, by depicting a number of exciting and impossible dangers which may have the effect of deterring others from taking to a sport that would be much encouraged by yachtsmen publishing their experiences—provided that they were careful to write only what they knew to be true.

R. T. MCMULLEN.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

—Mr. J. D. Dougall, London, England, manufacturers of well known superior Express rifles, calls our attention to the fact that his guns continue to show wonderful superiority at the Monaco competitions. Mr. Hepwood, the winner of the Grand Prize, shot with one. So also did the three first prize winners for the Prix d'Ouverton.

MASSACHUSETTS.—The Raymond Sportsman Club had a large attendance at Beechmont, Friday last, in the glass ball shoot for the champion medal. Score, twenty-five balls each, sprung from three Bogardus traps, eighteen yards rise, Bogardus rules: Schaffer, 23; Edwards, 23; Jones, 22; Gillett, 22; Wetherell, 22; Blanchard, 21; Bates, 20; Kirkwood, 20; Loud, 19; Smith, 18; No. 1, 17; Watts, 17; Rogers, 12; Bennett, 9; Dimick, 7. The tie was shot off at twenty-one yards rise, and was won by Mr. Schaffer by breaking five straight balls.

THE WORCESTER SPORTSMAN'S CLUB.—This club, of Worcester, Mass., have elected the following officers: President, George B. Buckingham; Vice-Presidents, William S. Perry and A. P. Pond; Secretary, Stedman Clark; Treasurer, G. J. Rugg; Executive Committee, A. L. Rise, E. S. Knowles, A. G. Mann, S. R. Hudson.

NEW YORK—*Eldred, Sullivan Co., March* 10.—Some quail have wintered here this last winter in barn-yards; they have been fed by the farmers. Daniel Hallock killed 13 foxes last winter. J. M. BRADLEY.

PENNSYLVANIA—*Dugdale, March* 12.—This and the adjoining townships of Kennett and Pocopson we think difficult to beat as a trapping locality for skunk. Norris Jackson, the first trapper of skunk in this vicinity, caught over fifty this season; but his daily trips were too hard on him, and he took pneumonia, and after three weeks died. Orr Bros., of Unionville, have caught over 130. They catch them altogether with dogs. While the dog is taking their attention, they slip up and pick the skunk up by the tail, in which manner they are inoffensive and are killed by a stroke on the head with a small club. S. Harlan's Sons, of Kennett Square, have caught nearly 100, and a number of others around have caught from five to twenty. They mostly use "chokers," but a few

use steel traps, although the latter have to be taken up every day to save them from thieves. A considerable part of the catch has been black, which makes them much more valuable in the fur market. SHETHAR BOZNAL.

TENNESSEE—*Nashville, March* 11.—The only game in season with us now is the snipe. Great numbers are reported in the bottoms, although I have heard of but very few bags as yet. J. D. H.

GEORGIA—*Rome, March* 10.—Our quail shooting season is over. Within the past few weeks I have seen a few snipe; had five shots and bagged four of them. On the 25th ult. I was out with friend Gammon, one of our best shots. While we were separated, one on each side of a field, he found a large bevy of quail, and fired into them on the ground, killing eleven, and as they rose killed four with the other barrel. Who can beat that? We killed two more on second rising, making in all seventeen out of one bevy. The mercury stands 78 degrees to-day, and we expect from now on to have good shooting on the little snipe-ground we are all so fortunate as to have in these parts. RAQUET.

FLORIDA SPORT.—*Editor Forest and Stream:* Having just returned from a month's camping out on the west coast of this State, I would like to give any one who wishes to follow my example the benefit of my experience as to the best way to find a first-class place to hunt and fish. We left this place on the A. G. & W. I. R. R. at 10:40 A. M., reaching Cedar Keys at 8:30 P. M. From this place steamboats leave every Wednesday and Saturday for Manatee. We left in the afternoon at 5 o'clock, reaching Manatee the next morning at 8 o'clock. Here we hired a schooner which took all of our plunder and selves to our camp at A. E. Willard's place on Sarasota Bay. Round trip tickets are now on sale at Fernandina to Manatee and return for $18, from Manatee to our camp we paid the captain of the schooner $5 to take us to our camp. We found splendid fishing on the bay, catching trout, skip jacks, bass, red fish, etc.; of the latter kind we caught, with light rods and lines some that weighed over thirteen pounds, and they are a fish that are fine to take, being very strong, and hard to tire out. On Long Key we found deer, and shot all we needed to furnish us with venison for camp use. Within four miles of camp we found all the "'gator" hunting we wished for. On the islands or Keys as they are called, countless numbers of pelican, ibis, heron, crane, cormorant, gulls, etc., are to be found, and one can shoot the same until he tires of the sport. Fine clams and oysters that cannot be excelled anywhere can be had in any quantity in this bay. For those who wish to get a collection of shells this is the place to go, as after every hard wind the beach on the Gulf side of the islands is covered with many varieties of same. You will remember that I wrote you before I left the North about the reliability of the Osgood canvas boat. I can say that for any sportsman who wishes a boat that is easy to manage, that can be run in little or no water, and one that is very light, in fact reliable in everything that it is made for, I would recommend this boat. Two of us took one out in a heavy sea, so heavy that the captain of the schooner on shore told us that he was about ready to go out and bring us in; fearing the "little boat" would not stand the storm, but it did stand it in fine style, not shipping a bit of water, and it was very buoyant. I think any one planning to go to this bay, could, by addressing John C. Jones, at Sarasota, get him to secure a boat to use while there, in this way saving the expense of carrying one with them. A 76'ER.

Fernandina, Fla., March 5.

OHIO—*Cleveland, March* 13.—Water fowls are now migrating north. I judge so from the numbers freshly killed and now for sale on the market. Canada and white-fronted geese, mallard, pintail, canvas-backs and green-winged teal by the hundreds—all in their beautiful spring plumage, but all "poor as crows." I had fourteen brace of canvas-backs weighed; they averaged in weight 4¾lbs. to the pair. A pair of these ducks in the fall would have weighed fully 7¾lbs., and you know what they would be for the table, while these unfortunates on the market to-day are hardly fit for cat-bait. And then another thing: if they had been left to their way, each pair in the fall would have returned with a family of eight or more fit for sport and the table. Any lubber that can keep warm around an ice-hole can shoot ducks at this season. A flint-lock muzzle-loader, or a long pole, will answer as well for the instrument of destruction as the modern improved gun. But when you have secured your hungry ducks that have pitched into a water hole for the scanty food it may furnish, you have only a bunch of feathers and bones, that find no sale on the market. My experience has been that three-fourths of these spring birds find their way to the garbage cart. Plenty of prairie hens, partridges and quail on the market. DR. E. STERLING.

WISCONSIN—*Baraboo, March* 10.—In the town of Excelsior about three weeks ago Mr. F. Ellsworth, known to many of our people, and two other hunters, started out with their dogs for a hunt. They had not gone far when they started three large gray wolves. Immediately putting their dogs on the track, they followed them all day, but at night left the trail and went home. Early the following day the dogs were again put on the track left the night before, and during the afternoon, when they had followed the wolves pretty close and had nearly caught up with them, they were seen by a person to cross Mr. Jas. Smith's farm, the wolves being then only about eight rods ahead. The hunters followed as fast as possible, and after crossing the farm above mentioned, soon came to a spot which showed signs of a bloody struggle, and upon closer inspection they found the heads of the dogs minus the bodies. It is supposed that the wolves, having been chased so far and long, and not having had much of a chance to lunch for two days, were very hungry, and so turned upon their pursuers and devoured them. The neighborhood in which this occurrence took place is said to be infested with gray wolves. ED. HOLLAND.

KANSAS—*Hill Gove, March* 9.—I have had lots of sport this winter with the antelope and jack-rabbit. Geese and duck are with us by the thousands. I went out on the Saline yesterday and brought home all I could tie on to my saddle. A. L.

OREGON—*Portland, Feb.* 27.—Our duck shooting out here this winter has been poorer than for some seasons previous. The reason, I suppose, is that the unusual cold weather we have experienced this winter caused the ducks to go further south than they generally go, and consequently did not get back on their northward trip as soon as is customary. However, some of our sportsmen have had several good days; one party of three bagged 110 fine canvas-back in a day's shooting. Last week two friends and myself crossed over to Fort Vancouver and tried the bottoms below town for "trash ducks," or, in other words, anything but canvas-back. We left here on the "magnificent steamer" *Wide West*, and after sixty-nine minutes' run, and including two landings, arrived at the fort, eighteen miles distant from Portland, and were soon on our way to the grounds about six miles west of the fort. On arriving there we found the birds much scarcer than we anticipated, but we went to work all the same, and considering the weather, which was still and bright, we did very well, getting in all fifty-seven duck and five geese. The next day, as we were on the way home, and after we had left the hunting-grounds about two miles behind, we heard a kind of "swish! swish!" and looking up in the air, about thirty yards above us, we saw five large swan in easy gunshot of us, but, of course, no one had his gun loaded, and the beautiful birds escaped unshot at. The same party contemplate going down the river after canvas-back in a few days, when we look for some exciting event and an immense bag. I just saw two of our best hunters come in from a "canvas-shoot" with ten dozen and four fine birds. WILLIAM L.

PIGEON MATCHES.

LONG ISLAND GUN CLUB.—*Dexter's, L. I., March* 11.—The second month's meeting of the Long Island Gun Club, to shoot for the Eddy gun. Among the twenty-seven candidates who went to the score was the veteran shot, Mr. King, also Mr. Talbot, who is to shoot the match at the Driving Park next week; Mr. Miller, who took the lead at the first meeting, toge her with the victor in the prize gun shoot of the Brooklyn Club, Dr. Wynn; Mr. Eddy, one of the crack shots of the Long Island Club, and such noted experts as Messrs. Madison, Gill, Dr. Aten, Broadway, Blankley, etc. It was from such a crowd as this that the Brooklyn Professor of Entomology, the veteran taxidermist Ackhurst, took the first place, killing with his first barrel thirteen birds straight. The birds were all lively ones. The shooting was at seven birds each, five ground traps. Ackhurst and Broadway tied on seven each; again on three, and on the second shoot off Ackhurst scored three to Broadway's two. Following is the tabulated score:

NAMES.	Yards rise.	Total killed.	Total missed.	Killed with 1st barrel	Killed with 2d barrel	Drivers killed.	Quarters killed.	Incomers killed.
Ackhurst	21	13	0	13	0	6	4	3
Broadway	25	12	1	7	5	3	4	6
Madison	25	8	1	5	3	2	5	1

The managing editor of this paper, Mr. Chas. Hallock, takes pleasure in acknowledging the compliment paid him by his election as an honorary member of the Long Island Club, which numbers in its rolls some of the best professional talent of Brooklyn.

NEW YORK—*Buffalo, March* 13.—25 "Bluerocks" each, 21 yds. rise:

Chas Heinold	1 1 1 1 1 0 0 1 1 1 0 1 1 1 0 1 0 0 1 1 1 0 1 1 1 0—17		
J Beler, Jr	1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 0 0 1 1 1 1 1 1 0 0—20		

This is the first of three matches. UNCAS.

BROOKLYN—*Monteverde's Grand Street Park, March* 5.—Regular monthly shoot of the Grand Street Park Gun Club, for club badge, at seven birds, from H and T traps, 80 yards boundary, club rules to govern. The birds were remarkably fine ones:

George Van Sese	4	S A Spratt	4
E J Stowell	3	Sam'l Higbee	3
W T Monteverde	3		

W. T. M.

MINER ROD AND GUN CLUB.—Match at club grounds, Springfield, L. I., Thursday, March 6. A neat little badge was shot for by those present, and won by Mr. John Wood, the photographer, of No. 208 Bowery; 25 yards rise; ten birds each:

Wm Steers	1 0 0 0 1 1 1 1 1 1—7		
John B Voskamp	1 1 1 0 1 1 1 0 1 1—8		
Major Acry	1 0 1 1 1 0 1 1 1 1—8		
M Engiert	1 1 1 1 1 1 0 1 1 0—8		
Capt Travis	0 1 0 0 0 1 1 1 1 1—7		
John Wood	1 1 1 0 1 1 1 1 1 1—9		
August Christien	0 0 1 1 1 0 0 1 1 1—6		

TALBOT VS. OUTWATER.—A match between Dr. Talbot, of this city and J. H. Outwater, of Rutherford Park, N. J., was shot at the Brooklyn Driving Park, last Tuesday, for a purse of $500. The conditions were: 50 birds each, 21 yards rise, Long Island rules, trap and handle for each other. The score was:

Dr. Talbot—1 0 1 0 1 1 1 0 0 0 1 1 1 0 0 0 1 1 0 0 1 1 1 0 0 1 1 1 1 1 1 1 0 0 1 1 0 0 1 1 1 1 1 1 1 1 0 1. Total, 43; killed, 26; missed, 17.

J. H. Outwater—0 0 0 0 1 0 0 1 0 0 0 0 1 1 1 1 1 1 1 1 1 0 0 0 1 0 1 0 0 1 0 0 0 1 1 0 0 0 1 1 1 0 1 1 0 1. Total, 44; killed, 19; missed, 25.

Referee—C. Wilgate, Fountain Gun Club.

NEW JERSEY—*Keyport, March* 4.—First shoot of the Raritan Shooting Club, from a screened revolving trap. Club organized Feb. 4:

G Watt	1 1 1 1 0 1 1 1 1 1 1 1 1 1—14		
O Charlart	1 1 1 1 1 1 1 1 1 1 1 1 0 1—13		
W Curtis	1 1 1 1 1 0 1 0 1 1 1 1 0 1—12		
S Dey	1 1 1 1 1 0 1 0 1 0 1 1 1 1—11		
W Hampton	0 0 0 1 1 1 1 1 0 1 0 1 0 1—8		
B Knowles	1 0 0 1 1 1 1 1 1 1 1 0 1 0—7		
W Holmes	0 0 1 1 1 1 0 1 0 0 0 0 0 0 0—6		
G Marer	1 0 0 1 0 0 1 1 0 0 0 0 1 1 0—6		
W Warner	1 0 0 1 1 0 0 0 0 0 0 0 0 1 0—4		
J Holmes	0 0 0 1 0 1 0 0 0 1 0 0 0 0 0—4		
J Cuberley	1 1 0 0 0 0 0 0 0 0 0 0 0 0 0—3		
R Waitt	0 0 0 1 0 1 0 1 1 1 1 0 0 0 0—6		
J McCabe	1 1 0 0 0 1 1 0 1 1 0 1 1 0 1—9		
T Seabrook	0 0 0 0 0 0 w	W. CURTIS.	

MIDWAY SHOOTING CLUB.—The annual meeting of the Midway Shooting Club, of Matawan, N. J., was held March 18, 1876, at Monmouth Park. The following officers were elected for the ensuing year: James Lambertson, Pres.; Hezekiah Warn, Vice-Pres.; K. H. Wyckhoff, Sec'y; and James Van Brackle, Treas. After considerable discussion, it was decided to adopt the following mode of shooting for the badge for the coming year—viz.: Shooting to be from 5 traps, use of both barrels, and handicapped from 21 to 26 yards; any member winning said badge four times during the year to receive it as his property. The first match governed by these rules was as follows, each member shooting at 7 birds and standing 30 yds. the first shoot:

James Irvin	1 0 1 1 1 1 1—6	J Lambertson	1 1 1 0 0 1 1—5
E Vanderveer	1 1 1 1 1 1 0—6	J Van Brackel	1 1 1 1 1 1 1—7
S Lambertson	1 1 1 1 1 0 1—6	H Warn	1 1 1 1 1 1 1—7
W J Conover	1 1 0 1 1 1 1—6	C Applegate	1 1 1 0 1 0 1—5
W A Dunlop	1 1 1 1 1 0 0—5		

Van Brackel and Warn shot off at five birds each, Van Brackel killing 3 and Warn 4. I have never seen a better lot of birds in New Jersey. The club is in a flourishing condition, and will make some fine shooting the coming season. OLD SPORT.

THE SHREWSBURY GUN CLUB.—The fifth match of the Shrewsbury Gun Club for the club gold badge was shot March 13:

H G White	0 1 1 1 1 1 1 1 1 1 0 1 1—13		
J B Bergen	1 0 1 1 0 1 1 1 0 1 1 1 1 1—12		
A R Coleman	1 0 1 1 1 1 0 0 1 1 0 1 1 1—11		
Chas Stilwell	1 0 1 1 1 0 0 0 0 1 1 0 1 1—9		
G F Marsden	0 0 0 1 1 0 0 1 0 1 1 1 1 1—8		

The score of the winners stands, for the first five matches: Morford, once; Wild, once; Coleman, once; Bergen, once, and H. C. White, once. There will be five more matches for the badge.

PENNSYLVANIA—*Towanda, March* 14.—Towanda Rod and Gun Club; match at pigeons, 21 yards rise, 80 yards boundary, Bogardus rules:

W A Chamberlin	1 0 1 1 1 1 1 1 0 1—7		
E F Smith	1 1 1 1 1 1 1 1 0—8		
W G Tracy	0 0 1 1 1 1 1 1 0 1—5		
C L Tracy	1 1 1 1 1 0 0 0 0 0—5		
Henry Porter	1 0 0 1 0 1 1 0 1—5		

E.

WASHINGTON, D. C.—*March* 15.—Third weekly shoot of the Anacostia Gun Club, of Washington, D. C., which took place to-day. We used a patent self-feeding trap, of which I will give you the particulars in my next:

Morgan	1 1 1 1 1 1 1 1 1—10		
Ball	0 0 0 0 0 0 1 1 1 1—4		
Taltavull	0 1 1 0 1 0 0 1 0—5		
Sheiton	1 1 1 1 0 0 1 1 0 1—7		
Williams	1 1 1 1 0 1 1 1 1—9		
Johnscher	1 0 0 1 0 0 1 1 0—5		
Simmpsh	1 1 1 1 0 1 0 1 1—7		
Rothwell	0 0 1 1 1 0 1 1 1—7		
Talbert	0 1 0 0 1 0 0 0 1—3		
McNelly	1 1 1 1 1 1 1 1 0—9		
Smith	1 0 1 1 0 1 0 1 0 1—6		

J. H. E.

TENNESSEE—*Nashville, March* 7.—The following glass ball matches were shot at the club grounds, back of the cotton factory; Bogardus rules; Card's rotary traps. First match:

Nobles	1 1 1 1 1—5	Burkholz	1 1 1 0 0—3
Waterman	1 1 1 0 0—3	Jones	1 1 0 0 0—2
Chadwell	0 0 0 0 0—0	Maskey	0 0 1 1 0—2
Griffith	0 0 0 0 1—1	Carter	1 1 0 0 1—4
Ragio	1 1 1 0 0—3	Kirkpatrick	1 1 1 1 0—4
Mitchell	1 1 0 0 0—2	Valentine	1 0 1 1 0—3

Second Match—Team shoot:

Mitchell	1 1 1 0—3	Maskey	0 1 1 1—3
Carter	1 1 0 1—3	Noble	1 1 1 1—4
Valentine	1 1 0 0—2	Kirk	1 0 1 0—2
Burkholz	1 0 0 1—2	Wheat	0 1 0 1—2
Ragio	0 0 1 0—1	Waterman	0 0 1 1—2
Oates	1 0 1 1—3	Chadwell	0 0 0 0—0
Griffith	0 0 0 0—0	Schwartz	0 0 0 0—0
Total	14	Total	13

Third Match—Sweepstakes:

Kirk	1 0 0 1—2	Valentine	1 0 1 1—3
Burkholz	0 0 1 1—2	Ragio	0 0 0 1—1
Carter	0 1 1 1—3	Eastman	1 0 0 0—1
Wheat	0 0 0 1—1	Armstrong	0 0 0 0—0
Maskey	1 1 0 1—3	Chadwell	0 0 0 0—0
Mitchell	0 1 1 1—3	Waterman	0 1 1 1—3
Oates	0 0 1 1—2	Noble	0 0 0 1—1

Valentine won in the shoot off.

Fourth Match—Team shoot:

Pritchitt	1 1 1 1—4	Mitchell	1 1 0 1—3
Oates	1 0 1 0—2	Valentine	0 0 0 1—1
Noble	0 0 1 1—2	Carter	1 1 1 1—4
Maskey	1 0 1 0—2	Burkholz	0 1 1 1—3
Waterman	0 1 1 0—3	Ragio	0 0 0 1—1
Schwartz	0 0 1 0—1	Wheat	1 1 1 1—4
Chatham	1 1 1 0—3	Kirk	1 0 1 0—2
Chadwell	0 0 1 0—1	Griffith	1 0 0 1—2
Martin	1 0 0 0—1	Blood	0 0 1 0—1
Total	19	Total	21

Fifth Match—Double birds:

Valentine	11 11—4	Burkholz	11 10—3
Nobles	01 00—1	Mitchell	11 01—3
Chatham	11 00—2	Waterman	11 10—3
Pritchitt	10 10—2	Oates	11 10—3
Carter	11 10—3	Kirk	00 00—0

J. D. H.

March 11.—Several matches at glass balls were shot off at the regular club grounds on yesterday afternoon; Card's rotary traps; Bogardus rules. The first and second matches were won by Mitchell. The third match, Roberts, Kirkpatrick and Mitchell tied on three. Mitchell won the shoot off. On the sixth match Carter and Mitchell again won the shoot off. In the eighth match Carter and Burkholz tied on five, Burkholz winning the shoot-off. Messrs. Ragio and Buzzard shot several private matches, ending in Buzzard's defeat.

J. D. H.

WISCONSIN—*Baraboo, March* 10.—Score at pigeons, 21 yards rise, 80 yards boundary, plunge traps, club rules; birds strong flyers:

Brewer	1 0 1 0 0—2	N Brewer	0 0 0 0 1—1
Kartack	1 0 1 0 1—3	Pointon	0 0 0 0 1—1
Whistance	1 0 1 1—4		

Glass ball match, the same day, Bogardus trap and rules:

Brewer	1 1 1 1 1 1 1 1 1 0 1—11		
Whistance	1 0 1 1 1 1 1 1 1 1—10		
Wold	1 0 1 0 1 0 1 1 1 0 1—7		
Saare	1 0 0 0 1 1 0 1 1 0 1—7		
Kartack	1 0 1 1 1 0 0 0 0 1 0—5		

ED. H.

CANADA—*Ottawa, March* 8.—Sweepstakes, pigeons, 21 yards, ground traps, 1¼ oz. shot; weather cloudy and wind moderate; birds strong and lively. First sweepstakes, five birds:

Mr Boswell	1 1 1 1—5	Mr Paterson	1 1 1 1 1—5
Mr Throop	1 1 0 1—4		

Second Sweepstakes—Five birds:

Boswell	1 1 1 1—5	Paterson	1 1 1 1 1—5
Throop	1 1 1 1—5		

Third Sweepstakes—Three birds:

Boswell	1 1 1—3	Paterson	1 1 1—3
Throop	1 0 1—2		

Fourth Sweepstakes—Miss and out:

Boswell	1 0—1	Paterson	1 1—2
Throop	1 1—2		

There being no more birds, Messrs. Boswell and Paterson divided first three sweeps.

Rational Pastimes.

For Forest and Stream and Rod and Gun.

THE ARCHER'S CHIEF ENEMY—THE WIND.

IT is only after years of practice that the archer discovers to what an extent the wind affects his scoring on the target ground. It must always be taken into consideration at every shot made, or no reasonable estimate of the result can be made. The perfect "archer's day" is that utterly windless one, when without a cloud in the sky the sun shines with the red and mellow splendor of Indian summer, the hills look smoky and solemn, and all objects seem to be nearer and larger than usual. Upon such a day the flight of an arrow will be perfectly smooth, the long parabola of its trajectory will be as clean as a painted curve, and every shot will be alike. These are the days upon which phenominal scores are made. One may be sure that the magnificent, perhaps un-

approachable score of 245 hits, and 1,251 points, made by Horace A. Ford at the Double York Round of 144 arrows at 100 yards, 96 arrows at 80 yards, and 48 arrows at 60 yards, at Leamington, England, in 1857, was not shot in a troublous wind. Of course an archer capable of accomplishing such a result in the most perfect weather could do well in any weather, yet we can only account for such a result as the amazing score above given by supposing that the archer was in the most perfect form, the gear used of the most careful choosing and of long use with the shooter, the targets placed in the best possible light, and the weather upon the two days shot must have been the sweetest in the history of the Isles. For in no other way can one conceive the possibility of such shooting. While we have no detailed account of the scoring, yet upon dividing it upon the most reasonable proportions as to the three distances shot, the archer must have averaged with each thirty arrows shot at each distance about as follows: 100 yds, 30 arrows, 100 points; 80 yards, 30 arrows, 140 points; 60 yards, 30 arrows, 202. Of course one who has shot a few years can readily imagine how an archer might possibly get such a score as either of the above with 30 arrows; but remembering that this archer averaged thus for two successive days, shooting altogether 288 arrows and only three at an end, walking to the next target at every three shots, and shooting back, the mind becomes at once possessed with the idea that the perfection of archery was there and then realized. Such a result could not have been possible even with Ford except nature had prepared the occasion. At very short distances the effect of a moderate wind upon an arrow is slight because of its instantaneous flight, but in shooting at distances from 60 to 100 yards a faint breeze that barely waves the tall grass or stirs lazily the branches of the trees, will bear an arrow entirely off the target that otherwise would have pierced the gold. The novice under such circumstances will not perceive that his arrow has been affected by the wind, particularly if it be a "broad and equal blowing" breeze, for the action has been so gentle and steady that the arrow has been gradually pushed aside, though the smoothness of its flight has been unimpaired. Not being aware of the cause of the defect the archer will repeat the shot with the same result many times in succession. To the trained archer, however, this sort of wind is of all the most easily managed. He has only to allow for his next shot the distance his first has been borne away, and he smiles with pleasure as he sees the obedient arrow rise and fall, slip round its double curve and fall with a dull plunge into the central gold. But there are winds that no philosophy can prepare against. Those most difficult are not the mad March gale that rushes up or down the range, blowing down targets and carrying away the light arrow by sheer strength, for in such a case the archer has only to exchange his 48-pound bow for his 65 pounder, and his 4.3 arrows for his 5.6 ones; and drawing them to the head, he will find that the low, impetuous rush of the heavy shafts are too much for the fierce gale. And herein lies the great advantage of the athlete, with his mighty bow and heavy arrow, over his weak antagonist bearing the light gear. Their equality is nearer than one would think on a fair day, but in the storm the weak vessel goes down. This was well exemplified at the English Grand National Tournament in 1877, when the burly preacher, W. Rimington, bore away the championship medal from Fisher, Palmer and Pinkney in the tempest that swept over the ranges of Doncaster Moor. The most troublesome winds to the expert are those undecided, restless and ever changing ones that come now out of the east, now out of the west; run up from the south, and sweep with a little whirl around a half circle and back with a puff from the north. They push the arrow away from the target, now on one side, now on the other. Running down the range with the arrow, they lift it clean over the target, or meeting it midway in full charge, they break the force of its flight, and it drives into the ground a few feet short. And in shooting long distances, when the arrow will be high in the air in its middle flight, it will be seen to waver and rock to and fro without apparent cause, and its destination changed and flight ruined. This is caused by the harsh blowing aloft of narrow streams of wind, while all is serene at the surface of the ground. Sometimes the wind will be drawing strongly from right to left where the target stands, while at the position of the shooter it is blowing in a contrary direction. The archer, making due allowance for the effect of the wind which he feels at his position, is surprised to see that his arrow not only holds the full allowance given against the wind, but actually gains upon it and goes far wide of the mark upon the windward side. No more striking passage occurs in literature than that in which old Roger Ascham describes the wind which he *saw* as he rode upon the highway between "Topcliffe on Swale and Borowe Bridge." I copy it *verbatim et literatim et punctuatim* from "The Schole of Shooting," published by that author and presented to King Henry VIII. in the gallery at Greenwich, in the year 1545:

"To fe the wynde with a man his eyes, it is impoffible the nature of it is fo fyne, and fubtile, yet this experience had I onces myfelfe, and that was in the great fnowe that fell iiii yeaus agoo: I rode in the hye waye betwixt Topcliffe vpon Swale and Borowe bridge, the waye beying fumwhat trodden afore, by waye fayrynge men. The feeldes on both fides were playne and laye almoite yeardе depe with fnowe, the nyght afore had ben a litle frofte fo yat the fnowe was hard and crutted aboue. Yat morning the fun fhone bright and clere, the winde was whittelinge a lofte, and fharpe accordynge to the tyme of the yeare. The fnowe in the hye waye laye loofe and troden wyth horfe fecte: fo as the wynde blewe, it take the loofe fnowe with it, and it fo flide vpon the the fnowe in the felde wnyche was harde and crufted by reafon of the froft ouer nyght, that therby I myght fe veryc well, the hole nature of the wynde as it blewe yat dayes. And I had a greate delyte and pleafure to marke it, whych maketh me now far better to remember it. Sometyme the wynde would not pafs it yeardes brode, and fo it would carie the fnowe as far as I could fe. An other tyme the fnowe would blowe ouer halfe the felde at ones. Sometyme the fnowe would tumble foftly, by and by it would flye wonderfull foft. And thys I percyued alfo that ye wynde goeth by ftreames and not hole togither. For I fhould fe one ftreame wyth in a score on me, than the fpace of ii, fcore no fnow would ftirre, but after fo muche quantitie of grounde, an other ftreame of fnow at the fame very tyme fhould be caryed lykewyfe, but not equally. For the one would ftande ftyll when the other flew apace, and fo contynewe fometyme fwiftlyer, fometime flowlyer, fometyme broder, fometime narrower, as far as I couldc fe. Nor it flew not fteight, but fometyme it crooked thys waye fometyme that waye, and fometyme it ran rounde aboute in a compafe. And fometyme the fnowe wolde be lyfte clene from the ground vp in to the ayer, and by and by it wouide be al clapt to the grounde as though there had bene no wynde at al, ftreightway it wouide rife and flye agayne. And that whych was mooft mervayle of al, at one tyme, i drifte of fnowe flewe the one out of the weft in to ye eaft, the other out of the north in to ye eaft: and I saw, it, wynges by reafon of ye fnowe the one croffe ouer the other, as it had been two hye wayes. And agayne I fhoulde here the winde blow ftrait in the ayre when nothing was ftirred at the grounde. And when al was fyll where I rode, not veryc far from me the fnowe would be lifted wonderfully. Thys experience made me more meruale at ye nature of the wynde, than it made me conning in ye knowledge of ye wynde."

How simply and yet how strongly the old master has told his tale of wonders. He "spake full well in language quaint and olden," and it would be sacrilege to doubt its veracity. Seeing the wind streams, as Ascham saw them that day, how could he have guided an arrow safely through their willful ways to the distant mark? Winds are not less playful now than in the days of Ascham, or less variable in America than in the British Isles. It therefore requires the alert archer to shoot well in all weather. To do this the archer need not attempt the study of the wind, for that is useless, but he must study the flight of his arrow. Its normal flight should be smooth, steady, and rising and falling in a direct line. If in the latter part of its course it veers from its true line gradually, the wind is pushing it in a steady stream aside. If it does not seem to fall enough in the latter part of its course the wind is following it; if it fall too much, the wind is making head against it; if it "wabbles" light in mid course, there are counter currents blowing aloft. If it thus "wabbles" in short distance shooting there is a sudden narrow stream pouring across the range. All these things and many more will only be learned by intelligent practice, carefully observing the flight of the arrow at every shot. And after all, the half will never be known. Guard against it as you may, the wind will have its way, and many times the weary archer will leave the target ground with the thought uppermost that there is no mistress so willful, no coquette so capricious, no spirit so restless and uncontrollable as the wind. He will find that there are many things about it which he does not know other than "whence it cometh or whither it goeth." Many archers have noticed, and many archery authorities have called attention to the fact that one can do much better shooting about sundown, and the reason is usually given that the air is clearer and the vision keener at that hour. The contrary is true, for the air is then much less clear than at noon. The principal reason is that the tired winds go down with the sun, there is a lull in the restless streams, and the arrow follows with absolute accuracy the beautiful parabola fashioned by the force of the trajection and the attraction of gravitation. On after another they rise and fall with an entrancing monotony, each followed by that indescribable sound which marks the central hit and which makes an echo in the archer's heart as thrillingly sweet as those sounds which smite upon the ears of the victorious soldier when the bravest trumpets of his country blow.

WILL H. THOMPSON.

THE ASTLEY BELT COMPETITION.

The Astley "Long-Distance Championship Belt of the World," was originally offered in January, 1878, by Sir John Dugdale Astley, Baronet and Member of Parliament from North Lincolnshire, who has long been known as a supporter of athletics, and especially of pedestrianism. The belt is composed of nine plates of solid silver, three by two and one-half inches in size, linked together and mounted upon a band of red leather. The central plate is gilded and bears upon it the name of the belt; upon another plate is the record of the first competition for it, and other plates are left blank for records of the other contests. The belt is valued at $500, and this amount must be deposited with the trustees as a guarantee of its safety. The conditions governing the belt are as follows:

I. The winner will have to defend his claim to the belt for 18 months, and should he wish to have it in his possession he must give security to the appointed Trustees, and undertake to restore it when called upon in good condition.

II. In case of the belt being won by any person resident out of the United Kingdom, the Trustees shall, if they think fit, demand the deposite of security to the value of $500 before permitting the trophy to be taken out of the country.

III. The holder of the belt shall not be called upon to compete in more than two matches within each current year, and in case of his winning it in three consecutive matches or sweepstakes, it shall become his absolute property, provided that the whole of the said matches or sweepstakes have been *bona fide* in every respect.

IV. The holder of the belt must accept all challenges (subject to the above conditions) for not less than $500 a side, and be prepared to defend his right to the same within three months from the issue of any challenge.

V. In the event of a match being made, anybody may join in by depositing $500 with the appointed stakeholder within four weeks previous to the day fixed for the commencement of the race; the winner to take the belt and the whole of the stakes; the gate receipts (after all expenses have been paid) to be distributed among the competitors as may be agreed upon beforehand, with the approval of the Trustees.

VI. The Committee of the A. A. U. are the appointed Trustees. The editor of the *Sporting Life* is nominated stakeholder for any matches that may arise for the belt.

VII. All appeals upon questions not provided for by these conditions shall be made to the Trustees of the belt, whose decision shall in all cases be final and subject to no court of law or otherwise.

The first "go-as-you-please" race for the trophy was held March 13 to 23, 1878, at Agricultural Hall, London. Among thirteen men, Daniel O'Leary, the American representative, went to the front, and won the belt with a record of 524 miles and two laps, a score which has not been equalled in subsequent competitions. His closest competitor, Vaughn, made 500 miles, and "Blower" Brown, 477 miles and two laps, no one else reaching 450 miles.

The second match was in this city, Sept. 30 to Oct. 5, 1878. O'Leary's only competitor being one John Hughes, of New York, better known as the "Lepper." The match was more of a catch-gate-penny scheme than anything else. O'Leary was ahead only 408 miles, and his competitor 310.

The present match, which in several respects was a most remarkable one, began at Gilmore's Garden, Monday, March 10, at 8 A. M. The contestants were: O'Leary, the champion; Charles Rowell, John Ennis and Charles Harriman. Rowell is a compact little Englishman, very short and very muscular. His occupation in England is as near that of our Whitehall boatmen as anything else we have in this country. He had an excellent reputation as a long-distance runner, and was selected by Sir John Astley as the English contestant to win back the belt from America. His usual gait is a dog trot, which he keeps up with the same regularity of movement that distinguishes O'Leary's walk. Ennis is a Chicago Irishman, who has a fine athletic record, was his own backer, and it is said mortgaged his house for the necessary stake money. Harriman is a long-limbed young fellow from Maine, the 36-hours' champion of America. He is a shoemaker when he is not a pedestrian.

The distinguishing characteristic of the Gilmore's Garden competition was the universal and intense interest manifested in its progress by all classes of people from the *gamin* of Ann Street to the bank president of Madison Avenue. Doubtless the international character had much to do in effecting this. Men and women, who did not care a snap of the finger whether one or another of three men won, suddenly became full of enthusiasm when England and America were pitted on the sawdust course. This was also in a certain measure the climax of the pedestrian furore which has had such engrossing possession of the country for months past. The public had become surfeited with the 3,000-quarter mile dames and damsels; its palled appetite craved something more pungent, and when the doors of the Garden were opened early Sunday evening the crowd was there and jammed itself in. At midnight—an hour before the start—the vast space was choked up with a surging throng, and the doors were closed, only to be burst in by the clamorous thousands without. The clubbing of the multitude by the stalwart New York policemen began promptly at midnight, and an hour later the four pedestrians appeared at the line, and, amid huzzas, shouting, screeching and the thunderous din and clamor which a New York audience alone knows how to make, they started off on their long and weary tramp. Rowell forced the work at once by breaking into a run, leaving O'Leary behind, and then closing up again upon his rival, dogging his steps, following him relentlessly around and around, worrying and annoying him. These tactics the Englishman kept up throughout the race, selecting his victim and sticking to him lap after lap, except when he chose to pass him and widen the gap between them. At the close of the first hour the relative positions of the four men were: Rowell, 6 miles and 7 laps; O'Leary, 6 miles and 2 laps; Ennis, 6 miles and 1 lap; Harriman, 5 miles and 4 laps. Ennis was very sick at his stomach the first day, and it seemed to his friends certain that he must give up the work; but the resolute fellow stuck to it, and after the first twelve hours not only succeeded in retaining his food, but was throughout the match physically the best man of the four. By 9 o'clock Harriman, who had been gradually gaining on Ennis, scored 34 miles 6 laps to the latter's 33 miles, and kept the lead thus assumed, gradually lessening the gap between himself and O'Leary, until at 5 o'clock he passed the champion, the score of the four men then appearing on the huge blackboard at the end of the Garden: Rowell, 83 miles; Harriman, 74 miles 5 laps; O'Leary, 73 miles 4 laps; Ennis, 66 miles 3 laps.

From the walk of last fall it will be remembered O'Leary went to the Hot Springs, Arkansas, for treatment, but failed to find the relief and recuperation which he sought. He was in no fit physical condition to undertake the tremendous task of a six-day's walk, and at a very early stage of the match it became a foregone conclusion that he must succumb. He struggled on, the distance between himself and the rest constantly and rapidly widening, until Wednesday afternoon, when at half-past five, having walked 215 miles and 6 laps, he staggered into his cottage and abandoned all further participation in the walk. The score at that time was: Rowell, 253 miles; Harriman, 245; Ennis, 233, and 7 laps. The collapse of O'Leary took from the match one of its greatest elements of attraction; many of the thousands which thronged the Garden having been drawn thither to see him.

The interest of the general public was now centered upon the tall Maine boy, whose long, easy strides bore him around the course with a regularity of movement which called forth repeated rounds of applause. But it was evident to keen observers that the Shoemaker could not last. Rowell's dog-trot at his heels worried him out. He kept bravely on, and upon the bulletins, which were improvised all over the city from the Battery to the last Harlem larger beer saloon, his name appeared next to Rowell's, but with the gap between his own score and that of Ennis gradually decreasing, until 7 o'clock of the fourth day, when Ennis forged ahead, the figures then showing: Rowell, 344 miles, 5 laps; Ennis, 316 miles, 7 laps; Harriman, 315 miles.

Harriman's task was after this one of the most painful endurance; but he kept pluckily on without hopes of more than securing a share of the gate money by doing 450 miles. The interest of the spectators and of the thousands who did not witness the walk themselves but closely followed it as detailed in the hourly extras and on the bulletins, was now concentrated upon the Maine boy. Rowell was ahead, and as the hours slipped by and the gap between the Englishman and the Chicago Irishman grew no less, it was generally accepted as established that the belt was to go back to England. But would Harriman, who had toiled so bravely and suffered so much, make his 450 miles and win his 20 per cent. of the admission receipts? For it had been agreed before the start no one should divide the spoils who had not covered that distance. There was to be no play about this. An old Sanskrit proverb—older by twenty centuries than long-distance pedestrian contests—has it that "A mile is long to him that is aweary"; and Harriman was very, very weary. The miles were very, very long to him. At noon of the sixth day there were still twenty-two of them before him. But he trudged on, stretching out his long legs, swinging his long arms and looking determination with his long face. Then at a quarter-past six came the scene of the week. Harriman came out from a rest in his cottage, so stiff and lame that he could hardly walk. The sympathetic audience cheered him tumultuously. Then Rowell came up, thrust his arm through Harriman's, and amid redoubled applause walked with him, helping him along. Ennis also appeared from his house, put himself on Harriman's left side and took his left arm: and the three walked on, while the thousands of spectators made the old Garden ring with such applause as it never knew before and will never hear again. This was too much for poor Harriman; it touched him when the suffering would not, and his eyes filled with tears. Two laps were thus made. Harriman was cheered up to keep on his way; Rowell won scores and scores of friends, and Ennis, who had been a favorite from the start, added new laurels to his record.

The climax of the six days came in the evening, when all eyes were still upon Harriman. At 8 o'clock Rowell had made 496 miles, Ennis 475, and Harriman 447. Rowell had long been assured of the belt, for had he stopped early in the day, Ennis could not have made the distance necessary to pass his record. But Harriman had still three miles to go, and the three men—Rowell ahead "cutting out the pace," Harriman in the centre, and Ennis bringing up the rear—they were applauded and cheered and greeted with every kind of pluuditory noise ever made by a human being: yells, huzzas, "hi hi's," cat calls, screeches, whistles, howls, shouts, clapping of hands, stamping of feet and canes, and last, but not least, clouds and clouds of tobacco smoke. I was a curious spectacle—the little round-limbed, bobbing Englishman; the lank, hollow-eyed, long-striding Yankee, and the sturdy Irishman, going around and around, while the gesticulating audience rose at their approach and sent them on with the inspi-

ration of their applause, and every little while burdened one or another of the three with heavy bouquets and floral designs; and when the final lap of the 450th mile came, there came with it such a fury of excitement, good nature, applause and cheers after cheers for Harriman, Rowell and Ennis, that even the reporters were dazed and bewildered, policemen in the corners woke up, the small boys in the cellar and on the roof came up and down like rats as they are, and the Garden shook from foundation stone to roof, and threatened to come crashing down in its excitement: the impecunious thousands without, who—by intuition perhaps—knew exactly the position of every man on the track within, caught up the applause and sent it echoing away out over the squares and through the streets, while messenger boys rushed off to telegraph it on and on.

Then Harriman, decked out with a tri-colored sash, a trainer walking with him to bear the last huge bouquet, made two more laps, which the judges had decreed as a penalty for the two in which he was assisted; these were two triumphal marches, and the happy man walked as if he did not know what pain was. Then he went into his cottage for the last time, whence he was borne to his carriage, and going far out of his way to avoid the enthusiastic multitudes who blocked up the streets, was finally got safely into bed at his hotel, there to sleep and forget his pains.

Rowell meanwhile had completed his 500 miles, donned his Ulster and made his tour of the track, bearing an American flag, while the band played "God Save the Queen;" but the audience drowned the noise, and the band might just as well have kept still—and Rowell went to his hotel.

Ennis was all this time spinning around the track, running his score up to 475, and at 10:57 he had finished his task, doing the last mile in the fastest time of the whole match. The first lap was made in 50 seconds, the second in 54 seconds, the third in 52 seconds, the fourth in 52 seconds, the fifth inside of 50 seconds, the sixth in 53 seconds, the seventh in 52 seconds, and the eighth in a fraction over 52 seconds, making the mile in 6:55. Then he made his triumphal tour—and Ennis went to his hotel.

The following table shows the work done by each man on the first and last days of the match, and the totals of each day, etc.:

FIRST DAY.

Time of Day.	Hour of Walk.	Rowell.	Ennis.	Harriman.	O'Leary.
2 A. M.	1	6 7	6 1	5 4	6 2

Rowell	102 15 15	Harriman	102 15 59
Ennis	105 34 27	O'Leary	45 51 45

AVERAGE TIME PER MILE.

	M. S.		M. S.
Rowell	12 16	Harriman	13 32
Ennis	13 29	O'Leary	33 55

The total receipts of the walk were $54,314.40, out of which an expense list of $13,517.79 was extracted. This last sum included $5,000 rent, $2,720.15 for pay of employees, $432 for segars, $1,541 for refreshments and drinks, $414 for gas, and so on through the list. At the meeting yesterday afternoon Ennis and Harriman objected to the payment of any money to O'Leary, and the ex-champion receives nothing from the receipts. The balance of $10,796.61 was disposed of as follows: Rowell, $18,398.31; Ennis, $11,038.98; Walton (Harriman's backer), $3,679.66; Harriman, $3,679.66; Manager Kelly, $2,000; and $2,000 will remain in bank as a contingent fund to meet subsequent claims.

THE GREAT SODA CRACKER COMPETITION—*Ten Dry Soda Crackers in Ten Minutes Without Drinking: prize* $500; *Entrance fee* 50c.: *open to all: chew as you please.*—Now that the great pedestrian match between Walker, Foote and Leggett has has come to an end we begin to take a glowing interestin the coming soda-cracker competition, which is bound to eclipse all other previous contests of any sort or character whatsoever. The liberal prize of $500 offered will doubtless be a great inducement to thousands of unemployed persons, tramps and gentlemen of leisure. The small entrance fee of fifty cents is insignificant in comparison to the reward to be obtained. The feat of eating ten dry old soda-crackers in ten minutes without drinking any lubricating beverage whatever, or the use of any means to promote sali vation, may seem to some persons not so herculean a task as it now appears to be to the promoters of the enterprise, who may really have assumed great risks' However, we hope the management will not be disappointed, and trust that the entertainment afforded to the participators and the public will sufficiently reward the ingenuity of the great heads who have conjured up this new sensation.

N. B.—This is no dry joke.

HONORS ON LAND AND WATER.—Though Hanlan won in the boat race, we cannot grant that he did better than Rowell.

THE ENGLISHMAN TAKES HIS TURN.—For this four years (1874–8), America invariably won in every competition of whatever character; but in the last two events, viz., the Hanlan boat race and the late long-distance walk, the Englishman has stepped to the front. There is no use being disheartened, however. As the Irishman says: "We can't have everything to plase us." We will pocket our losses and up and at 'em again.

THE METROPOLITAN TYPE-STICKING COMPETITION, which was carried on in this city last week in conjunction with the great Gilmore's Garden walk, was brought to a happy termination last Sunday. It resulted in a clean score of 336½ columns for the *Herald* to 335⅔ columns for the *Sun*, the same being the best of the list. The *Star* was a good third. The most entertaining incident of the affair was that every line of type was read fifteen times.

NATIONAL COLUMBARIAN SOCIETY.—The monthly meeting of the National Columbarian Society was held on Tuesday, March 11, at 7:30 P. M., at their new rooms, No. 152 Franklyn street. The society will hold meetings and have an exhibition of pigeons on the first Tuesday of each month. The Antwerp homing pigeon was selected for the April meeting, baldheads for May and priests for June. Entry fee, $1 for each pair entered. First premium to be a silver cup; second premium, $2; third premium, $1. Open to all. Birds from a distance can be sent to H. V. Crawford, Sec'y, 120 Hudson street.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

R. H. B., Canton.—If the bull is cut the shot scores as one; same rule on circles.

SUBSCRIBER, New Brighton.—Apply to Knapp & Van Nostrand, Washington Market.

L. A. M., Ohio.—Know of no water telescope. Write to Abbey & Imbrie; see advertising columns.

YACHTMAN'S HANDY BOOK.—Party having ordered same can have it by sending address to this office.

A. S., Hummelstown, Pa.—In trap shooting if a bird is once out of bounds it is always out, and must be scored a lost bird.

TAXIDERMIST.—Send your birds to R. L. Newcomb, Salem, Mass. You can learn his charge for stuffing and mounting them by writing to him.

J. R. H., Coudersport.—You will get what you wish by addressing J. Palmer O'Neil, 41 Fifth ave., Pittsburgh, Pa., who furnishes all kinds of sportsmen's supplies.

Z. T., Northumberland, Pa.—My setter gyp cannot hold her urine; is spayed; please give me advice? Ans. How long since was she spayed, and what is her general condition?

J. M. C., Ralston.—Write to Waters & Son, paper boats, Troy, New York. They make paper canoes. Specify your wants. For modern canoe, Geo. Roahr, foot 135th st., Harlem, N. Y.

H. B. B., Boston.—What variety of duck decoys would be best for Calaveras Co., California? Do you think mallard and teal would do? Ans. Mallard, teal and widgeon would answer.

R. O. B., Adams.—From your description we should imagine that your dog was a very large setter. Dust your birds with dry corrosive sublimate and it will probably keep the moths out.

MOC CASIN.—We have time and again published information about moccasins. M. S. Hutchins, of Dover, N. H., manufactures the Good's moccasins which were recommended in this paper so long ago as August, 1875.

E. B. C., Boston.—1. What pattern should a 20-bore gun (full choke) make at a 30in. circle, 40 yds., No. 10 shot? 2. Is medium or coarse Orange powder the best for a charge? Ans. 1. About 500 pellets. 2. Medium.

BREECH-LOADER, Salem, N. J.—Please inform me through your paper if Bogardus has published a book of his last trip to Europe? Ans. His latest edition contains a sketch of his European trip. We have it on sale.

J. U. S, Bridgeport, Conn.—At what age do bitches stop breeding? Is seven years too old if in good condition? Ans. The time varies. A bitch at seven years of age, under ordinary circumstances, should not be too old to breed.

J. J., Remington.—"Canoeing in Kanuckia" 75c. and "Canoe and Flying Proa" 50c. will give you much information on canoes. Harper Bros., New York. Also "Building Canoes," by Baden Powell, $1.25. Latter book we can get from England.

J. L. S., Phila.—For "Lloyd's Register" write to J. D. Leary, 73 William st., New York. He is agent for the book. Contains rules and specifications for building, list of all English yachts, their dimensions, owners, builders, etc., and other information.

A. M. H., Milton.—Bathe your pointer's feet in salt and water. Use the following lotion for your spaniel's ear, pouring it in and holding the flap over it for a few minutes: Goulard's Extract and wine of opium, of each ½ oz.; sulphate of zinc, ½ dr.; water, 8 ozs., mix.

W. B., Newfane, N. Y.—Supervisors of counties in New York State have no authority to legislate respecting game which is provided for in the State law. They cannot alter nor amend the existing law save to provided for such game as is not mentioned in the statute.

RAYNARD, Sutton, Mass.—I have a pointer dog that has rheumatism which seems to be wholly in his hind parts. Some days he is quite smart, others all down again. What can I do for him? Ans. Give salicylic acid, 3 grains in milk every 6 hours; if the parts are hot and inflamed, rub twice a day with chloroform liniment.

G. A. MCC., Altoona, Pa.—My dog Joe has running sore eye, and what seems to me a bad cold in the head. Please advise me what to do for him. Ans. For the eye, apply warm fomentations, and, if they do not afford relief, bathe it with sure lotion, one grain to the ounce of water. The cold in his head must be described more minutely to be prescribed for.

T. F. M.—Will you inform me as to the cheapest and quickest way of reaching the Rangeley Lakes? Ans. Would refer you to Farrar's "Rangeley Lake Guide," 60c. We can furnish it.

SENEX, Fairfield Co., Conn.—What is your remedy for chafed feet—feet chafed by walking? I have used the following: First, a foot bath of warm lye water; second, a foot bath of warm water, with the addition of a handful of salt and one of bran stirred in it, in which the feet are to be soaked for twenty minutes or more. Ans. Soft soap is as good as any.

R. D., Shawneetown, Ill.—1. The symptoms you describe are those which generally accompany shaking palsy. We should give the dog an aperient—the one prescribed for "L. S." in this column. Afterward give her tonics, with plenty of exercise and fresh air. Feed liberally. Look out for symptoms of worms. 2. The file binders are adapted to this paper.

G. W. E., Meddeld, Mass.—For information concerning Tex as lands read some of the letters written to this paper. Write to J. E. Buckley, State Geologist, Austin, Texas.; to J. D. Brown, Gen. Pass. Agt. Mo., Kan. and Texas R. R., St. Louis, Mo.; to W. H. Abrams, Land Commissioner, Marshall, Texas, and send to A. S. Barnes & Co, William st., N. Y. for "A Thousand Miles Through Texas."

L. M., Texas.—For plans of sharpie write to our advertisers. Would advise nothing smaller than 18ft. Sails about 165 square feet. Adopt regular sharpie rig as described in our columns. Sails of triangular form, laced to two masts; clews stretched out by light sprits from mast. Reduce to your size boat in proportion as the lengths of boats. May publish plans before long.

P. A., New York.—You will please inform me through your valuable paper if pike live in salt water, and also how to preserve grapes. Ans. Pike live in the estuaries of the Chesapeake, but have direct access to salt water. As to preserving grapes, we do not understand whether you refer to the making of raisins, to household sugar preserves, or the keeping of grapes fresh. Either branch is a little out of our line.

LINVILLE, Marietta, Pa.—I have wintered a number of quail in my office. In the fall I cut the right wing of each bird. The time for turning them out is drawing near, and they are not yet able to fly. What can I do for them? Did I make a mistake in cutting the wing? What is their time for moulting, and when should they be turned loose? Ans. The wings will grow out again. All birds moult just before hot weather, quail included. Turn them loose as soon as April 1.

A. R. S., Gouldsboro, Pa.—How many feet of perpendicular falling water will speckled trout scale in going up a stream? Ans. Don't know of any authentic record. Probably not over three feet where the sheet of water swings clear of an artificial dam; but very many feet up a natural cascade, where projecting nodules of rock assist the ascent. Salmon are higher leapers than trout, and will scale a natural fall of twenty feet, if there is the slightest holding ground against its face.

CONSTANT READER, Rutherford, N. J.—My Gordon setter bitch is troubled with tightness of the bowels. She is fed on scraps from the table, with small quantities of meat. I have given her powdered aloes, but it does not seem to do her any good. Ans. Give your dog a pill composed as follows: Blue pill, ¼ scruple; compound extract of colocynth, 1 scruple; powdered rhubarb, 5 grs.; oil of anise-seed, 2 drops. Afterward change diet; feed oatmeal and vegetables, and give your dog plenty of exercise.

E. G. K., Williamsport, Pa.—1. Did not FOREST AND STREAM some years since give directions for constructing split bamboo rods; and if so, can I procure the back numbers treating of this subject? 2. Do you know anything regarding the merits of sassafras as compared with other woods for but pieces of trout rods? 3. Can you give the best sizes for first and second ferrules on a 10 or 11ft. three-jointed fly rod; or is this a mere matter of judgment? Ans. 1. See page 86, volume 6. 2. Should not feel inclined to recommend it. 3. About a half inch and a quarter inch respectively. No exact scale of measurement.

J. L., Georgetown, D. C.—1. A, B and C shoot a pigeon match. A kills 8 birds, B kills 8 birds, C kills 7. C claims that A and B shoot off for first money and he gets second; is he right or wrong? 2. Does the same rule govern glass ball shoots? Ans. 1. Wrong. A and B shoot off for first money, and the loser in the tie shooting takes second. 2. Yes. The only variation to this rule is in "class shooting," where there are a large number of competitors, and the shooters are divided into classes, as they may have killed 10, 9, 8, or 7 birds, each class shooting off for its particular prize.

J. N. S., Bridgeport.—1st. Two of the teats of my pointer bitch hang three or three and one-half inches lower than the others, and feel as if they were filled with small stones packed tight together. She was all right two or three days ago. Can you tell me a remedy? 2d. Is there a book published containing the pedigrees of all noted dogs? Ans. Bathe the teats with warm water, gently pressing them. You don't say whether your bitch is with pups or has been nursing. 2d. Yes; the English Kennel Club Stud Book, and in this country Arnold Burges American Kennel and Sporting Field. Also, shortly to be published, the American Kennel Stud Book.

FITZ, Dauphin, Pa.—Will you tell if the salmon rivers in Nova Scotia are, any of them, still open to strangers, or if there is any reserve on sea or other trout at present time? Would the Cobequid District, N. S., be a sequestered locality, and afford good sport now as formerly—not cut up and ruined by improvements or tourists? Ans. All the salmon and trout rivers of Nova Scotia are now, as they ever have been, open to all, the license system in force in Ontario, Quebec and New Brunswick not being the law in Nova Scotia. Neither is there any reserve on the sea or river trout fishery. There is no such locality known in Nova Scotia as "the Cobequid District" in connection with salmon fishery. There are the Cobequid Mountains in Cumberland County, but there are no salmon rivers in the immediate vicinity nearer than River Philip. The western rivers are the earliest for spring fishing, and this year an Indian caught two in Port Medway River Queens County, about the 10th of January, with a fly.

L. S., St. Louis, Mo.—1. I have a ten months old setter dog of a dark red color, same as a spaniel. The dog is weak in the hind legs, and when he runs or walks the motion of its legs are like a hop. Would you be so kind as to let me know what will cure the above? He also growls when he is asleep. 2. Of what kind is the dog? Ans. 1. Your dog probably has rheumatism; but, without knowing how he has been kept and fed, it is impossible for us to determine. Over-fed dogs suddenly exposed to cold or wet are particularly liable to it. We should give, if there is much pain, first, a purge composed of blue pill, ½ scruple; compound extract of colocynth, 1 scruple; powdered rhubarb, 5 grains; oil of anise-seed, 2 drops; divide, and give in two doses, six hours apart. After this has operated give the following pill twice a day until the pain has abated: Calomel and powdered opium, of each, ½ grain; caldium powder, 1 grain. We are now prescribing for rheumatism, which generally affects the hind quarters, in the manner named, but from the careless way in which ailments are described, it is impossible for us in many instances to determine the disease. Your dog may have worms; in which case give him areca nut. As we only know the color of the dog, how do you expect us to determine his breed?

SAPANULE!

TO SPORTSMEN—"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

LAZELL, MARSH & GARDINER,
WHOLESALE AGENTS, NEW YORK.

SAMUEL CERRY & CO., Proprietors, Providence. R. I.

OUR TAME RAT.—During the winter evenings, when the children were engaged with their lessons, our tame rat, Billy, was usually to be found on the table, rummaging among their books and catching at their pens; which latter amusement he enjoyed very much after the manner of a kitten running after a knitting-needle drawn quickly up and down the table; but as these amusements rather interfered with the studies, Billy would occasionally be dismissed to the kitchen, to which he had a great dislike. He never stayed there longer than he could help, but on the first chance would rush up the stairs and scratch, or rather, I should say, gnaw for admittance. Speaking of this gnawing leads me to observe that one objection I had to receiving him was the fear that he would be very mischievous; but fortunately I never found him so. He had free access to a pantry where a variety of eatables, usually considered dear to a rat's heart, were to be found; but I never knew him to injure anything or even to cut the paper covering of any parcel, no matter what it contained. No doubt it was partly owing to his being so well fed that he was not driven to theft by hunger. I generally scattered for him on the shelves some grains of rice or pickles of starch, and to these he helped himself when inclined. From soap or candles he turned away in disgust, being far to well-bred a rat to indulge in such low tastes; but he dearly loved a bit of plum-cake; and, shall I confess it, he was by no means a tectotaler. If ale was used at dinner, he would rush eagerly about the glasses until he was supplied with some in a spoon. I believe, before he came to us, he had been accustomed to even stronger potations, in which, however, we did not indulge him. I have said he was not mischievous, neither was he, as mischief among rats is generally understood; but there is no rule without exception, and Billy had a decided penchant for kid-gloves. If any were left carlessly about, he was sure to get hold of them and have the fingers eaten off in a few minutes. I cannot tell how many gloves he destroyed, until repeated lessons of this sort enforced more tidy habits. I must not omit to mention his love of music; when he heard the piano he would rush to the drawing-room and spring to the performer's knee, where he would remain perfectly quiet, evidently listening with much pleasure. When he first came he was very restless, seeming to live in a state of perpetual motion; but he soon learned to come upon the knee to be caressed and have his head rubbed, which operation afforded him intense enjoyment. He would have lain in a state of supreme delight for an hour if any one would have rubbed his head for so long.—*Chambers' Journal.*

FLORIDA SHIP CANAL.—Among the most recent of the many plans suggested by the constantly growing need of the Mississippi valley and the farther West for cheaper transportation of their products to the Atlantic seaboard, is the revival of the old plan of building a ship canal across the State of Florida, or rather across the peninsula of Matanzas Inlet, on the Atlantic, to Fort Wool or Clay Landing, on the Suwanee River. It is claimed that not more than seventy-five miles of canal would have to be cut on this route, that it would have an excellent harbor at each end, and that the whole route would be well supplied with natural feeders. It would make the distance between New Orleans and New York from 1,000 to 1,200 miles less than the track now sailed over, and would, it is claimed, save yearly $5,000,000 in the way of shipwrecks, and $3,000,000 annually in the way of extra insurance; over $46,000,000 in freight, and several millions every year in the way of grain and products, which go to waste in the Mississippi valley for want of cheaper transportation. The canal, when built would, it is calculated, bring in an annual revenue of from $8,000,000 to $10,000,000, and much more when the Darien Canal is completed, and it would throw a vast amount of shipping the Gulf of Mexico and through the Florida Canal to New York, Liverpool and other ports. The connection of the Pacific and the Gulf by canal would render this project worthy of further consideration.—*Scientific American.*

—John C. Howard died on Wednesday last of paralysis in Paris, Ky. He was the tallest man in Kentucky, being six feet and eleven and a-half inches, and weighing 267 pounds. His parents and children are all over six feet in height.

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

Miscellaneous.

A GREAT INVENTION!

Imitation STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents | L. LUM SMITH, Patentee & M'f'r's. 717 Sansom Street, (Sole Agt. for U. S. & Canada.)

Apply to | PHILADELHIA, Pa.

READ the following Extract from the *Representatives Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent-readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

GUNPOWDER.

DUPONT'S

Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Alford's Practice Target.

PURDY'S PATENT, DEC. 1878.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shot-gun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desir to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,000 ball match, Jan. 8 and 9. with it. In that match I used two sets of double barrels, one of 10 and thy other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until thee became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government at Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

For Forest and Stream and Rod and Gun.

WILLOWEMOC.

FOREVER float the gandy fly!
Where swims the fish who can deny
Itself the tempting lure?
Let Willowemoc Club-man sing,
As welcome back comes every spring,
He feels his trout secure.
Then wake a good old woodland song,
As merrily you plod along;
With creel and reel and line and rod
You tramp the daisy-speckled sod,
And hasten forward at the call
Of singing brook and waterfall.
Now warily you stem the flood,
And feel the rushing of the blood;
While every nerve with rapture thrills
In unison with trickling rills.
When some bold swimmer dares "a rise,"
And leaps to gain the floating prize,
You strike! You have him sure and fast;
You back, and gain the bank at last.
There, stretched on mosses darkly green,
The chieftain of the pool, I ween,
Outrivals far the rainbow's sheen.
Eager again you cast the fly,
While clouds obscure the sun and sky;
Now here, now there, you take your tithe,
And pass the day in spirits blithe.
Then homeward turned at set of sun,
The gate is reached; with skip and run
Wee beaming faces greet you there,
And lead you to an easy chair,
To cheery fire and crackling log;
A noisy welcome barks the dog;
The singing kettle, hissing pan,
Presage the feast for inner man.
So may each day thus doubly blest,
Be but a foretaste of the rest;
And every day thus calmly spent,
To each and all bring sweet content.

—Esk.

For Forest and Stream and Rod and Gun.

The Land of the Painted Heart.

Number Two.

THE country round about Lake Cœur D'Alêne is chiefly mountainous, with here and there a small plateau or valley, generally on the bank of some sequestered lake. The Mullan Road (running from Fort Walla Walla to Fort Benton, and built by Captain Mullan, formerly of the army) comes up the Spokan River, and, skirting the foot of the lake, passes over the mountains. Wolf Lodge, a small hay ranch on Wolf Lodge Creek, which empties into the lake, is about fifteen miles distant, and some fifteen miles further on is the Cœur D'Alêne Mission on the river of the same name. Here the good Jesuit Fathers reside, and have managed to Christianize the Cœur D'Alêne Indians. One of the Fathers told me there was but one Indian in the tribe who was not a member of the Catholic Church.

These Indians seem to be very thoroughly imbued with a sense of their religious duties. I recollect one evening, while I was stationed at Palouse City—a little hamlet on the Palouse River about a hundred miles from our present camp—a party of the Indians came late one afternoon to the grist-mill with a train of ponies laden with grain, which they exchanged for flour. They camped about a hundred yards below us on the bank of the river. Just at dark, while the fires where blazing brightly, the whole party—men, women and children—ranged themselves in two lines, kneeling on the ground, and sung their "Vespers" in the Indian language. Their stolid faces, lit up by the firelight, and the monotonous drone of their harsh voices as they sang, the bright fire and the dark overhanging pines, produced a very solemn effect. After they had finished, they rolled themselves up in their blankets and settled for the night. In the morning, just after daybreak, as I lay in my tent, I heard them again; but when I went down to breakfast they had gone.

About six miles from our present camp, and about due north, is a lake some three or four miles long by half a mile wide, which is celebrated for the abundance of its fish and the amount of game on the mountains surrounding it. There is no outlet to the lake, nor are there streams of any great size, though several small ones, flowing into it. But it is always full. It is fed by springs, and the water is clear, pure and always icy-cold. The Indians say that in the bygone days there was a whirlpool in the centre of the lake, and that logs or trees, getting within reach of the current, were drawn down and disappeared. That among other things, on one or two occasions, canoes were drawn in, their occupants having ventured too near, and were never seen again. This outlet is now, undoubtedly, filled up with logs and debris, for no visible sign of it exists; but there must be some opening in the bottom of the lake, for the inflow of the water is too great to be disposed of by evaporation, and the melting of the snow on the mountains in the spring or the heaviest rains seem to make no difference in its level.

That there are underground passages and caves throughout this country is certain. Often, when riding, the drum-like sound of the horse's feet or the deep rumble of the heavy wagons indicates the existence of vast hollows under ground. The Spokan River, which flows from the lake, over a hundred yards in width, has apparently no affluent above the great falls; yet, about fifteen miles below the lake, the volume of water is suddenly almost doubled. In winter, above this place, the river freezes over; but below, between it and the falls, it never freezes. In summer, when the water in the lake becomes warm, the water of the river is always the same until it arrives at this place, when a very marked increase of coldness is at once perceptible. Undoubtedly some underground current joins the main body of the river at this place, having its exit among the rocks, which are scattered around in the wildest profusion.

The hunting around Cœur D'Alêne Lake is super-excellent, and the fishing "the best in the world." In the numerous small lakes in the vicinity, and in the secluded portions of the great lake, the wild fowl build their nests and rear their young. I subjoin a list of the animals and birds found here, so far as I have been able to learn:

Grizzly, black, brown and cinnamon bears; California lion, panther, wild-cat, lynx, wolverine, gray, timber and prairie (coyote) wolves; red, black, silver-gray and cross foxes; beaver, otter, pine and stone marten; mink, fisher, weasel, badger, skunk, muskrat, elk, caribou, Virginia, black-tailed and mule deer; rabbits and hares; gray, red and ground squirrels; chipmunks, gray and bald eagles; osprey and many other varieties of hawks; hooting, long-eared and snowy owls; sage hen, pintail, pine, ruffed and prairie grouse; capercailzie or cock of the mountain; wild geese and swans; loons, ducks of many kinds; English and other snipe; plover, curlew, sand-bill and swamp cranes; robins, blackbirds of several kinds; crows, yellow-hammers, several varieties of woodpecker, bluebird, magpie, snow birds, bluejays, water-ouzel, humming birds of many kinds, and a great variety of other birds and animals the names of which are unknown to me.

Of fish, there are a number of varieties of trout, salmon-trout, suckers, and many kinds of shiners and other small fish. Salmon come up the Spokan River in abundance, but cannot get over the Great Falls. I may add here that we have neither mosquitoes nor black flies—those pests of the angler and hunter on the lake shores—though there is a fair allowance of other insects, the common house-fly being particularly abundant.

The country around is a perfect wilderness, and the few ranches, which here and there dot the country, are simply a log hut and a patch of garden. The Great Spokan Prairie, which extends from Pend'oerille Lake to the Columbia River, being rather more than a hundred miles in length, with a varying breadth of from six to ten, contains some good ranches where the cereals grow thriftily. Indian corn, however, does not grow well; but wheat, rye, oats, barley and potatoes give fine crops. Hay is a staple, the wild hay growing luxuriantly, and timothy, clover, red-top, blue-joint and bud-grass giving famous returns. Fruit does well, especially apples and pears. Strawberries yield immensely; peaches and grapes finely.

The country around is rapidly filling up, and, were it not for the fear of Indian troubles, every desirable spot would soon be taken up. Fifty miles below, in the "Fair Lake Country," or one hundred below, in the "Palouse Country," the soil is deep and very rich; but in this neighborhood it is rocky, gravely and light.

The inhabitants of this up-country are principally French half-breeds, descendants of the old Hudson's Bay voyageurs, a few of whom are still living here and married to Indian wives; hence such names as Louis Charette, Jean La Flor, Antoine Pelissier, Louis Pion, Piérre Michél, Eugêne Le Flambeau and Henri Perrault are not uncommon. But the new element in the lower country is the usual sturdy race which pushes out on the frontier, and, with the exception of a small sprinkling of Irish and Germans (principally discharged soldiers), is composed of the unadulterated American, chiefly Pike.

The late Indian troubles have much retarded emigration. It is estimated that at least a thousand families were prevented from coming into this immediate section of country by the Nez Percé war alone, with a like population in other sections. The timber of the country is chiefly pine, fir and tamarack, though there is considerable maple, beech and thorn. The cedar on the streams which feed the lake—the Cœur D'Alene and St. Joseph—is magnificent. Logs a hundred feed long and four feet in diameter at the but, with a grain perfectly straight, can be obtained in abundance, and many of the trees are much larger. Some of the mountains are covered to their crests with tamarack which attains a great size. Trees of eight or ten feet in diameter, of tamarack as well as fir and pine, are frequent, while from three to five is the ordinary size. Below, in the Palouse and Fair Lake Country, timber is scarce and has to be hauled long distances; but around Cœur D'Alene the only trouble is to find open ground. The site of our post was cleared from the primeval forest, and, the undergrowth having been cut away and the trees thinned out for some half mile around the post, makes one of the most beautiful parks I have ever seen.

There are several routes to this beautiful country. One is by Helena and Missouri, Montana, by the Mullan road, over the mountains. This route is always closed by heavy snow falls during the winter. They spin some strong yarns about these same snow falls. One is that a few winters ago a party was crossing the mountains by this route on snow-shoes, the snow being very deep. About half way across they noticed one day a thin column of smoke near the trail slowly curling up by a pine tree. Upon going to the tree they found a deep hole in the snow on one side of the trunk and the smoke coming out of it. Looking down, they saw it was almost thirty feet deep, and at the bottom were three miners who had made this their winter camp and were waiting for the spring to melt the snow and enable them to resume their prospecting. So they lowered them some late papers and provisions by means of a long lariat, and left them in their snug quarters. I do not vouch for the truth of the story.

During the spring, summer and fall this route is practicable for equestrians, but not for wagons, the bridges built by Captain Mullan having been swept away by the spring floods. The scenery along the route is said to be very grand and beautiful. One of the streams on the route (Hose Creek, I think) crosses the road sixty-five times in less than as many miles. It is readily forded, except during the spring floods. The country can also be entered by the Mullan Road from Walla Walla. (The Mullan Road runs from Fort Walla Walla on the Columbia to Fort Benton on the Missouri River). There is also another road from Walla Walla via Waitesburg, Dayton, Colfax, Pine Grove and Spokan Falls. This is the most practicable route, and the only one over which runs a public conveyance. A stage runs daily from Walla Walla to Colfax, and a "buck board" from Colfax to Spokan Falls twice a week. At Spokan Falls a team can be hired for the remaining twenty-seven miles. There are hotels at Waitesburg, Dayton, Colfax and Spokan Falls, but most of the houses on the way will accommodate travelers. There is another road from Walla Walla by the Texas Ferry across Snake River. Another route is from Lewiston, Idaho, through Paradise Valley, Moscur, Palouse City, Pine Creek, Pine Grove and Spokan Falls. You can also go from Lewiston via Colfax. In the summer and fall all these roads are good, but during the winter and spring the traveling is bad. In the spring it is almost impassable for wagons a part of the way on account of the deepness of the roads.

It is hard to close this sketch without some allusion to our friend "Lo, the noble red man of the forest." While there are many noble specimens physically, as a general thing the unadulterated Siwash is a very forlorn looking individual. As hunters and fishermen, they of course excel. If any of our Eastern brothers of the rod and gun ever wander to this far-off land, they will find poor Lo more than their match. The Indians will catch two fish to their one in the same vicinity, and larger ones, too. With respect to fishing the Indians have some curious superstitions. One is that while the moon is dark or small is the best time. An Indian will not fish, except through necessity, when the moon is at or near its full. The Indians say, gravely: "Wake siklis" (No, my friend). "Wake klose pish kunsih hyas moon towagh" (It is not good to fish when the moon is full and shining brightly). "Klose pish sick moon polaklie" (It is excellent fishing when the moon is on the wane and dark). "Sagalie tyee tikegh tenas mamook pish muck a muck" (The Great Spirit wishes his children to catch fish to eat). "Wake mamook pish kwanc sum" (He does not wish them to fish all the time). "Mamook pish olo sitkum" (So he makes the fish hungry only half the time). "Mamook hiyn" (Then they catch a great many).

While I am speaking of the success of the Indians in fishing, I must tell you a little incident that occurred to a friend of mine who is rather literal in some respects, though wise enough in others. We had all noticed how successful the Indians were in their fishing, both as to number and size, and naturally felt curious as to the reason. So this gentleman, who knows a few words of Chinook, volunteered to find out. By eking out his Chinook by signs he made an old Indian comprehend what he desired. Indians are usually very reticent about such matters, but some little kindness in the way of food and cast-off clothing had made this one willing to communicate; and as he could not speak English, nor my friend sufficient Chinook, the Indian had to resort to signs. Going to a large pine tree, out of which happened to be oozing a considerable quantity of pitch which had become clear and hard, he touched the tree (accidentally on the lump of gum) with his hand, and then made the motion of picking something out and putting it on the hook. So my friend thought he comprehended, and made the Siwash so understand. Seeing us soon after, he told us the Indians

used the gum from the pine trees. He had forgotten that the large white grub is very abundant in the bark of old, decayed pine logs; and, while the Indian indicated these grubs, my friend, taking him too literally, supposed he meant the gum which the Indian had touched with his hand.

In the chase, also, I am afraid our Eastern friends would be nowhere as compared with brother Lo. Hunting here is very laborious, notwithstanding the abundance of game, owing to the excessive roughness of the country; but the Indian seems to be tireless, and almost never returns without meat. In the winter, when the snow is deep on the ground and the game is driven from the mountains to the rocky promontories which jut out on the prairie, the Indians have grand hunts. A whole village—men, women and children—will go out, and, making a surround of a mile or two in diameter, will close in gradually toward some point agreed upon. The amount of game thus impounded is often immense. Of course the greater part escapes—the more dangerous—with the free consent of Brother Lo; for they are after meat, not fur; but it is not infrequent, at these great surrounds or battues, for one or two hundred deer to be killed. As the circle closes in the frightened animals huddle together, or, impeded by snow, dash frantically from side to side only to meet their foes wherever they turn. When the circle is sufficiently contracted, the Indians run in on snow-shoes and the slaughter commences. The deer are killed with arows, lances, clubs and even knives. In these surrounds fire-arms are used sparingly, for ammunition is scarce and hard to get, and, moreover, it is dangerous. As a general thing, only the chiefs or head hunters indulge in this luxury, and this only with the greatest care and circumspection.

Very many of the Indians understand English, and during Nez Perce and Bannock wars they used to gather around the stores where were the post offices on mail days—which they knew as well as we—and listen for the news. They will seldom speak English, however, and usually pretend not to understand it. Their means of communication are simply marvelous. When the famous Nez Perce chief, Joseph, was captured, the Indians of this neighborhood knew it and all the details of the battle, before the messengers of Generals Howard and Miles reached the telegraph; and although it required but three days for the news to reach us from Walla Walla—the nearest telegraph station—yet they knew of his capture, and told it four or five days before we got the news from our own people. Many of the more intelligent Indians are beginning to understand the homesteading of land, and see the advantage of permanent homes from which they cannot be ousted, and where they cannot be interfered with by settlers. One of the chiefs here—"Quin-E-Mo-Sa" (To meet together) by name—one of the few Indians who in his younger days would fight a white man with his fists alone and sustain himself manfully, a man of some shrewdness, and who has accumulated a few thousands of dollars in hard cash—was located on a very desirable spot of land on the edge of a beautiful lake. Finding his little territory was likely to be encroached upon, he decided to become a citizen and take up a homestead. So he got one of his white friends to make application in his name to the Register of the Land Office and go through the necessary formalities, the old man paying down the necessary fees like a man. For several mails Old Quin, as he is usually called, came over to the post office in full rig, viz.: a stove-pipe hat minus the top of the crown; an old coat with brass buttons and much the worse for wear; a gorgeous yellow blanket with a border of red and blue stripes; leggings, parti-colored; red and green blanket, with wide flaps or fringes down from the outer seams, and shoes. Each time the old man was disappointed he went off quietly; but one bright day the wished for letter arrived, and the certificate of the Register was placed in his hands. Old Quin was in ecstacies. With the old hat well cocked to one side and his blanket closely wrapped around his stalwart form, he grandly strutted forth through the crowd of Siwashes near the door, exclaiming (though he is usually very taciturn), as he shook the paper before their eyes: "Nika hiyu Boston alta! Wake nika Siwash! Wake iskum illahie Quinemosa alta! Nika Boston!" (I'm big white man now; I'm no Indian. They cannot take away Quinemosa's land now. I'm an American). And the old fellow stalked off with an expression of the utmost elation and scorn on his features—as proud as a peacock and as independent as a wood-sawyer. Nor was his way stayed, nor was there any laughter, nor replies, for he was a mighty warrior and a man of prowess among his people; his hand is always ready to strike, and, elated as he was with the sense of indisputable possession, there was no one who dared take exception to the old man's self-glorification. It was a bold thing, too, to proclaim himself a white man, for the Indians dislike the whites. But Old Quin does as he pleases among his people, and everywhere else. The old man mounted his horse, and, as he rode off with head erect, the last words heard as his voice was lost in the distance, were: "Quinemose Boston alta" (Quinemosa is a white man now). MONMOUTH.

AFTER GRAYLING IN MICHIGAN.

COLUMBUS, Ohio, March 14, 1879.

EDITOR FOREST AND STREAM:

I have been intending, since my trip to Northern Michigan last fall, in company with E. G. Savage, an enthusiastic fisherman of this city, to give you a few particulars thereof. We left our stopping place on Indian River (which connects Burt and Mullett lakes), where we were spending a few weeks hunting and fishing, and proceeded to the west branch of Sturgeon River. To reach the fishable portion we had twelve miles to go by conveyance, which carried our tent, provisions, traps and a light boat accommodating three persons. To give you an idea of the roughness of the way, it will be but necessary to say that we left our starting-place at nearly two o'clock P. M., and by eight o'clock that evening had made ten miles of the distance, camping on the shore of a small and beautiful lake. We finished our journey early the next morning, and by nine o'clock we were busily engaged in landing grayling in water as swift as a mill-race and as cold as it was swift.

The west branch of the Sturgeon is a narrow, crooked and very rapid stream, with not an eddy or back water pool in it for the distance of the six miles which we traversed. The banks are studded with the ends of non-decayable pine stumps projecting out and looking like an armory, with limbs, trunks of trees and all kinds of wild rubbish entangled therein, which the lumbermen have cut down and dragged out to clear the stream for the purpose of running logs.

After striking the main Sturgeon, we had a deeper and just as swift a current. The distance from where we struck the main river to its mouth, about twenty miles, was made by us in four hours, and was one of the wildest trips imaginable. During this four hours we had to cut our way through fallen trees a number of times, cut off branches to pass under, climb out on an obstructing tree trunk at the water's surface and drag our boat over, and work hard all the time with a keen weather-eye open, so that when rounding a curve we would not be brought up suddenly against the bank or upon some snag or fallen tree, in which case we certainly would have had to "make up a load and walk." I would not advise any one not thoroughly acquainted with managing a craft in a very rapid and narrow current to try such a trip on their own hook; if they do they will certainly "get left." We were under the care and marshalship of David Smith, of Cheboygan, Mich., an old lumberman and a man of good sense and practical experience, who, with his wife and family, is now keeping a "hunters' and fishers' retreat" on Indian River near Burt Lake (the point from which we started), and which I take pleasure in recommending to all who wish to sojourn in that locality.

We caught a great many grayling in the west branch, the water being very clear, but none in the main stream, as that was riled on account of a heavy rain, which did not affect the west branch much. The sport is very fine, I assure you, to land a grayling weighing a good pound and a quarter in water that is very rapid, together with the swiftness of the fish, they being, if I am able to ascertain properly, the swiftest fish that live, being even given the name of "umbra." In water two to three feet deep, running smooth and rapid, where you could see every pebble on the bottom, you could not possibly see these fish, either still or moving. At the same time we knew they were there, for we were catching them, and the first sight it would be possible to get of them was when they were brought to a check by the tackle. We tried crickets, grasshoppers and artificial flies of different sizes and colors, but found grasshoppers the best bait for them. They do not take the bait as readily on the surface of the water as they do when it is submerged and drawn through it. I had, however, some of my finest sport in catching some with flies on the surface. As to their size, we caught nothing weighing more than a pound and a quarter—from that down; but we heard of some that had been caught the year before weighing two pounds—authentic; and a number of stories of their being caught weighing between three and four pounds. This from our experience we had to take with a grain of allowance. The cartilage of the mouth gives way very easily, much more so than that of any other fish I have ever caught, requiring some patience in order to land them in very swift water. And when just taken from the water I think they are the handsomest of all fish, being delicate in outline; large dorsal fin elegantly mottled and colored, and the bright appearance of the whole body gives to them an appearance to a sportsman very beautiful. They are, also very tender; one could with thumb and finger pinch the head entirely off. The flesh when first dressed has a slight pink tinge, but upon cooking turns white. It is a finely flavored and very compact meated fish, well deserving of the high rank they have attained.

I would wish here to back up "Subscriber" from Painesville, O., in your number of March 6, in regard to advertisers changing their ads. These advertisements are to me quite interesting, and the more in detail they go the better I am pleased with them, as I have no doubt others are the same. Also I wish to heartily recommend the Shelton auxiliary rifle barrel as an indespensable addition to a sportsman's outfit. I have one of .43 cal, which I would not exchange for the best shotgun in America. FRANK N. BEEBE.

LAKE SOPHIA.

MONTREAL, Feb. 26, 1879.

EDITOR FOREST AND STREAM:

On Friday morning, the 21st of February, 1879, the writer, in company with a sporting friend, Charley O——, left Taylor's Hotel, Sawyerville, Quebec, fully equipped and provisioned, for a trip to Lake Sophia, or, as it is usually called, Upper Connecticut Lake. The object of our visit there was to obtain specimens of the *Salmo fontinalis* that abound in that lake, and also to see if the French settlers in its vicinity, this side of the boundary line, were raying due observance to the game laws of this province. These "Canucks" generally have very lax ideas regarding the close season for game.

Our route from Sawyerville was by the new road through the woods to Emberton. This road in the summer is passable for both single and double teams. We were told at the hotel that the first eight miles of the road would be good; after that distance the remainder would be doubtful. When we reached the doubtful part of the road we found it hardly tracked, so we mounted "Shanks' mare" and trudged ahead, with our "nag," hauling sleigh and traps, following in the rear. The first six miles of this "doubtful road" was passed over merrily, and enlivened by an occasional shot at ruffed grouse, which our spaniel Rover flushed along the way. But soon after this distance was covered Charley's knees began to grow weak, and he swayed along like a ship in a storm. He expressed a desire to try a snowy couch by the wayside. But words of bantering and cheer sustained him until we reached a settler's shanty, where he had a rest, some hot tea and pea soup; then declared his ability to proceed to the next shanty, a mile distant, without further delay. Here we met Mons. Boscett, whose cabin is within 1¼ mile of the boundary line and 2½ miles from the lake. Mons. B. had his team with him, which, by the way, was a novel one—one ox yoked to a light sled—and we soon arranged with him to haul us to his place, where we would take up our quarters during our stay in that vicinity. The distance from Sawyerville to the lake by this route is not far from twenty-two miles, and is a very desirable one for sportsmen who wish to visit the lake during the summer months.

Take the Grand Trunk Railway to Sherbrooke or Lennoxville; then International R. R. to Birchton, a short half-hour's ride; then stage to either Eaton Corners, four miles, or to Sawyerville, six miles. At either of the above places a good double team can be engaged to make the trip to the lake and back for about $6. We would advise all parties visiting that locality to take a tent with them. M. Boscett's cabin is one of the best in the settlement, built of hewn square spruce logs, containing but one room, whose rough walls are decorated with a few cheap portraits of defunct saints, one of Pope Leo; a 7x9 mirror, with varnished frame; several pegs and board shelves covered with well worn apparel of all sizes, belonging to both sexes; cooking utensils; a cheap single-barrel shotgun, with equipments; a large double stove in the centre of the room, and four large beds arrayed side by side, opposite to the door. The family consisted of M. B. and wife, mother-in-law, sister-in-law, one large Thomas cat, three dogs (two of the latter were of the feminine gender), and eleven small children—a family for a poor man.

As we had our own provisions we did not suffer with hunger, though Charley did cast longing eyes toward a loaf of buckwheat bread that one of the babies was digging into. We brought in our buffalo robes and blankets and made up a comfortable shake-down on the floor near the stove, which was kept roaring with a good fire. As we were tired we turned in early. Soon after the family began preparing to retire. Then arose a perfect babel of sounds—squalling, scolding, jabbering and other like noises, to which we added our quota so as to appear sociable. All intermingled together made a din that once heard would never be forgotten; but the sounds were at last hushed and quietness reigned, only broken by an occasional long drawn snore.

We were up early, quite refreshed, and soon ready to visit the lake. That indispensable ox was hitched up and pulled us with a long swinging stride over a good winter road to the western side of the lake. This lake is beautifully nestled among spruce clad hills and peaks, and must be a favorite resort of the lover of such scenery during the summer months. As to the number and size of the trout that we took through the ice that day we decline to answer until we first ascertain at what time the open season for trout fishing begins in New Hampshire. It, however, is our belief, that some fine *Salmo fontinalis* inhabit those waters. The day that we were there it was ten degrees below zero—not favorable weather for winter fishing. The former frequenters of this lake must have been a bad lot of vagabonds, as we noticed that every spruce tree between the lake and boundary had been peeled, which of course destroys the life of the tree.

When we stood on the boundary mountain, where we had large view of the Megantic country, we saw what was a few years ago a beautiful unbroken forest country, now disfigured by long, unsightly clearings dotted with hundreds of French settlers' cabins. If the French inhabitants of America continue to increase during the next hundred years at the same ratio that they have for the past twenty years they will overrun this continent, for they will not number less than 350,000,000. What an odor of garlic and pease-soup there will then arise from this land. Oh! my friends!

We did not find any evidence that the deer have as yet been molested since the close season began, Feb. 1, though, should a thaw come on and a crust be formed, there is no doubt but that the forest on both sides of the line will be alive with hunters after venison. We returned to Sawyerville over a good road, via. Popes gold mines, Lapertria Island Brook, etc., distance thirty miles. STANSTEAD.

THE CARIBS.

The following is an abstract of a lecture delivered befor the Long Island Historical Society, on the 11th of March in stant, by our old Florida correspondent, Fred A. Ober (Fred Beverly), who has recently returned from a two years' exploration of the Windward Islands, in the Caribbean Sea:

On two of the smaller islands of the Caribbean Sea live the remnants of a people now almost extinct. They are all that remain of a people once powerful and warlike, but now they are peaceful and gentle, living a life of languid ease, dwelling in huts of thatch, cultivating their little garden spot, living on the fruits of the earth, with an occasional foray into the sea. The bounteous soil of that tropical clime yields them an abundance of fruit and vegetables sufficient for their simple needs. They are a happy people, their wants are easily satisfied, and, with little labor, they dream through their lives in the perfect enjoyment of existence. In a land which is theirs by right, and where they ruled supreme, they are now but a shadowy remnant, and even their blood is so intermixed with the negro that at the present day the number of pure blood Carib Indians is very small. We must turn to the first page of American history to gather our first account of these people. At no time was Columbus so popular with the court and people of Spain as when on the eve of setting out upon his second voyage. The Bay of Cadiz was whitened with his fleet, and the crowds that flocked to him to seek their fortunes in the new world were turned back, for the expedition was more than filled. On the 25th of September, 1493, he sailed from Cadiz, and the land first made was one of the group of small islands lying to the eastward of the Caribbean Sea. It was the Island of Guadaloupe, and upon landing they came in contact with a tribe of natives different from those that had been encountered upon the former voyage. The visitors found about the villages and huts of the savages the evidences of their cannibalistic practices. They found the bones of the victims, and in one place the flesh of a man boiling in a pot. It was learned that they were a strong and warlike tribe, that they made forays upon the neighboring islands and tribes, often going to a distance of one hundred and fifty leagues in their canoes. In the tribes which they attacked the youngest and handsomest of the women were carried off and the men were taken prisoners to be eaten. Columbus, however, was in search of gold, and coasted away along the belt of islands. In one place a boat's crew attacked a canoe load of these natives, and the contest was a long and difficult one. The canoe was filled with men and women, and both fought with courage and desperation. Even when the canoe was overturned they continued the contest in the water, swimming about and shooting their arrows with perfect ease. Some Caribs who were captured were sent home to be sold as slaves, and Columbus had planned that from this source, viz.: the traffic in the natives, the purse of the king would be replenished, the expedition paid for, and the souls of the poor heathen saved. The scheme, however, did not work well. The Caribs could not be enslaved, and the other and more gentle native tribes perished by thousands in the attempt made to enslave them. Their easy lives had not fitted them to perform the labors of their brutal Spanish task-masters. It is estimated that the Spaniards murdered upward of a million natives in these islands, but they did not like to come in contact with the Carib Indians. They did not care to meet an enemy who would measure swords with them, and who would set at defiance with their wild valor, the superior arms and military skill of the white invader—the "Children of the Sun," as they called them. It is to the prowess of their ancestors that the Carib Indians of to-day owe their existence. Every trace of the more numerous and weaker tribes has been swept away, and they alone remain, changed greatly, but still the remnant of the tribe that once filled the Antilles with fear.

I had been a week or more in the interior of Dominica

hunting and gathering natural specimens, and there I heard about the Carib Indians, and the more I heard the more I determined to visit them. I had secured a guide (a half-breed Carib), the most faithful servant I ever had, averse to work and to manual exertion of every kind, but nevertheless he always secured the performance of his duties and satisfied my wants by getting some one to do the work for him.

In this connection the lecturer told an amusing story of how the native girl employed to cook for them left one morning, and when he came back from the forest to breakfast there was none prepared. His servant disappeared in a short time, and about nine o'clock in the evening returned with a friend, both uproariously drunk and dragging between them a young Indian girl about eighteen years old. They had been to the settlement to get a cook, but could not find one, and the wild and lawless savage had lighted upon the girl wandering in the forest, and with the help of his friend had captured her, tied her securely, and brought her in triumph to his master for a cook. The "sweet doing of nothing," is the philosophy of the lives of these children of nature, and so long as their few and simple wants are supplied they do not care how life goes on. They are kindly and hospitable, and when a native puts his hut at your disposal it is no figure of speech, but he means what he says—wife, children, furniture and everything are at your service. The ancient Caribs were, of course, very superstitious, and they seemed to have had some vague idea of a future state. They believed that the brave would be rewarded with some happy hereafter, and that cowards would be banished beyond the mountains to some unknown region. They had also a vague idea of some supreme divinity, whom they worshiped, and to whom they made offerings. Their descendants are nominally Catholics, and are very observant of the rites of the Church, but are still full of their old-time superstition and belief in the evil spirits. Formerly the Caribs buried their dead in a sitting posture that they might be ready to jump up when the time came, and with their faces toward the east that they might see the light of the morning when the time came for arising. The last Carib buried in this position, according to tradition, was some time during the last century. Eight months after the visit paid to the Carib Indians of Dominica the lecturer was in St. Vicent Island, where there exists another remnant of the Carib tribe. In the former island they spoke a broken French, in the latter, broken English. In the Island of Dominica there were only twenty families of pure blooded Caribs; in St. Vincent less than six. A few more generations and they will have disappeared entirely.

The Carib language is fast disappearing, and in a short time it will be lost like the tribe that speaks it. The lecturer made a vocabulary of Carib words, but found very few natives that could speak it, and his main source of information was an old Carib woman. The tongue spoken by most of them is a jargon of broken English or French, mixed with some of their native words. He noticed that in some respects the women used a different dialect from the men; that there were some phrases used by the women that were never made use of by the men, and *vice versa*. The difference consisted, mainly, apparently in the structure of the sentences, and each was perfectly intelligible to the other. The origin of this peculiar distinction is traced to a time when a neighboring tribe was overthrown and the women incorporated as wives into the tribe of the conquerors. They spoke a somewhat different dialect, and when the children were under the care of the mothers they spoke the dialect used by the women, but as they grew up and passed into the society of the men and warriors, they dropped the women's dialect and spoke that of the men. The girls, however, of course preserved the dialect of their mothers, and thus it was handed down. The ancient Caribs could not count beyond twenty, and used their fingers and toes in their enumeration. The name Carib is from a native source and is also from the same root as the word cannibal, and means bravery and valor. In color the pure Caribs are a yellowish brown, and the distinguishing name between those of pure blood and those who have an admixture of negro blood is yellow Carib and black Carib. The hair of the pure blood is long and straight, and in youth they are well formed, but tend to corpulency as they grow older. The women marry very young, and grow wrinkled and old at an early period.

Mr. Ober showed a number of portraits and groups of the Carib Indians, and also a number of tropical scenes, illustrative of their life.

Fish Culture.

THE REPRODUCTIVE HABITS OF EELS.

By Hon. Robt. B. Roosevelt.

He first referred to the discovery of the eggs of eels, and quoted a statement of Professor Baird to the effect that they matured their spawn in winter, when they are dormant and imbedded in the mud, and when they could not unite with the male. It subsequently appeared that the parent eels had been caught in the fall of the year, when they were in full activity and in the fresh water preparatory to spawning. Mr. Roosevelt expressed an opinion that they were part of those taken by Mr. Aitkyns, in Maine—a locality in which it was probable that the eggs would mature more early than with us, and at present there is no doubt about the truth of the discovery. The action of this society and the discussion before it attracted public attention to these fish, which for two thousand years had been a stumbling block to the physiologists. Information came pouring in from all quarters, and although there was, as there always had been, much contradiction as to fact and opinion, important progress was made in our knowledge. The received theories of the descent of the mature fish to the sea in autumn to spawn, and the ascent of the young in the spring to the fresh waters were discredited, and if not disproved are now shown to be at least exceedingly doubtful, while their entire method of reproduction is freed from the strange theories which surrounded it. It is no longer supposed that eels are hermaphrodite—the two sexes united in one fish occurs only in the lower form of animal life—nor that they produce their young alive, nor that they have more than one heart in their bodies, although we have not ascertained accurately where and when they spawn, nor has an impregnated egg nor a living spermatozoon been obtained. The presence of the eggs in the spawning fish was so apparent when the proper part was examined, that it seemed impossible any difficulty could have ever arisen about it, and it now appears that many investigators knew of the existence of the eggs and had seen them frequently.

Notwithstanding these posthumous discoveries and assertions, to Mr. Aitkynes, Professor Baird, and especially to Mr. Eugene G. Blackford—who popularized the discovery in such a way that no one could doubt it—is due the credit of being the first persons who, in the course of two thousand years of experiment, discovered the true procreative methods and organs of the eel. It is gratifying to think that so desirable a result is largely due to the action of this society. [Applause.] In my paper of last year I suggested a probability that spawn would be found, if at all, in the fall months, just previous to the time when the eels hide themselves in the mud in the process of hibernation. Not that this is hibernation in the broadest sense of the word, as the fish are in all of it not in the least torpid, but perfectly capable of motion if disturbed, and I have seen them when driven from one locality swim rapidly against a strong current with as much apparent ease as in summer. But in winter eels lie dormant and undisturbed, and conceal themselves in the mud whether they happen to be in salt water or in fresh. Of this there is no question, and this hibernation commences in this neighborhood in November and continues until April. My pond on Long Island has been drawn off three succeeding winters for the purpose of digging out the muck which had accumulated on the bottom, and many grown eels are found in it and are dug up with the muck.

Mr. Roosevelt quoted several newspaper authorities on this point, and in continuing said: In salt water eels are not taken in pots after the fall months, but are often speared in considerable numbers through the mud. This is done with a broad spear, which is thrust into the bottom without special direction, but in such localities as the fish are in the habit of seeking for hibernation. These places are springy with the fresh water oozing from the bottom and percolating upward through the mud. It seems that the habits of eels in England are about the same as they are in this country. Here, while the young make their appearance in large bodies by April 1, the mature eels do not feed and are not taken in eel-pots until later, and probably when they have left their Winter quarters. So it would seem either that the eggs are deposited in the autumn, which is probably the fact, or that impregnation takes place not in the ordinary way, but by bodily connection. In suggesting the possibilities I do not mean to say that eels do not breed in the salt water. I do know also that they breed in fresh water, and that on Long Island the young go down the stream in spring as soon as they are hatched. Absolutely mature eggs are yet to be found, for, although Mr. Blackford has found them in various conditions of maturity, and those first discovered by Professor Baird, were far advanced, none, I believe, were actually ripe for emission, and until eggs are discovered we shall be in the dark as to the exact time of spawning. Bearing closely upon this question is the contingency that there may be connection between the sexes of eels instead of the fecundation of the eggs after their extrusion. There is certainly considerable evidence on one side of this question, and as yet none on the other. Mr. A. S. Fuller is reported in a recent interview to have said that "the researches of naturalists have not yet thrown light upon what are known as eel balls. Eels, like snakes, link and twist themselves together, forming large clusters or balls. These balls are frequently found in the streams during the fall. The clusters are sometimes so large that they roll into mill races and clog the wheels."

The creatures referred to above may not be eels, but the explanation would seem to be that intimated by Mr. Fuller—a sexual act. I have never seen this operation and cannot vouch for it, but other persons, even in this country, have asserted it in the course of the discussions brought out by the Fish Cultural Associations. No male eels have yet been discovered, that is, no eels containing milt. It has been suggested that the males may be much smaller than the females, and not caught or marketed, and even a difference is supposed to exist in their appearances. But these assertions are not borne out by proof, and eels are found in the fall with neither milt nor spawn. These may be barren or spent, but they may also be males, and should be examined anatomically under the microscope, to see whether traces can be found of genital organs. This is entirely a suggestion, as I have no opinion to offer on so curious a question, but as it is a possibility it should not be neglected. But leaving anatomical questions to be settled by others, as fish culturists we know that eels containing ripe milt have never been seen, and until we can get the milt in that condition it is of no value to us. For our own purposes one of the first things to do is to study these fish more carefully at night, which is the time they seem to prefer for many of their movements. There is one curious inconsistency about them. Mature eels can be transported readily, packed in barrels, and will live twenty-four to forty-eight hours without water. They are capable of great endurance treated in this way, although they do not live in stagnant ponds, but the young are exceedingly delicate and cannot be carried any distance without frequent changes of water. From my experience I should say they would die as quickly as young trout. They grow rapidly and feed freely on one another. I have seen salmon fry choked by trying to swallow an eel of two inches in length, and I have opened an eel of nine inches whose stomach was swelled into a round protuberance by the number of little eels which it contained. They eat all manner of little fish, and almost any sort of food. The fry when they first appear are like white threads on the water, but in a few weeks they are dark on the back and yellowish on the belly.

The run of the fry on Long Island begins on April 1 and closes entirely by May 24. So far as I have considered the question of the procreative habits of eels, on the theory that the eggs are deposited whether previously impregnated or not, and that they hatch after extrusion, I believe this to be the most natural and altogether the most probable theory, but I cannot ignore a considerable mass of testimony sustaining the idea that the young are born alive. There is nothing really incredible in the theory when tested by the facts which we can regard as established, although for my part I am not ready to place faith in it. In support of the theory, President Roosevelt read a letter from Mr. James N. Wells, of Riverhead, Long Island, and in conclusion he expressed the belief they would soon have the necessary facts about these curious creatures.

Another Compliment from Abroad.—Mr. Fred Mather, who so successfully superintended the transportation of the *Salmo quinnat*, presented by the United States to Holland last year, has received from the King of Holland a gift of two hundred and fifty guilders in recognition of his services.

Wisconsin—*Madison, March* 20.—There seems to be some trouble at the State Fish Hatchery, near our city. It is reported that the young trout are dying off by the thousands; that there will be none for distribution this season. This is sad news. Rover.

Small Mackerel.—A very pertinent commentary upon the principle of cause and effect, as applied to our fisheries, is found in a note from Seth Green, who writes:

I have made inquiries of our salt mackerel dealers, and they tell me that for the last few years they have not been able to get any No. 1 mackerel. The cause is that as the fish become scarce, the fishermen make the mesh of their nets smaller, and consequently they catch the fish one and two years before they ought to be caught.

—One million young whitefish have recently been distributed at points on the Detroit, Lansing and Northern Railroad, the Fleur and Pere Marquette Railroad and the Detroit River.

Natural History.

Food of the Paddle Fish.—In Forest and Stream of January 16 a correspondent called attention to the capture of a paddle fish on a hook baited with a minnow, and we gave at that time a short account of this curious fish and of some of its habits. A paper by Mr. S. A. Forbes, in the *Bulletin* of the Illinois State Laboratory, gives some further information on this and kindred points, and, in view of the general ignorance as to what constitutes the food of fishes, it seems worth while to notice some points brought out in this communication.

The paddle fish, which is generally supposed by fishermen to feed on the slime and mud of the river bottom, proves upon examination to depend for food very largely on *Entomostraca*, which are crustaceans of low grade. It also lives to a considerable extent on vegetable matter, fully one-fourth of the entire food being of this character. Algæ are largely eaten, and but little mud was found in the stomach with the food. The interlacing processes of the gills in this species, which are very numerous and delicate, and are arranged in a double row on each arch, apparently form a strainer which allows the mud of the bottom to escape with the water, but arrest and retain any object as large as a *Cyclops*.

Besides the species just referred to, no less than fifty-three varieties of Illinois fish were examined by Mr. Forbes, some of which were found to be wholly carnivorous and others herbivorous, while some, like the catfish, are omnivorous.

Fishes are notoriously voracious feeders, and the enormous quantities of food devoured by certain of them, especially among insect feeders, is very remarkable. As a very considerable part of this food consists of land insects which have fallen into the water, fishes and land birds are thus brought directly into competition so far as food supply is concerned.

It is remarked that some fishes, valuable to man, are dependent on food which is too liable to injury or destruction to make it worth while to attempt to cultivate them successfully. Others, however, equally valuable, subsist on food which is absolutely indestructible.

The subject of Mr. Forbes' paper is unquestionably of the highest interest, not only to the student of science, but to the practical fish-breeder as well.

Nests and Eggs of American Birds.—It affords us great pleasure to be able to call attention to Part I. of Mr. Ingersoll's work with this title, and to be able to speak of it in terms of praise. This branch of ornithology has been too much neglected in this country, and a work like the one proposed has long been needed. It will be gladly welcomed by all ornithologists as an important addition to the literature of the subject, and will be of especial assistance to young workers in this department of science.

In the present work the author proposes to bring together, from whatever sources, all that is known concerning the breeding habits of North American birds, and we understand that he has been promised the valuable assistance of some of the leading ornithologists of the country in his work. We are told that Dr. Coues, Prof. Allen, Capt. Bendire, and a number of other leading workers in this field, have offered not only rare specimens for figuring, but valuable extracts from journals and note-books for the text.

The scheme of the work, which is devoted to North America in the sense in which the term is usually employed by ornithologists, is to inform the reader: First, as to the region through which the species is known to breed; second, as to date of arrival and preliminaries to nest building; third, all about the nest itself—its position, construction, etc.; fourth, as to the eggs—their number, color, markings, etc., to illustrate which colored figures of each species will be given; fifth, as to the young—their food, growth, time of leaving the nest, and the care which they receive from their parents. It will readily be seen that a volume that gives us all these details will be extremely valuable as well as interesting.

In Part I., which we have just received, are accounts of ten species, in the order given in Dr. Coues' "Key," and, in the two plates which accompany it, one or more figures of the eggs of each are given. The text is interesting, and the drawings of the plates excellent. The coloring of some of the figures is not, we think, all that could be desired; but, as is well known, it is a matter of extreme difficulty to get this just right. No doubt subsequent numbers will be in every way satisfactory.

We have no hesitation in stating that Mr. Ingersoll's work, if successfully carried to completion, will be a very valuable addition to the already large list of works which treat of the the ornithology of North America.

STATEMENTS ABOUT THE WILD PIGEON.—At a meeting of the Monroe County Sportsmen's Club, held some time since, Mr. Henry Knapp, an old sportsman and pigeon trapper, made some remarks concerning the habits of the wild pigeon (*Ectopistes migratoria*) which deserve notice. Some of the facts, if facts they be, have not previously been published, and should receive the attention of field ornithologists.

Mr. Knapp says that neither young birds nor eggs are allowed to die of hunger or spoil in a pigeon roost if the parent bird is killed. The young ones are fed and the eggs hatched by foster parents. The pigeon usually lays only one egg at each hatching, but if food is very abundant two eggs are sometimes laid. The nest is exceedingly rude, consisting of a few twigs placed at the crotch of a limb, and so slovenly that the eggs may be seen from below. In a thick roost trees, are sometimes so densely covered with nests as to appear at a distance as if in foliage. When the young ones have been hatched the parents make immense flights daily after food. The hens all fly after food in the morning, leaving the cocks in charge at home, and the latter go away in the afternoon foraging. The quantity of "mast" a pigeon will carry back on such excursions from a distance of one hundred miles or more is enormous. Mr. Knapp counted the contents of one pigeon's crop taken in flight, and found 28 beech nuts, 11 grains of Western corn, 100 maple leaves and a quantity of other material. He has seen the crop burst open when the bird was shot, and the bulk of food it had contained was astonishing. The parent bird has the power of ejecting this from the crop to feed the young. When food is abundant, and the young birds have aquired sufficient strength to care for themselves, the old ones play them a peculiar trick to start them on the "battle of life" and teach them the necessity of earning their own living. The old ones steal away at night and do not return. The young remain a day or so in the nests, expecting to be fed as usual, but soon find themselves growing hungry, and fly out. If the parents did not do this the youngsters would remain in the nests and never exert themselves.

THE RAPID FLIGHT OF FLIES.—*New York, Feb.* 27.—Mr. C. H. Hope, of Somerset, Ohio, seems to question in your last issue the ability of the partridge fly to keep up with the flight of the ruffed grouse. Pshaw! has he forgotten the commonest incidents of his life? Don't the minute gnats in the woods keep up with his fastest walk, and the horse-fly with the fastest gait of the horse? The rapid flight of the clumsy bee is amazing when we consider the proportion of its wings to its bulky body. If Stedman's coming steam aerobat could be fitted with a propellor which could make revolutions as rapid as the buzzing wings of the blue-tailed fly—why, zip! how she would skip across the Atlantic! SHOO.

The point, as we understood it, which our correspondents tried to make, was rather that it would be impossible for an observer to trace the flight of the insect in company with the grouse, than that the fly could not keep up.

As a matter of fact, however, the flies do not leave the birds but travel on the body of their protector. Their wings are very weak and by no means fitted for long continued or rapid flight. Indeed, some genera of the group are incapable of any flight whatever. Moreover, *Olfersia* does not feed upon the excrement of the grouse, but upon its blood. The fly is provided with a long and exceedingly delicate and thin proboscis, through which it sucks its fluid nourishment. It is very doubtful whether the parasite, after it has once attached itself to a bird ever leaves it until death parts the twain, or an opportunity occurs for its taking up quarters on a new and fresh subject; as in the case of the transfer from an old bird to newly hatched young. The life history of the partridge-fly, however, has not yet been clearly made out, and any additions to it will be gratefully welcomed.

HYBRID DUCK—*Editor Forest and Stream:* A friend while on a shooting trip with me last week killed what I suppose is a hybrid between the black duck and the mallard. As I never saw or killed one before in twenty-five years' experience in shooting marsh fowl, I write to ask my brother sportsmen through your valuable paper whether such cross-bred ducks are not very uncommon. I am not ornithologist enough to give the technical terms, but will give a rough description of the duck. The bill is that of the drake mallard; the upper part of the head, down as far as the eyes, green; from the eye down the sides of the head and neck, gray, dotted with brown, as in the black duck; upper part of the breast like the black duck, but a shade lighter in color; lower part of breast and abdomen nearly like the duck mallard, with back, wings and feet resembling those of the drake mallard. My friend, who is a skillful taxidermist, will set the bird up. I would like to hear if any of the numerous FOREST AND STREAM family (in which I include your whole list of subscribers) have ever killed a duck of the above kind.

Easton, Md., March 18, 1879. SINKBOAT.

Hybrid ducks are not very uncommon, and have been frequently noticed in these columns. For very full information about them let "Sinkboat" consult FOREST AND STREAM, Vol. I., pp. 342 and 374; Vol. II., pp. 5 and 54; Vol. IV., p. 133; Vol. V., pp. 260, 276, 339 and 388.

A SNOW WHITE DEER—*Wright, Ottawa Co., P. Q., Canada.—Mr. Editor:* Do any of your readers desire a live deer that is snow white? I am trying to arrange for the proper care of such an animal until it can be sent within reach of a railway. The successful capture of this beautiful creature was but recently effected, the deer proving to be a young doe which is quite probably pregnant. So rare a specimen should be preserved alive, and although I cannot care for it myself I hope that some one as much interested in Natural History, can and will do so. I therefore would ask you to call attention through the columns of FOREST AND STREAM to the capture of this deer, especially that of the Zoological Societies. EVERETT SMITH.

Address, Portland, Maine.

SPRING NOTES.

CANADA, *Galineau River, P. Q., March* 18.—The cold winter has just broken, and the temperature to-day seems like that of May. Until within a week the deep snow in the woods was as light as in December, the result of continuous cold weather, uninterrupted by any thaw. Besides the pleasure of hunting large game during the earlier portion of the present winter, I have more recently enjoyed less exciting explorations in search of the feathered winter denizens of Canada, and have added to my ornithological collection some fine semi-arctic specimens.

Although ravens remain here all winter, the crows migrate, and only yesterday I first noticed the arrival of crows. A red-winged starling (blackbird) was seen here yesterday.

Although I am feasting on moose meat, it is only to the novice that I need add that the antlers on a frozen head outside show that it would not be "fresh" meat but for the weather, as no moose are to be found wearing antlers thus late in the season.

Although I have tramped many hundreds of miles in the woods this winter, I have not once suffered from chafed or sore feet, nor from cold, owing to the use of a pair of snow-shoe slippers. Without these I know, from much previous experience, I should have suffered great annoyance from cold toes, chafing, and snow-balling under the feet. Not the least suffering from these causes ever occurs while using the snow-shoe slippers. These slippers prove to be as great an improvement in the method of fastening snow-shoes to the feet as is the modern appliance of skates over the old one-strap method in vogue for so many years.

I am now with my friend and hunting companion of three years since, who is a constant reader of FOREST AND STREAM, and owner of the beautiful setter, Bang, own brother to my Cora II., whose likeness has been honored by a place in "The Sportsman's Gazetteer," the best book of reference for sportsmen ever published in America. EVERETT SMITH.

Our correspondent, "Quill Driver," writes from Milford, Mass., saying, under date March 10, "I heard the first blue birds of the season to-day."

"Buckeye," who dates his note Hudson, Ohio, March 8, says:

The birds are beginning to arrive. Spring is fast removing the last of Old Winter, and it soon will be a thing of the past. The robin was the first to come, he being here on the 5th, the blue bird and the crow on the 6th. Grackle and kill-deer between the 6th and 9th. Last year the robin was here the 3d of February, the blue bird the 4th, crow the 5th, kill-deer the 8th. Year before last, 1877, the robin was here Feb. 20, blue bird the 24th, crow the 25th, kill-deer 26th, snipe March 11, pigeon the 8th of March. No snipe or pigeon yet, but the snipe should be here by the 15th; the pigeons some days sooner, if we can take the appearance of the other birds as a guide, and compare their arrival this year with their arrival in past years. There are a few wild duck flying about, but only a few.

Our valued friend, M. G. E., sends us from Blacksburg, Va., a note on the arrival of the Wilsons snipe. He says:

On the 9th inst. I found seven Wilsons snipe in the marshes near this place and killed them all at seven shots. For six years past these birds have arrived here from the 5th to the 8th of March, and by the 5th of April have all passed by. Weather does not seem to affect their movements. Only a very few stragglers return this way to winter quarters.

Minnesota sends her contribution to this topic in a note from S. B. D., of Lake City, dated March 9. He says:

Meadow larks made their first appearance on March 8, blue birds to-day. Snow all gone and some ducks flying.

Chas. E. Scott, of Bristol, Penn., in a note dated March 10, says:

A woodcock alighted on a woodpile in Doron's coal yard this morning, and was captured by Eber Strembech. The river at this point was closed by ice until last week.

Capturing woodcock in March is poor business, we think.

Salem, March 24.—Field notes are slow, as snow and slush have been in order lately. Woodchucks are out. A woodcock was seen lying dead on a sidewalk on Rantoul street, Beverly, last week. Ponds and rivers, *i. e.*, small ones, are yet frozen up. Morgan, of Salem, got 7 nice pickerel in Wenham Pond the 22d. Snow buntings, since last snow are plenty; before they were scarce. This is in accordance with Field Notes by the Nova Scotia gentleman that you are publishing. R. S. N.

NEW YORK—*Hornellsville, March* 24.—Bluejays and pine-finches have been here all winter. English sparrows are getting to be a nuisance; have just sent for some of Stone's bird traps, and with a little help from the owls and shrikes I think we will be able to hold our own. Blue birds arrived Feb. 28; blackbirds, Feb. 28; robins, Feb. 20; kingfishers, March 3. All gone now. Have had some heavy snow-storms in the last two weeks. J. OTIS FELLOWS.

PROFESSOR BREWER TO DR. COUES.

EDITOR FOREST AND STREAM:

After a few weeks absence from home, I find in the issue of the 27th ult. a communication in which unmistakable reference is had to your humble servant. As you have thus devoted so much of your valuable space to personalities, which, as they stand, are one-sided and unintelligible, as a matter of simple justice I ask you to publish also the inclosed article, to which reference is made. It was published as editorial by the Boston *Journal*, and for it the editor of that journal is alone responsible. By so publishing it you will enable your readers to understand the communication you have given, and thus also to see that there was no occasion furnished by this article for so much as a ripple along the surface of your correspondent's equanimity. It is but a fair and logical conclusion, from data furnished by your correspondent's kinsman, and vouched for by your correspondent himself, who now, like Fear in Collin's well-known ode, appears to have

"Back recoiled, he knew not why,
E'en at the sounds himself had made."

It is a very weak afterthought on the part of your correspondent, after having paraded as something so very extraordinary the large number and the great variety of small birds breeding "in the very heart of a great city like Brooklyn," to now assume that, but for the sparrow, their number and variety would be even greater. This is not only begging the whole question, but is also contradicted by all our evidence. If this were as your correspondent pretends, small birds would be just as abundant in other cities, and still more so in cities where there are no sparrows, and your correspondent would have had no occasion for his wonder at their exceptional abundance in Brooklyn.

Your correspondent also contends that such birds are thus surprisingly abundant in Brooklyn, in spite of the sparrows, just as much as they are also thus abundant in spite of hawks and owls. Your correspondent seems to have lost sight of the fact, that while sparrows are cited by his kinsman as abundant in Brooklyn, hawks and owls are given as few and far between. And can it be that your correspondent is not aware of facts so well established in natural history, as that while hawks and owls are *rapaces*, and naturally destroy and devour small birds, sparrows, being only *granivores*, do nothing of the kind, but live in peace and unity with other small birds?

Is your correspondent aware of the indisputable fact, that in many of our cities, where no sparrows have obtained a foothold there is a conspicuous absence of all native birds. Halifax (Nova Scotia), and Gloucester (Mass.) may be cited as striking examples of this remarkable fact.

The statement of your correspondent that the City Forester of Boston finds it necessary to protect the shade trees against canker-worms, like too many of the loose utterances made in reference to the "sparrow question" is purely imaginative, and is not "founded on facts." So far as I know, not a single tree has been tarred or otherwise protected against canker-worms in all the peninsula of Boston since the sparrows have become abundant. There is not the slightest occasion. The canker-worm, once such a pest in all the squares in Boston, has become a thing of the past, and there is abundant evidence that we are indebted to the sparrow for its extermination, and to no other cause. In Gloucester, on the other hand, where the sparrows have not yet appeared, except a scattered few, it is necessary to tar all their trees, both fruit and shade.

Respectfully yours, THOMAS M. BREWER,
233 Beacon street, Boston.

[From the Boston Journal of January 17, 1879.]

In the January number of the *Bulletin* of the Nuttall Ornithological Club we find an article of more than ordinary interest touching the abundance of birds in American cities. It is remarkable in several respects; remarkable in itself as evidencing how large a number of our native birds, even under unfavorable circumstances, may be found within the territory of the largest cities; remarkable for its bearing upon an important and much contested question, and, in this connection, quite as remarkable in regard to its authorship and its indorsement. The article is a list of birds observed in the Naval Hospital grounds in Brooklyn, New York. These grounds are an inclosure of twenty acres, abounding in shade trees and shrubbery, contiguous to a considerable marshy tract, and all in a populous neighborhood, full of manufacturing establishments. Its author is George Hughes Coues, a nephew of Dr. Elliott Coues, and the latter, in a note, vouches for the reliability of his kinsman as "a close observer." The list names sixty species of birds that have been "actually observed and identified beyond question," in the very heart of a great city. For this we have the authority of Dr. Coues himself, as well as the statement of his nephew.

As we have said, the entire statement is very remarkable for its own intrinsic interest. That no less than sixty different species should have been observed "in the very heart of a great city," like Brooklyn, with the assurance that "others than those here given doubtless occur," as Dr. Coues informs us, is of itself a most noteworthy fact. Of these sixty species, sixteen include large visitors, such as hawks, owls, water birds, and others. Nineteen are either rare, occasional, or only migratory visitors, leaving the large number of twenty-five that are not only residents, but positively known to breed within the inclosure.

Now all these statements of facts, which we fully credit, are at once interesting and suggestive. Dr. Elliott Coues, whose nephew has made these very valuable observations, and which he so fully indorses, is well known to be the responsible originator of the anti-house-sparrow theory. Long before the sparrow had anywhere become sufficiently numerous to afford any evidence of their deportment, this gentleman, being both oracular and prophetic in regard to them, predicted that they would do here what it is well known they do not do in their native country—molest, persecute and drive away other birds. These predictions he has persistently followed up by positive averments that have made up in frequency of repetitions what they lacked of actual evidence. Other writers have followed in the same strain, and, as was but natural, these repeated iterations and reiterations have not been without their effect upon the public mind. Where there was all this smoke there must be some fire was the almost inevitable conclusion. Nevertheless, as time wore on, and as our own experience has failed to afford to our own senses any information of hostility on the part of the sparrows to our native birds, and, more than this, facts have come to our knowledge wholly inconsistent with this theory, the conclusion has been forced upon us that these charges are premature and unfounded. We can no longer doubt that as the sparrow, by universal testimony, lives in peace and harmony with other small birds in its own land, it has not changed its nature by its change of residence, but is the same in habit here that it is in Europe. Here, in our own city, it is an indisputable fact that we have more summer visitors among our native birds than we have had for at least thirty years. Their numbers as individuals have quintupled, and the number of species that breed in the heart of our city is at least threefold. The same, we are assured by competent authority, is true of Cambridge, Newton and other neighboring towns. The well-informed editor of the Germantown *Telegraph* bears the same testimony as to the remarkable increase of wood thrushes and other song birds in the suburbs of Philadelphia. And now we have the all-important testimony of Dr. Coues and his nephew as to the even more remarkable abundance of our native birds "in the very heart of a great city" like Brooklyn. Surely, in face of such evidence as this, it can no longer be pretended that the European house-sparrow is driving away from us our native birds. These facts demonstrate that this cannot be true, and compel the belief that the sparrow is the same peaceful bird in America that it is known to be in Europe, and that in crossing the seas, as the old Latin poet has it, they only changed their skies, but not their dispositions.

But to return to Brooklyn and the remarkable variety and abundance of birds in the Naval Hospital grounds. Passing by the larger forms, whose presence or absence the sparrows cannot be supposed to affect in any way, and also those that are simply migratory or stragglers, we find the very remarkable number of twenty-five species that reside there in summer and breed within the grounds, and, as Dr. Coues' suggests, "others than those here given doubtless occur." First we have named the English sparrow, said to be "very abundant," so that this harmonious assembly of birds cannot be attributed to the absence of this species. Then we find the downy woodpecker "common and breeding," the golden-winged woodpecker, "common, breeds." The robin, "very common, breeds;" cat-bird, "common, breeds;" the blue-bird the same. The same is also said of the wren, the yellow warbler, the barn swallow, the chipping sparrow, the song sparrow and several others, toward all of which species the

house sparrow has been repeatedly accused of displaying an animosity and of driving them away from our gardens and lawns. But if this ever did happen anywhere else—of which we have never seen any evidence—it certainly does not occur in the Brooklyn Naval Hospital grounds; for there, as Mr. G. H. Coues testifies, and his uncle, Dr. Elliott Coues, re-affirms, we find the house sparrow very abundant, while about them robins, bluebirds, and a score of other small native birds are both common and breed together in harmony and peace. After this convincing testimony to the innocence and good conduct of the house sparrow, it is to be hoped that Dr. Coues will spare us his semi-annual diatribe against the "interlopers," and cease to abuse and vilify those who, having taken pains to inform themselves as to the facts, cannot accept his violent invectives against an innocent species other than the invention of an over-prophetic and visionary imagination.

SPARROWS.

PERCE, Gaspe, Feb. 20, 1879.

EDITOR FOREST AND STREAM:

Poor unfortunate sparrows! A persecuted and much-abused race! I must and will take their part! It may be that "fellow feeling makes us wondrous kind," being myself the victim of unprincipled demagogues. They are bold, impudent rogues, I admit, but on the whole I think they do more good than harm. I like their merry chirp, to see them about the farm-house—for they are real home birds—and to watch them building their warm, comfortable nests, which, as a school-boy, I so often robbed of their pretty eggs, to blow and string them with those of the blackbird, thrush, crow, magpie, robin, chaffinch, greenfinch, lark, linnet, hedge sparrow, and even the pretty little wren, with her fifteen to eighteen eggs. The bullfinch, goldfinch and red linnet were spared in order to get the young. And how proud I was to show my collection—the largest and most varied in the parish.

I was truly pleased when I knew that my friend, Colonel Rhodes, had imported a colony of my little friends to settle in Quebec, and wish I had a dozen to chirp around Belle Vue, and come to feed on the veranda.

Mr. F. C. Browne's letter in FOREST AND STREAM of the 30th inst. has awakened youthful memories, and I think the following anecdote may be acceptable to its readers:

Business calling me to the Island of Guernsey, I was taking a stroll with the Rev. Daniel Dobree, who was then a student at Oxford, and had returned home for the summer vacation. Passing the Court House where the States were then assembled, he proposed that we should step in to listen to the proceedings. The question then under consideration was the propriety of offering a reward for the destruction of sparrows, which one gentleman declared to be the farmers' greatest plague. A motion was made to allow one penny for each bird, or bird's egg, destroyed. A warm discussion took place, and one of the judges stated that he was most decidedly opposed to any such law, as it would be nothing short of offering a premium for the desecration of the Sabbath. Boys, and even girls, would spend the Sunday birds'-nesting in summer, and men and boys shooting in winter. We were standing near the then Attorney-General's seat, and on hearing this Dan whispered to Mr. De Saumares to give him a scrap of paper; to me, to lend him my pencil—one of Mordaunt's ever-pointed, which is in my pocket as I write. Without a moment's hesitation the following extemporaneous lines were composed:

"Six days in seven, if you please,
Destroy the birds that eat your peas;
But on the Sabbath* shoot your arrows
At sin and Satan, not the sparrows."

They were handed to me for approval, then to Mr. De Saumares, and finally to the Chief Magistrate. They are as fresh in my memory as the day they were written—some forty-six years back.

If they get too plentiful lay a little chaff and grain screenings near the barn, and shoot them by the dozen, or let the boys catch them in traps. They are good eating in a meat pie, or roasted.

PHILIP VIBERT.

* Seventh.

The Kennel.

THE NEW YORK DOG SHOW.

OWING to the fact of no list of special prizes for the New York Dog Show having been sent out, and also to an error in printing the premium list, which named Tuesday as the day for closing the entries instead of Friday, it has been decided to keep the entries open until Monday, the 31st inst. As no entry-fee is required for special prizes, entries for them can be made up to the time of opening the show, provided, of course, the dog or dogs are already entered in the regular classes, and every dog will be considered as entered and competing for such special prize as he may be eligible for.

The judges have all been named, and the Westminster Kennel Club is to be congratulated on the excellent selections they have been enabled to make. They are as follows:

For Sporting Classes—John Davidson, of Monroe, Mich.; Geo. C. Colburn, of New York; and John S. Wise, of Richmond, Va. For Non-Sporting—Col. DeLancey Kane and John I. J. Granger, of New York, and Jos. S. England, of the Philadelphia Kennel Club.

In addition to the special prizes already announced, there is offered by Messrs. O. Strauss & Sons, of New York, a painted China *plaque* of Mr. Morford's setter bitch May, for the best English Setter dog in the show. By the Medford Fancy Goods Co., of Boston, two inlaid celluloid collars, one for the best pug and one for the best Yorkshire terrier.

BOSTON DOG SHOW.

THE second annual dog show of the Massachusetts Kennel Club will be held in the Music Hall, Boston, on May 6, 7, 8 and 9. Entries close April 21. We print below the rules under which the show will be held; also the classification and prize list. The officers of the club are: President, J. Fottler, Jr.; Vice-Presidents, F. B. Greenough, J. F. Curtis; Treasurer, T. T. Sawyer, Jr.; Secretary, E. J. Forster; Exhibition Committee—T. T. Sawyer, Jr., Elw. P. Brown, J. Nelson Borland, James F. Curtis, E. B. Greenough, Edw. E. Hardy, John Fottler, Jr., Sec'y. The judges selected for the sporting classes are Dr. Wm. Jarvis, of Claremont, N. H.; C. H. Raymond, Esq., of Morris Plains, N. J., and Maj. J. M. Taylor, of Lexington, Ky.

RULES AND REGULATIONS.

No dog belonging to the Massachusetts Kennel Club, or to any member thereof, will be entered for premium, although all will be on exhibition.

This bench show will be held under the following rules, which are identical with those adopted by the National American Kennel Club, as follows:

Rule 1. Every person who wishes to exhibit at this show must, at the time of entry, clearly identify by name and age (if known) the dog he intends to exhibit, and the name of the sire and dam (if known) must be given. If the name of the dog has been changed, it is necessary in entering the said dog to give his old as well as his new name.

Rule 2. If a dog shall be entered without being clearly identified as directed in Rule 1, he shall forfeit any prize that may have been awarded to him; and if the omission be detected in time he shall not be allowed to compete, and shall forfeit all entrance fees and subscriptions.

Rule 3. The committee reserve to themselves the right to exclude any dog or dogs belonging to any person who has been proved to the satisfaction of the committee to have misconducted himself in any way in connection with dogs, dog shows or dog trials.

Rule 4. No dog shall be qualified to compete or entitled to receive a prize, if awarded, who is suffering from mange or any other form of contagious disease.

Rule 5. A person duly qualified, appointed by the committee, shall decide whether a dog is or is not suffering from mange or any other contagious disease, and shall give his opinion immediately to the secretary or committee of the show, in writing, and if found to be afflicted with any such disease the dog shall at once be removed.

Rule 6. A dog that has been exhibited or has won a prize in a class exclusively for puppies under twelve months old, is not thereby excluded from being exhibited in a class where previous prize winners are not allowed to compete.

Rule 7. Dogs to be judged by scale of points laid down in "Stonehenge's" 3d edition, "Dogs of the British Islands."

Rule 8. A dog having won two first prizes in the open classes, or a champion prize at any bench show or shows in America, shall be debarred from entering in the open classes at future shows.

Rule 9. A dog which has not won two first prizes in the open classes, or one champion prize at any bench show or shows in America, shall not be eligible to the champion classes at future shows.

Rule 10. Both dogs competing for prizes offered for braces must be owned by the same person, firm or association.

Rule 11. In awarding prizes to stock dogs or brood bitches, the qualities of both sire and progeny, or dam and progeny, must be considered.

In addition to the above, the following regulations will be strictly enforced:

1. An entry fee of $2 will be charged for each animal entered, except unweaned pups. The entry fee must in all cases accompany the entry. Entries will be received until noon on April 21. Dogs must be at the Bromfield street entrance of the building by 8 o'clock on the morning of Tuesday, May 6; but it is earnestly requested that when possible all dogs will be on hand on Monday, the 5th. The entrance fee will include care and feed of dogs.

2. It is requested that a price be named for each dog at the time of making the entry, to be printed in the catalogue, at which price the dog may be claimed, the exhibitor, of course, having the option of naming a prohibitory price. A commission of 10 per cent. will be charged on all sales, and the same must be effected through the treasurer or superintendent.

3. All entries must be made on blanks furnished by the club, which can be had from the superintendent at the office, No. 28 Court street, or by addressing him at P. O. Box 3,008, Boston.

4. The authorities will use due diligence for the care and safety of all dogs exhibited (watchmen being on duty both night and day), but it must be distinctly understood that they will not be responsible for loss of or damage to any dog exhibited, whether the result of accident or any other cause.

5. The pedigree of all dogs entered is desired, although not actually required, except in case two dogs in same class should be so nearly equal that judges cannot agree which is the best. In such case if one has an authenticated pedigree and the other has not, the premium will be given to the dog with pedigree.

6. The decision of judges will be final in all cases, unless misrepresentation or collusion can be shown; should this occur the exhibition committee will use their discretion in the matter.

7. Judges will be instructed to withhold prizes offered in any class where there is no competition, unless the animal exhibited possesses suitable merit, in which case their discretion shall govern the prize to be awarded, either first or second, and they will also be instructed to withhold prizes where the dogs do not come up to the proper standard of merit.

8. Exhibitors will be permitted to take home their dogs every evening after the show is closed upon leaving a deposit of five dollars with the check clerk and surrendering their entry tickets, both of which will be returned on the reproducing of the dog in the morning before 9 o'clock. If prize winners should be taken out and not returned the prizes will be forfeited.

9. Exhibitors need not accompany their dogs. They can be sent directed to the Massachusetts Kennel Club, Music Hall, Boston. All dogs will be promptly returned to their owners at the close of the exhibition, or otherwise disposed of as they may direct.

10. The show will be open from 9 A. M. to 10 P. M. The judging will be done on the first day, and the cards will be attached to the stalls of the winners immediately thereafter.

11. The term dog, or bitch, implies that the animal is over one year old. The age of it must be computed from date of birth up to the 6th of May.

12. The members of the committee will be in constant attendance, and especial attention will be given to the care of pet dogs.

13. Judges will be instructed to give the awards of Very Highly Commended, Highly Commended and Commended where in their opinion it is warranted.

14. No dog will be received unless supplied with suitable chain and collar. Bitches, with pup and small pups weaned, will have suitable pens provided. Toy dogs will be furnished with suitable cages.

15. Exhibitors residing abroad may ship their dogs to the care of the Massachusetts Kennel Club. If for sale, a certificate from the American Consul at the port of shipment that they are exported for breeding purposes must accompany them. If to be returned, the club will give a bond to the Custom House authorities.

16. All dogs will be received at the Bromfield street entrance. No dog can leave the building on Friday evening, the 10th, before 10 o'clock.

The following railroads will carry dogs free both ways, when accompanied by their owners:

Pennsylvania Central, Erie, Great Western of Canada, Grand Trunk, Canada Southern, Wabash, Atlantic and Great Western, Boston and Albany, Old Colony (Fall River Line), Boston and Providence, Boston and Maine, Eastern and Fitchburg.

N. B. The Great Western Railroad of Canada will issue special tickets as far as Suspension Bridge for one fare and a third for the double journey.

The express companies will carry dogs to the show on *prepayment* of their usual rates, and return them free.

LIST OF PREMIUMS.

DIVISION A.—ENGLISH SETTERS.

Class 1—Champion English Setters.—Dogs, 1st, $40.
Class 2—Champion English Setters.—Bitches, 1st, $40.

OPEN CLASSES.

Class 3—Imported English Setters, or their progeny of the first generation.—Dogs, 1st, $30; 2d, silver medal. (See Special Prize List.)
Class 4—Imported English Setters, or their progeny of the first generation.—Bitches, 1st, $30; 2d, silver medal.
Class 5—Imported English Setter Puppies, under 12 months.—Dogs or bitches, 1st, $10.
Class 6—Native English Setters.—Dogs, 1st, $30; 2d, silver medal.
Class 7—Native English Setters.—Bitches, 1st, $30; 2d, silver medal.
Class 8—Native English Setter Puppies under 12 months.—Dogs or bitches, 1st, $10.

DIVISION B.—IRISH SETTERS.

Class 9—Champion Irish Setters.—Dogs, 1st, $40.
Class 10—Champion Irish Setters.—Bitches, 1st, $40.

OPEN CLASSES.

Class 11—Imported Irish Setters, or their progeny of the first generation.—Dogs, 1st, $30; 2d, silver medal.
Class 12—Imported Irish Setters, or their progeny of the first generation.—Bitches, 1st, $30; 2d, silver medal.
Class 13—Imported Irish Setter Puppies, under 12 months.—Dogs or bitches, 1st, $10.
Class 14—Native Irish Setters.—Dogs, 1st, $30; 2d, silver medal.
Class 15—Native Irish Setters.—Bitches, 1st, $30; 2d, silver medal.
Class 16—Native Irish Setter Puppies under 12 months.—Dogs or bitches, 1st, $10.

DIVISION C—GORDON SETTERS.

Class 17—Champion Gordon Setters.—Dogs, 1st, $40.
Class 18—Champion Gordon Setters.—Bitches, 1st, $40.

OPEN CLASSES.

Class 19—Gordon Setters, either Native or Imported.—Dogs, 1st, $30; 2d, silver medal.
Class 20—Gordon Setters, either Native or Imported.—Bitches, 1st, $30; 2d, silver medal.
Class 21—Gordon Setter Puppies, either Native or Imported, under 12 months.—Dogs or bitches, 1st, $10.

DIVISION D—POINTERS.

Class 22—Champion Pointers.—Dogs, 1st, $40.
Class 23—Champion Pointers.—Bitches, 1st, $40.
(Judges in Classes 22 and 23 will be instructed not to discriminate with regard to weight.)

OPEN CLASSES.

Class 24—Pointers over 55 lbs.—Dogs, 1st, $30; 2d, silver medal.
Class 25—Pointers over 55 lbs.—Bitches, 1st, $30; 2d, silver medal.
Class 26—Pointers under 55 lbs.—Dogs, 1st, $30; 2d, silver medal.
Class 27—Pointers under 55 lbs.—Bitches, 1st, $30; 2d, silver medal.
Class 28—Pointer Puppies under 12 months.—Dog or bitch, 1st, $10.

DIVISION E—SPORTING DOGS.
(Other than Setters and Pointers.)

Class 29—Chesapeake Bay Dogs.—Dogs or bitches, 1st, $20; 2d, silver medal.
Class 30—Irish Water Spaniels.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 31—Retrieving Water Spaniels, other than Irish.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 32—Cocker Spaniels.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 33—Field Spaniels of any other breed.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 34—Foxhounds.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 35—Beagles.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 36—Dachshunds.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 37—Fox Terriers.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 38—Greyhounds.—Dogs or bitches, 1st, $15; 2d, silver medal.
Class 39—Scotch Deerhounds.—Dogs or bitches, 1st, $15; 2d, silver medal.

DIVISION F—NON-SPORTING DOGS.

Class 40—Mastiffs.—Dogs, 1st, $15; 2d, silver medal.
Class 41—Mastiffs.—Bitches, 1st, $15; 2d, silver medal.
Class 42—St. Bernards.—Dogs, 1st, $15; 2d, silver medal.
Class 43—St. Bernards.—Bitches, 1st, $15; 2d, silver medal.
Class 44—Newfoundlands.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 45—Siberian or Ulm Dogs.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 46—Dalmatian or Coach.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 47—Shepherd dogs or Collies.—Dogs, 1st, $15; 2d, silver medal.
Class 48—Shepherd dogs or Collies.—Bitches, 1st, $15; 2d, silver medal.
Class 49—Bull Dogs.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 50—Bull Terriers.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 51—Pugs.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 52—Black and Tan Terriers—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 53—Skye Terriers.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 54—Rough Haired Terriers (except Skyes, Dandie Dinmonts and Yorkshires).—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 55—Dandie Dinmont Terriers.—Dogs or bitches, 1st, $10; 2d, silver medal.
Class 56—Yorkshire Terriers.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 57—Toy Terriers, rough or smooth coated (not exceeding 5 lbs. weight)—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 58—Blenheim, King Charles, or Japanese Spaniels.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 59—Italian Greyhounds.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 60—Poodles.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 61—Miscellaneous (dogs or bitches).—The sum of $15 will be given, to be awarded at the judges' discretion, for pure breeds of dogs which have not been assigned special classes.

Class 62—Trick Dogs.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 63.—A price of $25 will be given for the best exhibit of yard broken dogs for field purposes.

Classes 62 and 63 will be judged by a committee appointed for the purpose, and after, competitive exhibitions to be given on each afternoon and evening of the show.

Winners of first prizes can have cups instead of money, if desired.

SPECIAL PRIZES.

Class A—Setter or Pointer (dog or bitch).—Grand Cash Prize of $500, contributed by members of the club and their friends.

Class B—Setter or Pointer (dog or bitch).—A very handsome oil painting of a sporting subject, framed, size 44x56. Painted and presented by F. W. Rogers, Esq., Artist, Boston. Value, $350.

NOTE.—Dogs can compete in all special prizes for which they are eligible, but the dog or bitch winning special prize A, will be debarred from winning any other special prize; also the dog or bitch winning special prize B, will be debarred from winning any other special prize except in the specials for braces.

Class C—Native or Imported English Setter Dog.—A fine breech-loading double shot-gun. Presented and manufactured by Messrs. Parker Brothers, Meriden, Conn. Value, $200.

Class D—Native or Imported English Setter Bitch.—One case of twenty-five pounds of Falcon Ducking Powder. Presented by the Oriental Powder Co., Boston, Mass. Value, $25.

Class E—Brace of English Setters, regardless of sex (see Rule 10).—A pair of gold-mounted revolvers, pearl handles, with case. Presented by Messrs. John P. Lovell & Sons, Boston, Mass. Value, $60.

Class F—Native or Imported Irish Setter Dog.—A fine Fox's patent breech-loading double shot-gun. Presented and manufactured by the American Arms Co., Boston, Mass. Value, $150.

Class G—Native or Imported Irish Setter Bitch.—One case of twenty-five pounds Wild Fowl Shooting Powder. Presented by the Oriental Powder Co., Boston, Mass. Value, $25.

Class H—Brace of Irish Setters, regardless of sex (see Rule 10).—Bancroft's "History of the United States," 10 volumes, royal octavo, extra bound. Presented by Messrs. Little, Brown & Co., Boston, Mass. Value, $40.

Class I—Gordon Setter Dog, Native or Imported.—A fine Daly breech-loading double shot-gun. Presented by W. R. Schaefer, Esq., Gun Manufacturer, Boston, Mass. Value, $100.

Class J—Gordon Setter Bitch, Native or Imported, one collection of "Upland Game Birds and Water Fowl of the United States." Presented by A. Pope, Jr., Esq., Artist, Boston, Mass. Value, $25.

Class K—Brace of Gordon Setters, regardless of sex (see Rule 10).—A handsome silver vase. Presented and manufactured by Messrs. Shreve, Crump & Low, Jewelers, Boston, Mass. Value, $75.

Class L—Pointer Dog.—A fine W. & C. Scott & Sons breech-loading double shot-gun. Presented by Messrs. Wm. Read & Sons, Boston, Mass. Value, $150.

Class M—Pointer Bitch, under 50 lbs. weight.—A portrait head of the winner, to be painted and presented by F. W. Rogers, Esq., Artist, Boston, Mass. Value, $100.

Class N—Brace of Pointers, regardless of sex (see Rule 10).—A collection of thirty Heliotype Engravings, in portfolio, of Sir Edwin Landseer's Paintings. Value, $35.

Class O—Brace of Pointer Dogs (see Rule 10), under 18 months.—A case of Ornamental Birds. Presented by A. M. Tufts, Esq., Taxidermist. Value, $20.

Class P—Spaniel (dog or bitch), of any breed.—A Mole's celebrated patent glass ball trap. Presented and manufactured by the Batavia Manufacturing Co.

Class Q—Fox Terrier (dog or bitch).—Portrait head of the winner, to be painted and presented by F. W. Rogers, Esq., Artist, Boston, Mass. Value, $50.

Class R—Mastiff (dog or bitch).—A cash prize of $25, contributed by fanciers of this breed.

Class S—St. Bernard (dog or bitch).—A handsome gold and silver medal. Presented and manufactured by Messrs. A. W. Mitchell & Co., Boston, Mass. Value, $25.

Class T—Bull Terrier (dog or bitch).—A cash prize of $25, contributed by fanciers of this breed.

Class U—Pug (dog or bitch).—A cash prize of $25, contributed by fanciers of this breed.

Class V—Yorkshire Terrier (dog or bitch).—Al. Watts. Esq., presents a handsome silver collar. Value, $25.

NOTE.—All dogs competing for the Special Prizes, must previously be entered in the regular classes. The entrance fee for special prizes (for which separate entries must be made) will be two dollars, same as in the regular classes, except in class A, which will be $10.

IVANHOE AGAIN.

EDITOR FOREST AND STREAM:

It is very evident, judging from the several letters written in reply to mine on "Eastern Dogs Among Prairie Chickens," that my experience was an unusual one in every respect. I am glad such is the case, because a man might as well own no dogs at all if he cannot take them with him. The dogs which I took West with me I had always believed to be perfectly broken, and since my return at no time have I had occasion to be ashamed of them, nor do I recollect having even punished them once. Now it was because of this strange action of well-broken dogs that I asked in my original article for an explanation; but as no one seems to have had a like experience, I must solve the problem as best I can. How much or how little of their wildness was due to their being handled one day (that the first day) by a man who insisted upon their ranging nearly a half mile away, I cannot tell. I accepted what he told me as true, when he said it was the custom in that country to hunt their dogs a great distance from the wagon. Perhaps it was not quite a half mile, but it seemed nearly that to me, for I had always hunted my dogs keeping them well in. This man sent his bitch ahead, and, of course, it was no trouble to get the dogs to follow. It was my first chicken shoot, and, of course, practically, I knew nothing about it; but I soon made up my mind that if mine was the common experience of men going West with Eastern dogs (which I was assured was a fact), I would in the future leave my dogs at home when I should again go for chickens, and should advise my friends to do likewise. Now, if I have made a mistake, as the articles of "It. W. A." and Lewis W. Sharpe would seem to indicate, I am glad to know it, and shall act accordingly. The first thing a man would naturally say after reading my experience is, that my dogs were not well broken. Now, right there is the mystery. I think a man who has had an ordinary amount of experience among bird dogs can tell a well-broken dog after shooting over him for six months. That was my experience. For six months or more I had shot over and watched those dogs with great care, and I could find no fault with them. And yet, right on top of that experience comes the other. I did not understand it, and under the circumstances I do not see how I could have understood it. If I have been lied to in reference to the common experience of Eastern dogs in the West, that is not my fault; and while I am very sorry to have given so much offence in writing what I did, I can only say that such was my experience, whether common or not, and if those who still take exceptions do not believe what I have written, then I can only say they are entitled to their opinions, and must not find fault if I claim the right to still cling to mine.

IVANHOE.

EASTERN DOGS ON PRAIRIE CHICKENS.

"Mark, now, how plain a tale will put you down."
—*Shakespeare.*

MORRISTOWN, N. J., March 19, 1879.

EDITOR FOREST AND STREAM:

It would seem from the many letters in answer to "Ivanhoe," that he has placed himself in quarters uncomfortably warm. I too, have a word to say, inasmuch as "Ivanhoe" has not only offended the Western sportsmen by his overdrawn tale, but done a gross injustice to every Eastern sportsman who owns a dog that in the field stands above mediocrity. "Ivanhoe" advises all Eastern sportsmen who contemplate taking a Western trip to shoot prairie chickens to leave behind their brush-broken dogs and save $50 of good money. May I ask why? Simply because his dogs made a failure! "Ivanhoe" is rather arrogant in judging all Eastern dogs by his own. When this matter is carefully ciphered down, the answer will undoubtedly be that, in the first place, "Ivanhoe's" dogs did not have the nose he claims for them; and in the second place, they were not half broken. "Ivanhoe" has stepped upon delicate ground when he attempts to write on a matter that has been so fully discussed through every sporting paper in the land for years back. "Ivanhoe" has drawn upon his imaginary powers at a time when they failed him, for in his endeavor to more highly illuminate his picture, he has used colors that have stained his canvas, as is particularly noticeable when he says that Newfoundlands, hounds, shepherds and collies all work equally well on prairie chicken. This, Mr. Editor, is utterly false, and I challenge "Ivanhoe" to prove it. I have shot considerably in the West and never saw or even heard of such a thing.

SAIGON.

As our correspondent takes exceptions to certain expressions which appear in "Ivanhoe's" letter, he cannot expect us to reprint them when they appear in his, even as quotations.

BENCH SHOWS.

EDITOR FOREST AND STREAM:

All those intending to exhibit dogs at the approaching show of the Westminster Kennel Club should not fail to procure the rules that are to govern those that judge the dogs. If parties exhibiting dogs and expecting premiums would make themselves thoroughly familiar with said rules there would be much less complaining as to the decisions of an honest, competent judge, except by rings, who are never satisfied unless they can control the judge and forestall awards, regardless of gentlemanly conduct and the rights of others.

There are scores of gentlemen who witnessed, at a large and successful exhibition, conduct on the part of a prominent exhibitor that ought to have deprived said exhibitor from all future participation in shows where honorable competition is to govern. It will be a sad day for our shows when they are abandoned to a ring governed by such a representative. It is to be hoped that every man who feels an interest in the perpetuity of our shows will frown upon, and resist such corrupt control. Mr. Editor, please allow me a suggestion as to offering prizes: Prizes, it is fair to assume, are intended to encourage breeding from the best stock, and thus improve in the only safe way on our present dogs;—not only to improve their field qualities, but their constitutions also, that our dogs may be able to endure hard work and possess staying powers. With this important point in view, prizes offered for the dog or bitch showing the largest number of dogs worthy of prizes from one or two litters would bring out our best stock. None should be allowed to compete in this class under nine months old or until they are fairly matured. The exhibitors that show dogs from one or two litters labor under great disadvantage in competing with Brown, Jones or Smith, who have twenty litters or more to select from, and the public are misled by the awards as to who possesses the best stock.

STANTON.

NEW YORK, March 17, 1879.

EDITOR FOREST AND STREAM:

I wish to express my thanks heartily to the FOREST AND STREAM for the manly, honorable stand taken and maintained in opposition to the assumed dictator and his ring. Who is this "big medicine man" who proposes to lay down rules to govern the W. K. C. exhibition, and set value upon prizes there awarded? What right has he to sit in judgment upon those who elect to exhibit their dogs under the rules laid down, and the judge or judges selected by Eastern clubs? I have written for six entry blanks for the coming show, and if your paper has suffered any loss of subscribers by the stand taken in opposition to the ring let me know, and I will take my coat off and go to work to help repair the damage. From all that I can hear from reliable parties, whose support and good opinion is worth the having, I am satisfied your course meets with approval.

SUBSCRIBER.

A CANINE EPIDEMIC.

STAUNTON, Va., March 14, 1879.

EDITOR FOREST AND STREAM:

Our sporting dogs, both setters and pointers, about here, old and young, are being attacked by a serious epidemic which no one seems able to diagnose. It is not the ordinary distemper, as there is no discharge from the nose, but it begins with a general lassitude and loss of appetite and slight discharge from the eyes, which soon become very much inflamed, and in a few days filled with the matter. When fully developed the nervous system of the animal seems to be involved as, in a large number of cases, spasms ensue at intervals of 24 hours at first, then more frequently until death follows. There is more or less coughing and sneezing all the time. In some cases there seems to be, in the beginning of the disease, a tendency to shake the head as in canker; and they are very sensitive to the touch of the hand about the head and neck, crying out with pain when patted on the head, and during the whole course of the disease there is great muscular agitation with swelling of feet and legs, a sort of jerky motion with quick respiration, and general symptoms of feverishness. Several valuable dogs have died in these spasms, and many more are suffering with the disease in its various stages. It does not seem to be contagious, but purely epidemic, and only bird dogs are attacked by it as far as I can learn.

Can you suggest a remedy for it? I have an Irish setter bitch, four years old, that had progressed to the extent of having two severe spasms. I administered 10 grs. of Dover's powder, with 4 grs. of calomel. She is now doing well, has had no return of the spasms, eats heartily, but still has a strange appearance about the eyes, her vision being evidently impaired, and the nervous twitching of the muscles, etc., as before described, continues. If you think, from the foregoing description, that you can safely prescribe, please do so and I will circulate the prescription among the afflicted with the promise to let you know the results. The treatment given my bitch is the only case in which it has been tried. Her recovery was very speedy and marked in its character, but whether she had passed the crisis before it was given, and would have recovered anyhow, I don't know. Answer in your columns.

JACK.

The symptoms described are very similar to those given by Stonehenge as accompanying head distemper. He recommends calomel and jalap, and from a half to a grain of tartar emetic two or three times a day. In severe cases leeches to be applied to the inside of the ears, washing the part over with milk and water first, or a seton on the back of the neck. We have great faith in the Dovers powders, particularly in the case of puppies, as they are capital as an expectorant, in promoting the discharge of mucus and thereby relieving inflammation. We believe you have followed the right treatment. The twitching may result in chorea in aggravated cases.

A GOOD DOG.—Parties wishing a fine field dog, will do well to communicate with Mr. A. L. Emerson, who advertises Rubey for sale in another column, which see. She is an imported setter of the very best.

A SAGACIOUS DOG.—*Norristown, Pa., March* 10.—*Editor Forest and Stream:* Quail shooting was unusually good in this vicinity last fall and greatly enjoyed by our sportsmen, and by none more so than by our friends, Judge A. and Fred K. Fred is the fortunate owner of a pair of fine setters, father and son. Nep, the old dog, being regarded as one of the most reliable dogs we have and a splendid retriever. As the Judge has no dogs he arranged with Fred to do most of their shooting in company. This arrangement worked well with the exception that Nep insisted on taking all birds killed, no matter by whom, to Fred, much to the annoyance of the party, nor would any amount of persuasion or scolding (harsher means were of course not resorted to) induce the dog to do otherwise. One day while they were shooting along a strip of woods a party of crows flew over them; the Judge, thinking to get the laugh on Fred, shot one of them which fell beyond Fred. Nep being told to "fetch," went and gathered the bird, but instead of taking it to Fred, as he had every bird killed before, he deliberately carried it past him to the Judge, and when he declined to receive it he laid it at his feet. Was this instinct or what?

FALCONER.

TO CURE FILM ON DOG'S EYE.—A correspondent writes: "Tell 'E. E. P.' to powder some burnt alum and take a quill, (put about as much in as he can take up on a small knife blade a quarter of an inch from the point), blow it into the eye of dog and he has effected a cure of film on dog's eye. I speak from experience.

HAMMERLESS.

—Mr. E. F. Stoddard's bitch Dane (Bob-Duck) has been bred to Mr. Burges' Rufus.

—Mr. W. J. G. Dean's English setter bitch Leda (Leicester-Rose) has been bred to Rufus.

—Capt. W. H. Littleton's orange and white setter bitch Pat(?) has been bred to L. F. Whitman's Llewellin's setter Rattler, March 14.

—Mr. Dew's Daisy Dean (pure Laverack), dam of Pearl of Maury, has been bred to Carlowitz. Champion Petrel, dam of champion Gladstone, has also been bred to Carlowitz.

—Mr. J. W. Jackson, of Opelousas, La., claims the name of Mark for a red Irish setter puppy out of the St. Louis Kennel Club's Duck by their Thorstein; also the name of Flyer for a red Irish setter bitch puppy by E. H. Stoddard's Bob out of his Friend.

—Mr. Geo. H. Perry, of Syracuse, claims the name of Diana for his black, white and ticked bitch pup (field trial setter) by Koyal Duke out of Fleet, whelped December 20, 1878.

—Mr. J. L. Locke, of Portsmouth, N. H., claims the name of Dash-Elcho for his red Irish setter puppy, by Champion Elcho out of Rose, whelped Oct. 11, 1878.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

E. E. R., Tipton, Ia.—Bogardus' "Field, Cover and Trap Shooting" sent prepaid on receipt of $2. Charge for 10-bore, 2-lbs. choke is 4 or 5 drachms powder.

H. P. R., Phila.—Has anything appeared in your columns on the breeding of the mastiff, his origin, points, etc.? Ans. We shall soon print an article on the mastiff.

H. L. E., Philadelphia.—What is the proper load and size shot for ducking with an 8-lb. breech-loader, modified choke? Ans. Four drachms powder, 1¼ ozs. No. 4 shot.

A. W., Cin.—1. Are the trout at and near Kanawha Falls public? 2. What Nos. of hooks would be the most suitable for trout fishing in that region? Ans. 1. They are. 2. No. 5.

B. Packerville, Conn.—1. Where can I get a picture of setter Gladstone? Ans. Possibly from M. Von Culin, Delaware City, Del. We cannot express opinions regarding gunmakers.

C. K. H., Pikeville, Md.—If you will some day take the trouble to procure a copy of FOREST AND STREAM, and consult its advertising pages you may find out where to send for wild rice.

W. C., Jersey City.—Where can Curtis & Harvey's powder be obtained? Also price? 2. What is the best size of shot for woodcock? Ans. 1. Wm. Stitt, 61 Cedar street, New York. 2. No. 12.

E. H. H., Bath.—My cocker spaniel pup, four months old, has quite a large lump on the right side of his neck, and I wish you would tell me what the trouble is? Ans. The lump will probably disappear. Give your dog a mild aperient.

AIX SPONSA, Rushville, Ind.—Is there any one of your subscribers who answers to the name of "Aix Sponsa?" As I am a new subscriber I do not know, and do not want to take any one else's name. Ans. We think not.

W. D. S., Harlem.—We can supply you with an Adirondack Guide, price $1.75, which gives the name of every hotel keeper, guide, route fishing locality, etc., in the whole Adirondack wilderness, with a large detail map of the same.

C. S. B., Phila.—Please inform me where I can obtain a copy of the game laws of the State of New York. Ans. Address Thos. N. Cuthbert, Secretary New York Association for Protection of Game, 20 Courtland street, New York.

G. E. N.—We never intentionally encourage nor abet any violation of any game laws in any State. But as we have repeatedly stated, we cannot follow out every detail of every correspondent who writes to us, and hunt up the laws to see if the game he killed was in season or not.

D. W. C. P., Manchester, N. H.—From the symptoms described we believe your dog is troubled with worms—possibly a tape worm. Should at all events give him areca nut, say two grains to each pound of his weight, on an empty stomach, following in four hours with one ounce castor oil.

EVILINA.—Your poetry is very good, exceedingly good, only that you will persist in spelling "Forest" with a double "r." Now, we don't spell it that way ourselves, and we really couldn't publish your dear little poem with our own name in it misspelled. So you will write it all over again, and spell it right. Now, won't you, Evilina?

SKYE, Baltimore.—Are the blue Scotch terrier and the Skye terrier the same? If not, how can I tell the Skye? Ans. The Skye can be distinguished by its long, low body, and intensely thick coat of coarse hair. A Skye terrier is necessarily a Scotch terrier, but a Scotch terrier may be one of several varieties.

J. W. H., New Brunswick, N. J.—I kerosened my dog (setter) on Saturday the 15th for lice. Will a second application be necessary, or will one application kill the eggs as well as lice? If a second is necessary, how soon ought it be made? Ans. Once should be sufficient, but you can easily tell by watching your dog. If he continues to scratch you can do it again.

B. H. P., Vicksburg.—Please state the best means of removing the lead from guns that have become leaded, without destroying the high polish on the interior of the barrels. Ans. Put some kerosene oil into the barrels and let it soak in. Then use a scratch brush, or use the scratch brush alone.

INQUIRER, New York.—I have a pet cat which is affected with some skin disease (principally in the head) which causes the animal to be perpetually scratching. It is not produced by lice, but is something like mange in a dog. Can you suggest a remedy? Ans. Give your cat Fowler's Solution of Arsenic, commencing with doses of two drops each day and increasing to five. Rub the bare places with crude petroleum.

AU SABLE, Quebec.—1. Is the gun manufactured by Hyde & Shattuck reckoned of good quality and shooting powers, and is the workmanship good? 2. Can you give me the average price of a good lancewood fish rod for general purposes by any of the good makers, and is there much duty on such articles coming into Canada? Ans. 1. As good as we know of. 2. $15; no duty if you bring it for your own use.

E. P. W., Hartford, Conn.—Can you tell me where I can procure the best map of the Adirondack region, and price of the same? Ans. You can buy a map of the Adirondacks at Colton's, 172 William street, this city, for 75 cents. Would advise you to buy Wallace's "Adirondack Guide," 300 pp., for sale at this office. It contains the same map, with the names of all guides, hotels, routes, distances, geography, and all possible information. Illustrated. Price $1.75.

SUBSCRIBER, Macon, Ga.—My pointer dog will not retrieve when a quail is shot, but retrieves well in the yard. I did not train him entirely, and think he was punished for mouthing birds. Can you suggest a way by which he can be taught to retrieve a bird when shot? Ans. We can only suggest constant trying and making much of him when he does it; practice him on retrieving before feeding. If this is not finally effectual the spike collar might be.

J. S. S., Corry, Pa.—1. I am a carpenter. Would you advise me to go to Colorado? I am a young man, and wages are very low here. 2. I have a No. 1 Gordon setter and 10-gauge breech-loader. Should I take them with me? Would it pay me to take a Winchester rifle along, as I am fond of hunting and can make a good target? Ans. 1. If you cannot make a living at home we should advise you to go. 2. The expense of getting your dog there would be pretty heavy, but we should advise you to take both shot-gun and rifle.

G. A. B., La Fayette, Ind.—1. My setter pup, six months old, coughs continually, as if a bone were lodged in his throat, and occasionally throws up a slimy substance. His eyes run constantly, and he will not eat. 2. Can I obtain a good water spaniel cheap, and, if so, where? Desire one well broken; about two or three years old. Ans. 1. Give your dog a Dover's powder, composed of one grain each powdered opium and ipecac every six hours. He must be kept dry and warm, and fed with beef tea, which must be given with a spoon if he will no eat it. 2. Do not know of water spaniels for sale. You must advertise for one.

P. H. J., Oil City, Pa.—I have a cocker spaniel that is getting sore around the eyes; hair falling off, etc.; also a small spot on the muzzle hair is coming off. He scratches considerable, and hair is falling off, but can't notice any other sore spots on body except head as mentioned. He is not quite a year old. I think it's mange. What is the best thing to do for him? What shall I feed him and how cure him-Ans. Give your dog four drops of Fowler's solution of arsenic twice a day. Rub crude petroleum on the bare places. Cease the arsenic when the eyes begin to swell or the whites to assume a reddish appearance.

HOLLOWAY, Williamsport, Pa.—I have a pointer pup whelped in July last. Is it too late to dock his tail? If it can be done without injury to the dog I wish to improve his appearance by taking about three inches off his tail. Please give directions how to do the job. Ans. We doubt if you can improve the appearance of your pointer by taking off three inches of his tail; it will probably leave a thick stump. It should have been taken off, if at all, when he was about six weeks old. However if you do take it off, turn back the hair as well as possible, take a sharp chisel and mallet and cut it diagonally.

ONTARIO, Hamilton.—In the latter part of April, 1873, a large number of squaw ducks arrived in Burlington Bay. Shortly after their arrival here large numbers were found dead and dying. Several found and examined by me were in fine condition, being exceedingly fat and in the best of plumage. Will you kindly say if your attention has been called to a similar occurrence, and what you think was the cause of them dying in such large numbers. Ans. We cannot account for the occurrence without fuller information than is furnished by our correspondent.

H. P., Maine.—1. My dog got a small bone in his throat when eating his dinner. I noticed him at the time choking. It occurred two weeks ago. He keeps hacking and trying to throw it up, but cannot do it. I gave him a large piece of fat pork, which he swallowed whole, but it did not dislodge it. Can you suggest anything? 2. I saw a notice in a paper of an auction sale of coins in New York. It gave dates and prices paid. I have several fine specimens of dates mentioned. Could I realize anywhere near the amount for mine? Ans. 1. A raw egg swallowed might relieve him, but we would suggest that you take him to a surgeon. 2. You probably could.

DICK, Harrisburg.—A valuable English terrier dog, aged seven years, has a fearful cough, at times a shriek, which will not yield to any of the remedies administered. I have had him attended by veterinary surgeons, who pronounced it pneumonia. Had it been this disease he would have been dead long ago, as he has been suffering since last August. Ans. The following remedy will probably cure your dog, as it has been effective in some most obstinate cases of chronic cough: Friar's balsam, 15 drops; syrup of poppies, 1 drachm; diluted sulphuric acid, 5 drops; mucilage, ½ oz.; water, ½ oz.; mix and give two or three times a day.

CHESSMAN QUERIST.—Games are reported by annotation, which you will find in English chess works. A King cannot check a King as per diagram sent. On chess, the following works: Staunton's "Praxis' and "Handbook," price about $3 each; German *Handbuch*, best, about $9.50; Staunton, Wormold, Gossip's "Manual," and Gossip's "Theory and Pratice" (shortly to be issued), all of which cost from $3.50 to $5 Cook's "Synopsis" is also good, about $2. Your stationer can obtain them for you—if he cannot we will do so. On checkers: "Drummond's," 4th edition, $5; "Anderson's," 3d edition. Address A. J. Dunlap, 123 Franklin st., New York.

SUBSCRIBER, Port Rowan, Ont.—1. I notice, in answer to my questions about the breeding of woodcock, you say they hatch twice while in the North. This is something new to me, and I think is a mistake The season comes in here July 1, and surely they could not hatch twice before that. 2. In your issue of the 15th you say Sapanule is good for deas on dogs. Where can I get Sapanule? In what shape is it put up? Ans. 1. Does not our correspondent know that woodcock are about the first birds to nest in spring? There is good evidence that woodcock hatch twice when they are permitted to. Last spring we saw full-grown young woodcock April 25, hatched in Connecticut. 2. Sapanule is advertised in our columns.

OOLOGY, Newton, N. J.—Can you inform me whether there are any works relating to this subject about New Jersey or the Middle States, and, if so, what is the price and where can they be obtained? Ans. There are no special works on oology referring to your section. Dr. T. M. Brewer's "N. A. Oology" (now out of print), published in Smithsonian contributions, treats of the "Raptores" and "Fissirostres." Two works on this subject are now in course of publication. One is by Mr. Ingersoll, price 50 cents per part, published by the Naturalists' Agency, Salem, Mass., and promises to be an excellent work. The other is by two Ohio ladies, but as we have not yet seen it we hesitate to recommend it at present.

WARM SPRINGS.—1. The *Great Eastern* steamship was begun in 1854 and launched in 1859 by J. Scott Russell, on the Thames, England; built by English capital altogether. We believe her trial trip was undertaken to some French port. Her first trans-oceanic trip was to New York. Is now owned by an English company, who propose turning her into a cattle steamer at Sheerness, Thames, England. 2. The "strongest man in the world" was Samson; but he is dead now. 3. We were not there when the "French Giant" was shot from a cannon; nor do we know who ever lifted the most dead weight. The enthusiasts who are working out the *World's* Easter questions might help you. We are willing to answer almost any reasonable query, but when it comes to such conundrums as "Who is the strongest man in the world?" we give in to the McDuffers and cry, "Enough?" Besides, Homer died trying to guess a conundrum. That's where we differ from Homer.

A. P., Fort Riley.—For 15ft., flat-bottomed, fast sailboat, follow these figures: Beam, 5ft. 6in.; depth at side amidships, 14in.; flare to sides, 3in. each; sheer forward, 9in.; aft, 5in.; sideboards, 3¼ inches thick; let them spring to their natural curve and they will give a very handsome model. Sternboard or counter-piece should be 36in. wide and 22in. across, placed at an angle of 45 deg. Round up bottom aft till it meets this board; put skag of 1in. stuff under the round-up aft. Oak for stem, counter, skag and mast step; pine or other soft wood for rest. Sail, 18ft. on foot, 12ft. hoist, 8ft. gaff; latter peaked to an angle of 50 degs.; regular cat rig; mast, 15ft. deck to trunk, stepped 15in. from bow; diameter at deck, 3½in.; boom in centre, 2¾in.; gaff, 2in.; deck boat over with ¼in. stuff; deck beams about 2in. deep, ¾in. thick; crown to deck amidships, 4in. For construction of centreboard and well see back files. Board should be 4ft. 6in. long, 24in. deep at after end, and 16in. forward. Centre of board when up should be about in centre of length of boat. For leeboard, hang board of two-thirds the area of centreboard over the lee side. Pin the upper corner of the board to the side of boat near the deck and use a guy from forward to maintain it in position. Centreboard is handier and more effective, and in so small a boat the well is easily made, being nothing more than a slot cut through bottom and narrow box; spike down above it with wood cleets on side to stiffen and form efficient connection between the casing and bottom boards. Or you may use a keel 4in. deep. It is not as good as the board in a boat of this class. Sail of 8 ozs. duck. See back files.

A. RAYMOND & Co., CLOTHIERS.—This well-known and long-established house invariably gives its customers satisfaction. Its sale and custom departments are both well sustained at moderate cash prices. We can add our own personal testimony to that of many others.

—Valiant hunters who cannot beard the lions of Florida in their native dens may at least secure the beards of the beasts which others have bearded.—See the advertisement of Florida curiosities in another column.

MR. CHARLES FOLSOM:

Dear Sir—We would like to tell you what we saw one of your single fourteen bore guns do. Last fall one of our customers shot at an eight inch ring, 125 yards, and hit it twenty-five times out of thirty shots, getting twenty-five turkeys. We have no doubt but that you make the best shooting gun in the world, and think that to take one hundred just as you make for the market and one hundred of any one make, worth $150 each, your guns would be sure to win.

Yours truly, RAMSDELL & NEAL, Bangor, Me.—Adv.

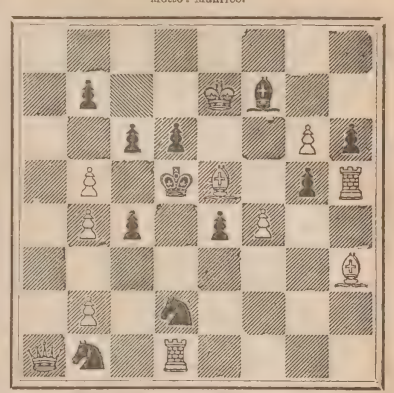
FRANK FORRESTER.—An unpublished work by Wm. Henry Herbert, is now being issued weekly in *Ajield and Afloat*. Office, 607 Sansom Street, Philadelphia. Specimen Copies, 5 cents.—[Adv.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 49.

Motto: Manrico.



White to play and give mate in two moves.

SOLUTIONS TO PROBLEMS—NO. 46.

1—Q-B4 1—Any
2—Q, R, B, or Kt mates

Game No. 108.—MUZIO GAMBIT.

A smart affair between the Rev. G. A. Macdonnell and Mr. Lindsay Hon, Secretary of the St. George Chess Club. The notes are by the Chess Editor of the London *Sportsman:*

White. Rev. G. A. M.	Black. Mr. L.	White. Rev. G. A. M.	Black. Mr. L.
1—P-K4	1—P-K4	12—Q-K R4	12—R-K Kt

11—Castles	11—B-K R3	22—Q-Kt3 ch	Resigns.

NOTES.

(*a*) An invention of Mr. Macdonnell's great namesake. Though not considered so strong as the more customary lines of P-Q4 and Castles, it requires very careful play in answering.

(*b*) By no means the best reply; 5—Kt-Q B3 is certainly better.

(*c*) A fair sacrifice under the circumstances.

(*d*) This seems to place Black's game in security, but its safety is more apparent than real.

(*e*) This seems to be the only safe retreat.

(*f*) Black's game now seems preferable, but nothing is more deceptive than position in chess. Very speedily the second player, by a remarkable series of moves, is completely rented.

(*g*) Very rash, but Black's game is so undeveloped that hardly any satisfactory course remains open to him.

(*h*) Very fine. There is no reply to this *coup*.

(*i*) Now Black must take the Kt, with immediate destruction as the consequence.

Game No. 109.—RUY LOPEZ ATTACK.

First game between Messrs. Elson and Judd in the Philadelphia Tournament:

White. Mr. Elson.	Black. Mr. Judd.	White. Mr. Elson.	Black. Mr. Judd.

15—Q-Kt3	15—Kt-Q2	31—R-K Kt	31—Q-K5 ch
16—B-B2	16—P-Q B3	32—K-Kt2	32—K-B2
17—B-K B5 (e)	17—B-Q B3	33—Q tks Kt	Resigns.

NOTES.

(*a*) The usual move here is Kt tks P.

(*b*) Already out of the books, the regular move being B-Kt5.

(*c*) An aggressive move, recalling to mind Morphy's style of play.

(*d*) Thus early we prefer White's game.

(*e*) All of this is well played by White.

(*f*) White seems to prefer this move to winning the P by 22—B tks Kt

(*g*) Black's game is hopeless. Mr. Berry has played much below his strength.—*Hartford Times.*

—Dr. Zukertort, of Paris tournament fame, whose health for some time past has been delicate, has somewhat recovered from a serious illness that prostrated him at Dublin.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 27, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

FARMERS AND MARKET MEN—THE SPORTSMAN'S BUGBEARS.

IT is a noteworthy fact that the market men of Boston have such power in the lobby of the State Legislature that it has been impossible to secure consideration of any bill to protect game within the limits of the State, which does not embody provisions which in effect nullify legislation. The market men have been induced to consent to an absolutely close season, provided the sale of birds killed outside of the State were permitted throughout the first four months of the year, namely, January, February, March and April! And all that the game clubs and the advocates of protective measures have been able to do is to assent, upon the plea of expediency, claiming that it is better to offer a premium on law-breaking in neighboring States, rather than have no law within their own borders. They urge that half a loaf for themselves is better than no bread.

We doubt if events prove that they have gained a point. We are opposed to all temporizing with the enemy. Let us ask first, how these market men could obtain the great bulk of the birds which they offer for sale if they did not obtain them from the farmers and the poachers upon farm lands. Next; what inducements could the farmers have to send their birds to market in forbidden seasons for the mere pittance of gain which they derive, provided a system of preservation in which they were made chief factors, brought them greater emoluments at lawful times? Where are quail chiefly obtained? On farm lands. Where are woodcock, grouse and prairie fowl obtained for the most part? Also on farm lands. When gentlemen sportsmen desire to shoot, what do they do first? They con over their list of farming friends and write to them for permission to come. And yet, the farmers upon whose lands the game principally breeds and feeds are seldom consulted as to preservative acts, or invited to deliberate in proceedings of sportsmen, or to join clubs. Are the farmers all German market gardeners, or poor white natives, whose sprouts, cabbages and berry vines are to be tramped over and kicked up with impunity by rough-shod gunners without so much as asking, "by your leave?" By no means. A large proportion of the readers of FOREST AND STREAM are gentlemen farmers who constitute a power to preserve game if their services are enlisted. This is not the class of men who send trapped birds to market in and out of season. Such men can exert an influence and work out conservative results, which mere sportsmen never can. The sportsmen have now tried their hand at game protection for fully twenty years; so far they have accomplished very little. The prolonged discussion of sumptuary measures and the study of the habits of game creatures, has indeed had its wholesome effect in awakening the whole country to the necessity of protecting and preserving game, and in the organization of clubs favoring protective measures; but it has done little else. Most of the sportsmen are not farmers; but very many farmers are sportsmen. Let them be invited to the deliberations of sportsmen, that their relations to each other may become better understood, and their interests made harmonious.

Hitherto all the laws seem to have been drafted in the interests of sportsmen only. The farmers have been too much ignored. Their lands are looked upon as open domain for every man who carries a gun and works a dog. Farmers who buy, feed, shelter and winter birds are forbidden, forsooth, to trap for their own consumption or pecuniary profit in order to preserve them for the gunners. They, the owners of birds and lands, are required to waive their property rights in favor of irresponsible sportsmen whose interests are alien, and whose only title is that which inheres in the birds as *ferœ naturæ*.

Is it wonderful that farmers, loth to lose all the proceeds and profits of their investments, should hasten to anticipate the coming of unconscionable sportsmen who, regardless of close seasons, take the field weeks before the law is off? or that indigent toilers who can scarcely grub a livelihood from the soil, should seek some small remuneration by gleaning from the stubble and copse the poor scrags which are left after the sportsman has hung up his gun, trapping them whenever they can? *Quel tort?* Who is the most blameworthy, the derelict sportsman who contributes nothing, or the derelict farmer who has contributed all?

But as to the wholesale destruction of game, we think that the great burden of accusation should not be laid at the doors of the farmers and farmers' sons. The greater mischief is done by that class of poachers who scrape the bottom boards of preserves for everything bearing the semblance of game. There are conscientious pot-hunters and market gunners, as much inclined to respect close seasons as honorable sportsmen, whom we do not include in the category of lawless poachers, although we deplore the havoc which follows their tracks. But poachers *per se* are highway robbers and despoilers of land and water preserves; desperadoes who are ready, when caught or confronted, to attempt escape from arrest by shooting the land owners. They are dog poisoners, barn burners, robbers of hen roosts and meat houses, yet oft times traveling in the guise of sportsmen, with dog and gun, and the most approved accoutrements. While they beat the fields and swamps they secretly set their traps by scores in every patch and runway. They are ready to contract with agents and collectors to furnish so many head of game at so much per dozen, or barrel! The collectors ship them to some outlying railway station, and the expressmen and railroad officials knowingly, or unwittingly, become *particeps criminis* by transporting the game to market—the *ultima thule* where the golden lure is held out at the despicable price of 65 cent per dozen! There are strings and strings of them now in the city markets rotting for lack of purchasers! Shame upon men who call themselves honorable venders! This is the class with whom the Massachusetts game protectors have been obliged to negotiate and temporize in order to secure any protective law at all, by conceding the extraordinary months of January, February, March and April, as months in which game killed out of the State may be sold. Heaven help the *poor!* Cannot these mercenary market men make far larger profits from their sales of spring lamb and fish, than they can skin from the meagre margins which accrue from the sale of unseasonable, unhealthy, and illegitimate game? Is not the small risk of loss in selling legitimate meat more engaging than the doubtful traffic in sour and skinny birds which have been starved by deep snows, heated by close packing, marred and mashed by long transportation, and kept for weeks in ice chests whose chill is like the damp of vaults where dead men are buried, and whose slimy deposits are just about as repulsive to the eye and palate?

Now, to extinguish the poachers, and squelch the market men:—how can it be accomplished? Surely there is nothing easier than to make the carrying of a gun and sportsman's accoutrements in close seasons *prima facie* evidence of an intent to violate the law. Intent should be equivalent to violation, and either should make the offender liable to arrest and severe punishment.

But how shall we be able to reach these offenders when the laws are so inconsistent that they permit men to carry a gun and dog to shoot woodcock, and at the same time prohibit them from carrying a gun and accoutrements to shoot ruffed grouse and quail? Evidently there is no alternative except to make the seasons *uniform on all kinds of game*, so that there can be no excuse or possible pretext for a man being in the field prior to or after a designated date. Should such a provision seem to bear hard upon some localities or sections, tell us whether it be better that a few sportsmen should suffer, or that the game should be scoured out of the whole country? There can be no uniformity in game laws without certain compromises on latitudes, localities, and some varieties of game. But sportsmen will be required to make only trifling sacrifices. If woodcock be debarred in July, do they not have ruffed grouse, quail, deer, and wild fowl in the fall? Is it not better that the few should go without woodcock than that eventually there shall be no grouse, quail, and deer for anybody? And if by reason of a fixed date (say September 1st) birds should not be full grown in a northern locality, is it not better that a few immature birds shall die in that section, than that the whole fraternity of sportsmen be debarred from sport in southern localities where the birds are full-grown? Again, if by reason of expediency the close season is made to begin January 1st, is it not better to curtail the sport of men in the southern tier of States, rather than that birds should perish in the deep snows of northern latitudes, by gun and snare? What we curtail at one end, we give and allow at the other, so that we grant a fair and full average to all—and spare the birds. Four months' shooting should suffice for any reasonable man. What we aim at is to make the season uniform on all kinds of game alike, beginning at Sept. 1st and closing Dec. 31st, so that any man found accoutred as a sportsman in prohibited seasons, in *any part* of the country, may be arrested and punished. Then, if no game is shot, the occupation of the market men, as well as their pecuniary incentive, is gone. Following will come the game millennium, when the labors of twenty years will have accomplished their purpose.

Under such a *regime* no possible objection can be raised against trapping. Trapping will be done in open season only, just as shooting will be done. The same penalties for trapping will obtain as for shooting, and traps found set on premises will be *prima facie* evidence of guilt.

And why not trap in season? Are not the birds more comely to look at, and more desirable for the table? Will trapping prove more destructive to the birds? Will it exterminate them? Will the silent operations of the snare and net tend more to drive away the birds and make them wild than the bang of the gun from day to day, which picks up a brace now, and two brace to-morrow, continuously, until the coveys are bagged entire, or the remnant run off to other covers? Cannot the farmer be trusted to trap judiciously? He has been to no small trouble and expense to plant and winter the birds: will not his common sense and pecuniary interest induce him to leave enough for seed for the coming year? He does so with his corn, potatoes and wheat. Is it for the sportsman to dictate that the farmer shall not gather where he hath sown? Shall the farmer cast in the seed for the sportsman to reap?

The time has come to discuss these questions seriously. The rights of farmers have not hitherto been sufficiently taken into account. Their active intelligent co-operation should now be invited and secured. What we need more than all is *Farmers' Protective Game Clubs;* not in antagonism to sportsmen's clubs, but in harmony with them; and operating upon the plan which we have now outlined, and which is the only feasible plan to meet all the requirements of the case; to foster mutual interests; and to prevent abuses.

WALTONIANA.

IZAAK WALTON was exceptionally blessed in his lifetime with the great blessing of many and rare friends. "All who knew him loved him; and if any did not ove him, it was because they did not know him," exclaims his biographer, and now, two centuries after his death, we may repeat the saying with equal truth of the generations after generations who, in his books, have known and loved the gentle philosopher of the "angling days." For who that has read his books has not been drawn to the writer by the homely, honest good sense and kindly wisdom which fill thier pages. Few there are, too, we suspect, who have not been conscious of something of a feeling of regret that Izaak Walton has not left us more. Influenced by some such motives as these, he tells us, Mr. Richard Herne Shepherd has collected and published, under the title of "Waltoniana," a number of Walton's fugitive pieces in prose and verse, the dates of whose composition cover a period of some fifty years. While these fragments and stray bits are not of a nature to add much, if anything, to the literary reputation of their author, they will nevertheless be received by not a few of his friends with the same spirit that induced the collection. Nor will their publication be altogether fruitless, if it shall do nothing more than simply serve to show us how diligently and conscientiously Walton labored with his pen. Among these curious literary treasures, for example, is the original draft of the "Elegy on Donne," which is believed to be the earliest literary work of Walton's that has been preserved to us. It is the same poem which, greatly re-modeled, corrected, amended, and in short almost re-written in the author's old age, was finally inserted in the collection of the "Lives." All this goes to show that Walton had the gift of patient, paine-taking work, a good, old-fashioned way of writing, now, unhappily, somewhat out of date, but without which, we may add, few things last so long as have the "Angler" and the "Lives."

"Izaak Walton's Complete Angler," the quaint production of a quaint mind, is unlike anything else in the English language; and it grows every year more charming, as its fancies, morals and queerly turned sayings assume more and more the quiddities and oddities of old age. No man has ever really gone fishing—let us rather say "angling"—who has not started out with rod and line from Tottingham High Cross for a day's ramble with the master. And one may make the excursion at any time, whether it is a good day for fishing or not. Yet as there are times and moods for all books, give us the "Complete Angler" on a day in June, while we lie underneath the shade, the brook purling by, the perfumes of

the flowers greeting our senses, the insects chirruping in the grass and the birds chattering in the trees above us.

Not less distinguished in their way are the "Lives". Walton not only knew how to appreciate the good qualities of his friends, but he had the belief that others, too, ought to recognize and love these traits of character. And what else could have been expected from the author of the "Complete Angler" than just such a set of biographies as he has given us? Written with all the tender grace of personal love and admiration, and for the avowed purpose of holding up for the emulation of posterity, the good and the beautiful in human character, the Lives of Donne, Wotton, Hooker, Herbert, and Sanderson are among the English classics, and occupy a place wholly unique in the literature of biography. It is no small honor to Walton that he has left for us these records of the simple piety and domestic virtues, which appear as refreshing springs of sweet water amid the rank and noxious morasses of that age of profligate license and debauchery; nor is it less worthy of comment that in thus commemorating the character of others he has taught us that his own was simple and pure, and that leading us to love his friends he teaches us, of necessity, to love him as well.

We can readily number upon our fingers, almost without pausing to recall them, the few English writers who have won for themselves such a warm personal regard from so diverse a class of readers as has Izaak Walton. With few do we come into such close sympathy of thought and feeling. Of the "Angler," originally published in 1653, there have been some forty editions, many of them very rare and costly ones, upon which enthusiastic disciples of the gentle teacher have spent months of research, and lavish sums of money. You may find some kind of a copy of the book to-day in any book store, and you may pick up well-worn copies on the second-hand book stands. Who can say when the good old volume will be out of print? Surely not so long as the mountain streams flow on, and men go forth to angle in them.

UNMANLY MEN AND UNWOMANLY WOMEN.

LAST Wednesday evening, at eleven o'clock, the excitement-craving population of New York flocked into Gilmore's Garden to witness the beginning of another six days' trial of endurance. There are sixteen competitors this time, and they are women. Each of these women has already allowed herself to be gazed at for a greater or less number of quarter hours, and has won a more or less creditable pedestrian record; all have found it so much to their taste or their profit that they are now eager for another and a competitive pose before the public.

Had the original announcement been adhered to, the "walk" would have extended over six consecutive days, including the Sabbath. Upon that day, doubtless, the managers, whose sense of public decency appears to have been strangely perverted by the vacuity of their pocket-books, expected to have reaped a plenteous harvest of half dollars. Unfortunately, however, for the silvered, not to say golden, anticipations of "the management," the police captain of the precinct—who is just now, pending his trial for alleged ruffianly conduct at the last six days' match, on exceptionally good behavior—has very properly seen fit to interfere, and by forbidding the receipt of Sunday gate-money has taken from the proposed exhibition all excuse for its Sunday being. The day will therefore be observed so far at least as female walking matches go; the church attendants of Madison Square may worship in their sanctuaries undisturbed; and that portion of the community which has a regard for the sanctity of the day may well draw a breath of relief, since the city has been spared a Sunday spectacle that would have disgraced any society this side of those benighted regions to whose wilds Stanley alone of white men has as yet penetrated.

It were to be desired for certain very grave considerations that this prohibition could have been extended over the whole week and not alone over its first day. The entire surroundings of these exhibitions are demoralizing. Drinking, idleness, late hours, unnatural excitement, betting, profanity and congregated coarseness are not, it is true, necessary adjuncts of a long-distance walking match, but they are adjuncts nevertheless, and very conspicuous ones at that. It must, moreover, be well understood by any one who has given it a moment's reflection, that with these surroundings what might otherwise, under proper limitations, be legitimate and healthful incitements to physical culture are degraded into vast schemes of money making and gambling. It is the hippodroming of human beings, the conversion of a man into a beast—a metamorphosis which in all ages and in all lands has been among the unclean dreams of philosophy and imagination. We have no reason to felicitate ourselves because we have realized this dream by organizing such tests of human brute endurance and by staking our money upon the human animal that seems likely to suffer most without succumbing first. In the present instance the money is staked, not upon men, but upon women.

Any necessity is deplorable which draws woman forth from the retirement which is her sphere, unless it be to something high and noble. Doubly to be deplored, not for the sake of these individual women alone, but for the sake of womanhood itself and of men's reverence for it, is that so-called amusement which not only brings woman before the public gaze, but strips her of her modesty—her chiefest ornament—and exposes her, a short-skirted spectacle, to the unholy gaze of lewd men. It is this unsexing of woman that we denounce, and against which, for the respect he bears his mother or his sister or his wife or his daughter, should be uttered the protest of every right thinking man.

The men who institute these female pedestrian shows, and the men who abet them with their patronage, are unmanly men; the women who participate in them and the women who encourage them with their presence are unwomanly women.

BOYTON'S SWIM.—The curiosity of the good people of the Ohio Valley has been aroused to the highest pitch by the appearance of the terrifying object in black which seems neither to care for ice, snags nor rapids, and which delights in the very fierceness of the contest with the raging elements and in the consternation of the simple-minded rustics who till the soil along the river banks. Paul Boyton is at his old tricks again, shooting rapids with no worse results than being bruised a little, or getting so nearly under the wheels of excursion steamers that there is no fun in it, and at other times being engulfed in the seething currents of angry waters, but whose spite the amphibious captain laughs to naught in his rubber suit. The doughty skipper is now pursuing his long and toilsome journey down the Ohio and the Mississippi to the Gulf, and he will not rest till the long swim has been accomplished and the value of his life-saving suit put through the severest tests.

THE GLOUCESTER FISHERMEN.—The occupation of our coast fishermen is at best one of extreme toil, hardship and peril. The men who go down into the sea in ships must needs have for the pursuit of their calling brave hearts to do and to dare, for they go forth into certain danger and possible death; and they who remain on the shore to watch the lessening sails disappear from their sight must needs exercise not less of courage and patience. The local history of sea-port fishing towns is filled with sombre pages. The city of Gloucester, Mass., is now in mourning for the fishermen, who, after days and weeks of weary watching and waiting by wives and children, are believed to have perished in the February gales off the George's banks. Of the fishing fleet which sailed from Gloucester in the early part of last month, thirteen vessels, with their one hundred and forty-three men, have never been heard from. This calamity leaves fifty-seven women widows and one hundred and forty-nine children fatherless. Such disasters have not been infrequent in the previous history of the city. In February, 1862, fifteen vessels and one hundred and twenty men were lost; in 1871, nineteen vessels and one hundred and forty men were lost; in "The Lord's Day Gale" of August, 1873, fifteen vessels went down into the waters, and with them one hundred and twenty-four men; again, in the December gales of 1876, ten vessels and ninety-eight men were destroyed, and the melancholy record of the losses for the year numbered two hundred and twelve lives. This is a sad catalogue, the statistics of which become full of pathos when we reflect upon the tales of human heart suffering they tell.

WEATHER ON THE LOWER ST. LAWRENCE.—The meteorological phenomena of the Gulf of St. Lawrence have been singular the past winter. While deep snows and severe weather have prevailed to the westward, there has been less snow on the Gulf coast than the oldest inhabitant had ever seen. A letter from Gaspe tells us that the ice has not held to the shore as in other seasons, and there is no body of ice outside. There is every appearance of an early spring. The same letter says the fishermen are suffering for necessaries, having no potatoes and very little flour.

GAME PROTECTION.

—The bill before the New Jersey Legislature at its last session, just closed, to prevent the shooting of woodcock prior to Sept. 1, was passed to a third reading, and only failed in consequence of the adjournment of the Legislature. This is unfortunate. The bill had many friends, and was warmly supported, and had the session lasted a few days longer it would undoubtedly have become a law. The originator of the bill was Geo. S. Duryee, of Newark; and John Gill, of Orange, was one of its chief promoters. Let their names be emblazoned in letters of gold, and let their efforts and example be followed in other States.

REPLY TO SETH GREEN ON "DESTRUCTION OF WHITE FISH."—*Editor Forest and Stream*: Mr. Green writes to the New York *Times* as follows: "When I was in New York last week I saw tons of two-year-old white-fish, not weighing over eight or ten ounces, in Fulton Market. They are sold for cisco or herring (*Argurossmus clupeiformis*). I consider this one of the greatest wastes of fish food that exists in this country. These fish have passed all their early dangers, and if they had been permitted to grow one year longer they would have weighed two and one-half or three pounds, and would be worth to the fishermen that caught them twenty cents each, whereas, in the condition I saw them in, they were worth not more than one and two cents each. If the same fisherman had only waited one year—for fish are local and never wander but a few miles from where they are taken, except during their breeding seasons—he would have been paid just ten times over for his patience."

Seth Green, nor any other person ever wrote a better article in a short way for the protection of fishes or for the interest of the fisherman than this. We have ourselves for years observed the destruction of young whitefish on Lake Erie when they have been caught and sold as herring, both fresh, smoked and salted, and have deplored this destruction as much as any other observer; but where is the remedy? The pound-net cannot be abandoned, it is the best net, when not abused, in existence. Mr. Green proposes to enlarge the mesh in the leader and pot of the net. No pound-net should be allowed to be set in any of our waters with less than a two-inch mesh, measured from knot to knot. Now here comes the dilemma. With this size mesh no herring would be caught, and in the course of ten years Lake Erie would be packed with this fish (for they are most terribly fecund) and as they are the natural enemy of the whitefish hardly one of the latter by this time would be found to enter the fisher's net. By enlarging the mesh as you propose, Seth, you let the herring go scot free to reproduce and devastate the waters. You well know he is a decidedly predaceous little rascal, following the whitefish on to his spawning grounds, devouring his eggs the live-long winter and finishing up with the young from the time they are out of the shell in the spring until they leave for deep water, and how much longer they feed on this young fry I cannot say, but in June I have taken herring with the hook baited with a lake shiner 1½ inch long, and caught a hundred or more in the course of one afternoon. With the same bait and often with a bit of meat on the hook, I have taken through the ice in March, with others, among the Islands at the head of the lake all that we could carry.

DR. E. STERLING.

MICHIGAN GAME LAW.—The Michigan Senate passed, March 18, the game law, of which the provisions are: No person shall hunt deer in the upper peninsula from Sept. 1 to Dec. 15, or in the lower peninsula from Oct. 1 to Nov. 15. It also forbids hounding deer in the upper peninsula at any time during the year. No person shall kill wild turkey except during October, November or December of each year. Killing of woodcock is allowed only between Sept. 1 and January 1. Shooting prairie chickens, partridge, grouse and wild ducks only allowed between Sept. 1 and Jan. 1. Other wild water fowl or snipe to be killed only between May 1 and Sept. 1.

ROCHESTER, N. Y.—Having shot considerably in England and in this country, I feel interested in the protection of game. My conviction is that a panacea may be found in a September opening for all shooting, and permitting no shooting before. Intelligible duties to game constables, and a host of willing deputies would spring from this, and these duties could be capably performed. Undoubtedly the key-note to extermination is sounded in the summer shooting, which is, to say the least of it, a difficult pastime to confuse with sport.

NUX.

THE NEW YORK GAME LAW.

HUDSON, N. Y., March 15, 1879.

EDITOR FOREST AND STREAM:

It appears that a majority of the members of the New York Association for the Protection of Fish and Game favor extending the close season for partridge, quail, wood-duck, etc., to Oct. 15. To make the close time later than Sept. 1 or Sept. 15, excepting for quail, is objectionable to the sportsmen of this locality, and, I am inclined to think, generally elsewhere throughout this State, excepting on Long Island, where the climate is more favorable for shooting in the latter part of the fall and first part of winter, and the only part of the State where quail are plenty. The extensive sandy plains, briary swamps and forests of shrub oak on Long Island are natural grounds and shelter for quail, and the snow, so destructive to quail elsewhere in the State, is there quickly melted by the sea breezes.

In this more northern and hilly country from Sept. 15 to Nov. 1 is the best and pleasantest part of the season for shooting. Partridges can take care of themselves as well, or better, by the 15th of Sept., being protected by the leaves, as later, when the leaves have fallen. Oct. 15 is late for woodcock shooting here, but I am not in favor of summer woodcock shooting. I do not understand that it is the intention to make any change in the close season for water fowl shooting; it is not necessary in order to protect the quail, they being hunted differently and on different grounds from water fowl. We never—hardly ever—get our share of water fowl, as compared with the more favored States South and West. King Frost makes a close season for water fowl in the northern half of this State most of the time from Nov. 15 to April. The first half of the fall months being the pleasantest and best part of the season for shooting in the northern part of the State and the last half of the fall the best in the southern part, particularly on Long Island, it would therefore be treating us northerners very unfairly, you see, to extend the close season for water fowl shooting to Oct. 15. Water fowl are very wild here in the spring, having been hunted all winter South, and the familiar report of guns causes them be unlucky hurry further north to their favorite nesting grounds. I do not think they are slaughtered in such numbers in this State in the spring as to make it appear necessary for their preservation to prohibit spring shooting.

After being confined in office for several months and reading weekly in the FOREST AND STREAM of the fine sport shooting water fowl in the favored localities, thus keeping the subject "excitedly" in mind, also reminding me of the times that I too have visited some of those favored localities to shoot duck, and, on returning, figured the cost of the ducks I shot, cash paid, at much higher sums than they would bring in market, I greatly enjoy getting out on pleasant days in the spring, with a good companion, in my sneak-boat and "creeping" for ducks, the most exciting, skillful and best way to hunt them for sport and although not able to get a "big bag," if I get a pair I am well satisfied with my luck, regarding the excitement and exercise sufficient remuneration.

I have a very favorable opinion of the New York Association for the Preservation of Fish and Game. It is the chief among associations of the kind, and a power to prevent the killing and selling of game out of season; but I am inclined to think that some of its members are a little selfish, and more familiar with the shooting on Long Island than elsewhere in this State.

LATITUDE 42.

WELLSVILLE, N. Y., March 17, 1879.

EDITOR FOREST AND STREAM:

At a recent meeting of the New York Association for the Protection of Game a bill was reported and read, making the season for all kinds of game to open Oct. 15 and close Feb. 1.

Should such a bill become a law—not excluding woodcock from its provisions—it would be very harsh and unjust to sportsmen in this section of the State. In this vicinity it is a rare occurrence to see a woodcock later in the season than Oct. 15, and usually they leave us during the last days of September in each year.

We are strict in enforcing our game laws, and the result is that when the season opens on the first of August we have a nice lot of birds with us. If the law should be changed as proposed upon woodcock, in this section we should not be able to kill a bird in any year. The change in the law might be a nice thing for New Yorkers, but it would be death for the "little fish" in the country.

CLARENCE A. FARNUM.

EDITOR FOREST AND STREAM:

To set the close season date at Oct. 15 would be very unfair for the northern part of the State. Woodcock are almost all gone from here by that time. The 1st of Sept. would be better. The October date would cause many to violate the law, and would thus deprive those who did respect it of much of their legitimate sport.

W. R. S.

The Rifle.

MASSACHUSETTS—*Boston, Walnut Hill, March* 22.—At the regular meeting of the members of the Massachusetts Rifle Association, at Walnut Hill range, Saturday, there was a large attendance of members, as well as friends from other clubs. A large number of spectators from Woburn and other places were also present. The wind was fresh from the east, and bothered the riflemen considerably, although some succeeded in making excellent scores in spite of the disadvantages presented by the weather conditions. Interest centred in the "Winchester Rifle" series, in which there were fifty-eight entries at 200 yards:

W Poland	5	4	5	4	4	4	4	5	5	5	5	5	4	4	5—68
W Charles	4	5	4	4	4	4	5	4	4	5	5	5	5	4	4—66
C Edwards	4	5	4	4	4	4	4	4	5	5	4	5	4	4	4—65
J B Osborn	5	5	4	5	4	4	4	4	5	5	3	5	5	4	4—65
J B Parker	4	3	4	4	4	4	5	4	4	4	5	5	4	4	4—64
E W Law	4	4	4	4	4	4	4	5	5	4	4	4	5	6	4—64
H E Jepson	4	4	4	4	4	4	4	4	5	5	4	4	4	5	5—63
R Davis	3	4	4	4	4	5	5	4	4	4	4	4	4	5	5—63
L L Hubbard	4	4	4	4	5	5	4	3	4	4	4	5	4	4	5—63
C A Parker	3	4	4	4	5	4	4	4	4	3	5	4	5	5	4—63
E B Souther	4	4	4	5	4	4	4	4	4	4	4	5	4	4	4—62
J N Epes	4	4	4	4	4	4	4	4	4	4	5	4	4	4	4—62
J F R Schaefer	3	4	4	5	4	5	5	4	3	3	5	5	3	4	4—62
E E Harry	5	3	4	4	4	4	4	4	5	4	5	5	4	4	3—62
W E Guerrier	4	4	3	4	4	5	4	4	4	4	4	4	4	4	4—60

C R Griffin	4	4	0	4	3	4	4	5	4	4	4	5	3	2	4—54

MAMMOTH RIFLE GALLERY—*Boston.*—Still better shooting has been done the third week of the month at this gallery, though the extra prize of $20 for eight consecutive bull's-eyes has not yet been won. The best scores stand (150 feet, rounds 8, possible 40):

F Hollis	5	4	5	5	5	5	5—39	M L Pratt	5	4	4	5	5	5	5	4—37
Geo Lamb	4	4	5	5	5	5	5—38	G McKenzie	3	5	4	4	4	4	5	5—36
E S Tobey Jr	5	4	4	5	5	5	5—38	W H Restarick	5	5	4	4	5	4	4	4—35
C Edwards	4	5	5	5	5	4	4—38	C U Meiggs	5	5	4	4	4	4	5	5—35
A L Eames	4	5	4	4	5	5	5—37	G A Fletcher	5	4	4	4	4	4	5	5—35
W Bradford	4	4	5	5	5	4	5—37	G A Bent	5	4	4	4	4	4	5	5—35
Geo E Everett	5	5	4	4	5	4	5—37	A W Robinson	5	4	4	5	4	4	5	4—35
C J Foye	5	5	4	5	4	5	4—37	Frank H Frye	4	4	4	4	5	5	5	4—35

WALPOLE AMATEUR RIFLE CLUB.—At the annual meeting of the Walpole Amateur Rifle Club, the following officers were elected: William Moore, President; Wm. H. Pray, Vice-President; W. Glover, Secretary and Treasurer. Directors—Wm. Moore, W. H. Pray, W. Glover, R. S. Gray, T. H. Gray, E. Reader, Jr., H. P. Blake.

Medford.—Bellevue Range was thronged on Wednesday afternoon, the weather being fine, and some good shots were made. The occasion was the third competition in the classified matches for March. The following are the scores made:

First class.

J B Osborn	5	5	5	4	4	5	5—33								
J B Osborn (re-entry)	5	5	4	5	5	5	4—33								
C H Russell	5	5	5	4	5	4	5—33								
C H Russell (re-entry)	4	5	5	5	4	5	4—32								
H Withington	5	4	5	4	4	5	5—32								
H D Cushing	4	5	5	4	5	5	4—32								
J H Eames	4	4	4	5	4	4	5—31								
J H Eames (re-entry)	4	5	4	4	5	5	3—31								
E Wyman	4	4	4	4	4	5	5—30								
E Wyman (re-entry)	5	5	4	4	5	4	4—31								
J R Teele	4	4	5	4	5	5	4—31								
J R Teele (re-entry)	5	5	4	4	5	4	4—31								
W E Guerrier	4	5	4	4	4	4	4—29								

Second class:

G H Howe	4	4	5	4	4	5	—30
G H Howe (re-entry)	4	4	5	4	4	4	5—30
E Hunt	5	4	4	4	4	4	5—30
E Hunt (re-entry)	5	4	5	4	4	5	3—30
E F Kendrick	5	4	4	4	4	4	4—29

There were eighty-four re-entries. The Medford Rifle Team have sent a challenge to the Bergen Point team, to which no reply has as yet been received.

CONNECTICUT—*Collinsville, March* 20.—At a regular meeting of the R. & G. Club, held to-day, the following scores were made by the members; off-hand, 200 yards, 10 shots:

	Mass.	Creed.		Mass.	Creed.
J Hamilton	108	47	J Laubenstein	84	38
O B Hull	97	42	J G Case	79	38
J D Andrews	88	41	J Pfister	64	24

EMPIRE RIFLE CLUB.—In an all-comers' match, under the auspices of the Empire Rifle Club, at Hastings' Park, on March 19, the following scores were made:

W M Farrow	4	5	5	4	5	5	5	4	5	5—47
J W Todd	4	4	5	5	5	5	5	4	4	4—45
S T G Dudley	3	5	5	4	5	4	4	4	4	5—44
— Mangam	5	4	5	4	4	4	4	4	5	4—43
— Donaldson	4	5	4	4	4	4	5	4	4	4—42
N D Ward	5	4	3	4	4	4	4	4	4	4—42
M M Maltby	4	4	4	4	5	4	4	4	4	4—41
H Fisher	4	4	4	3	4	4	5	4	4	5—41
F Holton	4	4	4	4	5	4	4	4	4	4—40

The Empire Club has an all-comers' match every Wednesday afternoon at the same place. Entries can be made at any time on that day.

ZETTLER CLUB PRACTICE, *March* 18.—Creedmoor targets reduced to gallery distance; 10 shots per man, possible 50:

C G Zettler	49	R Zimmerman	46
P Fenning	48	C Judson	46
L E Batse	48	F R Grohman	46
M Dorrier	48	H Oehl	45
M B Engel	48	N D Ward	43
D Quihane	48	D Quihane	43
F Levy	48	F Dutt	43
A E Moore	48	F Fabarus	43

NEW YORK—*Jamestown.*—The Chatauqua Co. Sportsman's Association have fitted up a very neat gallery, and a member says of their practice: "We use the Frank Wesson .32 cal. gun, bored to .25 cal. by our President, H. V. Perry, and think we now have as true shooting, and convenient a gun as can be found. We have set apart two afternoons in each week for ladies to visit the gallery with one or more members of the association, and participate in rifle practice, two or three of them having made as high as forty-five out of a possible fifty, standing up to it same as the men."

NEW JERSEY—*Newark, March* 19.—Weekly score of the Newark Amateur Rifle Club:

W C Gardner	5	5	5	5	5	5	5	5	5	5—50
J F Hill	5	5	5	5	5	5	5	4	5	5—49

The 22d annual shooting festival of the New Yorker Schuetzen Corps, Capt. Dav. G. Yuengling, will be held August the 4th, 5th and 6th next.

A CLOSE FIGHT.—The long-talked-of rifle match between Jake Levy, of the Zettler Club, and Chas. Eiseman, of the New York Schuetzen Corps, took place at Zettler rifle range, 207 Bowery, on Thursday evening, March 20, for $25 and refreshments for the members of Zettler Club. The following is the result, 50 shots per man, 200 yards target reduced: Jake Levy, 220; Chas. Eiseman, 219.

MICHIGAN—*East Saginaw.*—At the nineteenth weekly practice of the East Saginaw Amateur Rifle Club to-day, the following scores were made (200-yard target reduced, possible 50):

Capt W J Shaw	4	5	5	4	5	5	5	4	5	—47
C Yawkey	4	5	4	5	5	5	5	5	5	—48
R F Corbyn	4	4	3	4	5	5	4	5	5	4—43
J H Howry	4	4	4	5	4	4	4	4	4	5—42
D T Disney	4	4	4	4	5	3	4	4	5	—40
H G Hamilton	4	4	4	5	4	4	4	4	5	5—42
F R Osborn	4	4	3	5	3	5	4	4	4	5—41

OHIO—*Cincinnati, March* 17.—The Cincinnati Shooting and Fishing Club had their third competition for club prizes to-day; distance, 200 yards; position, off-hand:

First Class.

M Gendillin	5	4	4	5	5	4	4	4	4	4—43
W Caldwell	5	4	4	4	4	5	4	4	4	4—42
L Fender	4	4	4	5	4	4	4	4	4	4—41
M Langdon	4	5	4	4	4	3	4	5	4	4—41

Second Class.

C M Epply	5	4	3	4	4	4	5	5	4	4—41
A Koehler	4	4	3	4	4	5	4	4	4	4—40
W Campbell	4	4	4	4	4	4	4	0	4	4—36

CHICAGO, *March* 22.—The regular weekly competition on the Northwestern Rifle Range did not come off to-day. Some improvements are being made on the range, which made it necessary to postpone the shoot, and, in consequence, the "Old Guard" among Chicago riflemen—the George H. Thomas Club—have passed a very lonesome Saturday afternoon. We might have gone out on the Lake View Range, where the members of our club have been always most cordially welcomed, but that spirited and kindly organization is just now busily perfecting plans for a new 200-yard range. Both clubs show a gratifying increase in membership, and applications are still coming from the best men in the city. The two organizations number at present about eighty good men and true, and in the event of any mob disturbances here, will make themselves felt as well as heard on the side of law and order. Two companies of forty men each as flankers to our splendid First Regiment, I. N. G., would make a mob of communistic rioters sick in a very short time. By the way, that was a splendid score that Mr. J. P. M. Richards, captain of your Seventh Regiment rifle team made on the burglars on the night of the 9th inst. Mr. J. E. Tilt, of the Lake View Rifle Club, has presented a beautiful cup to be shot for on the 24th of May, open to competition for members of the two clubs.

The Lake View Rifle Club at practice to-day made:

Chas Catlin	4	4	4	5	5	4	4	5	5	5—45
Jos Tilt	5	5	4	4	4	5	4	4	5	4—44
Wm Burns	5	4	4	5	4	5	4	4	4	4—43
John Macauley	5	4	4	4	5	5	4	4	4	5—42
Jas A Colchour	4	5	5	4	4	4	4	4	4	4—42
F Henroten	4	4	3	5	4	5	4	5	4	3—42

Guests:

D B Freeman	5	4	4	5	4	4	4	4	4	5—42

Lu.

THE SHELTON AUXILIARY RIFLE BARREL.—A Norristown, Pa., sportsman, who has tested the auxiliary barrel, writes of it: "I have tried it enough to satisfy myself that for sporting purposes I have no use for any other rifle. I used it several times during a day's brant shooting, and would now on a ducking excursion as soon think of leaving my gum boots at home as my auxiliary. I killed a brant goose at 200 yards, shooting from a rest, and I struck a loon on the wing, fully 75 yards off, shooting in this latter case without sight—simply as a shotgun. This, you may say, was chance; but I have killed a meadow-lark on the wing at 30 yards, and another sitting at 125 measured yards. These last were two successive off-hand shots. I would exchange my trusty Parker and my auxiliary for no other arm in the world."

Another gentleman writes of two barrels used by himself and brother: "We are very much pleased with them; in fact, I have sold my regular rifle, having now no further use for it. Having changed the rear sight into an open V sight, although I am no expert at rifle shooting, I can now shoot as accurately with it as I could with my other rifle. Having repeatedly driven the nail off-hand at 30 yards, and while in the woods have made excellent shots at 150 yards."

THE AUXILIARY BARREL.—In your issue of the 6th inst., I noticed an article on the merits of the auxiliary rifle barrel. I have used the auxiliary for some time, and fully agree with Mr. Cushing. In wild fowl shooting I have found it especially convenient, while for deer shooting it has no equal in the hands of average sportsmen, because it in an instant converts his trusty breech-loader that he is accustomed to use into a first-class sporting rifle. What I have found especially noticeable in it is the uniformly good practice made at moving objects by persons not accustomed to the use of the rifle. I would not part with my 10-bore Parker, with its auxiliary, for any other gun in the world. D. M. YOST.

Norristown, Pa., March, 22, 1879.

PENNSYLVANIA RIFLEMEN.

A weekly paper of Philadelphia, Pa., urges very strongly upon the riflemen of the Keystone State the hurrying up of their organization. The original call was responded to by a dozen clubs and officers elected as follows: President, W. H. Rauch, member of the Keystone Club; Vice-President, J. M. Root, of the Pennsylvania Club; Secretary, John Barry, "E" team, Second Regiment; Treasurer, A. B. Parker, Norristown Club. A committee are now busy in drawing up a plan of organization. The same paper urges a series of tournaments to be held each season, one in May, one in July, and one in September, to be contested by teams from each club, enrolled or affiliated with the State Association. Under such arrangements there would be a gala time indeed, and this manly and scientific amusement would in a short time become as extremely popular in Pennsylvania as it now is in Massachusetts, New York, New Jersey, Connecticut and California. Then, again, every team would shoot the same day and under the same conditions, and at the end of the year, the team which succeeded in recording the highest total of points in the three matches would by their superior skill be justly entitled to the Championship of the State of Pennsylvania.

Philadelphia boasts quite a number of Rifle Clubs, which have mostly been organized within the last year or two. The Keystone was the first to organize, having been formed by a party of gentlemen who met for pleasure, calling themselves the Twentieth Ward Rifle Club. In a little while the name was changed to the "Keystone," with quite a number of prominent business men on its roll. The riflemen have met with considerable trouble in getting a proper range on which targets could be set up from 100 to 1,000 yards, and at the same time within convenient distance of the city. This difficulty, however, will be partly met when Company C., 6th Regt., New Jersey, N. G., gets possession of the promised park in Camden, formerly known as the Camden Schutzen Park, which will be fitted up by the State of New Jersey with club houses and a range from 100 to 500 yards, with the possibility of 1,200 if desired. The Philadelphia clubs doubtless will be invited to shoot on this range, and the matches of this summer will be principally shot there.

The Keystone Rifle Club grounds, at Sanger Park, will be improved, and a shooting house erected as soon as the weather opens. The club is in a flourishing condition, containing some 25 active and 25 contributing members. The officers are as follows: President, B. Tomer; Vice-President, Wm. Bower; Secretary, A. J. Kensil (977 N. 6th street); Captain, P. A. Schemm; Vice-Captain, L. J. Sommers.

The Pennsylvania Rifle Club consists of some forty active members, who have shot some very creditable matches, particularly last summer. Among the members are some of the best shots in the city. Their Captain is Dr. Price; H. H. Woodruff, Secretary (633 N. Broad street).

The Girard Rifle Club is composed of gentlemen living in the northwestern part of the city, and have an active list of twenty members, who are most all shooters. Their officers are as follows: President, Jas. Childs; Captain, W. F. Wallace; Vice-President, Jno. Helling; Vice-Captain, H. Taylor; Treasurer, Major Helling; Secretary, Chas. Hinckle (1,306 Girard avenue.)

The Social Gun and Rifle Club. The membership of this club are gentlemen of this city, who summer at Riverton, N. J., where they have a range. They intend going into practice at 200 yards, as soon as the season opens. The officers are Capt. Elleson, and secretary T. Perot Ogden (314 Vine street).

The Norristown Club is one of the crack clubs, and have a range on an island in the Schuylkill opposite Norristown. Their Captain is A. B. Parker, of Norristown, who is a most enthusiastic rifleman.

The West Philadelphia Club is composed of gentlemen living on the west side of the Schuylkill. They have their range at Stokes', on the Darby road, at Angora. Secretary, F. Warden, 741 Spruce street.

Company E Team is composed of members of Co. E, 2d Regt., N. G. They shot the first match last summer with the Keystone. Their Secretary is John Barry, 806 Chestnut street.

Company C, 6th (N. J.) N. G., is made up of members of Co. C, 6th New Jersey Regt., who live in Camden. This team is quite popular in Philadelphia, they having shot several fine matches there last season. Their Captain is Geo. Reed; A. J. Millieth, Secretary, Camden Post-office.

Yachting and Boating.

YACHTING NEWS.

NOVA SCOTIA YACHT SQUADRON.—Through the exertions F. C. Sumichrast, Esq., Honorary Secretary of the club, the Department of Marine of the New Dominion will issue Certificates of Competency to yacht owners capable of passing the examination instituted for Masters in Ordinary as at present required of merchant captains. The examination is voluntary; only yacht owners are eligible, certificates apply to the yacht owned when examined only, specified length of sea-service is not exacted, the fee charged is $10. The holding of such a certificate will give the owner official standing and recognition as a competent fore and aft seaman and navigator for all waters at home or abroad.

COLUMBIA YACHT CLUB.—The Columbia Yacht Club is coming into prominence among the junior metropolitan clubs, and its adhesion to Corinthian principles will secure for it popular favor and an increased fleet. It was organized 1867, incorporated a year after, and now possesses a fine club house and conveniences foot of West Eighty-sixth street, North River. Initiation fee $5, and monthly dues $1.25. Concerning the adoption of Corinthian rules by this club, their nature and to what they must lead, we will have more to say anon. The club deserves the support of all who desire to see honest yachting take the place of machine jockeying, which now has its strong-hold reduced to New York waters only, but which shows signs even of givin

way in this neighborhood to a more enlightened and beneficial policy. The small fry must learn to take the bull by the horns and abolish sand-bags and live weight if they wish to see yacht racing thrive.

BUFFALO ITEMS.—The season will probably open about the middle of April. It will mark an era of fresh life and increased growth in yachting affairs on the lakes. The Buffalo Yacht Club used to anchor their vessels wherever a snug nook could be found, but this summer they will all moor in the Erie Basin, just inside the stone breakwater, under the supervision of an appointed boat-keeper. A club house is in contemplation.

ROWING ON LAKE GEORGE.—The open amateur regatta of the Lake George Regatta Association will be held at Lake George, N. Y., on July 16 and 17, 1879. Handsome prizes will be offered, and satisfactory arrangements are in progress in relation to the transportation of crews and their boats from a distance, and a limited number of crews will be furnished with board free while at Lake George. The programme of the races has not yet been fully decided upon, but will embrace fours, pairs, doubles, singles, and perhaps others. The regatta will be governed by the rules and regulations of the National Association. For particulars address W. Scott Whitney, Sec'y, Lake George, N. Y.

It is proposed to make this regatta the forerunner of others to come. There is as fine water as the world produces at Lake George—no obstructions, such as tide or current; and it will be an unusual thing at that time of the year if there is not a mirror-like surface to the lake. The course will be as straight as a line can be drawn. A view of the whole can be had from the banks of the lake. There will be no trouble in land conveyances, as the crews can come via railroad to the wharf of the steamer on Lake George, at Ticonderoga. Everything will be done to make it pleasant and interesting to all.

ST AUGUSTINE (FLA.) YACHT CLUB.—The club held a review, March 6, in which the yachts *Seminole* (flagship of Com. Douglas), *Arrow*, *Fletching*, *Maud*, *Florence*, *Nellie*, *Alexis*, *Venus*, *Gipsey*, and others took part. The annual regatta was sailed March 13, with a very flattering list of entries. The Regatta Committee consisted of the following gentlemen: J. H. Rutherford, W. B. Beck, and C. Livingston, with Commodore Douglas in general charge. Course, ten miles, and five miles for third class. Time allowance, one minute to the foot, and thirty seconds for third class. A summary is appended: First Class—First, *Vixa*, 59ft. 3in., 2:40:30; second, *Florence*, 33ft., 2:40. Second Class.—First, *Idlewild*, 24ft., 2:24; second, *Mamie*, 26ft. 3in., 2:32. Third Class.—First, *Carrie*, 16ft. 2in., 2:36; second, *Minnie*, 18ft. 2in., 2:50:30. Special First Class—*Maud*, 27ft. 10in., 2:16. Special Second Class—*Alexis*, 24ft., 2:27:30; *Daisy Burns*, 16ft. 3in., 3:59. Special Third Class—*Traveller*, 22ft., 2:33:45; *Bessie*, 19ft. 9in., 2:55:30.

THE ST. AUGUSTINE BAR.—The St. Augustine *Press* says that the pilots report ten feet of water on the St. Augustine bar at *low water*, and seventeen and eighteen feet at high water. What bar on the south Atlantic coast can do better than that; and what pilot was ever smart enough to keep up with that shifting bar for a week at a time?

PROVIDENCE YACHT CLUB.—This club was organized in 1875 and has now a fleet of 1 schooner, 12 sloops, 8 cats, and 2 catamarans. Number of members 40. Colors, red pointed burgee, blue diagonal stripe with white star. Headquarters Providence, R. I.

YACHTING ON NARRAGANSETT BAY.—*Editor Forest and Stream:* I read the description of the English cutter *Freda*, given in your last issue, and think she must be an extraordinarily fine craft; but I cannot understand where all the sails you mention can be set on a sloop-rigged boat. Will you explain her rig more fully, or give a cut of her in your paper? The *Freda* may be very comfortable at certain times, but why, I am at a loss to perceive, having been accustomed to a very different style of craft. I think that for the many good qualities combined that those of Narranganscit Bay cannot be excelled, and although calculated more for bay service, they can do very fair work when caught outside. At Mr. Davis', our yachting headquarters here, a large number of fine yachts are wintered every season. Mr. Davis is the builder and owner of the famous *Wanderer*. His yard is located on Allen ave., and is quite a place of resort during the warm season. Mr. Davis has just launched Mr. Arnold's sloop *Tidal Wave*. He has also a 19-foot boat on the stocks. The *Wanderer* has taken so many prizes in the bay that the yachtsmen have got discouraged and won't sail against her, especially so in the Newport regatta last season, when she came off victorious against all the picked craft of the vicinity, much to the astonishment of Newporters, who thought to beat her in rough water. Some of our yachtsmen have made an early start this season, so as to take in the spring fishing; the *Starlight*, a sloop of 25ft., owned by R. W. Jenks, was rigged last week. She is a very good sailer, and has won several prizes, but the past season has found a formidable rival in the sloop *Hope*, owned by E. J. Anderson, and some exciting contests between them are looked for the coming season. The *Irene*, cat-rigged, 25ft., is also ready for work. The Providence Yacht Club was organized in 1875, and has nearly one hundred members and a fleet of yachts that would compare well with those of any club in the States. They own the handsome building they occupy, and lease the entire wharf privilege on which it is situated, and which commands a fine view of the bay. The club gives several regattas each season which are open to all other clubs that extend to them the same privilege, with the exception of the cup races, of which they have two. The first of these was given by Harry J. Flint, and has to be won three successive seasons by the same yacht before the holder of it becomes the owner. This cup is sailed for in June, and has been won two seasons by the sloop *Peck and Dixon*, owned by C. H. Peck. The second cup was given by E. J. Anderson, with nearly the same conditions, and is held by *Wanderer* at the present time. This cup is sailed for in September, and is over a triangular course, thus giving sloop yachts a great advantage. One notable feature to be seen on most of the yachts of Narragansett Bay, and which is seldom seen elsewhere, is what is called the "slide rig," which does away with hoops on the mast, and in connection with the brass blocks, which are universally in use, not only gives a yacht a neater appearance, but, as Mr. Davis informs me, "are of the greatest advantage in doing windward work, holding the luff of the sail close to the mast, and not allowing it to swing to the leeward as it must do with hoops." This style of rig with brass blocks is manufactured in Providence solely by Chas. Manchester. RHODY.

YACHTING ON THE DELAWARE.—The coming season promises to be one of unusual activity. The Quaker City Yacht Club, of Philadelphia, held their monthly meeting March 12. Owing to the many accidents that have happened to the boats in crossing the bar opposite Cooper's Point, the regatta committee proposed to change the starting and finishing of the matches from off Laurel street wharf on the western shore to off Cooper's Point, Camden, N. J., on the eastern shore of the river. No definite conclusion was arrived at, and the matter was laid over until the April meeting. The annual spring regatta of the club will be sailed on Thursday, June 12. The fleet of this club comprises the following yachts: First class—*Coquette*, *Clara*, *Columbia*, *Minerva*, *White Wing*, *Phantom*, *N. Spering*, *Salin*, *William Tell* and *Kingston Goddard*. Second class—*Stella*, *Lillie*, *Eliza*, *Chris. Gallagher*. Third class (open boats)—*Bianca*, *Post*, *Ella*. The *Phantom*, *Spering*, *Eliza* and *Gypsy* were very badly damaged in the great storm last October, but will be repaired. There will be three sloops added to the first class before the season opens, two from New York and one now building by Fisher, of Kensington. Also some five or six of the third class, including the famous *Adelphi* and the *Fashion*, *Selby*, *Camden* and *Nichols*, formerly of the Delaware Yacht Club. Wm. Wiser, Jr., of Bridesburg, is building a 22-foot boat for parties of that place, which will probably be added to this club. Collins, of Camden, is also building one, which is expected to be a regular flyer; she is 27 feet on deck, 25 feet on keel, 11 feet beam; mast, 40 feet; boom, 36 feet; gaff, 22 feet, and will carry 150 yards of canvas. The present efficiency of this club is due to the untiring zeal of its officers, especially of its Commodore, A. F. Bancroft, who, in addition, is an active member of a cricket club and gun club. Capt. R. G. Wilkins, of Cooper's Point, is building two boats—one of 15 feet and the other of 18 feet—which you will no doubt hear from during the coming season. C. C.

BOSTON PROSPECTS.—The Corinthian spirit runs higher than ever in Boston, and this summer will see more men sailing and navigating their own vessels than in years gone by. Cutters are rather growing in favor among the "level-headed"—no disparagement intended to those who do not believe in them, however. The feeling seems to tend toward the cutter rig for vessels over 50ft., but not under. It is hoped that some enterprising person will build an auxiliary steam yacht and start in these waters a specimen of that useful and convenient style of vessel. Both Beverly and Nahassett Clubs seem enterprising as ever, and will both show additions in their forthcoming lists. Salem's new club will probably keep in the fashion and give a union regatta, as its sister clubs have done during the past summer. There is plenty doing at City Point in the small yacht building line. Among this summer's fleet will be several craft familiar to New York yachtsmen, and we will always be glad to see more of them in our harbor, even if the club signal does show that they hail from the west of the "cape." WANDERER.

GROUND TACKLE.—The great majority of our yachts are lamentably deficient in ground tackle. This is what the owner of a sea-going schooner of sixty tons says on the subject: "I carry as ground tackle 300 fathoms 6½in. hawser, one 500lb. anchor, one kedge, one anchor 175lbs, one anchor 250lbs, 75 fathoms ⅜in. chain, 500 fathoms 3½in. hawser, and at least three or four warping and mooring lines, of length and size proper. I have a good hold to stow all this gear, so that it is handy. I should like to see a New York fancy yacht, or a Boston one either, for that matter, stow away the amount of tackle proportioned to her size. I never saw a proper place reserved for it in them. In truth, most yachtsmen would laugh at the outfit, and yet it is hardly up to the amount required by the text-books of the United States Naval Academy for a vessel going to sea."

THE HERALD ARCTIC EXPEDITION.—The San Francisco Yacht Club will muster in full force, as per club resolutions, and convoy the Polar Expedition out to sea. Capt. De Long, of the *Joannette*, and his officers have been tendered the hospitalities of the club.

WANTED—A flush-deck, sea-going steam yacht. Also a Shadow canoe in fair order. Address the Yachting Editor, this office.

BOSTON TAKES TO KEEL AND LEAD.

BOSTON, Mass., March 3, 1879.

EDITOR FOREST AND STREAM:

I notice in your columns that there is considerable discussion as regards the merits of the cutter, centreboard boat and sharpie, but that very little is said about our keel boats. I think them not only the most comfortable boats of their size, but in a breeze and a jump of a sea they are the smartest boats we have in our waters and for aught we know can equal, if not beat, the English cutter. In our keel boats we gain ability in rough water, and cabin accommodations that cannot be had in either of the three above-named boats—two qualities alone that the Boston yachtsman dislikes to do away with. We have here but one genuine cutter, that was brought over from England with great expectations, although there is now less faith placed in her as regards speed. But when one comes to comfort I can't see where it can be found, the cutter being so very deep and narrow that if a person wishes berths he is obliged to sacrifice transoms and narrow his floor so much that a table cannot be stationary without being very much in the way; and while under weigh with any wind, it is next to impossible for the steward to do any cooking, consequently a cold lunch has to be served to satisfy the enormous appetite the yachting man generally has. The cutter enthusiast might say there is comfort in the feeling that the boat is uncapsizable. I agree with him on that point, but this comfort is also had in our keel boat, as we carry heavy iron or lead keels. He also claims that he has height in his cabin, but to get this he sacrifices the beam. As for the centreboards they are a class of boats that are fast going out of use in and around Boston—*i. e.*, boats from 20ft. upward—as it has been and is still being shown that a keel boat in a breeze is the smarter of the two; and with that speed the owner gets comfort as he puts his centreboard box out of his cabin and has his boat deeper, consequently more head room, which is a great convenience. We allow that in moderate weather the centreboard boat is more than a match for the keel in going to windward, but as soon as the sheets are lifted, the keel not only holds her own, but in the majority of cases will outrun the centreboard. It might be said that the latter has beam, and makes up the room she lacks in depth. To this I can say that more than one-half the keel boats we have here have a beam equal to that of the centreboards; also, that a number of centreboards have been changed to keels, and are now taking prizes and beating centreboard boats who took prizes away from them before they were changed.

In the keel boat of 35ft. length one can have a forecastle, with a stove large enough to have an oven, and stowage room enough for stoves, crockery etc., besides accommodations to sleep a man and a boy. Then we come to the cabin, which is high enough to allow the average man to stand up straight in. On either side the companion-way are two large closets, one for light sails and storage generally—such as overcoats, oilskins, rubber boots, etc—while the other is used for a water-closet, which is below the line, consequently giving ample head-room, to say nothing of her wide transoms and floor. This size boat will carry all the way from 1,000 to 3,000lbs. of iron or lead on her keel, consequently is as uncapsizable as the cutter.

Here allow me to quote from "B.," in his article in your number dated Jan. 23, on the "Construction of Sharpies:" "Being narrow, they are rather crank, and in fresh breezes must be eased by slacking the fore-sheet, as too sudden easing of the helm slews the stem so swiftly as to take in water before the boat rights up in answer to relief from pressure." I agree with him in thinking them perfect for oyster tonging, or where the water is so shoal that our light-draft centreboards cannot be used. But having plenty of water here, I am inclined to think that their good qualities will hardly be appreciated by the yachtsmen in and about Boston. There are now being built here a number of keel boats, ranging from 20 to 50 feet on water line, four of which are schooners, the rest sloops and cat-rigs, a style that is not used here as much as formerly, on account of the heavy weather helm they carry, running off; and to steer them at all, even by the wind, it is necessary that a deep skag should be placed on the keel, thereby making her draw from 7 to 9in. more water.

I mentioned what are going out of use in Boston waters, so now I will give you the dimensions of two or three sloops, the styles of which are fast coming in use here, as the entries in the race next season will show a larger number in this class than any other. Mr. Green is building for Thos. Stone, of East Boston, a boat (modeled by R. M. Woods, of E. Boston), with which he expects to clean out the *Viking*, the keel sloop that took the first prize away from the famous centreboard *Shadow*, last fall, in Capt. Weston's outside race, under the auspices of the Dorchester Yacht Club. Her dimensions are as follows: Length over all, 37ft. 6in.; water line, 33ft.; beam, 12ft. 8in.; depth, 6ft.; draft, 7ft. She is quite sharp forward, also on the floor, as you will see by the depth, having 42in. rise to the bilge; is very lean aft, with a V stern. She has 22in. sheer; has 25in. keel outside the garboard, with 1,200lbs. of iron bolted to it amidships; has also a tremendous amount of dead wood aft, which, it is claimed, is going to give her power in a breeze, especially with any sea running. This point, of course, can only be satisfactorily proved to us by practical illustration, there being no other boat with such an amount of dead wood here in Boston. They also believe that canvas makes the boat go, and are putting very large sails on her, carrying a 46ft. 6in. mast, which is stepped well aft; bowsprit, 14ft. outboard to stay, and a 22ft. topmast. Mainsail will have 28ft. hoist, 42ft. on the foot and 22ft. head. Wood Bros. are building a boat for themselves, with which they expect to beat the *Gael*, as they want to prove their model superior. She is 35ft. over all; 31ft. water line; 11ft. 6in. beam; 5ft. deep; 6ft. draft; is very sharp forward and on the floor, having a rise of 33in. to the bilge; is also very much cut away aft, with a V stern—in fact there is hardly a straight line on her, as they are all hollow. She will make a very pretty boat on the water, having 20in. sheer. Her keel is very deep—being 27in.—on which she will carry 1,500 lbs. of iron; and in races they intend to carry nothing but shifting ballast. The amount will be about 3,000lbs., which cannot help giving the boat a great deal of power. It can also be very easily handled, as she will be an open boat for this season. Jacob Rood is about finishing for Messrs. Blaney, of East Boston, one of the prettiest boats that will float the coming season, the workmanship being beyond criticism, and, should she prove as fast as her looks warrant, will be the hardest competitor the third class will have. Her sails will be extremely large, and it is thought they are overdoing it, and that she will not stand up under such a pressure, except in very light airs. Length over all, 29ft.; water line, 25ft. 10in.; beam, 9ft. 8in.; depth, 3ft. 6in.; draft, 4ft.; sheer, 18in.; hollow lines forward and on the floor, also very fine aft, with a Y stern; is to carry 1,000lbs. of iron on her keel, which is 20in. deep. Mr. Rood is also building a cat-boat, for W. B. Pigeon, of East Boston, wherein he combines keel and centreboards. Length, 23ft. 5in.; water line, 19ft. 6in.; beam, 9ft. 2in.; depth, 30in.; draft, without board, 2ft., having a 10in. keel-board, being 7ft. by 2ft. 6in. She is very flat on the floor, and is straight sharp forward. It is a noticeable fact that hardly a boat is built here now but that she has some weight on her keel, and that the old boats are obliged to follow suit in order to keep up their reputation for speed. HALLIARD.

A DELAWARE RACING CRACK.

The cat-rigged yacht *Charles Cohill* was built in the spring of 1877 by Captain R. G. Wilkins, and launched in time to participate in the annual regatta of the Cooper's Point (Camden, N. J.) Yacht Club, May, 1877. She is 17ft. long on deck, 12ft. long on keel (over all), and 7ft. beam. Spars—mast, 32ft. long, 6in. thick at deck; boom, 28ft.; gaff, 17ft. Depth amidships, 22in.; forward, 27in.; aft, 30in.; spread of canvas, 95yds. She won the champion flag in the regatta of 1877, and has held it in the three subsequent regattas of the club. She was challenged by the *Mayberry* for $50 and the champion flag, which race was sailed July 18, 1877, from Cooper's Point to Chester Buoy and return, a distance of upward of 35 miles, the *Cohill* beating her adversary more than three miles. She next entered Smith's regatta of 22ft. boats, and won first prize, a handsome silver tea set, but was swindled out of it, although she passed the home stakeboat two miles ahead of any boat in the fleet, the judges deciding—after accepting her entrance fee—that the competition was not open to Jersey boats. During the same year (1877) another race was sailed from Cooper's Point to Chester Buoy and return, in which the *Cohill* participated. On her return up the river, when off Red Bank, a heavy thunder shower came up, and she was struck by lightning, splitting her gaff, and for a while paralyzing her crew. The rain poured down in torrents, and shut out the view of all the boats. After the gust cleared away, the gallant craft was seen—still on the lead—heading for the Horseshoe under full sail, although three-fourths of

the ties along the gaff had been cut by lightning, and her wet sail bagged out like a balloon. She maintained the lead to the end of the race. The above were all the races of any importance in which she participated during that year. In 1878 she was challenged by the *Dish*—a new boat, built expressly by myself to beat the champion—for $50 and the champion flag. The boats started, and after a spirited and well-contested race, during which they passed each other several times, the superior qualities of the *Cohill* in breezy weather carried her through, winning by 2m. over a course of ten miles. She was next challenged by the *Holland*—a new boat, whose speed had been proven in a race with the *Kramer* and other boats of her class—for $50 and the champion flag. This race was sailed on August 8. The wind was heavy at starting, but both boats carried whole sail. When they reached Gloucester Point it was blowing a gale (dead ahead). The *Cohill* was about two miles on the lead, and the *Holland*, pitching like a cork in the heavy seaway, required two men constantly bailing to keep her from swamping. At the Horseshoe buoy the *Holland* gave up the contest, and ran back to Gloucester. The *Cohill* was then over three miles on the lead, and the *Holland* being out of sight, her captain (Harry Clay Fank) wisely settled away, and tied in a double reef, and went over the remainder of the course comfortably. The *Cohill* was the only boat, large or small, that reached Chester Buoy, although several large boats accompanied the race. This contest seemed to settle the championship question for that season, as no boat accepted her challenge. On August 21 Captain Weaver had a regatta of the Kaighn's Point fleet, and invited the Cooper's Point boats to participate. The *Cohill*, although not in first-class order, entered this regatta and won the first prize, the champion flag. She is now the possessor of three champion flags, winning one of them—the club flag—four times. She will come out this year with a new sail, new spars, and otherwise rejuvenated and prepared to sail any boat of her class carrying one sail. I consider the *Cohill* a most remarkable proof of the perverseness of "wood-life." I have devoted a lifetime to the construction of boats for speed; have handled them from childhood; have driven them, coaxed them, humored their little eccentricities, and made them go despite themselves; but this *Cohill* boat is the most self-willed piece of wood I ever undertook to manage. When she means business it is no more trouble for her to go than it is for her namesake to write a sporting sketch or knock over a rail bird; but neglect the least little thing in her hull or rig, and she is as stubborn as a mule. With a crew that will stay with her, she delights in going to windward through a heavy head sea, and there is where she has had the best of all her competitors. R. G. WILKINS.

THE SAN FRANCISCO YAWLS.

NEW YORK, March 23, 1879.

EDITOR FOREST AND STREAM:

I read with much interest the letter from California which appeared in your paper, and never before did I feel such an inclination to "Go West" as when I learned through this communication of what a yachtsman's paradise those Western waters supply. Here we all know what it is to get our plans disconcerted, and our enthusiasm lessened by calms and varying winds; but happy, land—or rather, happy water! The yachtsman of those parts always has a breeze that he can bet on, and the steam yacht gets no advantage over him. When I think of these things, there appears to be something better to live and hope for, and nothing but rhyme and metre is adequate to meet the needs of expression. While "Saucelito" has interested me much, and commended himself by the account which he gives of the new yawl rig, and by the general temperateness of his statements, what about those 35-mile breezes? Before I start for California, let me know if this is correct. He says: "Our average afternoon breezes blow about 24 miles, and from that up to 30 miles per hour." And again, in reference to *Fawn*, 37ft. long on water-line: she "stood up to her canvas beautifully, and went to windward against a 35-mile breeze in first-class style, carrying all sail." Now, a breeze of half this weight would be sufficient to make any yacht here of the size named take in some sail, and a 35-mile breeze would invite most of them to stay at their anchorage, give a little more scope, and get an extra anchor out ahead. There is a knot in this yarn somewhere; won't you take it out, please? BOB STAY.

In noting the wind force, our correspondent, "Saucelito," was guided no doubt by the observations of the Weather Bureau made at an altitude. A considerable allowance should be made for the force nearer water level, especially where shielded or broken by surrounding bluffs. Generally speaking, a 16-mile wind is a fresh one, an 18-mile breeze requires reefing, a 20-mile is a close reef breeze, and 24 miles a gale, while 30 miles is a fresh gale. The San Francisco yachts are stiffer than our Eastern craft, and carry much less canvas; but it seems improbable that they can carry whole sail in even a net 20-mile breeze. On this point, however, "Saucelito" will be able to give accurate information.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout—*Salmo fontinalis*, Land-locked Salmon—*Salmo glover*; White Perch.

TROUT FLIES FOR APRIL.

☞ The following are imitations of natural insects which first appear on head springs, and later in the season are found on ponds and rivers:

BLACK GNAT OR MIDGE.—Body and feet, black; wings, sub-hyaline.

DARK CLARET GNAT.—Body, dark claret; feet, black; wings, sub-hyaline.

BRIGHT CLARET GNAT.—Body, bright claret, mixed with yellowish gray; feet, ginger; wings of one sex, hyaline, of the other, cherous.

OLIVE GNAT.—Body, dark olive; feet, ginger; wings, hyaline.

GRAY GNAT.—Body, dark fox fur, mixed with dark claret; feet, gray; wings, hyaline.

DARK FOX.—Body and feet, dark fox fur, mixed with lemon-colored mohair wings, sub-hyaline; tail, three fibres of dark gray hackle.

BLUE BLOW.—Same as dark fox, blue shade.

POOR MAN'S FLY.—Body and feet, hare's ear and yellow mixed; wings, slightly mottled gray.

RED FOX.—Body, fur from a fox face, mixed with yellow; feet, red hackle; wings, pale gray or sub-hyaline; tail, mottled wood-duck feather.

BRIGHT FOX.—Body and feet, brightest part of fox fur, mixed with yellow; wings, brightest hyaline; tail, pale yellow.

FISH IN MARKET—RETAIL PRICKS.—Bass, 20 cents; smelts, 10; salmon, fresh, $1.25; shad, per pound, 18 cents; white perch, 15; frost fish, 8; halibut, 18; haddock, 6; codfish, 6; herring, 5; flounders, 8; eels, 18; lobsters, 12½; sheepshead, 15; scallops, per quart, 37; whitefish, 15; red snapper, 12½; hard crabs, per 100, $3.

For Forest and Stream and Rod and Gun.

Not in the whirl of the bail-room—
Not in the city's mart,
Enters the strength of my brain-work,
Enters the warmth of my heart;

But where the wild mountain torrent
Dashes from rock to rock,
And noble woods of giant pines
Close in their strong arms lock

The deep, still pool, where hides the trout,
My thirst for blood finds rest.
And as I "yank" the beauties out,
Then—then! I am at my best.

Athens, Ga., March 21, 1879. DOCTOR.

☞ The salt and fresh water fishing season properly begins now. On the first of April, the season is open by law, though the selection of "April Fools' Day" does not verify old Sam Johnson's adage of a "Stick and a string, with a fish at one end and a fool at the other." The trout is of course the chief fresh-water fish in request during April. In salt-water we now have flat-fish and flounders (two different fish); soon will come blackfish sea bass and weakfish, and still later, about the middle or end of June, the bluefish and sheepshead.

—Next Tuesday, when our readers visit Fulton Market, let them look sharp for fish, especially trout. It will be the first of April and the opening of the angling season, when trout may be caught and sold without let or hindrance from constable or public prosecutor. Mr. Eugene Blackford promises us a display which will even eclipse all his past efforts; and we have no doubt that the exhibition of dead and living fish from the various ponds and streams of Canada, New England, and the middle States, with all their peculiar characteristics of shape, size, and color, will afford as interesting a study as can well be conceived. The advent of the trouting season brings a sense of exhilaration, because it opens the door to the genial season of spring, when the buds begin to swell, and the ephemeridæ break their shells at the headwaters of the streams; and the air becomes milder and pleasant to the senses. The farmer puts his plough into the soil, and the farmers' boys look wistfully toward the meadows, and hint in vain to their obdurate paternal that "trout bite pretty well now." The old man lays the string onto the cattle with greater vim than before, but the boys get no fish on their string just then—not until spring ploughing is done. Last week Mr. Blackford received from Jupiter Inlet, Florida, a strange fish, the body of which, back of the opercles or gill covers resembled the haddock, but its head was like that of a muscalunge. He sent it to Prof. Baird, of the Smithsonian, who identified it as *Centropomus undecimalis*, a West Indian fish, for the first time recorded on our coast. Mr. B. also had a *Cryptacanthodes maculatus*, or white eel. Mr. Blackford is doing a good work: He supplies the belly with food, and the brains with subjects for fresh thought.

—Charles Gauthier, of Sandwich, Ont., has shipped from that place over $20,000 worth of fish since October last.

MASSACHUSETTS—*New Bedford, March* 17.—"Herrings have come!" is the cry that salutes your ear from the fish markets. Probably no one species of fish enters more generally into the daily food of rich and poor in southern Massachusetts than the herring or alewife, and their coming is anxiously looked for. To-day a few have been taken at the Vineyard and at nearly all the traps on the main land. Eels, cod and halibut are plenty. CONCHA.

VIRGINIA—*Leesburg, March* 17.—The spring is nearly on us here, and the coarser fish are being brought into market every day. Report says the fish are caught in nets and then marked in the mouth to look as if caught with the hook. T. W.

INTERESTING FACTS FROM WASHINGTON TERRITORY.—The following facts are contained in a private letter to the editor from a prominent officer of the U. S. Army. They are too valuable to be pocketed; so we print them at a risk of violating etiquette:

FORT WALLA WALLA, W. T., Feb. 27, 1879.

DEAR SIR—Your kind favor of the 29th ult. came duly to hand, also the "Sportsman's Gazetteer," which is as complete a compendium of everything interesting the sportsman as could be gotten up, and far surpassing anything of the kind ever published before for general information. Yesterday the fly material arrived from MESSRS. Abbey & Imbrie, giving complete satisfaction, and a better selection than I would probably have been able to make myself.

I think we will have excellent fishing this season, and I hope that the very high water we are having now will play smash with the many fish traps obstructing the streams hereabouts. I think we will have a good season for game, as it has not suffered much during the winter. A few Wilson snipe wintered on the reservation. I shot a single specimen of the Virginia rail here on the 16th of January, when the ground was covered with about eight inches of snow. The bird was in good condition, and is now in the hands of Dr. T. H. Brower, of Boston, Mass., for examination. I think it differs a little in its general plumage from the Eastern bird. If the noble red man leaves us alone I hope to be able to make a trip to the Wallowa Lakes this summer to obtain some of the redfish found there and have their proper status finally settled. It is about time that it was done by some one. Prof. Baird wrote me last fall that it is possible that the fish is the one known under the name of *Salmo Kennerbyi*.

Last August, while after the Bannock Indians in Northeastern Idaho, I passed within a few miles of the Salmon Lakes, the headwaters of Salmon River, where the same fish, or at any rate one closely allied, is found, and they were running in large numbers then. I saw some taken and pickled a few days before only, and their flesh was white, while that of the fish in Wallowa, and also the Fayette Lakes, is red or pink. The upper Salmon River country must be a sportsman's paradise, both as regards fish and game, and a person has to see for himself to believe the stories that can be told of that section. The river takes its rise in the Sawtooth range, and the name is a very appropriate one for this mountain—it would be a hard matter to find a rougher one. It is the home *par excellence* of the ibex, and I believe these animals are found there in larger numbers than anywhere else in the U. S. As far as trout are concerned, I never saw finer or larger ones, and more of them, in any other section I have visited, and they are not at all particular. It will not be long before that part of Idaho will be easy of access most of the way by rail, then you may look out for trout stories that will beat those from the Rangeley Lakes by considerable.

CHS. BENDIR.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild ducks, geese, brant, etc.

WHAT IS A SAFE DISTANCE?—Not only the probabilities but the possibilities must be taken into account in the use of fire-arms. An incident illustrating this and showing how far some guns will carry, recently occurred in Brooklyn, where a member of the Excelsior Gun Club received a painful cut in the eye from a shot-gun fired at a distance of 126 yards.

MASSACHUSETTS—*Plymouth Co., March* 19.—I have seen several flocks of geese this week moving along slowly north. They do not hurry at this early season. Coots, sea ducks and brant are coming in daily from south of the cape, where they have been for two weeks past. No snipe yet. S. K., JR.

NEW YORK—*Good Ground, L. I.*—The goose shooting season at Shinnecock Bay was opened with great *eclat* on Tuesday, the 18th, by that prince of baymen, Bill Lane. Capt. R. C. Johnson, of the Jersey City Heights Gun Club, and party, secured eighteen, and the Captain came home on Thursday well loaded with geese and ducks. There is a good many broad-bills and red-heads in the bay, but everything is dropped for geese. As the Captain came away, large numbers of geese could be seen on the wing, and the parties were having, from the reports of the guns, more than good shooting. Lane's shooting-box will be well filled the coming fortnight. JACOBSTAFF.

BARABOO VALLEY SPORTSMEN'S CLUB.—The Baraboo Valley Sportsmen's Club, of Baraboo, Wis., has the following officers: M. H. Mould, Pres.; J. F. Kartack, Sec'y; J. W. Davis, Treas.

MICHIGAN—*Detroit, March* 22.—A. C. Hobbs, Esq., of Union Metallic Cartridge Co., passed through this city on the 21st on his way to St. Clair Flats for a week's sport among the ducks. He has brought a patent refrigerator with him this time to ship his ducks home in, having lost all he shipped last fall. They spoiled on the way. DRUID.

Our correspondent makes no mention of that Sluggs' patent, the working of which we believe Mr. Hobbs proposes testing.

—Wild ducks are reported to be exceedingly abundant in the vicinity of Hall's marsh and the mouth of Detroit River.

CALIFORNIA—*San Gabriel, March* 10.—Last week three gentlemen went from here to Alamedas, on the coast, some twenty miles distant. They returned after two days' shooting with one hundred and fifteen birds. Of these about fifty were snipe; the remainder ducks and geese. C. B.

ANOTHER ODD FREAK.—*Toronto, Ont., March* 1.—*Editor Forest and Stream:* About forty years ago I was out shooting with Mr. John Crooks (now, like myself, at present a resident of Canada West), along the banks of a very crooked and tortuous stream in Wiltshire, England. Was about fifty yards from my companion when I rose a duck and drake, at which I let fly with both barrels, and thought that I had surely the honor of killing them as they both fell. It seems, however, that Mr. Crooks had sighted them at the same time and fired simultaneously with myself, so close together that I never heard his shots nor he mine. He immediately shouted, "Why did you not fire?" I replied, "So I have, and killed them both." He could not believe me, but said, "Why I fired and killed the ducks," and could not be convinced no more than myself, until we examined each other's guns and found them both smoking and empty. TORONTO.

A GREAT SHOT.—*Berlin Heights, March* 14.—*Editor Forest and Stream:* I can truthfully give you the details of a shot made by myself this morning. Was visiting, professionally, H. H. Vrelland's house, when H. H. came to the door, saying, "Doc., hurry, here's a shot for you." Of course I hurried, and when I got out of the house I saw a flock of geese flying by. To get out my 32 Smith & Wesson, and make a shot, was but the business of an instant, and down came a goose—a very fine one, too. The goose had both wings broken, and the ball lodged a little above the fracture in the opposite wing. The distance from where I shot to where the bird fell was 174 paces. I held what looked to be ten feet ahead and four feet over. There were many who witnessed the shooting, and, if it is doubted, I can bring the best of proof, and abundance of it.

M. M. B.

RUST PREVENTIVE.—A correspondent writes from West Boylston, Mass., as follows: "In your issue of February 13, "Major" inquires regarding a rust preventive called "cosmoline." I have never seen the name applied to what I have used for the past six months, and am still using, but from his description of this "cosmoline," I think it the same as what I am using. This rust preventive is petroleum jelly, which we sportsmen here have found to be the best thing as yet. I have given it a number of severe tests, and has not failed me. It exceeds all my expectations. I would not be without it as long as I keep my shooting irons. A friend of mine has used

this petroleum jelly in salt water shooting this past fall, and claims it O. K. I differ with the "Major" as to its being cut with turpentine or like nature, and being as good as in its raw state, for this jelly forms a coating similar to shellac or varnish, and is easily put on by warming a trifle. I think it can be bought in any wholesale paint and oil store, and costs about $1.25 per pound. I think the sportsmen have in this rust preventer the "*Ne plus ultra.*" PAUL.

MORE RUST PREVENTIVE.—A Philadelphia correspondent writes:

An equal proportion, say one ounce each of mercural ointment and cosmoline, I have found to be the best preventive from rust or corrosion on gun barrels when they are exposed to the salt air or the action of salt water. I have known guns that have been coated with this preparation to be laid away for five months, and, after rubbing them well prior to using them, not to show a particle of rust or corrosion.

DUMOLINE FOR RUST.—*Mr. Editor:* Among the various articles of gun grease I can recommend an article made from petroleum called Dumoline; I think it is an excellent rust preventer, used by surgeons on their dissecting instruments, is cheap, does not run or smell badly, and being used by apothecaries as a basis for some ointments can easily be obtained. In common with many others I do not believe in grease on guns when used for dry upland work, except of course around locks and break-off. This is just where Dumoline works nicely, lubricating without working out to soil clothes. Pickerel fishing has been well enjoyed, but genuine field sports at present are dry, pedestrianism excepted, this runs high just now. Yours, R. L. N.

—A Fort Omaha, Neb., correspondent writes: "Cosmoline has been used for several years by the U. S. Army in cleaning small arms. It is generally regarded as the best oil which has ever been used in the service. It will remove rust which has remained in guns for a long time; if applied liberally, it will effectually prevent the formation of rust in any climate. W. L. CARPENTER, U. S. A.

AS TO PATTERNS—*Mr. Editor:* E. L. Seeley, in your issue of Feb. 27, says he beat my pattern of 309 pellets in 30-inch circle, at 40 yards, with same amount of shot, but he does not say how much powder he used in his 7½lbs. Clabrough. I said I used 5 drachms; had I used 4 or 8½ drachms I could have made a better pattern. I shot the same gun (a cheap Parker) against a Scott that cost three times more than mine, and beat it every time, each using same amount of powder and shot, shells loaded all alike; and I can beat his 7½lbs. Clabrough, too. JAS. ROY.

Brookfield, O.

LIGHT AND IMPROVED WADING PANTS.—As the early song of the blue bird warns us that spring is at hand, bringing with it the joyous trouting season, I am prompted to bring to the notice of my brethren of the rod and line an article long needed, which the past season contributed very greatly to the comfort, and especially the success, on many fishing excursions, namely, a pair of light, yet strong, wading pants, with uppers and soles all in one article. I had tried the English wading stockings (an abomination), which requires a pair of woolen socks to be drawn over them, and on the outside of these a pair of stout shoes; also the long-legged heavy American rubber hip boots,—and all were found tiresome and clumsy. Finding that I could not procure what I wanted, I persuaded the President of the Goodyear Glove Manufacturing Company, office corner Broadway and Broome street, New York, to make for me the article wanted, and which, after a severe practical trial, has given perfect satisfaction. Let me describe them. The legs are made of light colored silesia inside and out, with a coating of rubber between, and extend up to the waist, and are supported with suspenders. The foot parts are attached to the legs, or rather made with them, and are covered with stout white canvas, and this canvas is double for an inch in length all around the soles to protect the feet from sharp stones. The soles are a quarter of on inch thick, and made with a composition of fine pieces of cork and pure rubber, and the heels the same. This arrangement prevents slipping when wading in streams with slimy stones. The whole thing is perfectly waterproof, and a great comfort to wear, and my friends who have seen them all want to know where such goods can be bought. I believe the aforesaid company will place them in the market this spring. They can be made either as hip pants, or to extend to the waist. I prefer those that come to the waist, because, when fishing in a brook overhung by alders, I find that fishermen having low stockings avoid such places, and by being able to wade in deep water and such spots I am very apt to secure many a fine fish overlooked. These pants would also prove a great boon to salmon anglers in Canada. I have had such pleasure in the use of these pants that I want others to know of them. The hip style will not probably cost as much, or any more, than the imported stockings. HUNTINGTON.

RUBBER "CIRCULARS" FOR SPORTSMEN—*Editor Forest and Stream:* "Clericus" very justly complains of the ordinary rubber overcoat as being altogether unsuited to the wants of the sportsman, particularly when he is seated in the stern of the skiff. In that your correspondent is undoubtedly right, but I think he errs in his suggestion of a remedy. It is not additional length that he requires to make him comfortable, but greater width. Years ago I realized this fact, and if "Clericus" will do as I did he will be able not only to keep every thread perfectly dry during the severest storm, but will soon learn to rather enjoy an occasional shower. Instead of a cost which is about the same size at the bottom that it is at the top, let him procure a rubber circular, or cape with sleeves. This garment, which is large around the bottom, will enable "Clericus" to keep his knees, when sitting, as dry as his shoulders; and in addition to this, he will find ample room for the complete protection of his gun. As to length, it need not reach much below the knee when standing erect, particularly if high top boots be worn. This is the experience of one who has passed a portion of his time in each of the last twenty years in the stern of an Adirondack boat. D. D. S.

New York, March 18, 1879.

We presume that the Hodgmans can fit out our damp friends, and keep them as dry as old Noah in his ark.

DITTMAR POWDER.

FRANKLIN, N. Y., March 12, 1879.

EDITOR FOREST AND STREAM:

I notice in the issue of FOREST AND STREAM, No. 5, that Robt. Walker makes a reply to the card of mine which I wrote you in relation to our club being obliged to prohibit the use of Dittmar powderfrom its lub shoots and matches. Now in that card I was particularly careful not to mention any names of the parties. They knew that the majority of the club stood in mortal terror of it, and refused to come out and shoot by the side of it or be near where it was used. It was thought best to call for a vote of the entire club, which resulted in almost a unanimous vote to prohibit its use at club shoots and matches, under penalties, etc. The club has no objections to those of its numbers who desire to test it or use it going by themselves and using it to their entire satisfaction. I ask, Mr. Editor, that you give these few lines space in your paper in the Dittmar powder column, not only as a reply to Mr. Walker's letter but to notify brother sportsmen that we have as yet had no serious accident with it as a club or as individual sportsmen, as I have understood many supposed that we have had. "OULEOUT SPORTSMAN'S CLUB."

NED BUNTLINE'S WORST SCARE.

MR. EDITOR: STAMFORD, N. Y.

In an active and rather eventful life, much of which has been spent among the Red Men, I have been pretty badly scared a good many times, but I think the worst fright I ever had was over on Wolf Pond in Pike County, Pennsylvania. I think it is within the borders of the Blooming Grove Park now, but am not sure. It lies off southwest from Mast Hope four or five miles.

I spent the summer of 1853 or '4 thereabout, catching trout, killing a deer now and then, and rattlesnakes almost every day.

I rode on my pony over to Wolf Pond one day to fish for yellow perch and pickerel. There was an old boat, with a paddle for propelling power, and into it I got with my tackle, and was soon drifting lazily over the sleepy waters, pulling in fish at a lively rate, for the pond was little fished and splendidly stocked.

About noon I lunched in the boat, letting it drift as it liked, and was taking things comfortably when I felt the jar of the boat as it touched the shore near a rocky ledge. Have you ever felt a danger intuitively, without seeing or hearing it? I did, just then. A kind of a chill came over me with a thrill, and I turned my eye to the rocks behind me. The same breath saw me jump full half the length of that boat, while a sickening faintness came over me, and I stood, trembling from head to foot. I had seen on the rocks, just in the act of striking, a full-sized pilot, or copperhead snake, and it now was in the bottom of the boat, where it fell as it had struck when I leaped out of its way. I was weak as an infant with the fright and shock, but I managed to raise the paddle and kill the infernal venomous thing; and then I made for the landing, took my fish, and rode back to Mast Hope.

I never fished in Wolf Pond again, nor have I ever forgotten that scare. Had I been ten years younger it would have stunted my growth. NED BUNTLINE.

A BATCH OF QUESTIONS.

STRASBURG, Va., March 12, 1879.

EDITOR FOREST AND STREAM:

I have had it in mind for some time to ask some questions of your correspondents who understand shot-guns. We folks here, who do so little hunting, find that our notions entertained heretofore in regard to size of shot, length of barrel and size of bore, are at variance with those held by your correspondents. These three things—size of shot, length of barrel and size of bore—are what I want to talk to them about.

1. Size of Shot—I have been using No. 4 for shot; FOREST AND STREAM says No. 8. Many persons here use No. 3 and some No. 2. For wild turkey I commenced with BBB's, but gradually went up to Nos. 1 and 2. FOREST AND STREAM says No. 5—smaller than I have been using for squirrels. It has occurred to me that the same No. is not always the same size. This would be some explanation of the difference in No. used by different persons, but surely there should be some certainty. How is it about this shot business, anyhow? Certainly No. 5, or even No. 8, would do little execution upon an old gobbler 50 or 75 yards. Am I not right?

2. Length of Barrels—People with us have a notion that long barrels will throw shot much closer than short ones, especially at long range. I see that short barrels are recommended for general shooting. Is it true that barrels, 28 to 32 inches, will throw shot in as small a compass as barrels 36 to 40 inches? Will barrels 28 to 32 inches throw shot with as little spread at the distance of 75 to 100 yards as barrels 36 to 40 inches.

3. Size of Bore—There is as much difference in the opinions of persons about the size of the bore as there is about the length of the barrels. Folks here think that a small bore, say 18, will scatter much less than larger ones—10 or 12, with the same size shot. I do not infer this to be the opinion of the writers for FOREST AND SATEAM.

How is it about choke-bore muzzle-loaders? I should think that a wad that would fit the muzzle would be too small when rammed down, and this would prevent the use of wads in them.

Now, some of your professional hunters may laugh at me exhibiting so much ignorance, as I evidently do; but I can afford to be laughed at if I can thereby obtain the desired information. Let some old veteran in the art be kind enough to tell me what I want to know, desiring, as I do, a shot-gun with the best length of barrels and size of bore for general shooting, yet knowing nothing about it.

JOS. B. MCINTURFF.

PIGEON MATCHES.

MINER ROD AND GUN CLUB.—A very enjoyable shoot by some of the members of the club, took place on Thursday, March 20, at their club grounds, at Springfield, L. I. The day was very fair, and wind enough to give the birds a fair show for their lives. Capt. James T. Davis proved himself the champion of the day, and was awarded with a beautiful medal presented by a friend. The following is the score at snow birds and pigeons:

	Snow birds.	Pigeons
H Miner	0 1 0 0 0 0 0 1 0—3	1 1 0 1—3— 6
M Engieri	1 0 0 0 1 1 1 1 0—6	1 1 1 0—3— 9
John Wood	1 1 0 1 0 1 1 1 1—8	0 1 0 1—2—10
James T Davis	1 0 1 1 0 1 1 1 1—8	1 1 1 1—4—12
Geo Aery	0 0 1 1 0 0 0 0 1—3	0 0 1 1—2—5
Wm Steers	1 1 1 1 0 1 1 1 0—7	0 1 1 1—3—10
Chas Clancy	1 0 0 0 1 1 1 1 0—5	1 0 1 0—2—7
John Voskamp	0 1 1 1 1 0 1 1 1—7	1 1 1 1—4—11

JERSEY CITY HEIGHTS GUN CLUB.—A grand tournament at glass ball shooting will be held under the auspices of the Jersey City Heights Gun Club, at their grounds, West End, Marion, on April 2. A good programme is promised. Amateurs from everywhere are invited to participate.

VIRGINIA—*Staunton, March* 11.—Pigeon match shot by the Bogardus Club; 13 yards rise, 80 yards boundary, Bogardus rules; weather clear and windy, birds strong and in good condition:

C Berkeley	1 0 0 1 0 1 1 0—4
T S Doyle	0 0 0 1 0 1 1—3
Ed Echols	1 1 1 1 1 1 1 1—8
Ham J Fultz	1 1 0 1 1 1 0 1—6
Alex Harman	0 0 0 0 0 0 1 1—2
Jno M Kinney	1 1 1 1 1 0 1 1—7
C Parker	0 1 1 1 1 1 1 1—7
H G Preston	1 0 0 0 1 1 1 1—5
Hans Scherer	0 1 1 1 1 1 0 1—6
Julius Scheffer	1 1 0 0 1 0 1 1—5
Geo H Hudson	0 1 0 1 1 1 1 1—6

TENNESSEE—*Nashville, March* 18.—The following glass ball matches came off to-day on the A. E. Burr club grounds; Bogardus rules; Bicterlich traps, 18 yards rise:

First match:

Pritchett	0 1 1 1—3
Carter	1 0 1 1—3
Mitchell	1 1 1 —4
Bush	1 0 0 1—2
Horne	1 1 1 1—4
Cheatham	0 1 0 0—1

Second match:

Cheatham	1 0 0 1—2
Mocker	0 0 1 1—2
Pritchett	1 0 1 1—3
Carter	0 0
Horne	0 0 0 0—0
Mitchell	1 1 1 0—3
Bush	1 1 1 1—4

Third match:

Ragio	0 1 1—2
Thompson	0 0 0—0
Cheatham	1 1 1 0—3
Pritchett	1 1 1 0—3
Carter	1 1 0 —2
Bush	1 1 1 0—3
Gilbert	0 0 1—1
Whitworth	0 1 1—2
Mitchell	1 0 1—2
Horne	0 0 1—1

Fourth match:

Valentine	1 1 1 1—4
Whitworth	0 1 0 —1
Mitchell	0 0 —0
Horne	0 0 1 1—2
Gilbert	0 0 1 1—2
Whitworth	0 1 0 1—3
Valentine	0 1 0 1—2
Horne	0 0 0 1—1
Whitworth	1 0 1 1—3
Griffith	1 1 1 0—3

Fifth match:

Carter	1 0 1 0—3
Mitchell	1 0 0 1—2
Valentine	0 1 0 1—2
Gilbert	0 0 1 1—2
Whitworth	0 1 0 1—3
Horne	0 0 0 0—0
Griffith	1 1 1 1—4

Sixth match:

Gilbert	1 0 0 1—2
Carter	0 1 1 1—3
Mitchell	0 1 0 1—2
Horne	0 0 0 1—1
Griffith	1 1 1 1—4
Whitworth	1 1 1 1—4

Seventh match:

Gilbert	1 0 0 1—2
Carter	0 1 1 1—3
Mitchell	0 1 0 1—2
Horne	0 0 0 1—1
Griffith	1 1 1 1—4
Whitworth	1 1 1 1—4

Eighth match:

Whitworth	0 0 1 1—2
Horne	0 0 1 0—1
Ragio	1 0 1 1—3
Griffith	1 1 1 0—3

Tie on three:

Ragio	0 0 1—1
Griffith	0 0 0—0

Ninth match—$10 a side:

Ragio	0 0 1 1 0—2
Whitworth	1 0 1 0 1—3

Tenth match—$10 a side:

Ragio	0 0 1 0—2
Whitworth	0 0 0 1—1

Eleventh match—$10 a side:

Ragio	1 0 1 0—2
Whitworth	0 0 0 1—1

There is a grand tournament being arranged for a shoot at M'Whirterville, when the weather becomes fair, at which there will be some splendid scores, as many of the contestants in the coming match at pigeons in Louisville will participate.

—See Bogardus' advertisement.

Rational Pastimes.

CALUM DHU,

THE RENOWNED SCOTTISH ARCHER.

THE following thrilling extract is taken from Hansard's "Book of Archery," published in London in 1841:

No braver warrior than Calum Dhu followed the banners of the Chief of Colquhoun, and with them the powerful McGregors were at inveterate feud. His cottage stood at the base of a steep fenny hill within a sequestered glen that lay beneath the lofty Ben Lomond. Thus retired from the rest of the clan he nourished deadly hatred toward the McGregors, and was ever foremost in danger when they joined in red unyielding battle. For skillful archery, Calum Dhu never knew a rival; in wielding the claymore, too, he had few equals; but the bow was the weapon of his heart.

The son of the chief of the McGregors, with two of his clansmen, were at the chase. Their game being wide, they wandered far and found themselves a little after mid-day on the hill-top just above Calum Dhu's cottage.

"Come," said the young chief, "let us go down and try the strength of Calum Dhu's bow, which men say none but he can bend. You and I, Evan, are reputed the best archers of our clan, and it will go hard with us if we cannot show him that the McGregors have thews and sinews equal to the task. Hast though forgotten how often he has stained his arrows with the heart's blood of our bravest warriors, piercing them through and through as if they had been straw buts set up for holiday sport? On, I say! he knows us not. Should he, we are three to one, and I owe him somewhat," he continued, with eye of fire and voice quivering from subdued passion, "since our last affray, when he drove an arrow through my uncle's gallant bosom. Follow, then!"

The will of a Highland chieftain was ever law to his clansmen.

"We will go down if a score of his best claymores were with him," cried Evan fiercely.

"Nay, be not rash; we'll first bend and break his bow," replied the chief; "and then for my uncle's blood."

"They say he is good at the sword," remarked the third McGregor, who had hitherto been silent, "but this," drawing his dirk, "shall stretch him on the sward."

"Strike not behind," rejoined his lord; "hew him down in front; he deserves honorable wounds, for he is brave, though an enemy."

A rising knoll had hitherto concealed the cottage, which they now reached. Knocking loudly at the door, after some delay, a little, thick-set, gray-eyed, oldish-looking man came forth.

Threads and thrums hung from his black, bushy head, as if he had been employed in weaving the coarse linen of the country and the time. Though the most incurious observer could not have failed to remark the disproportionate length of his arms in comparison with his stature, in all other respects the man before them had none of the muscular symptoms of prodigous strength which Calum Dhu was reported to possess, and which had so often proved so fatal to the McGregor clan.

To a querulous demand of what they might want, uttered in the impatient tone of one interrupted in some engrossing worldly employment, they replied by inquiring if Calum Dhu was at home.

"Na, na; he's gone to the fishing. But an' ye ha ony message for our chief (Heaven guard him) about the coming of the red McGregors, and will trust me with it, Calum will get it frae me. Ye may as well tell me as him. He stays long when he gaes out, for he's a keen fisher."

"We were only wanting to try the bending of his bow, which report says no man can do save himself."

"Hoo gin that's all, ye might have tell'd it at first, and no keepit me sa lang frae my loom. But stop." Thus saying, the old fellow paused and gave his shoulders an impatient shrug, as it appeared to his visitants; to a keen observer, however, the action might have expressed satisfaction, triumph and determination. Then, on entering the house, he quickly brought out a sheaf of arrows and a bow of the dark red yew, so tall and stout that the young men were persuaded the Colquhoun chieftain was quite another sort of person from the dwarfish being with whom they were then conversing. He threw the arrows carelessly on the ground and said: "Ye will be trying your strength at a flight? Like a glance of lightning I hae seen Calum send a shaft over the highest point

of that hill; and once, when the McGregors came raging up the glen like red devils as they are, many of their best warriors fell at the farthest entry o' the pass, every man o' them wi' a hole in his breast and its fellow at his back."

Whilst thus speaking he had taken the longest arrow out of the sheef, and stood playing it in his hand, seemingly ready to give it to the first of his visitors who should bend the bow. The three McGregors were tall, muscular and in the prime of manhood. The young chief first took up the bow, and after examining its unbending strength laid all his might into it. He strained till the blood rushed to his face and his temples throbbed almost to bursting, but in vain; the string remained slack as at first. Evan and his associate were alike unsuccessful; as well might they have striven to root up the gnarled oak of their native mountains.

"There's not a man," exclaimed the chief of the McGregors, chagrined at the absence of the man he sought, and his own and his clansmen's vain efforts—"there's not a man in your clan can bend that bow; and if Calum Dhu where here he should not long—" Biting his lip he suppressed the rest of the sentence, for the third McGregor gave him a glance of caution.

"Ha!" said the old man, still playing with the long arrow, without seeming to observe the latter part of this speech, "if Calum was here he would bend it as easily as ye wad bend that rush; and gin ony of the McGregors were in sight he wad drive this lang arrow through them as easily as ye wad drive your dirk through my old plaid. More, I say; the feather wad come out at the other side wet with their heart's bluid, and sometimes even the man behind is wounded if they are any way thick in their battle. I once saw a pair o' them stretched on the heather pinned together with one of Calum's yard-long shafts."

This was spoken with the apparent simplicity and composure of one talking to friends and careless of foes. Still, closer attention would have discerned a checkered shade of pleasure and triumph cross his countenance as McGregor's lip quivered and the scowl of anger descended upon his brow at the tale of his kinsmen's destruction by the aim of their direst foe.

"He must be a brave warrior," at length observed the young chief, compressing his breath and looking with anger and astonishment at the cool, tenacious old man. "I should like to see this Calum Dhu."

"Ye may soon enough; and gin ye were a McGregor, feel him, too. But why is the man glunching and gloaming thus? Gin ye were Black John himsel' ye could na look mair deevilish like. And what are ye fidging at, man?" he continued, addressing the third McGregor, who had marked the anger of his lord, and gradually moved nearer the old tormentor with his right hand below the left breast of his plaid, probably grasping his dirk ready for the signal of vengeance. The faith of the Gael is deeper than "to hear is to obey," the slavish obedience of the East: his is to anticipate and perform. To know and to accomplish, or to die, is the stern devotedness of the North.

The old man kept his keen gray eye fixed upon him whilst he continued in the same unsuspecting tone: "But is there ony word of the McGregors coming over the hills? Calum wad like to try a shot at Black John, their chief; he wonders could he pass an arrow through his great hardy bulk as readily as he sends them through his clansmen's silly bodies. John has a son, too, he wad like to try his craft on, who has the name of a brave warrior—I forget his name. Calum likes to strike at noble deer, though he is forced sometimes to kill that which is little worth. But I'm fearful he o'errates his own strength. I think his arrow would only stick weel in Black John, but—"

"Dotard, peace?" roared the McGregor till the glen re-echoed with his voice; his brow darkening like midnight. "Peace! or I'll cut that sacrilegious tongue out of your head, and, nailing it to your door, show Calum Dhu you have had visitors in his absence, and make him bless his stars he saw them not."

A dark flash of suspicion crossed his mind as he gazed at the individual he was addressing, who quailed not at his frowns. But it vanished as the imperturbable old man resumed his discourse.

"Ha, oh! ye are no a McGregor; and tho' ye were, ye surely wadna mind the like o' me! But anent bending this bow," striking it with the long arrow which he still held in his hand. "There's just a knack in it; and your young untaught strength is useless, as ye dinna ken the gait o't. I learned it frae Calum, but I'm sworn never to tell it to a stranger, and there is mony a man in the clan I ken naething about. But as ye seem anxious to see this bow bent I'll no disappoint ye. Rin up to you gray stone—stand there; it will no be as if ye were near me when I'm doing it, but it will be just the same to you, for ye can see weel enough. When the string is on the bow ye may come down, an' ye like it, and try a flight. It's a capital bow, an' that ye'll fin'."

A promise is sacred with the Gael. As the Colquhoun was under one, they did not insist on his exhibiting his art while they were by; nevertheless, curious to see the sturdy bow bent—a feat of which the best warrior of their clan would have been proud—and perhaps thinking Calum Dhu would arrive in the interval, they walked away in the direction pointed out. Unsuspicious of treachery, as the old man appeared ignorant of their names, and could not be supposed capable of sending an arrow so far, the McGregors thought not of looking back until close to the gray rock. Then, turning round, they saw him suddenly bend the stubborn yew and fix an arrow upon the string. In an instant he drew strongly to his very ear, and the feathered shaft of a cloth yard length was fiercely launched in air.

"Mac Alp—hooch!" exclaimed the dying youth instinctively endeavoring to raise the McGregor war cry, and clapping his hand on his breast as he fell.

"Ha!" cried Calum Dhu, for it was he himself, "clap your hand behin'; the arm shot, which never sent arrow that came out where it went in," a rhyme he used in battle when his foes fell fast as he could nock arrows upon the bow-string.

The first impulse of the two remaining McGregors was to rush down and cut to atoms the slayer of their beloved young chief; but seeing him fix another arrow to that bow, the terrible powers of which they had just witnessed, and fearing they might be prevented from carrying to the old chieftain the news of his son's death, they started over the hill like roes. Flight availed not—a speedy messenger was after them, for a second arrow sent by the same powerful and unerring arm transfixed Evan's shoulder just as he descended out of sight. To catch him it must have grazed the bent that grew on the hill-top, as naught but his shoulder could be seen from where Calum Due stood.

On flew the other McGregor, with little abatement of speed, till he reached his chieftain with the bloody tidings of his son's death.

"Raise the clan! Dearly shall they rue it," burst from the lips of Black John, and a party, breathing all the vengeance of mountain warriors, were soon far on the way of fierce retaliation. Calum Dhu in the meantime had not remained inactive. Knowing, from the escape of one of his three foes, a battle must quickly ensue, he called as many clansmen as he could, and, with his terrible bow, calmly awaited the onset. The McGregors concealed not their coming. Loudly and fiercely their pipes flung their notes of warlike defiance on the gale, and far and wide, mountain, cliff and glen, echoed to the martial strains. The foes met, and long and desperate was the conflict which ensued. No warriors of that age could withstand the hurricane onset of the bold McGregors, the tide of battle flowed full in their favor, while Black John, raving through the field like a chafed lion, shouted in a voice of thunder, heard far above the clash, groans, and yells of the unyielding combatants for the murderer of his son. None defied him—to none was afforded time, for he cut down, in his headlong rage, every foeman he encountered, until but few remained on whom he could wreak his vengeance or exercise his great strength. Gazing round the field, he at length spied an old man seated on a fern bank, while his hands grasped the bloody stump of his leg, which had been stricken off. He beckoned the grim chief to come nearer, and Black John rushed forward, brandishing his bloody sword, and still crying in a voice which startled the yet remaining birds from the mountain cliffs, "Where was his son's murderer?"

"Shake the leg out of that brogue," said the old man, speaking with difficulty, and squeezing his bloody stump with both hands in all the energy of pain. "Go bring me a drink of water frae yon burn, and I'll show you Calum Dhu, for he is yet in the field, and lives. Rin, for my heart burns and faints." The McGregor, without uttering a word, shook the leg out of the brogue, and hastened to do his foeman's bidding. But, while he stooped to dip in the blood-stained brogue, "Mac-Alp-hooch!" faintly broke from his lips, and he splashed lifeless into the stream, which in a moment ran thick with blood.

"Ha!" cried Calum Dhu, for it was he again, "clap your hand behin'! that's the last arrow shot by the arm which ne'er sent those which came out where they went in."

BASE BALL CHAMPIONSHIP.—The following clubs have entered for the championship of the National Base Ball Association, the entries for which closed here last night: The Uticas, of Utica; Albanys, of Albany; Capitol City, of Albany; Springfield, of Springfield; Holyoke, of Holyoke; Worcester, of Worcester; New Bedford, of New Bedford; Manchester, of Manchester, and National, of Washington. The Defiance Club, of Philadelphia, has been admitted to membership in the association.

PENINSULAR CRICKET CLUB.—The Peninsular Cricket Club, of Detroit, Mich., has elected for the ensuing year: President, George E. Hand; Vice-President, Joseph Taylor; Corresponding Secretary, C. B. Calvert; Treasurer, T. Calvert; Managing Committee—J. W. Waterman, C. Hinchman, Fred Bamford, R. B. Ridgeley, H. Crawford, Phil Uridge, Wm. White; Match Committee—Ford D. C. Hinchman, U. Armstrong, Frank C. Irvine. The club now has more than one hundred members, and the prospects for a lively cricketing season in Detroit are very flattering. Several Canadian clubs will visit Detroit, and like courtesies are expected from a team from either New York or Philadelphia. A professional team from England, under the management of the celebrated cricketer, Richard Daft, will also pay their respects to the Peninsulars.

STATEN ISLAND ATHLETIC CLUB.—The annual meeting of the Staten Island Athletic Club was held at the rooms of the Neptune Rowing Club, West New Brighton, S. I., Wednesday evening, March 12. There was a large attendance. The reports from the Treasurer, Captain, and Board of Management, showed the club to be in a flourishing condition. The election of officers resulted as follows: President, Wm. K. Soutter; Vice-President, David J. H. Wilcox; Recording Secretary, Henry W. J. Telfair; Treasurer, Wm. A. Collins, Jr; Corresponding Secretary, Robert P. G. Bucklin; Capt., Oliver J. Johnson; First Lieutenant, Clarence M. Johnson; Second Lieutenant, Frank G. Janssen; Trustees, F. L. Rodewald, Jno. W. Edwards, Thos. Chute, H. A. Caesar, A. L. Faris, and Jno. H. Rimmer.

NEW YORK LACROSSE CLUB.—The annual meeting of the New York Lacrosse Club was held at Delmonico's on Friday evening. There was a large attendance of members and much interest manifested in the proceedings. A new constitution was framed and several additions made to the roll of membership. The following officers were elected: President, Hermann Oelrichs; Secretary, A. P. Montant; Treasurer, William Patteson; Captain, E. C. La Montagne; First Lieutenant, F. E. Randall; Second Lieutenant, Herbert Inman. The members will commence practice at an early day.

—The New York Athletic Club will hold a meeting at their grounds, Mott Haven, Saturday, April 19. The events to be contested are runs of 120 yards, 300 yards and 600 yards, and a walk of two miles, open to all amateurs. Gold and silver medals will be given in each race. Entries close on April 12. C. A. Mahony, Secretary, post office box 3,101.

—The Tally-Ho will be driven as a public coach between the Hotel Brunswick, this city, and Pelham Bridge, during the coming season. Col. Delancey Kane has purchased his coaching horses, and will soon give notice of the time-table, etc.

—The San Francisco Olympic Club recently gave its nineteenth annual exhibition at the Grand Opera House, that city. The occasion was one of a most pleasant reception of the friends of the athletes. The entertainment consisted of acrobatic feats, boxing, dumb bells, exercises, etc.

ILLINOIS.—*Highland Park, March 15.—Editor Forest and Stream:* A few members of the Highland Park Archery Club had an in-door contest a few evenings since in Central Hall, in the presence of a fine audience. The range was short, being only twenty yards; but the target was only a one-foot one; number of arrows, ninety per man. The following scores were made:

	1st 30 arrows.		2d 30 arrows.		3d 30 arrows.		Total.	
	Hits.	Score.	Hits.	Score.	Hits.	Score.	Hits.	Score.
W H D Gray	17	69	12	64	13	33	42	166
F P Hall	9	57	8	43	15	59	32	164
K B Weston	13	47	12	44	16	60	41	151
E H Beebe	7	37	12	45	10	44	29	120

SPORTING SKETCHES—*With Pen and Pencil.*—By Francis Francis and A. W. Cooper: *Field* office, 346 Strand, London.—This is one of the most engaging volumes of sporting incidents which it has ever been our good fortune to read and possess. The author is the venerable editor of the Piscatory Department of that incomparable sportsman's journal, the London *Field*. He is now verging toward sixty years, we believe, and the personal gift of the gilt-edged, green-liveried, illuminated, copy of the book now before us under review, coming from the veteran sportsman to the editor of FOREST AND STREAM, enhances its charms all the more, and kindles to its warmest blaze the sympathies which cement good-fellowship and make the brotherhood kin.

A few weeks ago we printed in FOREST AND STREAM an editorial criticism of the illustrated sporting literature of magazines, in which we deplored the fact that our best periodicals, which pay the highest prices for contributions, are so often marred by crude descriptions and worse pictures of hunting and fishing adventures by incompetent writers and artists, whose gross and glaring inaccuracies are only rivalled by their manifest ignorance of the commonest facts of natural history and the methods and tactics of the field. It is too painfully obvious to the initiated sportsman that, under the investiture of well-turned sentences and faultless diction, the maiden adventures of tyros are too often palmed off upon the reader as the experiences of veterans. Even when the recitals are those of cultured sportsmen, the illustrations, instead of helping the narrative, only make it ridiculous. Every well-informed sportsman knows how sadly even the best pictures fail to reach the soul of field sports; and no author can venture to undertake to portray with pencil and pen strokes the glorious subjects of nature without the exercise of the most painstaking effort, based upon the consciousness of a thorough familiarity with the matters he treats of. Mr. Francis has borne ample testimony to the truth of these assertions, when he affirms in the preface to his "Sporting Sketches," that he has postponed for *many years* the publication of the very work in review because he could not find an artist equal to the task of illustrating it! Says he: "Many a shooting and fishing picture have I seen published, in which the artist had not the slightest acquaintance with the subject he had undertaken, and wherein the details had been furnished entirely by his imagination." That he has at last succeeded in his search, and in the realization of his purpose, should be the cause of sincere congratulation. Certainly Mr. Cooper, the artist, has done full justice to the intelligent text of the author. The illustrations are true to life and nature, and vested with a reality which satisfies and refreshes, because they represent so faithfully what home sportsmen are familiar with and what strangers desire to see and know. The portraits of the fish and birds; the cover in which the birds are found, the dress of the sportsmen, the garb of the gillies and keepers, the outfits and accoutrements, the poses of the *dramatis personæ*, the varying attitudes of the dogs according to situation, and all the natural and artificial surroundings, are detailed with an accuracy and homogeneousness of parts and position in the drama, which bears the stamp of honest truth in every outline. There are twelve of these illustrations in all, full page landscapes, each accompanying a sketch of sport by field and river. Six of them are devoted to Partridge, Woodcock, Pheasant, Rabbit, Grouse, and Snipe shooting, and the other six to Trout, Pike, Roach, Salmon, Grayling, and Punt fishing. There are suggestive tail pieces to each chapter.

The narratives are evidently the production of one whose whole soul is in his pastime. It is pleasant and exhilarating to hear him talk. He rambles on in a careless rollicking fashion, very characteristic of his buoyant nature—*buoyant* even in a full grown man well past maturity; discoursing now of this trait of man or dog, and anon of some quondam shooting or fishing incident; introducing real character sketches of his different attendants with their quaint vernacular, and of the gentry of the country; pausing betimes to describe the dressing of an artificial fly, or to take a nip or a bite from his lunch bag; and so absorbed in what is passing, that he seems to be talking directly to the reader in his odd, natural way, while the reader in turn becomes so engaged and enchanted with his new acquaintances that he almost imagines himself upon the ground and one of the party. It is pleasant to observe his enthusiam and the joy of anticipation which beams all over his radiant face as he is about starting out for a jaunt to the covers or poole. Listen to his chin-music at the opening of the chapter on Salmon Fishing! He proceeds:

"It is strange how the very mention of salmon fishing makes one prick up one's ears, and how the thought of it sends a sort of thrill through pulses grown old and torpid, and how even when one is declining into the vale of years the prospect of a week's good flailing in a well-stocked, kindly-dispositioned river, sets one's spirits bounding and sparkling with delightful anticipation. We get into the train with a choice companion for the long journey north or west. We chirrup and we sing; very little makes us laugh, and jokes which would have been regarded at any other time as very small beer are now most excellent fooling. 'Ha! ha! Ho! ho! Cackle, cackle!' We're the boys who fear no noise while the thundering cannons roar. 'Dash it all! I feel twenty years younger.' 'By jingo! I feel thirty years younger. I feel—I feel—jolly thirsty, old fellow—don't you? Here's health to man and death to fish! Ha! real Jamieson that!" so by degrees we sober down into the usual fisherman's talk." Etc.

There's a man to go a-fishing with! No chance for megrims or mollygrubs in his party!

The author's story of the dog Rock, who howled and ran home to his kennel, after five clean misses on snipe, is very funny. The whole book is full of amusing incidents which, if we were to give in detachments, would mar the continuity of the narrative. The only way for those of our readers to do who are interested in English field sports, is to send to the *Field* office for a copy of the "Sporting Sketches." They will be instructed as well as amused The whole sporting fraternity is placed under obligations to Mr Francis for his opportune publication.

—Ira A. Paine is engaged to travel with Tony Pastor th coming season, and has made a big hit.

A PANTHER HUNT.

The following spirited description of a day in the wood was published in *Knickerbocker's Magazine*, in 1855. The author, whose name we do not know, wrote from Lexington, Ky.:

In my winter home, in the tangled wilds of the far Arkansas, during the last months of 185—, I was reveling amid the hardy pleasures of a hunter's life, seeking in the exciting and invigorating chase to recruit a constitution impaired, if not shattered, by the dissipations of the preceding summer. Early one bright morning in November, I cheerily wound my horn, as it summoned forth for the hunt the eager, high bred pack, who burst from their kennels in tumultuous joy, making the old primeval woods ring with their loud and deep-mouthed bayings. Old Croat was the leader and sire of more than half the pack. It seemed as if age had only steeled the wiry muscles of his long, black form and added a clearer and more sonorous tone to his ringing notes. And Beauty, too—so named from her symmetrical and slender proportions—was, without exception, the most perfect model of the high-bred staghound I ever beheld. Her thin, wide legs, deep chest, sharp, delicate muzzle, and bright, expressive eye, at once challenged admiration and proclaimed her "Queen of the canine race." And Old Warrior, with privileged boldness, came up and rubbed his cold nose against my hand, as if to show that, although his name was nobly earned on many a hard fought battle—and his long, tanned frame was seamed with many a scar—he was still "the fleetest in the chase, the foremost in the fight."

Impatient at the delay of my faithful bodyguard, John, who was as fine a specimen of the Kentucky slave as one would wish to see —"six feet in his socks," and brave as a lion—I walked around to the stable to ascertain the cause of so unusual an occurrence. Reared from childhood in the arms of my "boy," I was attached to him by no common feelings, especially as he had twice saved my life at the risk of his own. He would have died without a murmur at my command, and it was no ordinary offence that could call forth for him an angry reproof. As I neared the stable, John slowly led forth a magnificent black stallion, who pawed impatiently the earth, as if eager as his master for the approaching chase. I turned toward the negro somewhat sternly, exclaiming:

"Where's Medora? I ordered her—not Alps."

"Deed, Mass' Frank," said John, "I could not help it, but Medora's got out and gone. I'se been hunting her all night."

The mare had escaped in the dark, and made for the woods, and the poor fellow knowing the explosion which must follow the announcement of her loss, had toiled the entire night in the vain attempt to recover her. In a burst of passion I demanded:

"Which way did she go?"

"Up toward the clearing."

"By heavens! then she's gone! The panthers are as thick as ——! Quick! saddle your horse and bring me my revolvers!"

Just as the negro had disappeared on his errand and I had mounted the impatient steed, my father, a hale old man of sixty, came to the cabin door and asked:

"Where now, Frank?"

"After Medora," I replied; "She's out, and toward the clearing. The panthers may have her before now."

"You had better take your rifle and dogs; you may need them."

"No; I want my dogs fresh for the big buck, and my rifle will hinder me in riding through the brush."

"Well! have your own way; but you may regret it."

But my blood was up, and John just then handing me my Colts, and mounting his horse, I dashed over the picket in the direction of the clearing. The clearing was a large bottom tract, which had, some years before, been swept by fire, and was now covered with low, dense underwood, here and there dotted by a hardy old tree, half burnt and gnarled, but defying alike the influence of fire and time. After a few moments' hard riding, hearing an exclamation from the negro, I turned and saw close at our heels the three dogs, Croat, Warrior and Beauty. Struck by so unusual a breach of their training, and remembering my father's admonition, I cried out to John: "Let them alone; we may want them!" On nearing the outer edge of the clearing, Alp reared and snorted, while his glossy mane seemed to stand erect with fright. Straight before me lay the body of my matchless Medora, but torn and bleeding with a wound in the neck, too plainly pointing out the perpetrator of her death. Yes; there she lay, drained of her life blood by the hungry panther; she on whom so often I had skimmed the fashionable thoroughfares of the West, envied of my light-limbed barb; she who, twice within a day, had borne me over the rapid waters of the Mississippi; she with whom I would have shared my only crust, lay cold and dead.

Alp bent down his head and snuffed the lacerated form, and then sent forth a shriek and piercing neigh, as if in sorrow for his peerless mate.

Understanding at a glance the cause of her death, grief gave place to a feeling of revenge and wildly chasing the hounds, I swept o toward the wood, knowing that there the panther had crouched until evening, when it would again come forth to banquet on its slaughtered prey. The animals seemed to divine my feelings, and dashed madly on upon the warm and recent trail, while Alp cleared with his tremendous bounds the brush and underwood with which the earth was covered.

We had proceeded but a short distance when I beheld the panther's back as he sprang over the impediments in his course as lightly as if they were the long grass of the prairie. Twice did I attempt to wound him with my revolvers, but the distance was too great, and bitterly did I regret the absence of my rifle. Gaunt, and only rendered more savage by his taste of blood, the panther maintained his distance between us, although the dogs, mad with anger, woke the wild echoes of the deserted waste, till it seemed as if a thousand hounds were opening on the trail. Eagerly I bent over Alp's neck wish a cocked revolver in each hand, and drove the spurs into his reeking sides; yet he needed not the incitement; the noble animal strained every nerve, and on we sped—torrents less rapid and less rash!

On we sped for more than an hour, while at every opportunity I sought to stop his mad carreer by a ball in the panther's back, yet only once had I drawn his blood, though all except one of my barrels had been fired.

At last, wearied by this severe burst, the hunted animal "treed" in a sturdy swamp oak, where the yet green leaves formed a cover not ten feet above the root. The negro, in this reckless race, had been doubly distanced, and I was alone, with a single shot, to meet the most dreaded antagonist of the Southern forests. As I approached, still at full speed, I could distinguish his glaring eyeballs, as, crouching for his spring, he lay along the knotted limb, lashing with his long and tufted tail his reeking flanks. Maddened by excitement, and regardless of danger, I dashed within three paces of the infuriated animal, and, throwing my horse upon his haunches, fired. Simultaneously with my shot, the panther made his leap, and the ball intended for his brain glanced from the surface of his rounded skull.

In an instant he was upon me: but Alps, true to his training, crouched at the report, and the baffled beast, missing his anticipated hold, seized me by the shoulder, and, being suspended, vainly attempted to gain a secure footing upon my horse's sides.

Throwing aside my discharged revolvers, I drew a heavy Bowie knife—my constant companion—and, in the hands of a determined man, the most effective weapon in the world. Rapidly sheathing its broad blade several times in his body, I forced the beast to loose his grip, and he fell to the ground, although having as yet received no deadly wound.

My brave dogs were upon him an instant, but the slight, symmetrical form of Beauty was ill suited to such a contest, and before I could leap from my saddle she was quivering in the agonies of death. Furious with pain, and at the death of my two favorites, I sprang into the midst of the struggle, and, seizing the panther by the throat, buried my knife in his heart, until the last convulsive quiver told that life had fled. With the assistance of John, who had just arrived, I removed his tawny and spotted skin, and dressed, as well as possible under the circumstances, my wounds upon the shoulder, consisting of several deep cuts, some inches long, laying the flesh open to the bone, they having penetrated through my buckskin hunting shirt.

Slowly and sadly I retraced my homeward way, mourning the double loss of both my favorite beasts, and weakened by the great flow of blood and the extreme tension of every nerve through high excitement.

A negro was dispatched to bring in the bodies, and I buried them both beneath a mighty cottonwood upon the banks of the great "Father of the Waters."

The panther's skin is now my saddle-cloth, but it needs not it frequent sight to remind me of my priceless pair. I have since possessed many animals, but those at whose grave I shed a heartfelt tear stand yet pre-eminent amid their kind. In the happy hunting-grounds of the spirit-land I hope again to remount my fleet Medora and cheer my matchless hound in the wild and joyous madness of the trifling chase.

—The total crop of ice gathered from the Hudson River this winter is estimated at 3,000,000 tons, taking no account of what is stacked outside the houses.

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition. including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

Goods sent to all parts C. O. D.

Paper and Metallic
FOR
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

I GO A FISHING

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents / Apply to — L. LUM SMITH, Patentee, 717 Sansom Street, PHILADELPHIA, Pa. (Sole Agt. for U. S. & Canada.)

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GIVEN EMPLOYMENT GENTS OOD VERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. Grand outfit, including Circulars, terms and a beautiful 10x14 Engraving of the SAITHOGRAPH, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's AGENTS' HERALD, all for 10 CENTS. YEARLY SUBSCRIPTION, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste, AGENTS' PUBLISHING CO., Phila., Pa.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

"THE FISHING LINE"

TAKE THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass FISHERIES,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the Grand Traverse region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. Brook Trout abound in the streams, and the famous American Grayling is found only in those waters.

The Trout Season begins May 1 and ends Sept. 1. The Grayling Season opens June 1 and ends Nov. 1. Black Bass, Pike, Pickerel and Muscalonge also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points. Take your family with you; the scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with hay fever and asthmatic affections. The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing. During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at Owner's Risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address

A. B. LEET,

Gen'l Pass. Agent, Grand Rapids, Mich.

Alford's Practice Target.

PURDY'S PATENT, DEC. 1878.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shotgun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: New York, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,600 ball match, Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Scriber, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

LOVE OR MONEY.

Cupid and cupidity,
Stupid and stupidity;
Many a time I've turned a rhyme
Lacking in lucidity.

Some declare that love is blind;
Lucre proves a blind to many;
Only men of stupid mind
Marry wives that have not any.

Ring the changes as you may,
You'll not find for love or money,
Felt that will not fly away,
Love that's always sweet as honey.

Cupid is no friend of mind;
"Siller's" but a transient ill;
Even where the two combine
They will let you hunger still.

Give me friendship pure as dew,
Free as breezes, blithe as birds,
Finding its expression true
In the coin of loving words!

A. M. V., *Jersey.*

For Forest and Stream and Rod and Gun.

WHEN BLUEBIRDS SING.

When bluebirds sing,
And from old winter's grizzled form
The white burnous of silence falls;
When low, sweet notes of melody
First ripple through the voiceless wood
In woolngs to swift-winging mates,
Fair Columbine in witching dress,
Of bursting buds and spangled dew,
Trips out with smiling, wond'ring face—
Then is it spring!

WEDWORTH WADSWORTH.

For Forest and Stream and Rod and Gun.

How I Spent the Holidays—No. 1.

JUST on the eve of starting on a visit to my former home for the holidays, I received a letter from Mallory R. (living near the next station), saying he would expect me to spend a few days' shooting with him before my return—to be sure and come "equipped as the law directs, with dog, gun, etc." He had one dog good as any; but, as he had arranged a match hunt for my benefit, we would need another. He said, furthermore, that I must notify him on arrival at T— what day he should expect me.

Now, as the shooting is equal to the very best to be had anywhere, to say nothing of the social enjoyment in store for all who are so fortunate as to visit Mt. Ida, I lost no time in making up my mind what to do. I decided to go, and proceeded forthwith to pack my trunk accordingly. This was Christmas eve, and the whole town was alive with people of every conceivable type shopping for the holidays. As it was an hour before the train was due, I started on a stroll. Only a little way down Broad street I was overhauled by a friend of the adjustable type with "I say, Doctor, hold on there! Is that a good dog you have?"

"Yes," said I.

"Well trained?" queried my friend.

"Yes."

"Don't you want to go hunting?" he persisted.

"No!" I replied curtly, for I saw plainly that he had "an ax to grind." "But why do you ask?" I said, my curiosity getting the better of me.

"Because," said he, "I have some friends here on a visit, am anxious that they should enjoy themselves, and thought you might like to take them out shooting. I suppose he (inclining his head toward the old setter, Dot) wouldn't follow me, would he?"

"Well, no; not if I could help it," was the reply.

"What kind of a man are you, anyway?" said he. "Other people lend their dogs, and I don't see why you should refuse."

"That's just why I have good dogs. I break them myself, and allow no one else to handle them; then, when I go into the field, I have something that may be relied upon. Take my advice, young man, and never ask to borrow a dog of an old sportsman, and you'll not be disappointed. If shoot you must, go to some pot hunter who keeps a mongrel for everybody's use, and borrow him; you'll never know the difference, and it will serve to gratify what you conceive to be a taste for sport."

Having thus delivered myself, and bidding him a "Good-morning" with one of my profoundest bows, I resumed my line of march to the depot. When turning on the next crossing below I glanced up the street, and there stood my colloquist where I had left him, with each hand to the elbow in his trousers' pockets, staring at me with all the mouth and eyes he had, looking just as if he didn't know whether he felt called upon to demand an apology or sue out a writ of lunacy against me. And even now, when we meet on the street, he shies around me as if I were an escaped lunatic. One thing I feel assured of, however (and right thankful am I for the assurance), that he will never ask to borrow another dog of me.

Arriving at the depot just in time to catch the eleven o'clock south-bound mail-train, I procured tickets and stowed old Dot away in the baggage-car. Only a few moments' delay and we were off, free as the air, to indulge in the delights of a real Christmas holiday. A three and a half hours' ride brought us to my place of destination, and likewise a right stiff little snow storm, which didn't promise well for my prospective sport. But the weather moderated a little, it stopped snowing, and by the next morning it was cold, damp and cloudy—just the kind of a day that affords the best of sport to the gunner. After a late breakfast I started out with dog and gun for a little tramp, merely to get up an appetite for a Christmas dinner. Found two coveys and bagged eleven quail in less than two hours.

I wrote Mallory immediately on arrival that he might expect me on the following Monday, intending to spend the remainder of Christmas week shooting with friends near town. But it grew much colder that night and snowed some, which, with a hard breeze, disjointed all our plans. As the week passed away it grew warmer, and by Monday the weather was just right.

With gun in one hand and valise in the other, I stepped into a second-class car, old Dot following close "to heel," and when I took a seat he crawled underneath it, thereby avoiding the unpleasant necessity of being made baggage of. Arriving at the station, who should I see emerging from the rear coach but my old friend Captain Jim C., brother-in-law to Mallory, whom we found waiting for us with a double seated buggy drawn by an excellent team. On the way out from the station Captain Jim entertained us with a history of his experience as a sportsman. A friend(?) made him a present of a fine dog, which necessitated the purchase of a gun. He fancied he liked the sport, and waded through one season. Then he fancied he didn't like it so well, since he couldn't kill anything. He gave the dog away. His gun and a thousand shells he was offering for sale at a sacrifice. He regretted not being able to join us in the next day's sport, having lost all taste for it, but assured us that he had a wonderful stowage capacity for game after it was prepared and brought to the table, which fact he lived to substantiate to the entire satisfaction of us all.

After an uneventful little drive of five miles we pulled up at Mt. Ida, the homestead of one of those grand old estates peculiar to our Southern land in days gone by. The estate is still kept up by friend Mallory, his mother and sisters, all of the very highest type of nature's nobility, and right royally do they entertain, to be sure. Now, in the match, which was arranged for the following day, Mallory and I were to shoot against his cousin Tom J. and brother-in-law Captain H., of Selena; but, as the latter gentleman failed to put in an appearance, they decided to substitute for him a neighbor, Ed. S. One fact worthy of note in this connection is that we all met in our first tourney at glass balls only a few weeks previously, in which Tom and Ed. came out winners. So they but naturally felt they would have an easy "walk over" in the matter in hand. They went out to a party and remained until the "we sma' hours," while Mallory and I retired rather early in the hope of getting a good night's rest and rising with a steady hand for the morrow's work.

Next morning we were up at a reasonably early hour, and, after a comfortable breakfast, off for the fields, Captain Jim flinging the proverbial old "shoe of good luck" after us with a side remark that he "hoped they would get at least enough birds to make a mess for to-morrow's breakfast." At first the weather was just right, but soon the wind changed and brought with it unfavorable prospects for the day.

Perhaps it may be well to describe my companions: Mallory is of rather a sanguine-phlegmatic temperament, firm as a rock, even tempered, with iron nerves; a sportsman every inch of him, and a number one shot. Tom is of a bilio-nervous temperament, rather delicate of constitution, warm-hearted, with nerves like spring steel; an anomalous compound formed by a combination of drollery and a peculiar kind of timidity; withal an excellent shot, and as good a fellow as ever drew a trigger. Ed. is a blond chap, with a sanguine temperament, full of fun, and always ready for a joke, on some one else. He is a capital good fellow in the field and a crack shot; in fact, he is one of the few men I've met who approved my ideas of what, with practice, would make a first-class snapshot. Nothing excites him, he is as quick as lightning without being the least bit nervous, and has that peculiar knack, or I prefer to call it gift, of pulling trigger the moment the but of the stock touches the shoulder.

But here we are at the field. Old Charlie, the colored gillie, having proceeded us and pulled down the fence, we lose no time riding inside and casting off the dogs. They get themselves down to work in beautiful style, and, before we have crossed the first field, seem to understand each other as well as if they had run together a whole day. They both wind game near a patch of millet. On they go steadily, and now old Dot stands firmly. Mallory's old setter, Night (staunch as a rock and black as midnight), comes up and "backs" in splendid style. We all dismount and leave the horses in charge of old Charlie; but by this time it is sprinkling rain, the birds don't lie well to the dogs, they are very much scattered and get up all around us. All four of us being together makes confusion—bad shooting consequently. We only get two birds on first rising and two more on following them up. It always makes me nervous to shoot with so many in a crowd; so I suggested a division of the party, which was unanimously agreed upon, with a provision from Mallory that Ed and Tom should not shoot on the ground, suggesting that we had better send Charlie along to watch them, but finally agreed to put them on their honor.

After so long a time old Dot "finds" in very thin cover; it is still raining a heavy mist; the birds rise out of range and pitch into a thicket, where we follow and get only two of them. On we go (and still it rains), but we find no game. Tom and Ed are in better luck, at least old Charlie has just counted the twenty-sixth shot they have fired since we separated to our four. Finally old Dot winds a covey and "finds" in good style. This time, although found in a thicket, they scatter into good cover and afford us good shooting (the first we've had), bagging seven or eight. But every sweet has its bitter, and this case proved no exception to the rule; for we found all our shells wet, and it was exceedingly difficult to get the loaded ones in or the empty ones out of the gun, which gave us a full realization of all Mr. Zimmerman meant to express in his famous picture "Tight shell." By this time Tom and Ed came in sight, and when within hearing we readily discovered there was a row on hand. Just what the trouble was we couldn't get enough of their conversation to understand, when Tom called out with, "I say, boys, what do you think!" Without giving him time to go on with his exclamation, Mallory replied, in a rather absent-minded way: "Well, I think this is a very disagreeable day for shooting, but if the weather—" "Oh, bother with the weather," said Tom; "I wanted to tell you about some of Ed's tricks. He has been claiming my birds all day. Every time a bird fell he would pick up and pocket it just as complacently as if there wasn't a man within a mile of him, utterly ignoring me; and right now, more than half the birds in his bag justly belong to me. I just allowed him to take them rather than raise a fuss about it. But enough of a thing is enough, and I'm not going to stand it any longer!"

"Now just listen to him," says Ed. "He never did kill anything until he took a deliberate rest on a fence, when he managed to wing a bird on the ground and old Night caught it. That seemed to give him a kind of a send off, and I believe he has killed two since."

Tom, disgusted and quite out of patience, said:

"Well, Ed, I do know you wouldn't tell the truth if you could possibly get around it."

Here Mallory, thinking from the amount of shooting the others had done we must be a long way behind, interrupted this interesting colloquy by suggesting a change of venue, as the lawyers say. So it was decided that we should make our way by the nearest route across the creek and hunt down on the other side. After crossing over we called a halt for lunch. Luncheon over, we proceeded to count out the morning's work, and found, much to the surprise of Mallory and myself, that we were just even with them, Tom and I having tied. Mallory and Ed were in the same fix, a very encouraging showing for our side considering the amount of shooting done on each side.

"But," said Mallory, "what on earth were you all shooting at before we came together?"

"Oh, that's very easily explained," said Ed, with a comical look toward Tom. "Every time I killed a bird Tom would shoot, too, so he could claim it, and if I had killed every shot that would make two shots for each bird, you understand?"

All of this on Ed's part was told with such a withering pat-him-on-the-head air that Tom, seemingly in the depths of despair, said:

"Well, Ed, since I see you are determined to have all the birds we double on, I will agree to let you count them that way. One thing, however, I am determined on; that is, you shall not have the ones I shoot by myself!"

All hands, including old Charlie, were called upon to witness the contract, and then we were off again. In the second field we crossed the dogs found a fine covey, but in our efforts to get very near before dismounting we rode into and flushed them, so we lost our chance at them on first rising, but had them well scattered on a hillside among some small pines and sedge grass. Now we scattered out to business, "every fellow on his own hook," and had some real nice sport.

"Well, that beats anything I ever saw; if he can't claim my birds himself, he wants some one else to."

We found one other covey and had some very good shooting,

which brought us to the end of our day's sport about sunset, when we, on counting out, found our side just five birds ahead, Tom and I having shot even all day. Mallory did the work by beating Ed just that number. We only bagged forty-eight birds in all, which, considering it rained all day nearly, and the rough ground they were in constantly, was not such a bad day's work after all. Over the same ground, with a good day for it, we should have bagged at least twice that number.

Here our party divided, Ed going by the nearest route home and we to Mt. Ida, which was anywhere between five and ten miles off, depending on the condition of the road and the weather, which in this case was far from being good. On the way Tom regaled us with a description of the party the night before, how they played "old sister Phœbe" and "Johnnie Brown" in the good old-fashioned way, which latter feature he dwelt on at length and enjoyed to the fullest extent. And now, for the first time, were we able to understand why he was so absent-minded and wore such a far-away expression of countenance at times during the day, whenever Ed would allow him a little time for reflection.

Arrived at home, we were sitting around the fire in the dining room, warming a little before going upstairs to dress for dinner, when old Dot came in, shivering with cold, to claim his place before the fire. He had covered himself all over with glory during the day, and quite won the hearts of our entire party. Notwithstanding which, I thought he had better go out doors until dry; but in spite of all my protestations, the ladies (on hearing the good report of his day's work, as well as from a genuine sense of sympathy) decided that he should "go up stairs, where he would be comfortable." So Sam was summoned and directed to "carry Dot up to the Doctor's room and leave him there by the fire."

Now, if Dot had remained by the fire and behaved himself, as all good dogs are expected to do—while being made company of, at least—thereby showing his appreciation of such treatment, then you might have been spared the trouble of reading, and I the humiliation of making, the following statement:

The fire had just been made, and, of course, the room was still cool, and on going up stairs some ten or fifteen minutes later, I found Dot (in trying to make himself "comfortable" as possible) had gone to bed on one of the nicest of snow-white counterpanes; and not being satisfied with one, he had tried each of them, there being two beds in the room. It was but the work of a few moments to dress and get myself ready for dinner, but it was quite an undertaking to frame an apology for Dot's bad conduct. Descending to the dining-room, I proceeded in a rather faltering, and ungraceful way it may be, but with nevertheless commendable courage, to deliver the aforementioned apology.

Of course, the ladies said it would make no difference, and did all they could to make me feel comfortable in my embarrassment—which, by the way, is by no means an easy thing to accomplish.

While we were seated around and enjoying a bountifully spread table, Mallory entertained the party with a history of the day's work and fun, which latter feature was enjoyed very much by the ladies. Capt. Jim enjoyed it too, but his chief delight seemed to be "discussing dinner," and a knowledge of the fact that we would have birds for breakfast. Dinner over, we all gathered in the back parlor, and there spent very pleasantly the last day of 1878. And as this sketch has already grown unreasonably long, I will in my next begin the ending of this trip, with the beginning of a new year.

HAL RAQUET.

TROUT OF THE TWO VIRGINIAS.

STAUNTON, VA., March 22, 1879.

EDITOR FOREST AND STREAM:

Since I wrote to you in the spring of 1877, I have found out a good deal about the trout in our two Virginias that I did not know then, a good deal about their numbers and size, and where they are to be found; a good deal that I think may be of interest to some of the gentle craft who have not time or means to go to the great Maine or Canadian fishing grounds. For instance, in the last days of June, 1877, a party of three of us, from this town, taking with us a tent, cooking utensils, a servant and a two-horse wagon, went to the head-waters of the north branch of the Shenandoah River, in this county, to the farm of a man named Shiflett. The distance was twenty miles, the road good for the first fourteen, and by no means impassable for the last six miles. We camped in as pretty a little forest glade as you would wish to see, under the shadow of an immense spruce, not more than a hundred yards from the "river," as it is, by courtesy, called. The "river" at this point is a bright, clear, swift running stream, rough as all trout streams are, but infinitely smoother than many another that I know. It is one long succession of ripples and pools; the ripples from six to twenty inches deep, and the pools, as you find them, of any depth from three to eight feet. We remained here three days, and caught three hundred and three trout, from six to fourteen and three quarter inches long, and never threw a hook as much as two miles from the camp. Most of them we found within a half a mile. The bait we used was grasshoppers. There are some places on this stream where a fly could be readily cast, but for a regular rough-and-tumble half-day's fishing a fly would give you more trouble than profit. Just across the stream from our camp was Shiflett's house, from which we drew bountiful supplies of sweet, fresh butter and milk, and about the best bacon that it has been my fortune to come up with—bacon cured with hickory smoke from mast-fed swine—a combination that is hard to beat.

Parties making this trip need not take camp equipage, unless they prefer it. They can board at Shiflett's for a dollar a day per head, and will get very good fare—excellent bread, good coffee, vegetables of the season, the trout, and that bacon. This, then, although less glorious, is far less expensive than the Rangeley Lakes, the Adirondacks, or the Restigouche.

Last summer (1878), the 20th of June, a party of four of us, with two wagons (one, one horse and the other two), a servant, and the necessary camp equipage, started over the Parkersburg turnpike to the Greenbrier River in Pochahontas County, West Virginia. This river, at the point where the great Parkersburg turnpike crosses it, runs between the main (back-bone) ridge of the Alleghanies on the east, and the Big Cheat mountain on the west. Here, then, on the road side, near the abutment of the burned bridge, we pitched our tent, and here we stayed four days. It rained on us nearly all the time, the river was flush, and yet we caught four hundred and seventeen trout, ranging from six to sixteen inches in length. We used the fly exclusively. It would be hard to get bait of any kind in that region. The favorites among the Greenbrier trout at that time (20th to 30th of June) were the black gnat, the queen of the waters, or Montreal fly, and the gray and brown hackles. Fancy flies seemed at a discount. The black gnat was the fly favorite. And just here let me put in my word about the tail-slapping business. Since August, 1874—at which date I threw my first fly in the waters of the Dry Fork of Cheat—I have caught "a many a trout" with a fly, but I have never seen one try to use his tail as a means of taking the fly. My experience is this: When a fish rises, if he misses a strike he turns a somersault, and in six cases out of ten shows his tail near the fly as he goes down. If he strikes he settles down backward, and makes no splash further than the little bubbling gurgle that is always an accompaniment of his effort at a strike, whether a successful one or not. And this experience of mine is identical with that of our best fly fishers in this State.

Next June, Providence permitting, a party of us are going to try the head waters of Elk, in West Virginia, where there are said to be more trout and larger ones than in any stream of the two Virginias. I shall find out, and if they are larger than the Dry Fork fish, or more numerous than those of the Blackwater (in the Canaan), I will hold myself a satisfied fisherman for the rest of my days. If you would like to have some account of our doings on the Elk expedition, say the word, and I will remember you when the history is to be written.

Our sportsmen's club still holds its own here. Partridges were scarcer with us last fall than they have been for years. The best bag I heard of was eighty-three birds to two guns. I must close up this long, rambling epistle with the statement made before, that if anybody wants more particular information about sporting expenses, facilities, etc., in and around Staunton, Virginia, he has only to write a line to our president, Capt. Wm. L. Bumgardner, and it will be most cheerfully given.

ASA.

Fish Culture.

Report of the Commissioners of Fisheries of the State of New Jersey, for the Year 1878.

THE Commissioners of Fisheries of the State of New Jersey in their *resumé* of the fish cultural efforts of the past six years, the period of time New Jersey has been engaged in this work, state two things which are very efficient in promoting the fishing interests of the State, an increased interest in the work manifested by the general public, and following from this, a better protection. Attention is very pertinently called to the fact that the efforts of appointed game wardens and other officials to protect the fish must ever remain nugatory until the community shall so clearly see the necessity and advantages of protection that it may lend its co-operation. The best and, in short, the only efficient protection is that which shall come from the people. The most destructive form of poaching now carried on is by that of parties in the Northern part of the State, who set eel traps in the fall, in which great numbers of young shad are caught on their way down stream, and being too small for food, are shovelled out in cart loads upon the lands to serve as manure. The organization of local game protective associations, and the growing appreciation of the economic importance of food fishes will doubtless within a limited period remedy the present defects in New Jersey fish protection.

The shad fisheries of the Delaware last season between the early part of March and the middle of June gave employment to about twelve hundred men; there were about seven thousand fish taken, which at an average price of $25 per hundred, yielded $175,000 worth of food. The first efforts to artificially improve the shad fisheries began in 1874, since which time several millions of young fry have been added to the natural supply. In June, 1878, a party of fish culturalists engaged in the work on the Delaware, succeeded in hatching and planting about a million and seven hundred thousand young shad. The greater portion of these were placed in the river below Trenton in order to give them immunity from the attacks of the black bass, which exist in great numbers above tide water.

The history of the salmon propagation in the Delaware has been fully given in the FOREST AND STREAM. It is probable that up to June 10, 1878, between fifty and one hundred salmon were taken in the Delaware, ranging in weight from twelve to twenty-nine pounds. During the year 300,000 eggs have been received from California, in addition to which the West Jersey Game Protective Society turned over to the State 150,000 eggs, furnished to them by Professor Baird, and a further installment of 25,000 intended for some inland waters, made the total number of salmon eggs received 475,000. These were hatched with a loss of only 10 per cent., and have been disributed to the Delaware, Raritan, Hackensack, Passaic, Great Egg Harbor, and Mullica rivers, Alloways and Raccoon creeks, and Greenwood Lake and Shepherd Pond. For the establishment of the salmon it is important that their capture should be prohibited for at least three years.

The black bass, formerly a stranger to the waters of New Jersey, was introduced into the Delaware in 1870, since which time they have increased to an enormous extent, furnishing annually many thousands of pounds of food. They have been transplanted to a great number of ponds and lakes, their propagation being attended with no expenses beyond those of transportation. During the past year 2,000 of the spawning fish have been placed in the waters of Hunterdon, Ocean, Mercer, Cumberland, Camden, Gloucester, Morris, Union, and Salem. There has been a much greater demand for them than the Commission could fill.

Of land-locked salmon, 39,000 were placed in Strubles Pond, near Andover, Sussex County, March 20, 1878, and in the following May 10,000 were deposited in Green Pond, Morris County, and 9,000 in Morris Pond, Sussex County.

Until the present year no appropriation of the funds of the Commission has been devoted to the propagation of brook trout, although the many depleted streams of the State warranted special effort in this direction. There were made in 1878 the following deposits: 10,000 in the headwaters of the Paulinskill, near Newton, Sussex County; 10,000 in the small brooks emptying into the north branch of the Raritan, near Dover, Morris County, an equal number in the headwaters of the Pequest River, near Newton, Sussex County; 6,000 in the Saddle River, Bergen County; 6,500 in the headwaters of the Wallkill, Sussex County, and 1,000 in Cedar Creek, near Plainfield, Union County. A supply of 200,000 are now in the hatching-house.

The smelt fishing of the Delaware has greatly declined within a few years past, and the expediency of an appropriation for their artificial reproduction is urged by the present Board, who were compelled, from lack of funds, to decline co-operation with Maryland in smelt hatching on the Hackensack.

There are in the hatching-trays 100,000 whitefish eggs.

VERMONT.—The Fish Commissioners, through their agent, Mr. John P. Williams, of Rutland, have lately been engaged in putting smelt into several of the Vermont trout ponds. Berlin Pond, Nigger Head Pond and Long Pond in Groton have just been stocked, and Greensboro Pond, Barton Pond and several others are soon to follow. The smelt are caught in Lake Champlain, where they are supposed to have found their way from salt water. What is the advisability of putting smelt into trout ponds? Is there no danger of their crowding out the trout or will they simply furnish food for them.

MAJOR.

It is possible that the smelts may devour the very young trout; but that will depend so much upon the condition of the ponds, food, etc., that we cannot advise positively.

EEL EGGS.—*Mecham Lake, N. Y., March* 23.—*Editor Forest and Stream:* At three different times in the last seven years I have taken eels in my hands and seen the eggs run from their vent, each time in the month of May. In May 1878, I collected from the tub in which the eel was brought ashore, about one hundred eggs and put them in alcohol. The eggs ran from the eel as I held her by the neck while taking the hook from the mouth. I have now about thirty of the eggs in alcohol. I gave a portion of the lot to Prof. Wheeler, of Yale, to take to Prof. Dana, curator of the Museum at Yale, hoping he would make examination and give the result of his examination to the public. I have not heard from either gentleman since in regard to the eggs. The eggs when taken were about the size of No. 8 shot, and showed as much development as brant eggs after being impregnated forty days. The eyes are very black, and the form of the fish could be plainly seen. I shall make an effort the coming May to secure more eggs, also to observe closely the eels from which they are taken. My little salmon and brook trout have hatched nicely during the winter, and will be let from the tank into the lake about April 15. This year's hatch is one of the largest and best I have ever turned out. I feel very well paid for my labor and expense. Everybody saw a marked improvement in the fishing last year.

A. R. FULLER.

—After a great deal of talk for the last five years the Canisteo River here has been stocked with black bass, and the sportsmen desire to return thanks to Seth Green and Fishery Commissioners of the State, also to Mr. Scott, who had charge of the bass. He arrived here at noon on a cold, wet day, and when asked to have his dinner he refused it, saying he would attend to the bass first and then himself. He thinks we have a fine river, and that the bass will do well.

J. OTIS FELLOWS.

Natural History.

For Forest and Stream and Rod and Gun

THE LOWEST VERTEBRATE.

Amphioxus Lanceolatus.

THIS remarkable fish is the simplest and the most imperfectly developed of all the animals comprising the class *Pisces*. Indeed, for a long time after its discovery, it was not regarded as a fish, so unlike the fishes was it in its anatomy and habits, but it was referred to some lower class of organisms among the invertebrata, zoologists regarding it as possessing some of the characteristics of both the annulozs and mollusca.

Pallas, who first described and figured it, regarded it as a mollusc, and named it *Limax lanceolatus.*

It has been found, however, upon close examination, to be more nearly allied to fishes than to any other class, and, according to modern classification, its simple and anomalous structure entitles it to the first and lowest position among that class of vertebrates.

Hæckel regards it as representing the lowest stage of vertebrate animals, and as the last surviving representative of a lower class of vertebrated animals, rich in forms, and highly developed during the primordial period. Until recently the order contained but one genus and one species. Gervais has, however, discovered a new genus.

Amphioxus averages about one and one-fourth inches in length (though specimens have been found two inches long), one-fourth of an inch in depth, and one-eighth of an inch in thickness; being slender, compressed laterally, and tapering to a point at each extremity. It is semi-transparent, and silvery white when alive; when preserved in alcohol, it becomes opaque, and of a pale flesh color.

No *true* fins are developed from any part of its body, but a narrow membraneous border runs along the whole of the dorsal and a portion of the ventral surface. This expands slightly, as it comes over the tail, into a sort of lancet-shaped fin. If, however, we examine closely, delicate cartilaginous threads in the dorsal portion of this membrane will be found answering to fin-rays. Moreover, there is really no true skeleton, at any period of life, in this animal, and where we find the vertebral column among the other adult fishes, and vertebrates generally, we notice, in this instance, that the vertebral column, and in fact the whole endo-skeleton is represented by a semi-gelatinous cellular substance, known as the *notochord*, contained within a delicate fibrous sheath, the latter giving off both superior and inferior fibrous arches. The ribs are represented by a series of fine transparent threads of cartilaginous or fibrous tissue, on either side of the body; and *Amphioxus*, possessing no bony skeleton, is never found in a fossil state. This *notochord* is continued to the anterior extremity of the body, but as it exists in the embryonic state of the higher vertebrates, is discontinued at a little depression called the *pituitary fossa.*

In all vertebrate animals, without exception, the notochord is developed in much the same manner, but it remains during adult life in *amphioxus*, whereas in all other vertebrates (except Lamprey eels and Hag-fishes) it becomes developed into cartilage and bone, thus forming the vertebral column.

Amphioxus is sometimes regarded as supplying the link of connection between the Invertebrates and Vertebrates; during the larval stage, its development is remarkably similar to the development of the same stage in the life history of the Tunicata (which are Invertebrates) or "Sea squirts," as they are popularly called, the notochord being developed in both, but in the "Sea-squirts" it becomes in the adult condition of minor importance, whereas in *Amphioxus* it continues an important element in its structure.

This curious fish therefore possesses no *skull*, and the spinal cord does not enlarge anteriorly to form any brain mass, as in the higher vertebrates; yet the brain is supposed to be represented, from the fact that near the anterior extremity of the spinal cord minute nerves are given off to supply a pair of pigment spots, supposed to be imperfectly developed eyes. Until very recently it was believed that *Amphioxus* had no visual organs. There is also a nerve branch continued to a little depression, which is lined with a ciliated mucous membrane, and is supposed to represent an organ of smell.

It is doubtful whether the sense of touch is very acute. The muscles are arranged very much as in the higher fishes, but of course they can have no bony attachments. They diverge from a central line in two series, one passing upward and backward, the other obliquely downward and backward. There are no auditory organs, nor trace of any external organs, except that of a mouth. This is a longitudinal fissure situated beneath the anterior extremity, or "head," of the animal, and is surrounded by a cartilaginous ring composed of several pieces, each of which gives off a prolongation to support *cirri*, or short cartilaginous filaments. These are in number from twelve to fifteen, arranged on each side of the mouth, and the filaments of the two rows are said to cross and interming'e with one another, and are constantly in motion; they may thus protect the oral cavity against the admission of extraneous bodies.

The mouth leads into a rather long, dilated cavity, which is regarded as the pharynx. Among the highest vertebrates the pharynx is a musculo-membraneous canal, situated between the base of the cranium, and the œsophagus or gullet, narrow above or anteriorly, dilated in the middle, and again contracted below or posteriorly, where it opens into the œsophagus; it serves alike for the passage of air to the trachea or "windpipe," in respiration, and for the passage of food during deglutition.

In *Amphioxus* the walls of the pharynx are supported by filaments of cartilage, having narrow fissures or clefts between them, a ciliated mucous membrane lining the entire cavity. Posteriorly this pharyngeal sac opens into an alimentary canal. This consists of a short intestine, not convoluted, and terminating by a distinct opening a short distance from the posterior extremity of the body, and slightly to the left side of the median line. This intestine is well supplied with these vibratile cilia. There is at one point a lateral expansion of the intestine, which terminates in a blind sac, and is of a greenish color. This little pouch is supposed to represent a liver, and its development is very similar, so far as it goes, to that of the same organ in some of the higher animals. In the adult fish it has the appearance of the liver of an embryo fowl, at the fourth or fifth day of incubation.

The kidneys are not well defined, but they are supposed to be represented by a small opaque glandular body, elongated in form, and as yet no lymphatic system has been demonstrated. Respiration is effected by water entering the mouth and passing to the pharyngeal cavity, these continuous currents being produced by the constant action of the above mentioned cilia, their motion being always in one direction, *i. e.*, backward toward the posterior part of the body. The greater quantity of the water then gains access to the abdominal cavity, which is the space existing between the walls of the pharyngeal sac and the walls of the body proper; it terminates anteriorly at the mouth, and posteriorly by a small opening, the "abdominal pore." The water is then expelled from the body through the above mentioned small opening, which is situated ventrally and a little to the middle of the body, and has contractile margins. It is located anterior to the intestinal opening. The remainder of the water finds its way into the alimentary canal. The reproductive organs are remarkably similar both in appearance and location in the two sexes; are rather above and behind the "abdominal pore," and the generative products are transmitted to the abdominal cavity, thence through the "pore."

Amphioxus has no true heart, but nature has endowed it with several imperfectly developed hearts, these being merely dilatations in the course of some of the largest circulating vessels, which contract and dilate rythmically, thus forcing the blood along its channels; the veins as well as the arteries are supplied with these contractile bulbs, and it is supposed there are from twenty-five to fifty of these "hearts" on each side of the body. In this case we find the only instance of a vertebrate having a *single* cavity, or several individual cavities, placed at intervals, to represent the heart. We must call these cavities hearts, for they perform the functions of these organs.

Also in *Amphioxus* we find the only exception among vertebrates to the general red color of the blood—*i. e.*, red when seen in mass. As it possesses no red blood corpuscles, it is hence colorless. This blood is principally purified by the current of water constantly passing through the bronchial or pharyngeal cavity; but within the cavity of the mouth we find several prolongations of the mucous membrane, densely covered with cilia, and richly supplied with blood; and without doubt these appendages are very efficient aids in the function of respiration.

This most remarkable little fish is generally found in sand-banks in various seas, but especially in the Mediterranean Sea. It has been found off the coasts of England and Ireland; in the Baltic Sea, North Sea, Indian and Pacific oceans, and also along our Southern Atlantic coasts. When dug out of its native habitation it will immediately begin to burrow again with considerable activity. These fishes live in sand-banks, at a depth varying from ten to twenty fathoms below the surface of the water, and are very hardy, living for several hours out of water, and will outlive a considerable amount of handling. For some reason they dislike exposure to the sunlight, and hence we might infer that, although their organs of vision are very imperfect, they possess the power of distinguishing light, if not objects.

Among the first descriptions of this most interesting fish, we have that by Mr. Couch, from specimens found on the British coasts. The one first discovered was lying partially buried in the sand, only its tail being exposed, and fifty feet distant from the retreating tide. This occurred on December 21, 1831, after a storm. The specimen had apparently been cast up by the waves. Of several individuals which were found about this time, the largest were about two and three-tenths inches long.

According to statements made by Mr. Wilde in a "Narrative of a Voyage to the Madeiras, Teneriffe, and Along the Shores of the Mediterranean," several individuals of *Amphioxus* would attach themselves to one another in a most remarkable manner, sometimes adhering together in such a way as to form a cluster; sometimes adhering by the sides of the bodies, so that the head or anterior extremity of one would be applied to the posterior third of the body of another preceding it, thus forming a connected line six or eight inches long. The whole mass would swim in unison and with considerable rapidity, with a snake-like motion. When specimens were placed in a glass containing sea water, and a finger or stick held before them, although their eyes are so imperfect, when approaching the solid object, they would stop suddenly and turn aside. They frequently come to the surface of the water, apparently for fresh air.

Amphioxus does not receive its food into its body by a process of swallowing, but simply imbibes it from the water after it is admitted for the purpose of respiration. Hence its food must consist of the minutest and lowest of organisms, belonging to the sub-kingdom *Protozoa*. It is highly probable that the most of its food is derived from the water which passes from the pharyngeal sac into the alimentary canal.

Notwithstanding the facts noted in this brief and imperfect sketch, our knowledge of *Amphioxus* is very limited. We need a more familiar acquaintance with its development and habits, and to zoologists it is an animal possessing more than ordinary interest.

HERMAN CROCKER EVARTS, M. D.

NOTES ON SOME BIRDS, OF CHATHAM, N. J.

BY HAROLD HERRICK.

[Read before the Linnean Society of New York, Nov. 2, 1878.]

Cistothorus stellaris, Short-billed Marsh Wren.—Commoner on the meadows along the Passaic River than I ever saw it elsewhere. Few of our birds are more local in their distribution than this species. While it is common on this part of the river, it is rare—in fact, I doubt if it occurs at all—on the salt meadows, thirty or forty miles nearer the river's mouth, although but about fifteen miles from Chatham as the crow flies. It breeds in June, after the manner of the long-bill, which latter bird probably occurs near there, although I never noted it.

Coturniculus henslowii, Henslow's Bunting.—For a bird not rare, it is surprising how few specimens of this species are to be found in collections made in this vicinity. It occurs at Chatham, and from the fact of my having a specimen taken late in the spring (the exact date I do not know), I infer that it breeds occasionally.

Tachycincta bicolor, White-bellied Swallow.—We all know that this swallow should breed with us, but, judging from my own experience, but few of us have found it so doing in New Jersey. On Decoration Day, May 30, 1873, I, with my friend Mr. D. B. Dickinson, while searching the river banks for nests of wood ducks and night herons, found a number of pairs nesting in old woodpecker's holes in stubs, precisely as I had found them often before at Grand Menan and Lake Umbagog, with the exception that at these places they had almost undisputed possession of their homes, while at Chatham the bluebirds were doing their best to dispossess them. I shot several in the act.

Goiaphea ludoviciana, Rose-Breasted Grosbeak.—A few usually breed in New Jersey, but it is as a rule an uncommon bird. This spring, however, it was very abundant, Mr. Will Dickinson shooting nearly a dozen one morning in May. More than the average remained to breed, I think.

Cardinalis virginianus, Cardinal.—Not a common bird, and occurs as often in midwinter as at any other season. This, however strange it may appear, is a fact, and one that has been noted by several friends as being the case in other places. A pair remained for a long time one winter in the firs and evergreens about a house in Llewellyn Park, Orange.

Lophophanes bicolor, Tufted Titmouse.—This species I have never seen alive, but Mr. Dickinson has shot it occasionally, but usually in winter, when, like the preceding, it should have been properly several hundred miles further south.

Melanerpes erythrocephalus, Red-headed Woodpecker.—Was not at all common until the fall of 1872, when a great flight occurred throughout the Middle and Southern New England States. They remained all winter, finding abundant food in the pin oaks along the river. Quite a number bred the next spring, and ever since a few pairs have continued to nest each spring in the vicinity.

Centurus carolinensis, Red-bellied Woodpecker.—A rare bird. Mr. Dickinson has taken but a single specimen.

Picus villosus, Hairy Woodpecker.—We found a nest with young some years ago in an old rotten tree in one of the river swamps. It was the first that either of us had ever seen. Although the birds are very common, the eggs are quite the reverse; and in all my collecting I have failed to secure a single authentic set, although they have always been one of my desiderata.

Dendroica æstiva, Yellow Warbler.—I noted last summer something in the nesting of this bird quite new to me. I had often seen them build a second story to their nests to cover the invading egg of the cow bunting; but in this instance the female had deposited three of her own eggs before the cow-bird's was laid. She had probably previously enjoyed the pleasure of rearing a young cowbird, and not caring to repeat the operation, determined to destroy her own eggs to get rid of the strange one, which she could not remove, and to that end built an entirely new nest on top of the old one. The structure was taken before the second litter was laid.

Helminthophaga lawrencii, Lawrence's Warbler.—As I have recorded elsewhere, the type of this species was taken at Chatham.

The various owls—*Bubo virginianus*, *Scops asio*, *Brachyotus palustris* and *Syrnium nebulosum*—are quite common at all seasons, and breed in greater or less numbers every year. Mr. D. takes the eggs of some one or other of them every year. The *Syrnium nebulosum* is quite tame, and not being shot, nests in hollow trees near the house. If small holes are enlarged and made suitable they are pretty sure to take possession of them for breeding. Of the hawks, *Buteo lineatus*, *Accipiter cooperi*, *Circus Hudsonius* and *Falco sparverius* breed in fair numbers.

Nauclerus furcatus, Swallow-tail Kite, seems pretty far from home, but I saw a fine specimen taken some six years ago. It lit on a house near Chatham, was shot at, wounded and caged. It finally died, and was stuffed by Mr. Dickinson.

Speaking of hawks alighting on houses reminds me of what I thought the peculiar action of a sparrow-hawk some two weeks since. He remained for several days in the vicinity of my house, in Orange, N. J., and during his stay seemed to light only on house tops, regardless of the persons around.

Aix sponsa, Wood Duck, breeds commonly in stubs along the river. Snowy and white herons sometimes visit the river, but are rare and shy. Night herons breed plentifully; saw thirty eggs taken in one tree where but one half the nests were accessible.

Porzana noveboracensis, Yellow Rail, is another of our birds that, while not rare in proper situations, is uncommon in collections. The Chatham meadows seem to suit them as well as they do the common and Virginia rails. I have four or five specimens taken there, and many are annually shot by sportsmen and discarded on account of their small size.

Gallinago wilsonii, Wilson's Snipe.—These meadows have, since first brought to notice by the facile pen of the lamented Frank Forester, been the most noted snipe grounds in the State. In the spring many birds are wounded, and so prevented from migrating, but their powers of reproduction are unimpaired. These, perhaps, mate and rear young. For certain it is that some breed yearly in the meadows. I have an egg taken from a nest found there, and Mr. D. takes young often, and last spring got a family of four in the down.

Philohela minor, Woodcock.—The dark, muddy, weedy and malarious swamps, close to the river, seem to possess great attractions for the woodcock. Only a few breed there, but in June, when the young are half grown, the families come down from the hills and surrounding country, till the swamps fairly teem with them. Mr. D.'s is the best swamp on the river, and 120 fine birds were killed in it July 4, 1878.

Larus philadelphia, Laughing Gull, occurs during migrations. During a heavy freshet in October, 1876, when the meadows were all under water, and after a severe storm, Will Dickinson shot an immature specimen of the genus *Stercorarius*, presumably *pomatorhinus*. This I regarded as a good take, as the bird probably did not come overland, but followed the sinuous course of the river from the sea, which could not be less than forty miles.

NEW JERSEY SPRING NOTES.

STANLEY, N. J., March 18, 1879.

EDITOR FOREST AND STREAM:

One of the many advantages gained by a residence in Morris County, N. J., within twenty or thirty miles of New York, is the opportunity to ramble through the hills and through the woods with a dog and gun. It matters but little if game is sometimes scarce. How delightful to observe the various habits of the birds, the wonderful variety among the trees, the laughing, rippling brooks, and exquisite moss-covered rocks. Although eleven years have passed since I left Brooklyn, to become a permanent summer and winter resident "in the Jerseys," I have no desire to return to the city. Indeed each returning season, with its fresh experiences in reading Nature's ever-open volume, serves to strengthen deep-seated love for our Hillside Home, on the sunny southerly slope of Long Hill, overlooking the fair valley of the peaceful Passaic.

When spring returns, we are all eagerly waiting the advent of the birds. A few courageous robins and bluebirds always winter in our neighborhood. Within two miles of our house is that remarkable feature in the physical geography of this part of New Jersey, the "Great Swamp." In one portion of it, covering many acres, the magnificent rhododendron grows to the height of ten feet. So dense is it that one can hardly force his way under or through the closely interlocked branches. Its broad, brilliant, evergreen leaves form an impervious roof, shielding partridges, quail, rabbits, robins, bluebirds, and as some naturalists tells us, even woodcock, from cold, hail, rain and snow during the rigors of winter.

On the afternoon of March 11, in company with our dark-eyed Laurie, a spotted six-year-old, with Grouse, the pointer, full of excitement at his liberation from the kennel, and the Colt breech-loader lying comfortably in the crook of the left arm, I started out for a short tramp along the bank of the Passaic. The ice was beginning to break up, and a few ducks had already been seen. The sun was shining brightly, and the atmosphere was like a day in April. We counted ten varieties of birds—robins, bluebirds, bluejays, blackbirds, four kinds of sparrows, crows, and an immense hen hawk. The latter was flying high in air. I exchanged No. 4 for a shell charged with buck-shot, and pulled trigger. The shot evidently disturbed him, as he suddenly wheeled and fluttered his wings in the bright light of the sun, revealing the plume-colored under-feathers.

This region seems to be frequented by many different varieties of the hawk family. I have observed at least twelve. My pigeons and young chickens are frequently destroyed by them. They are very wary, and I have as yet been unable to bring down a single specimen. I mean to break the monotony ere three weeks have passed, as I want a fine falcon to keep company with the great horned owl and broad-winged golden eagle in the library.

On Saturday afternoon, 15th, in the same locality, within two gun-shots of the house, I flushed three woodcock. Is not this unusually early? This evening, while returning home from the depot, I heard their peculiar note repeated rapidly. One flew across the road just in front of the horse; another sat in the road two rods in advance of us. We pulled up. For a moment the quaint cry was repeated, and then as we drove on, up and away, alighting just over the fence.

At noon on Sunday a golden eagle came sailing over, five hundred feet in the air. A plucky little hawk espied him, and it was very amusing to witness their encounter in mid-air. By the way, an interesting event happened during a recent trip on the Fort Lee boat up the North River. A golden eagle, whose expanded wings were six feet from tip to tip, accompanied us for two miles. It kept just in advance, a half gun-shot off. As we approached the ice on the western shore it alighted on the outer edge. The deck hand said that he had seen several this winter. The severe weather of the North has driven them to the salt water to seek fish food, and perhaps anticipating an invitation to the fish dinner of the American Fish Cultural Association. Sunday also marked the return of the cheerful, industrious, gossippy Phœbe bird.

As I sat at breakfast this morning I heard the familiar call, "Phœbe," "Phœbe," and looking out of the window saw the bird busily engaged in a critical examination of her old home built on a shelf which I made for her four years ago, after her two unsuccessful attempts to build a nest five inches broad on a window frame two inches wide.

We were all nicely seated in the library this evening, when "Buster," our irrepressible ten year old, rushed in exclaiming: "Papa, come to the kitchen, quick! What do you think Hugh has caught?" I thought instantly, and as I reached the kitchen saw that I had divined the cause of "Buster's excitement. "See, papa! he's playing 'possum! Just look at him curled up there! Isn't he a sly old fellow to try to fool us and make believe he's dead?" It was a comical sight. Mr. 'Possum was on his back, one eye closed, the other open; his jaws apart, showing two fierce looking teeth nearly an inch long; his hind paws were curled up under him, the front ones stretched out losely as if useless. The hairless tail, bereft of four or five inches, seemed to indicate that it would never serve again to suspend its owner to the branch of a persimmon tree. Our entire family speedily gathered there. Some insisted he was dead. I inserted a stout stick between his jaws. This was a little too much for the animal. They closed on it like a steel trap. We decided to add this new comer to our little managerie. It seemed that he had discovered about as soon as we that our hens had decided on a "new lay," and in the shades of evening he was cautiously making for the gate of the hennery when Neptune, our magnificent black and white greyhound, espied him. With the speed of the wind he came down upon him, and but for the approach of Hugh would have left him no legitimate reason for "playing 'possum." Hugh took him by the tail, and thereby hung the termination of this tale. Now, Mr. Editor, and kind readers, isn't it a thousand times more enjoyable to be in Jersey, even in March, than to be confined to the dull, uninteresting, ill-smelling city? GEO. SHEPHARD PAGE.

P. S.—This does not stand for postscript, but for another "'Possum," which Neptune caught at half-past ten o'clock, since writing above, and which also sacrificed her liberty to her unlawful love for fresh laid eggs worth 40 cents a dozen.

G. S. P.

NESTING OF THE GREAT NORTHERN AND LOGGERHEAD SHRIKES IN MAINE.—Last summer (1878) I came into possession of a fine nest and five eggs of the northern butcherbird. It was taken at Bangor, Maine, May, 1878, and at finding contained six eggs. It is a bulky, heavy walled structure, and thickly lined with feathers. Writing to Mr. E. S. Bowler, the collector, for further particulars, he kindly replied as follows: "The nest was located in a small spruce tree, in the middle of a retired field. It was about ten feet from the ground and quite well concealed." And now comes a surprising statement, for he continues: "This shrike is by no means common. The loggerhead shrike frequently builds in this vicinity, but I have heard of only three instances of the great northern nesting here—one last year and two this. It is a little more retired in building, and defends its nest with greater valor than the loggerhead. I think the first *debut* of the latter species was made in 1875, and that they have been increasing every season since and will soon become common." Mr. Bowler considers that the eggs he has of *Lanius (Collurio) ludovicianus* are more rounded and the spots smaller than on those of *L. borealis*. Perhaps we have now a clue to where the birds taken occasionally in Southern New England late in fall and winter come from. H. A. PURDIE.

Boston, Massachusetts.

HORNS WITH HAIR ON—*St. Maurice, Canada, March 26—Mr. Editor:*—I have before me a pair of caribou antlers most extraordinary. They are entirely covered with skin and thick hair of the color and texture of such as covers the animal's head. These antlers were purchased from a hunter last July (1878), but the covering is not the "velvet" (which is quite familiarly known to me), but is as genuine hair from skull to tips as ever grows on a deer's head. The antlers are of good size, rather flat laterally, fairly symmetrical and of very light weight. Has a parallel curiosity ever been known?

EVERETT SMITH.

THE TROUT PERCH.—A matter of much interest to the icthyologist is the late discovery of the "trout perch" (*Percopsis guttata*—Agassiz) in one of the streams of old Connecticut. This fish, first found and described by Agassiz while on his trip to Lake Superior in 1856, up to the present find has only been known to inhabit three Northern localities, namely, one of the streams of Western Kansas, Rocky River of this State, which empties into Lake Erie six miles west of this city, and a small stream in Maryland, a tributary of the Potomac, but now at this late date, after the first discovery of the fish on the north shore of Lake Superior, we find it inhabiting a fifth locality, the Nutmeg State counting it among her fauna. Theodore Lyman questions if it might not have been "sent in some invoice of whitefish or black bass?" I do not think this possible, but believe it found its way to the Connecticut stream in a natural way. It has been there for ages but has been over-looked. This fish in the Maryland River was first discovered eight years ago. In the Rocky River, where it is quite abundant, it was found by the late Dr. Yared P. Kirtland in the spring of 1846, long before fish culture had recieved any attention, and to this day no foreign whitefish, black bass or their spawn have been introduced to the river or its vicinity. Two years ago a number of these fish were brought to me. I quote from my note book made at the time: April 25, 1877—Mr. A. Hall, of East Rockport, caught in Rocky River, the 23d inst., four specimens of the "perch, like salmon" (*Percopsis guttata*—Agassiz). This new genus was made by Agassiz, and so far contains but two species, of which the Rocky River specimen is the same as discovered by him on the north shore of Lake Superior. The second species is, so far, only found, according to Agassiz, in Western Kansas. This fish bears the same relation to the ctenoid and cycloid fishes of to-day that the gar pike (*Lepidosteus*) does to the ancient ganoids. DR. E. STERLING.

ANOTHER PARASITE FLY.—*Williamsport, Pa., Nov. 11.—Mr. Editor:* Inclosed please find a fly found "alive and kicking" on a chicken hawk killed this morning. Thought it might interest you to compare it with the partridge flies you recently examined; also that it is found fully developed and lively after such a hard winter, at this time of year.

BOBOLINK.

The specimen sent by our correspondent belongs to the genus *ornithomigee*, and is often of the same family with the partridge fly, to which it is similar in many of its habits.

THAT WOODCOCK IN THE WOODPILE—*Bristol, Pa., March 28—Editor Forest and Stream:*—Why so gently chiding? The woodcock mentioned in my note of 10th inst. was caught by a cat and almost killed before Strembeck captured it. I should have so stated and not have led to the inference that we were killing woodcock in March—*vide* your issue of this week. C. E. S.

AERIAL CLAM CRACKERS—*Cleveland, Ohio, March 24—Editor Forest and Stream:*—Being a constant reader of your valuable paper, and seeing that the clam-muskrat question is calling forth quite a number of letters, perhaps it would interest your readers to know how crows and gulls get mussels and other shell-fish out of their shells. Their mode of operating is to take the shell-fish in their claw or mouth, rise in the air and let it drop time after time until the shell is broken.

S. B.

A WISE QUAIL.

JERSEY CITY HEIGHTS, JAN. 28, 1879.

EDITOR FOREST AND STREAM:

In one of your late issues I read a letter on "Domesticating Quail," and I have always had my doubts whether this could be done, but after this morning's experience I am inclined, after noticing the sagacity of one of these favorites, to believe it can be. When I have stated the case, I leave it to those who have more time than I to judge. Two weeks ago I sent for 12 pair of Minnesota quail and received them in good order by American Express, made a coop with an extension in my yard for them to enjoy the sun and fresh air. Last evening after dark, while engaged at the coop, one said whirr! and was gone. Were I a betting man I would have wagered about 100 to 1 that that quail was a goner. At break of day this morning, while feeding my dogs, I heard the well-known whirr again, and could faintly see the little fellow alight on a woodshed, with about seven cats trying to catch him. You may think it strange that seven cats should be up so early, but allow me to explain, that our kitten gave a concert last night, as she is of age to go into society, and I presume the company had not got over their spree and were singing "Home, Sweet Home" when I fired some "Beautiful Snow" in among them, and they desisted from singing and also from trying to shake hands with my poor "Bob White."

I got Mr. Bob down from the shed and he flew across six fences and alighted about 500 feet from my yard. I told my son (who, when I said "quail," got out of bed and dressed in about 3½ seconds) to go around "Bob White;" and sure enough he flew (the bird, not the boy) straight to his coop and tried to get through the wires into it: this, remember, without another quail being in sight, as I had not yet opened the trap-door. Now, Mr. Editor, what pigeon, chicken, or any other domesticated bird or animal could do better than this? Please consider fences had shut out from him every view in the past two weeks; here he was free, but came back, and I quietly walked him into a woodshed, closed the door and returned him to his friends. That quail is not for sale for $99.99, and in spring he with the others shall have a trip to the country. TRUTH.

The Kennel.

THE NEW YORK DOG SHOW.

THE GRANDEST YET—953 DOGS ENTERED FOR COMPETITION IN THE REGULAR CLASSES, EXCLUSIVE OF ENTRIES FOR SPECIAL PRIZES OR LITTERS OF PUPPIES.

THE third annual dog show of the Westminster Kennel Club, to be held at Gilmore's Garden on April 8, 9, 10 and 11, will eclipse all of its predecessors, even including the great show of 1877. The number of dogs entered for competition is 953, and the list could have been increased to considerably over 1,000 if those offered on Tuesday had been accepted. The gratifying part of this exhibit is in the fact that a large majority of these are sporting dogs, the entries in these classes being in excess of any previous year. Nor has there been any special effort made on the part of the managers to secure entries by solicitation or extraordinary means. This unusual entry of sporting dogs may be accepted as an expression of the sentiments of the sportsmen of the country with regard to the integrity and popularity of John Davidson as a judge. The "ring" which could not use him for its purposes, and which yet connived at the altering of the scores at Nashville and Hampton Field Trials (of which more anon), would do well to take this lesson to heart. The gentlemen who have accepted the position of judges in companionship with Mr. Davidson are Mr. Geo. C. Colburn, of this city, and Mr. John S. Wise, of Richmond, Va., and their names given in this way are alone a sufficient indorsement or expression of opinion as to whether Mr. Davidson is a suitable person to judge or not. And we might mention in this connection that Mr. Hammond, of Springfield, Mass., and others who were named in the "ring's" Chicago organ as having declined to serve with Mr. Davidson, have written to the club, indignantly denying such an imputation, and giving satisfactory reasons for declining.

There are no less than 516 pointers and setters entered. The list comprises 128 pointers, 157 English setters, 73 black and tan setters, and 158 red and red and white setters. In the list are 43 champions, a number, we believe, unprecedented at any previous show held in this country, or, as far as sporting dogs are concerned, in England. The champion pointers are Snapshot, Pete, Bounce, Sicaford, Psyche, Fan, Columbia Kennel Club's Belle and Fan and Mr. Orgill's Romp, Sefton Rush, Rose and others. The open classes will contain some very fine dogs. The Champion English Setter classes will show Lark, Frank II., Royal Ben, Grouse, Jersey Duke, Grace, Rhods, Nina, Rose and others. Among the black and tan setters (champions) are Knight, Belle, Nell, Nellie (Copeland's), Beauty, Lou, Fan and others. The Champion Red Irish dogs and bitches are Dash, Rory O'Moore, Flora, Ruby, Red Rival, Breeze, etc. In the other sporting classes there are 2 Irish water spaniels, 5 Clumbers, 26 cockers, 9 foxhounds, 15 beagles and 8 dachshunds. The non-sporting classes are represented by 20 mastiffs, 23 St. Bernards, 20 Newfoundlands, 10 Siberian bloodhounds, 15 greyhounds, 5 deerhounds, 45 fox terriers, 16 collies, 8 bulldogs, 31 bull terriers, 14 Skye terriers, 23 pugs, 11 Scotch terriers, 13 black and tan terriers, 3 Dandy Dinmonts, 36 Yorkshire terriers, 9 toy terriers, 8 King Charles, 5 Japanese spaniels and 9 Italian greyhounds. In the miscellaneous class there are 26 entries, among them some very curious animals. Mr. Lorillard exhibits two *Ouiniche*, or black poodles; then there is a specimen of the New Leonberg breed, several Maltese dogs and Chinese and Mexican dogs.

A comparison of this with the principal shows held in the United States gives the following results:

PLACES.		ENTRIES.
New York	1879	953
"	1878	824
"	1877	877
Boston	1878	674
Philadelphia	1877	495
Baltimore	1877	245
"	1878	368
St. Louis	1878	469

The following is a complete list of the special prizes. The prizes in classes E, F, H, J, K, N, will follow the awards in the general classes. Classes B and D will be decided between the dog and bitch winning in their respective classes. Class I will be decided between the winners in the champion and open English setter dog classes. For the other special classes entries must be made to the superintendent during the first day of the show. No entrance fee will be required:

A. For the best native English setter dog or bitch that has never won a first prize, a breech-loading shotgun, valued at $200, and presented by Messrs. Parker Bros., of West Meriden, Conn.

B. For the best red Irish setter dog or bitch that has never won a first prize, a split bamboo fly rod, presented by Messrs. Conroy, Bissett & Mallison.

C. For the best brace of English setter dogs, a Creedmoor rifle, presented by Messrs. E. Remington & Sons.

D. For the best pointer dog or bitch that has never won a first prize, a complete hunting suit and gun case, presented by Messrs. Thomson & Son.

E. For the best fox terrier dog, a gold scarf pin, presented by F. O. De Luze, Esq.

F. For the best fox terrier bitch, a gold scarf pin, presented by F. O. De Luze, Esq.

G. For the best toy or pet dog exhibited by a lady, a silver-mounted, silk-wrapped club bow and arrows, presented by Messrs. Conroy, Bissett & Mallison.

H. For the best black and tan setter dog that has never won a first prize, a silver flask, value $75, presented by Louis B. Wright, Esq.

I. For the best English setter dog, a painted China *plaque*, portrait of Mr. Morford's May, value $50, presented by Messrs. L. Straus & Sons.

J. For the best pug, dog or bitch, an inlaid celluloid dog collar, presented by the Medford Fancy Goods Co., Boston, Mass.

K. For the best Yorkshire terrier, dog or bitch, an inlaid celluloid dog collar, presented by the Medford Fancy Goods Co., Boston, Mass.

L. For the best litter of pointer or setter puppies, a meerschaum pipe, value $40, presented by F. Julius Kaldenberg, Esq.

M. For the best pointer dog competing in the open class, to be shown with two of his get, $30 in cash, presented by a friend of the pointer.

N. For the best Yorkshire terrier under five pounds weight, a silver collar, value $30, presented by Geo. De Forest Grant, Esq.

O. For the best brace of black and tan setters, regardless of sex or age, the "Sportsman's Library," value $20, presented by the Orange Judd Pub. Co.

P. For the best brace of red Irish setters, regardless of sex, a gentleman's six-foot, two-piece snakewood and lancewood bow, and one dozen best snakewood-footed, full-nocked, parallel points arrows, value $26, presented by the manufacturer, E. I. Horseman, Esq., New York.

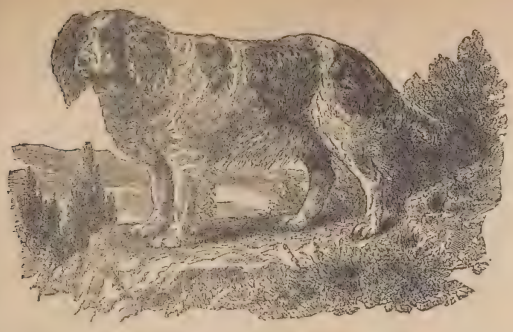
Q. For the best dog, bitch or puppy, sired by Sensation, an artist's proof of steel-plate engraving of Sensation, presented by W. Wellstood & Co., of N. Y.

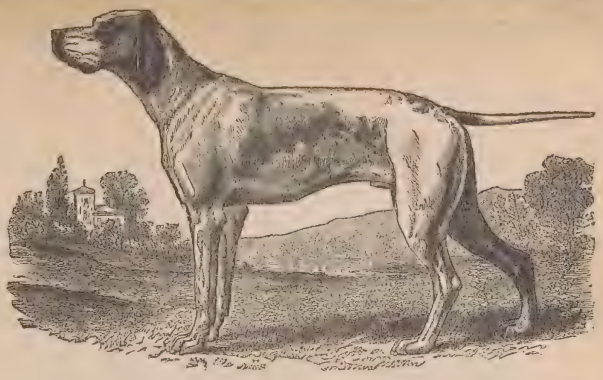
The judges are, for the sporting classes, John Davidson, Esq., of Monroe, Mich; John S. Wise, Esq., of Richmond, Va., and Geo. C. Colburn, Esq., of New York. For non-sporting classes, Col. DeLancey Kane, of New York; J. I. J. Grainger, Esq., of New York, and Jas. B. England, Esq., of Philadelphia. The Philadelphia Kennel Club will appoint and send on three of its members to act with a similar number from the Westminster Kennel Club as a committee of appeals. The members of the latter club having the show in charge are as follows: Manager—Wm. M. Tileston, Dr. W. S. Webb, C. Du Bois Wagstaff, H. Walter Webb. Committee—G. De Forest Grant, E. C. Stanton, Louis B. Wright, Robt. C. Cornell, F. O. De Luze, Dr. Wm. G. Richards. Season tickets will be sent to all exhibitors.

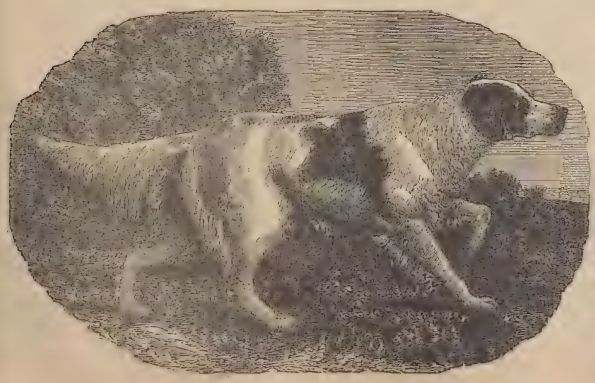
We print on another page fac-similes of some of the letters received from superintendents of railroads, in which they offer to carry dogs free; also a cut of the Kennel Club medal.

PHILADELPHIA DOG SHOW.—We are requested to advise intending exhibitors at this show that all those desiring to enter dogs for special prizes, after Class D, page 26 of prize list, are notified that the clause requiring all pointers and setters to be the progeny of parents bred in the United States, is rescinded, and is open to all. All entries close April 1.

CELEBRATED PRIZE WINNERS.—We give on another page cuts of some of the most celebrated dogs of the day both in this country and in England. Those on the right are the pointer Sensation, Skye terrier Ruffles, St. Bernard Monarque, pug Rex, Yorkshire terrier Kitty, bull terrier Tarquin and Gordon setter Lu. In the centre, St. Bernard Alp and bull dog Duke. On the left, cocker spaniel Witch, mastiff King Olaf, dachshund Diana and English setter Lark.







CELEBRATED PRIZE WINNERS.

Gen'l Fr't Ag't.

FRESH IMPORTATIONS.—There arrived, March 18, per steamship *Erin*, from Liverpool, a very handsome pair of red Irish setter puppies, dog and bitch, four months old, by Osborne's Bosco (second at Bristol, 1878), J. W. Princep's My Duchess. They were purchased in Bristol, England, for Geo. J. Leach, of Raleigh, N. C., and will be forwarded to their destination after the close of the coming show in this city, where they are to be exhibited in the puppy class under six months old.

GREYHOUNDS RETRIEVING.—*San Francisco, March* 19.—In looking over my copies of the FOREST AND STREAM my eye was struck with an article entitled, "Retrieving Greyhounds," and I thought my experience with them as retrievers might not be out of place, even at this late period. About forty-three miles on the line of the Stockton railroad is situated a town called Pleasanton, where resides a friend of mine who is a great hare hunter, and always keeps a large pack of greyhounds, several of which will retrieve rabbits and hares in a manner that would not disgrace a setter. The best retriever I ever saw belonged to myself. She was a small blue slut, and would retrieve a ball or stick with pleasure, and when hunting would bring all the game I could shoot. She was a good duck retriever, and would bring me a crippled duck alive. There is a hound in the city now, called American Girl, that is an excellent retriever, and will bring in pigeons at a pigeon match as well as a setter. She will run in the next coursing match at Merced. Yours fraternally,
W. S. KITTLE.

"ANSER" TO "IVANHOE."

EDITOR FOREST AND STREAM:

Allow me to say a word concerning "Ivanhoe's" letter to your valuable paper. No doubt the gentleman did not anticipate stirring up such a hornet's nest when he dealt so summarily with his dogs in general and our Western dogs in particular. On August 12, 1878, I had the pleasure of traveling from St. Paul to Worthington with "Ivanhoe," a friend of his, and a man whom I supposed to be their breaker. They had a brace of dogs, a red Irish setter and a Gordon—two beauties. I had with me my brace, the liver and white and the liver pointer, both of which dogs you will remember to have seen and to have complimented very highly. His party spent considerable time in baggage car, where the two braces were, and were apparently highly pleased with the general appearance of the pointers. At Mankato we took supper, after which I took my dogs off the chain and turned them loose for a few minutes' run and freedom. My recollection is that they were surprised at my venturing to do it in a strange place and while the cars stopped for so short a time. When the bell rang I whistled up my pointers, put them on the chain again, and moved on for Worthington, when we separated, they stopping there to shoot and I going on to Sioux Falls, D. T. I returned in a few days and inquired how the young men got along. A party with whom they were out said they did pretty well, considering they nor their dogs knew nothing of chicken hunting. Every time a bird was killed there was a neck and heels chase—dogs, men and chickens—and devil take the hindmost, until the bird was bagged. The dogs were not to blame; the lack of training was the trouble. A cool sportsman to take either of those dogs singly, a good whip and a strong check-cord, and plenty of birds, in half a day's time would have brought him down to where the sport would have been grand. When I saw they did not dare turn those setters loose for a chance to run and to rest their weary, tired bodies at Mankato, I knew there couldn't help being music when they struck game for the first time. I am not surprised at their blue-blood noses being slightly elevated at the dogs seen at Worthington, as there are a few hard citizens there among the canine fraternity. My advice to the young gentlemen, if they try the prairies another season, would be to form the acquaintance of some sportsman where they propose to hunt—men that have good dogs and who know their use, and are prepared to show them how the thing is done in this part of the country. Then I think when they leave it, it will be with a different opinion of the country, the sport and our canine friends. It surprised me somewhat that he was so sweeping in his denunciation of the Western curs, as to my knowledge he had seen some of our best—some, whose immediate ancestors have proved themselves on both bench and field to have been worthy of consideration.

Submitting the above as from one interested, in harmony prevailing in all classes, but more especially that of sportsmen, I have the honor to remain,

Yours for the good of the common cause, ANSER.

COCKER SPANIELS.

TORONTO, March 19, 1879.

EDITOR FOREST AND STREAM:

As a breeder of cocker spaniels (in a small way) I have read the articles and letters that have appeared on that subject lately with a great deal of interest. The one that suited my ideas best was that one about the "Devonshire Cockers." My brood bitch Brownie answers to the description very well, and as she is considered to be, by long odds, the best cocker in this dog-loving city, I do not think that it will be amiss if I give a short description of her:

First, as to pedigree: She is by one of the ordinary large liver-and-white cockers, an imported dog and very handsome, out of a black bitch, also imported, weighing about thirty pounds, and, as far as I can make out, a "Devonshire." Brownie is brown, as her name implies; not the ordinary dark liver color, but a rich brown, with the slightest suspicion of a red or golden tinge. She weighs only twenty-one pounds when in working condition, but at present, being heavy with pup and pretty fat into the bargain, she will probably weigh twenty-four pounds. Her legs are short and as straight as can be; her head is small and delicately shaped, ears long and silky, feathers the same, tail set on low, and, of course, cropped; and, in fact, as the "Devonshire" man says she is, "the very beau-ideal of symmetry in a dog." She is under-hung slightly, though her lips quite cover it, and you have no idea what an improvement it is; it gives a sort of *piquant* appearance to her face which is quite charming. Her first litter was got by a thoroughbred King Charles spaniel weighing about fifteen pounds, color black and tan. In one dog pup she threw back to her dam and produced an almost exact image of her in size as well as everything else. This dog (Rollo) took second prize at a bench show held here in 1877, being beaten by the dog that took first prize at the Centennial. As I have been unable to get the stamp of dog that I would like to breed Brownie to of other blood, I have tried in-breeding, on the strength of "Stonehenge's" assertion that it is not injurious, and I have found it answer very well so far. She has had one litter by him, and is now in pup to him again. I had saved the smallest pup, a bitch, for myself, but was so unfortunate as to have her stolen from me some three months ago. I do not believe in in-breeding myself when it can be avoided; at least not so close as in the present instance—and could I obtain a black dog not more than twenty-five pounds in weight and with a small nose, I would much prefer to breed her to such an one. The reason that I say a small nose is that a great many dogs called thoroughbred cockers, and even taking prizes as such, have long, square, broad noses, which I consider excessively ugly. If any gentleman should see this who has such a dog as I would like, I would be glad to hear from him. In fact, I would be glad to hear from any one interested in cockers, for I think that they are the dogs for gentlemen who are fond of sport and yet have not sufficient spare time to keep a setter in proper training, and as com-

panions they are unequalled. I have received a circular from Mr. McKeon, but it seems that he has only liver-colored or liver-and-white dogs. Surely there are some black cockers in America! Brownie's dam is dead, and of course Rollo might be called a cross, though the King Charles are only a variety of the cockers. There is one black cocker here besides Rollo, but his owner knows nothing of his breeding, and he is not a very handsome specimen, though a splendid field dog. And now having trespassed long enough on your valuable space, I will end this rambling letter. Any one who wishes to see Brownie will have the opportunity at the coming bench show in New York.

G. D, M.

Mr. Lemuel Willey, of 21 German street, Baltimore, exhibited a very handsome pair of imported black cockers at the last Boston dog show, and also at the Baltimore show. At the latter show Mr. W. H. Whitridge showed a black cocker two years old out of this cross.

SINGULAR DEATH OF A DOG.—Mr. Voskamp, Secretary of the Miner Rod and Gun Club, of this city, brought to our office the other day a beautiful red and white Irish setter, a two-year-old dog pup, sired by Michael Englert's celebrated dog Frank, now dead, but for which the owner once refused $1,000. Dash, the progeny, is certainly a most beautiful creature, and evidently very well-broken, inheriting the traits and characteristics of his sire. He has been entered in class for the coming bench show, and stands a good chance for a prize. He is the most promising of all the old dogs yet. And this leads up to the lamentable incident which we wished to relate. Frank died in the field, whither he had been taken by some members of the club to retrieve snipe; for he did the retrieving for the whole club. The suddenness of his taking off led to a *post-mortem* examination, which disclosed a cocle jammed tight in the rectum, and very much swelled. It had probably been swallowed a fortnight previously, for the poor creature had no passage of the bowels for six days and evidently suffered great pain, though he did not allow mere bodily ailments to interfere with his duties. He was a noble beast, and the club has sustained a severe loss. We call to mind an almost similar instance in which Dr. Strachan, of this city, was the sufferer, one of the celebrated dogs imported by Sir Frederick Bruce having been killed by swallowing a greased cork.

ANOTHER DOG BOOK.—The Orange Judd Company, with its accustomed enterprise, has just issued a new book which is most comprehensive in its scope and thorough in its completion. It is entitled "The Dogs of Great Britain, America and Other Countries," and comprises all the essential parts of the two standard works on the dog by "Stonehenge," together with chapters by David W. Judd, Henry Stewart, "Warwick" and other American writers. Not having yet perused the book, we cannot yet speak as to its merits, but the price is only $2, and it can be purchased at Gilmore's Garden during the dog show.

PURCHASE OF FINE DOGS.—Mr. J. Fottler, Jr., of Boston, President of the Massachusetts Kennel Club, has purchased from the St. Louis Kennel Club the Irish setter bitches, Loo II. and Duck, and having previously purchased Berkley will establish a kennel of red Irish setters which it would be very hard to excel, all the dogs mentioned being well-known prize winners. Loo II. stands unrivalled. She has been many times exhibited, but, we believe, no bitch in this country has ever yet beaten her. She is now five years old, being just in her prime. She is in whelp to Erin II. The latter is considered one of the best field dogs ever owned by the St. Louis Kennel Club. Loo II. has won the following prizes:

Dublin, 1874, 1st in puppy class; Belfast, 1875, 3d in champion class; Dublin, 1875, 2d prize; Chicago, 1876, 1st in bitch class and special for best setter bitch of any strain; St. Louis, 1876, 1st prize bitch and progeny; Baltimore, 1877, 1st for best bitch, special for best setter dog or bitch either imported or native, special with Elcho for best brace, and special for best Irish setter bitch; New York, 1877, champion prize; St Louis, 1878, champion prize, best pair with Berkley, best brace with Berkley, and best kennel with Berkley and others; Boston, 1878, best pair with Berkley, best kennel with Berkley, but did not compete for championship; Baltimore, 1878, best setter bitch imported or native; New York, 1878, champion prize.

Duck will be bred to Berkley—a better pair can hardly be found. She was a noted bitch before coming hither, having won numerous prizes before her importation. She is a grand and stylish worker, having been under Mr. C. B. Whitford's tuition. The following prizes stand to Duck's credit: Duck (No. 6,209 Eng. K. C. Stud Book), before importation was winner of 2d prize at Brighton, 1876; 1st prize at Birmingham, 1875; 1st prize at Wellington, 1876; 1st prize at Nantwich, 1876, and champion cup for the best sporting dog exhibited at Nantwich, 1876. Since importation she is winner of 1st prize at St. Louis, 1877; 2d prize at St. Louis, 1878, when in bad form; 1st prize at Boston, 1878; champion prize at Baltimore, 1878; champion prize at St. Paul, 1878; 1st prize at Detroit, 1879, special prize for best Irish setter dog or bitch, at Detroit, 1879.

ADVICE TO DOG BUYERS.—*Monroe, N. Y.*—"Let me say to sportsmen: Don't be flattered into buying a dog because its "daddy" took a prize at the bench show. I am speaking of pups, for they are somewhat like a family of children. Their father may be great and they worth nothing. It is best not to buy a pup till it has reached the age of six months, as you can then tell something about its style and general appearance. He must have a natural disposition to range; must be headstrong and intelligent, and it is no bad sign to see him at this age pointing the chickens and ducks about the yard. With this sort of metal your trouble in training will be amply repaid. If you don't know how to train a dog get a copy of "Hallock's Gazetteer" and find out. I believe that half of the pedigree dogs have little to recommend them except their pedigrees. I have had several such, and the best dog I ever saw or had is a blue-ticked pointer, which was picked up in a gutter, and I believe he is to-day as fine a dog as ever ranged a prairie or stubble. I think if more attention was paid to breeding dogs from parents who had superior field qualities and less from bench show stock, that there would be many dogs of genuine worth, if not so pretty to the eye. AVERY.

TO REMOVE FILM FROM A DOG'S EYE.—*Jarvis, Ontario, March*, 27.—As I have frequently obtained valuable information from you it is only fair that I should give your readers the benefit of an experiment I tried, and which succeeded. Three years ago my cocker spaniel, Rake, injured his eye, and a white film slowly grew over it. As a remedy I put into the eye, three or four times a day, a small pinch of dry pulverized white sugar. After a few applications the film was gradually reduced, and in about three weeks entirely disappeared and has not since returned. C. W. NASH.

—Mr. Edmund Orgill, of Brooklyn, has sold his young lemon and white setter Repton (Ray-Bess) to Mr. C. C. Pettitt, of Galveston, Texas.

—Mr. E. B. Gallup, of Perrymans, Md., has sold half his interest in beagle dog Spot, winner of 2d at Baltimore, 1878. To J. P. Prentiss, of Wilmington, Delaware, for $30.

—Mr. Fred O. Downes, of Worcester, Mass., has sold to Mr. W. B. Cross, of Brockton, Mass., his black, white and tan bitch pup Topsy, whelped July 13, 1878. By Champion Gladstone out of Mr. Isaac Fiske's Pearl.

See adv. Laverack pups, A. F. Huston.

Rational Pastimes.

HOMING PIGEONS.—The Homing Pigeon Society, of Troy, N. Y., will hold a contest for the championship of the United States next May. The pigeons will start, May 9, from St. Johnsville, and fly to Troy, a distance of fifty-four miles. A week later the pigeons will be started from Utica and fly to Troy, a distance of eighty-five miles. On May 24 the long distance fly for the State championship gold medal will take place. The birds will be started from Syracuse and their destination will be Troy, distance 130 miles. On June 14 the great race for the championship of the United States will take place. The distance will be from Rochester to Troy, 206½ miles. As this race is open to all, it is expected about eighty Antwerps will be entered.

A GRAND ARCHERY TOURNAMENT.—On March 20 a meeting of the association was held at Chicago, and measures were taken to have a grand archery tournament on White Stocking Park this summer. The programme arranged at the meeting will include contests for prizes to the amount of $1,000. The shooting for the championship medal will be at the double York round, consisting of 144 arrows at 100 yards, 96 at 80 yards, and 48 at 60 yards. Shooting for the woman's championship medal will be at the Columbia round, consisting of 48 arrows, each at 60, 40 and 30 yards. The club shoot for teams of four will be at the American round, consisting of 30 arrows each man at 60, 50 and 40 yards. In addition to a number of special prizes offered in England and this country, the association will offer national medals. The archery clubs of this vicinity should prepare at once to send representatives to the tournament.

ILLINOIS—*Highland Park*—The following archery scores were made at recent contests, the shooting taking place in the evening in Central Hall. Range, 20 yards; target, 12 inches; 90 arrows per man the first evening, and sixty arrows the second:

Score First Evening.

	Hits.	Score.		Hits.	Score.
H C Carver	51	219	W B D Gray	36	132
O W Kyle	35	213	J McDonald, Jr.	19	71
E H Beebe	46	161	F B Green	18	48
F P Hall	39	159	N Butler, Jr.	8	44
C G Hammond	35	133			

Score Second Evening.

O W Kyle	37	159	F C Hall	26	93
E H Beebe	35	139	C G Hammond	18	80
W B D Gray	32	118	J McDonald, Jr.	14	54
H C Carver	23	101			

—Entries for the New York Athletic Club open handicap games close on the 12th inst. The meeting is the 19th inst.

—They had a ludicrous time of it in Brooklyn the other night. Prof. J. W. Whitney, the athletic instructor of the schoolship *Minnesota*, equipped some game cocks with buckskin gloves and leather muzzles. The birds went at it with spirit, and one of Mr. Bergh's men who was present laughed so hard at the harmless tilt that he was considerably more used up than the roosters were.

—Boston is to have another lacrosse club.

—The Boston bicycle season was opened by a First Day Meet in which the Massachusetts, Boston and Suffolk clubs joined.

CHARLESTON LIGHT DRAGOONS.—The annual anniversary parade and tilt of the Charleston Light Dragoons was held at the race course of that city last Tuesday.

—There are five lacrosse clubs on the Pacific Coast and new ones are to be organized.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

E. L. L., Denham, Mass.—The law has not yet been passed so far as we are advised.

T. T. S., Rochester, N. Y.—For specimens of Canada spruce grouse write to Alex. Irwin, Harriston, Ont.

J. W. K., New York.—For trout fishing go to Sullivan County. Write to J. M. Bradley, Eldred, Sullivan County, N. Y.

RUFFED GROUSE, Goshen, Mass.—Your questions of recoil and penetration have been discussed again and again in our columns. See former issues for past two years.

W. E. W., Phila.—Is Mr. Ingersoll's work on ornithology published in book form, and what is the price of it, and where can it be got? Ans. See our last issue for full information.

HAMMERLESS, Cazenovia, N. Y.—I see reports of matches where screened rotary traps are used. Why the screen with the rotary trap? Ans. That is something we cannot understand ourselves.

J. W. T., Boston.—Can you inform me if Genio Scott is living, author of "Fishing in American Waters," and his address? Ans. Genio C. Scott is living. Address "Scott's Fashions," 675 Broadway, New York.

PENCIL, Dedham.—Can I purchase a book treating on the mounting of birds and and animals; if so, where and at what price? Ans. Cones "Manual of Ornithology," $2.50, or Maynard's "Naturalist's Guide," $2

F. H. D., Williamsport, Md.—From the letters sent we cannot see that the names of either the sire or dam of your dog is given. Get these, and send them, with the names of the breeders, to J. W. Munson, St. Louis.

B. F. L., Fairfield, Ill.—Please give me names of parties having black setter pups for sale, as I see none such advertised. Ans. We know of no one who makes a specialty of breeding black setters. Advertise for one.

A. S., Shawneetown, Ill.—I have a setter which has a very bad habit of smelling me all over whether in company or not. What is the cause of it, and what is a preventive? Ans. The fault is not with the dog. Use some other kind of scent.

S. W. B., Huntsville, Conn.—Which is the best book on "Breaking and Training the Bird Dog," and where to purchase it? Ans. You will find instructions for breaking the dog in the "Sportsman's Gazetteer," which can be sent from this office, price $3.

ORION CLARK, Brattleboro, Vt.—J. Cypress, Jr.'s, Works are two volumes of very entertaining sporting sketches, written by J. Cypress, Jr., and edited by Frank Forester. The book is entirely out of print, with the exception of the few volumes which we are able to furnish.

"***, Attica, N. Y.—1. As a dog to have around the house, and with children, etc., which would you recommend to a person who perhaps would not use him more than eight or ten times in a year, a pointer or a setter? 2. What is the best authority for the training, etc., of dogs? Ans. 1. For the work a pointer; as a companion for children a setter. 2. Hutchinson ("Dinks, Mayhew & Hutchinson").

A. I. F., Xenia, O.—My setter bitch was lined last winter, and now has pups four weeks old. She is two years old and an excellent mother. Will she probably be in heat again next summer, and, if so, is there any objection to breeding her again so soon? Ans. Your bitch will probably be in season again in July or August, and there is no reason why she should not be bred again if you wish to raise more puppies.

MALTESE, N. Y.—Do striped bass ever take the fly; and, if so, what fly is most killing at different seasons? Ans. Striped bass of salt water are not fished for with flies, but as they are surface feeders from July to October it is probable that they might take a fly at such times. However, their object in approaching the shore and flats is to feed on the small crabs, mud worms, sand lances, shrimps, etc., which there abound.

W. R. R., Boston.—Geo. Roahr, foot of 135th st., Harlem, N. Y., builds from a model much superior in lightness and speed under paddle or sail than the Baden-Powell type of canoes. He has contrived a plan where a very large area of centreboard can be used, in connection with a very small well, which does not interfere with the canoeist. The Baden-Powell centreboard and model, though the best in England, are clumsy affairs alongside the American type.

J. A. J. G., Oakland, Cal.—1. Can I obtain Part I. of Hallock' "Gazetteer?" Do not care about Part II. If for sale, please state price? 2. At what age should a dog be sent to the trainer? 3. Can you recommend any book for training the dog, retrieving, etc? Ans. 1. Send $3, and we will split the book and bind the part you want. 2. Any time from six months to a year. 3. The "Gazetteer" contains the information. We cannot speak as to the merits of the gun you mention.

C. E., New York.—Does a person require a permit to collect birds in New Jersey? If so, where can it be obtained? The law does not speak of requiring one. Also, I hear they are going to pass a law in this State so as to put a stop to the shooting of all small birds at any time of the year. Is this correct? Ans. Collectors can shoot any where at any time for scientific purposes by obtaining a certificate of integrity and honorable purpose from any natural history society in the State where collections are to be made.

L. P. A., Biddeford, Me.—1. I do not fully understand the duty of cocker spaniels; know all about setters and pointers, but have seldom, if ever, heard of cockers. If you can spare a line or two please tell me briefly their duty. 2. Have seen much about Edgar barbless hook Can you tell me the price, or what it would probably be? Ans. Cockers are adapted by their size for penetrating the closest and thickest coverts, where the larger setter or pointer would not be able to penetrate. They should hunt close and flush the game, and by giving tongue advise the shooter of its being on the wing.

S. H. H., Concord, Mass.—1. Would it improve the shooting qualities of my shotgun to have a square shoulder about the thickness of a brass shell tapered down? Or would it be better to have shells made just the right length to fit the chamber? 2. Would wild rice interfere with boating on a narrow, shallow river? Ans. 1. Have shells fit the chamber. 2. You can push your boat through wild rice at a high stage of water, but as for rowing or sailing through it, that would be quite impracticable. In some places it grows as thick as wheat or barley.

F. S. W., St. Catharines.—I have a Gordon setter dog who last June was pretty well shaken by a bull dog who caught him by the ear, and ever since it has been running, and a very strong stench arising from same. I have tried your canker remedy—sugar of lead and rose water—and seems to do no good. What would you recommend me to do for it? Ans. You do not say if the sore is internal or external. In either case wash thoroughly with Castile soap, and afterwards, if external, apply carbolic salve; if internal, syringe it with carbolic acid diluted with twenty times its bulk of water.

WHIST, New Haven, Conn., and J. G. R., Mapelbyrne, Ontario.—Our answer in issue of Feb. 27 was too general and vague. The query was propounded ourselves orally, and in the same manner communicated to editor of this department. We may, perhaps, have misapprehended the question. As stated, we inferred a hand of the following character at a stage of the game indicated by number of cards: Leader has five cards, four of which are stray or fair trumps and one not; we should advise that a trump be lead. Or, suppose that leader's hand consists of six cards, four of which are stray trumps—say from Queen down: we should think that the best play would be to lead the Queen trump.

S. W. H., Huntingdon, Tenn.—One of our hounds, six years old, was some nine or ten weeks since attacked with a swelling of the legs, and ever since they have been three or four times their usual size. They were at first hard and feverish, but are now softer, and when indented with the finger the impression remains for some time. Had done no hard running for months. Has pretty good appetite. It is with great difficulty that he can walk. Is, or was, a valuable dog. What is the matter with him? What, if anything, can be done for him? Ans. The symptoms are those of dropsy, caused probably from inflammation of the kidneys, which can be determined by noting the appearance of the urine. If the latter is mixed with blood give two drops tincture of cantharides, in two ounces of water, twice a day. If it is dark brown, give the following twice a day: Iodide of potassium, 2 grains; nitre, 4 grains; digitales, ½ grain; extract of gentian, 5 grains; mix,

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 3, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

JERSEY CITY HEIGHTS GUN CLUB.—Mr. Chas. Hallock, the managing editor of this paper, begs to signify his appreciation of the valued compliment bestowed upon him by the Jersey City Heights Gun Club in making him an honorary member. This is one of the most active gun clubs in this part of the country, and the record of their scores at the traps will compare favorably with those of any section. We wish the club continued success and a long and harmonious existence. Mr. T. C. Banks, our business manager, is also indebted for a similar courtesy.

THE DAY THEY CELEBRATE.—The present year is the eighteen hundredth anniversary of the destruction of Pompeii and Herculaneum. Next November there will be a convention of scientists at Pompeii to commemorate the day when old Vesuvius poured out its ashes and lava and buried the cities of the plain. Mortals who live in this time and clime should gratulate themselves and their sisters and their cousins and their aunts that mountains never play such pranks nowadays—at least, well, hardly ever.

THE ACADEMY OF DESIGN.—The fifty-fourth annual exhibition of the Academy of Design was opened last Monday evening with the usual, or rather an unusual, crush of reception night. The pictures this year are six hundred and fifteen, and they are of more than ordinary merit. There are many painted scenes of fact and fancy that will be of special interest to those who delight in the glories of the fields and rivers and mountains. The sportsman is always something of an artist, and an artist ought to be a good deal of a sportsman. The Secretary of the Academy, Mr. T. Addison Richards, whose pictures were known years ago, is an expert in the handling of gun and rod. May it be long before his hand forgets its cunning.

VETERANS OF 1812.—The veterans of 1812 are dwindling down to a most forlorn hope. At a meeting held last Monday to consider whether or no the corps should continue to rent the room at No. 4 City Hall Place, which has been their headquarters for twenty-two years, only three of the old soldiers presented themselves, and Commander Col. Dally thinks that there will not be more than fifteen in line for the next annual July parade.

LINGERING LEGENDS.

WITH what a strange and romantic tenacity do we cling to all ancient fables and traditions! What a strong vein of sentimentality invests with peculiar charms all legends which come to us from former ages; their great antiquity being, seemingly, the surer guarantee of their worth and popularity. From the time when "the blind bard of Scio's lonely isle" gave to future immortality his tales of the "Woes of the Achæans," the "Voyage of the Argo," and other stirring epics, down the corridors of time, to our own age, with the Poet Laureate of England and Longfellow, our own countryman, at the head of legend and verse writers, we see always this taste of the human mind exemplified. The unnatural element in these tales is lost in the contemplation of deeds of chivalry and knightly prowess. Love and war are the inseparable factors always met with, and the pens of the greatest men of all ages have been used in transcribing these fictitious deeds which their ideal heroes, in ages remote from their own, had accomplished by the wielding of the sword.

Truly, if we analyze our feelings, we may not believe that Richard Cœur de Leon actually achieved so much glory and in such miraculous ways as he is given credit for; but such thoughts never enter our minds, and every other sentiment is merged in our admiration of the man and his feats of arms. Nor in reading the legends of Charlemagne and of the deeds of his redoubtable knights do we give unqualified credence to their marvelous accomplishments; believe that Orlando really went mad for love of the beautiful Angelica, or afterward accomplished so many Herculean tasks; that the speed of the steed Bayard was greater than the average running time of our modern locomotives, or that the female warrior Radamanthe sailed through the air on her winged horse, the Hippogriff. The fascinating tale of King Arthur and his noble comrades of the Round Table, the enchanter Merlin, the brand Excalibur, the weird and gloomy death of the noble King,—all these fables, while bordering on the impossible, are yet infused with sentiments which are as strong and inciting to-day as they were in the time of Homer, and appealing as they do to many of our nobler instincts and impulses, have an intense fascination for us. The *genus homo* is the same to-day as of three thousand years ago—of three thousand years hence.

In our own land there is a dearth of stories relating to the deeds of fair women and brave men, a lack of scenes laid on old and historic ground. This is necessarily the case in a land which, but a few centuries ago, had never seen a face of the Caucasian type, and was still bound by the fetters of semi-barbarism. Yet even the native American, the mismaned Indian, had his traditions, his legends, and his God. Though passed from father to son and from son to son by word of mouth only, yet they lost none of their force, none of their sacred importance, and even now, among the degenerate descendants of the once noble red man, many are the legends and traditions which are guarded, preserved, and handed down with a strange veneration. The red man of Cooper and Catlin has passed into the things that were. The abuse of strength derived from civilization has sunk the aborigines to their present degraded position, and the enlightened and civilized nation of to-day looks down upon the results of its own handiwork in the poor, shattered fragments of a once truly noble race. As they were one hundred years ago we cannot but admire many of the qualities of the North American Indian. They were then the grandsons of Nature, free and untamed as the animals with whom they shared their wilderness home; but they are gone! *Roma fuit.*

Who of us has not perused with delight the bubbling song of Hiawatha, with its perfect rythm and symmetrical cadence? Perchance, it was suggested by some love legend passed down from long ago, which, taken up by the pale-faced bard, was so admirably set to verse and immortalized. Had we more Longfellows, many such romantic legends might have been saved from oblivion. It is for the white man to cherish such records of the past which belong to, and form part of, the history of his country.

Rare is it for an Indian to confide these stories, which are indeed a part of his creed and Bible as it were, to a pale-face; yet it is occasionally done, and we have but lately listened with delight to more than one legend of the Pawnees, which in weird scene and graphic portrayal of deeds of noble prowess might equal the Morte d' Arthur. Pruned, polished, and put in verse, they would prove intensely attractive.

Here is a field in poetry and romance but little tried. *Carpe diem*, and let not these lingering legends of the land fade and, like the dying race to whom they belong, from whom they emanated, be forever forgotten.

THE DUKE OF YORK AND HIS DOGS.—Harry Jennings, who rejoices in the distinction of being New York's most notorious dog fighter, has returned from his trip to New Orleans, thoroughly disgusted, be it said to the credit of that city. Jennings and his companions provided themselves with twenty-five bull terriers and, having marched them down to New Orleans, they marched them back again. The authorities by prompt action so effectually demoralized the ranks of the "sporting fraternity" that the pits were left bloodless and desolate, and the treasury of the dog brigade was depleted of about $2,000 by the trip.

—It is not always possible to keep from having mud thrown at you, but you can always keep from throwing it at others.

GAME PROTECTION.

CLOSE TIME IN GREAT BRITAIN FOR SALMON, TROUT AND CHAR.

WE copy the following data from the London *Fishing Gazette*. An examination will prove interesting, and perhaps elicit a hint or a suggestion. It would seem that the general law contemplated a uniform close season; but that under one pretext or another exceptions have been so frequently made that they number twenty out of forty-nine districts. Of course we cannot predicate our own laws and close times upon those which are English; but there is something to be learned from those formula of English precedents which concern the appointment and duties of guardians, the duration of the open or close periods, annual or intermittent icenses, penalties, etc.:—

Under the Salmon Fishery Acts, 1861, 1863, 1865, 1870 and 1873, salmon are protected, and a close time of not less than 154 days is fixed for England and Wales, during which all fishing for salmon, except with rod and line, is prohibited. The commencement and termination of the close season may be varied by the local boards of conservators, but it must never begin later than 1st November. For rod and line a minimum close time of 92 days is fixed, which must commence not later than 1st December. No salmon may be sold after 3d November in any year, except such as can be proved to come from parts beyond the seas; in those rivers or districts in which the capture of salmon is legal after 1st September, their sale is allowed, provided their capture in such river or district was lawful by any means other than by rod and line.

In those rivers and districts where no bye-law on the subject has been made, the close time for nets begins on 1st September and ends on 2d February; and for rods it begins on 1st November and ends on the 2d February. The following are the districts in which these dates have been varied by bye-law, confirmed by the Secretary of State:—

Close time for	Nets.	Rods.
Avon and Stour	15 Aug. to 1 Feb.	3 Oct. to 1 Feb.
Taf and Ely	31 Aug. to 30 April	1 Nov. to 30 April
Usk	1 Sept. to 1 April	2 Nov. to 1 April
Dovey	14 Sept to 30 April	20 Nov. to 30 April
Clwyd and Elwy	15 Sept. to 15 May	15 Nov. to 15 May
Conway	" to 30 April	" to 30 April
Nelent	" to 1 March	" to 1 March
Cledy	" to 15 March	31 Nov. to 15 March
Ogmore	" to 20 April	15 Nov. to 30 April
Coquet	" to 25 March	" to 25 March
Kent	" to 1 March	1 Nov. to 2 Feb.
Taw and Torridge	21 Sept. to 30 April	16 Nov. to 31 March
Axe	29 Sept. to "	20 Nov. to 30 April
Avon and Erme	21 Sept. to 31 March	21 Nov. to 31 March
Camel	1 Oct. to 30 April	15 Nov. to 30 April
Teign	1 Sept. to 2 March	31 Nov. to 2 March
Yorkshire	" to 2 Feb.	16 Nov. to 28 Feb.
Ouse (Sussex)	" to 1 April	1 Nov. to 1 April
Dwyfach	15 Sept. to 1 March	15 Nov. to 1 March
Fowey	1 Oct to 30 April	1 Nov. to 2 Feb.

In the case of the sale of salmon after the 3d September, it must be proved that this exception is legalized by a bye-law of the district in which the fish has been caught. The onus of proof that the fish were caught beyond the limits of the Acts, or that they were caught during the legal open season by legal means lies on the person selling or exposing for sale. The exportation of salmon is prohibited between 3d September and 30th April (Salmon Acts Amendment Acts, 1863 and 1870), unless it can be proved that the salmon exported or entered for exportation was caught during the time at which its sale would be legal in the United Kingdom: the *onus probandi* lies on the person exporting.

A weekly close season, during which net fishing for salmon is prohibited, is fixed in England at not less than forty-two hours, nor more than forty-eight hours, to be determined by the Boards, between Friday at midnight and noon on Monday. Licenses to be obtained from local Boards, and available only within the limits of the district in which they are issued, must be taken out for instruments employed in fishing for salmon, and the use of spears, lights, snatches and similar instruments is prohibited. During the open season no unclean salmon may be taken. The word salmon includes all migratory *Salmonidæ*.

There are at present forty-one fishery districts in England and Wales, each with its board of conservators. These boards have the power to make by-laws not only for the regulation of salmon fishing, but also, during the salmon close-time, for the regulation of other kinds of fishing which are prejudicial to the salmon fisheries; and heavy penalties are fixed for infractions of the law.

In Scotland there are 120 fishery districts, and thirty boards with similar powers. There the annual close time must never be less than 168 days, and varies between the extreme dates of 27th of August and 25th of February. These dates may be found in the Salmon Fisheries (Scotland) Act, 1868, since which act, however, the close times have been altered in the following rivers:

Thurso—15th Sept. to 10th Jan. (for rods only). Nith and Fleet—10th Sept. to 24th Feb. (nets); 1st Nov. to 24th Feb. (rods).

The weekly close-time is fixed at not less than thirty-six hours, between 6 P. M. Saturday and 6 A. M. Monday. The river Tweed is specially regulated by the Tweed Fishery Acts. Its close-time is from 14th September to 15th February.

CLOSE-TIME FOR TROUT AND CHAR.

By the Fresh Water Fisheries Act, 1878, amending and extending to trout and char in all waters, certain provisions of the English Salmon Fishery Acts, which had hitherto applied only to these fish in salmon fishery districts, it is enacted that the sections of the Salmon Acts apply to spears and unclean fish to the formation of fishery districts, to the powers of water baliffs, and to the issue of licenses, etc., shall apply to trout and char in all English waters, except in the counties of Norfolk and Suffolk, where under a local act (the Norfolk and Suffolk Fisheries Act, 1877), the local conservators may make a close-time to all freshwater fish. They have accordingly fixed the close-time for trout, for nets only, at from 10 September to 25 January. With this exception, the capture of trout and char in England and Wales, and their sale, are prohibited between 2d October and 1st February.

By an act passed in 1876, the trout close-time may be varied by by-law, made by boards of conservators in various districts, so however that the close-time does not commence earlier than the 2d September nor later than the 2d November, and shall not be less than 123 days.

The following dates have been fixed under this act:

Deer—14 Oct. to 14 Feb. (for rod and line only). Teigu—1 Oct. to 2 March (for rods and nets). Dart—2 Oct. to 28 Feb. (for rods and nets). Ogmore—2 Sept. to 14 Feb. (for rods and nets.)

TENNESSEE.—Our correspondent, Mr. J. D. Hill, of Nashville, Tenn., in his connection with the Nashville *Banner*, is dealing some good blows in advocacy of game protection in his State. Intelligent discussions of these questions by newspaper men who know what they are talking about is sure to prove an effective agent in securing the desired ends.

NEW JERSEY STATE ASSOCIATION.—Delegates from the different sportsmen's clubs throughout the State, and others of their persuasion, met at the Clarendon Hotel, Newark, on Saturday last, for the purpose of discussing the proposed tournament this spring, Geo. B. Eaton, Pres. of the State Association, in the chair. Speeches were made by the President, Dr. Bird, Mr. Fred Mather, J. Hays and others. Much enthusiasm was evinced. Several clubs, who had not joined the State Association, presented their credentials and were enrolled. The convention adjourned until Saturday, the 12th inst., at the same place, when the committee who have the tournament in charge are expected to report definite arrangements.

THE OHIO LAW—*Chillicothe, March 28—Editor Forest and Stream:* The game laws of Ohio have been changed so as to make it a penalty of from $5 to $25, and imprisonment, for shooting on a man's place without a written or verbal permit, and does not require notice or posters on place. Quail promise to be scarce this season. Ducks and geese are not stopping long with us. Some few snipe have been seen, but are scarce as yet. C. E. L.

WISCONSIN'S NEW FISH LAW—*Editor Forest and Stream:* For several years money has been appropriated for the stocking of the waters of the beautiful lakes surrounding our city, but doing absolutely nothing for the preservation of the fish. The following law was passed and approved by the Governor at the session of Legislature just closed, and will, if duly enforced, be a move in the right direction. The law reads "that no person or persons shall take, catch or kill any food fish of any kind in either of the lakes known as Kegonsa, or First Lake; Waubesa, or Second Lake; Monona, or Third Lake; Mendota, or Fourth Lake; or Wingra, or Dead Lake, situated in the county of Dane, or in any stream of waters connecting said lakes or either of them, or in any stream of waters emptying into said lakes or either of them, between the first day of March and the tenth day of May in any year; or with any net, seine, wire basket, spear, grapple, trap or device whatever, except hook and line, at any time whatever; *provided*, that minnows may be taken with the net, and that suckers may be speared at any time of the year, and whitefish may be speared except from March 1 to the 10th of May in any year; but it shall not be lawful during the winter season, or time when said lakes are frozen over, for any one person catching fish through the holes in the ice, to use more than three hooks and lines, nor more than one person from one household or family to use that number."

For the violation of the above provisions a fine is provided "os not less than five dollars nor more than fifty dollars, with costs or suit; one-half of such fine shall go to the use of the prosecutor, and the residue as provided by law. In lieu of such fine and costs, the proper court may in its discretion, upon such conviction, imprison the party so convicted in the common jail of the proper county not exceeding thirty days." ROVER.

Madison, Wisconsin.

The Rifle.

MASSACHUSETTS.—*Gardner.*—There has been a series of interesting rifle matches at Hackmatack range this winter, under the direction of the Rifle club, contests having taken place every Wednesday for prizes in two classes. Some good scores have been made, and on Wednesday the 26th the prizes in the first class were awarded. This class was open to all comers, distance 200 yards, off hand, ring target, five rounds to the score, winners to be determined by the aggregate of two scores whenever made. The best possible was 120. The first prize of an ice pitcher, goblets and bowl, valued at $25, was won by Mr. H. C. Knowlton, whose aggregate was 98; second, a cake basket valued at $15, Mr. I. N. Dodge, 97; third, card receiver, valued at $12, Mr. C. O. Bent, 96; fourth, sugar bowl, valued at $10, Mr. George F. Ellsworth, 94; fifth, spoon holder, valued at $5, Mr. A. E. Robbins, 87. The contest for the prizes in the second class is not yet closed.

MASSACHUSETTS—*Medford*—The last competition in March series, winter shed match, of the Medford Amateur Rifle Association occurred at Bellevue Range on Wednesday, March 26. There were ninety re-entries. Appended are the best shots:

First class.

J B Osborn	4	5	5	5	5	5	5—33
J B Osborn (re-entry)	4	5	5	5	4	5	4—32
H H D Cushing	4	5	5	5	4	5	5—33
H H D Cushing, re-entry)	5	4	5	5	5	5	4—33
H Withington	5	5	5	4	5	4	5—33
H Withington (re-entry)	5	5	4	5	5	4	4—32
C H Russell	5	4	5	4	4	5	4—31
C H Russell (re-entry)	4	4	4	5	5	4	5—31
C D Harrison	5	5	4	4	5	4	5—32
C D Harrison (re-entry)	5	5	4	5	4	5	4—31

Second class:

D N Howard	4	4	4	4	4	4	5—30
F E Gardner	5	3	4	5	4	5	4—30
G Henry	4	5	4	4	4	4	4—29
E Hunt	4	4	4	5	4	4	3—28
E F Kendrick	3	4	4	3	4	6	3—26

The Medford Amateur Rifle Association will hold meetings every Wednesday (if stormy, following Friday) during this month (April). Competition series open from 1 P. M. to sunset. Match (April 3) Fast Day, from 9 A. M. to sunset. Conditions as follows: Distance, 200 yards; rounds, ten; rifle, any in rules; position, standing; open to all comers; the best individual score to count whenever made. Prizes to be 60 per cent. of the entire entrance fees received for each class, divided into five first, five second, five third, five fourth, and five fifth prizes. First prize, 18 per cent.; second, 15 per cent.; third, 12 per cent.; fourth, 9 per cent.; fifth, 6 per cent.

Boston—Walnut Hill, March 29.—There was a good attendance of riflemen and spectators at the regular meet of the Massachusetts Rifle Association to-day, at the Walnut Hill range. The wind was cast, and quite steady. W. M. Farrow used his 33-cal. rifle, naked bullet, and fired his score without cleaning. There were fifty-one entries in the Winchester Rifle match, and the best scores made in that match were:

W M Farrow	5	5	5	4	4	5	5	5	4	5	4	5	5	5—71
W M Farrow (re-entry)	4	5	5	4	4	5	5	5	4	5	5	5	5	4—70
L L Hubbard	5	5	4	5	4	5	5	4	5	4	5	5	5	4—70
D Kirkwood	5	5	4	4	5	5	4	5	5	4	5	5	5	4—69
J H Osborn	4	5	5	4	4	4	5	5	5	5	5	4	5	5—67
J N Frye	4	5	4	5	4	5	4	4	4	4	5	5	5	5—67
E T Richardson	5	4	5	4	4	4	4	5	4	5	5	4	5	4—66
J B Parker	5	4	5	5	4	4	4	4	5	4	4	5	4	4—65
J W Williams	4	4	4	4	5	4	4	4	5	4	4	4	5	4—64
H Tyler	4	4	4	5	4	4	5	5	5	4	4	4	4	4—64
D F Hunt	4	4	4	4	5	5	4	3	5	5	4	4	5	5—64
R Davis	4	4	4	4	4	4	5	4	4	4	4	4	5	4—63
E B Souther	4	5	4	4	4	4	3	4	5	4	4	4	5	5—63
C H Parker	4	4	5	4	5	4	4	4	4	4	4	4	4	5—62
G S Rice	5	4	4	4	4	4	5	4	4	5	4	4	3	4—62
N Kinsman	4	4	4	4	4	4	5	4	3	4	4	4	4	4—61
E W Law	4	4	4	4	5	4	4	4	4	4	4	5	5	4—61
W Charles	4	4	4	4	3	4	4	4	4	5	4	3	5	4—60

—The politicians made a good showing at the target on their match at Hellwig's Gallery on the 5th inst. The teams were those of the Fifth and Ninth Assembly Districts of the Fifth Senatorial District. The scores stood:

Fifth Assembly District Team.				Ninth Assembly District Team.			
	200	500	Tl		200	500	Tl
Devlin	44	48	92	Decker	45	49	94
Cavanagh	43	34	77	Coonan	37	46	83
Murray	41	42	83	Hoagland	44	44	88
Keenan	45	44	89	Lehnkes	44	45	89
C Jachne	46	46	92	Vosburgh	42	48	90
Harney	46	41	87	Doubtney	42	45	87
Cook	45	46	92	Gilon	45	39	84
H Jachne	46	49	95	Cavanagh	42	48	90
Totals	356	351	707	Totals	341	364	705

Mr. Henry Jachne was presented with a gold medal by Mr. A. G. Hellwig on account of his having the best score of the evening.

—Captain L. V. Sone, of the New York Rifle Club, made forty-two consecutive bull's-eyes in Conlin's Gallery on the 28th ultimo; distance, 65 feet, at Creedmoor target, reduced in proportion to the distance; actual size of bull's-eye 1 1-16th inch in diameter, with Ballard .22-cal. rifle, 3-lbs. pull; Winchester cartridges; position, off-hand.

—H. D. Blydenburgh hit a silver dollar, tossed in the air, with a pistol, at fifteen paces, while a bullet tossed in the air was hit at the same distance.

—The New York Rifle Club has sent a challenge to the Geo. H. Thomas Post, of Chicago, for a telegraphic match. Date not yet fixed.

—A special meeting of the N. R. A. was held on Monday evening last, and a vote taken to reduce the dues from $3 to $2, annually. On a count, however, it was discovered there was not a quorum present.

NEW JERSEY—*Newark, March 26.*—The following is the score of the Newark Amateur Rifle Club made to-day:

W C Gardner	4	5	5	5	5	5	4	5	5	5	5—48			
Wm Hayes	4	5	5	5	5	4	5	5	4	5	5—48			
W P Welsod	5	4	5	5	4	5	5	5	5	5	4—47			
J Bayer	5	5	5	4	5	5	4	5	5	5	4—47			
J F Hill	5	4	5	5	4	4	6	5	5	5	4—48			
F Harrison	4	5	4	5	5	5	4	5	4	4	4—45			
V Hesse, Jr	4	4	5	4	5	5	4	4	5	4	4—44			
Theo Felsburg	3	2	4	5	4	4	5	5	4	5	4—41			

MICHIGAN—*East Saginaw, March 12.*—At the twentieth regular weekly practice of the East Saginaw Amateur Rifle Club the following scores were made (200-yard target reduced, possible 50):

Capt W J Shaw	5	4	5	4	4	5	4	5	4	5—45				
C O Yawkey	5	5	5	5	5	4	5	4	5	5	4—47			
J H Howrey	3	4	5	4	4	4	3	5	4	5	4—41			
H H Hamilton	5	4	4	4	3	4	5	4	4	4	4—41			
F R Osborn	4	4	4	4	4	4	4	5	4	4	5—41			
R F Corbyn	3	4	4	5	4	4	4	4	4	4	4—40			

J. H. H., Sec'y.

OHIO—*Cincinnati, March 23.*—The Cincinnati Shooting and Fishing Club had their fourth competition for club prizes to-day; distance, 200 yards; position, off-hand:

First Class.

W Hall	4	5	5	5	4	5	4	4	4	4—44				
G Henson	4	5	5	4	5	4	4	4	5	4—44				
L Fender	4	4	4	5	4	4	4	5	4	5—43				
W Calowell	4	4	4	4	4	5	4	4	4	5—42				
M Gendillin	4	5	5	4	5	4	4	3	4	4—42				

Second Class.

W Campbell	5	4	4	4	4	4	4	4	5	4—42				
J Weston	4	5	5	4	3	3	4	5	4	4—41				
A Koehler	3	4	3	4	4	4	4	4	5	4—40				
C M Epply	4	4	4	4	4	3	4	5	3	4—39				

C.

NORTHWESTERN RIFLE RANGE—THOMAS POST CLUB.—*Chicago, March 29.*—Distance, 200 yards; wind strong at nine o'clock at commencement; light and fitful at close. Score:

Schaffer	4	4	5	5	5	4	5	5	5	5—47				
Tyrrell	4	5	4	5	4	4	4	5	5	4—44				
J Freeman	4	5	4	5	5	4	5	4	4	4—44				
D Freeman	4	4	4	5	4	4	5	5	4	4—43				
Drury	4	4	4	5	4	2	3	4	3	4—33				
Swain	5	5	3	3	4	3	5	4	3	3—38				
Hobbs	3	4	3	4	3	4	2	4	4	3—35				
Borchert	3	2	4	5	5	4	3	4	3	4—37				

The Lake View Club did not shoot to-day. LU. H. DRURY.

PACIFIC SLOPE RIFLEMEN.—The California Rifle Association announce the spring meeting for 1879, to be held at the San Bruno range, beginning Sunday, April 27th. There will be five competitive matches, as follows: First, the Kellogg challenge cup, open to members of the National Guard of California and officers of the army and navy; 300 and 600 yards; all scoring 15 points or over out of 25 at the first distance to enter at the second. The cup, ordered at $150, is to become the property of the person who shall win it three times. Cash prizes for the best scores at 300 yards are also offered. The second competition is for the *Pacific Life* cup, open to all comers, distance 200 yards, to become the property of the person who shall win it twice. The following have won it at the previous meetings: Frank G. Edwards, Henry C. Smith, H. J. Burns, John McComb and J. W. Guthrie. Value of the cup, $45. Cash prizes are also to be given to the three best scores. The third match is between regimental teams, to consist of ten men from any of the regiments, battalions or unattached companies of the militia and the United States army. The first-class gold medal of the rifle association is to be given to the team making the best score and $20 to the team making the second best. At the close of this match the highest marksman in each team will have a match between them for a gold medal, which will be the property of the winner. The fourth will be a subscription match, 500 yards, open only to members of the State militia and members of the Rifle Association. One-half the gross receipts will be divided among the four highest scores. All of the above matches will be under the rules of the Association, and will be shot with regulation rifles or carbines, the minimum "pull" of each trigger to be not less than six pounds.

SANTA ROSA CLUB.—The Santa Rosa Sportsman's Club, of Santa Rosa, Cal., have elected for the following year the following officers:—

President, Frank H. Swett; Vice-president, E. L. Whipple; Secretary, E. T. Crane,; Treasurer, A. L. Justice. The club has a present membership of twenty active and about ten honorary members. The club has concluded to inaugurate a series of matches for the prize rifle, the first of which has already come off. There will be five contests, at which each contestant will be allowed twenty shots, and the one scoring the highest average will be awarded the prize. The distance in each contest is to be 200 yards, and the shooting will be conducted according to the Creedmore rules. The matches will be held every two weeks until ended.

HONESTY THE BEST, ETC.—I have read with pleasure the leader in FOREST AND STREAM of Feb. 20, on "Honest Experts." It has the true ring about it, and it is just such tone that has been and will continue to extend the influence of your paper. The transaction upon which it is based may or may not be as charged, and they should not be condemned without a fair hearing. But if all parties implicated do not clear their skirts, I hope you will not let up on them, and not only in regard to this fraud, but every species of fraud attaching to the shooting fraternity. P.

Montana, March 6, 1879.

SHOOTING POSITION.—Mr. W. M. Farrow, who has made good records at all the ranges takes up the matter of position in shooting in a recent letter and makes several good points, though the real merits of the military position have not yet been touched upon by any of the multitude of writers on the subject. Mr. Farrow says:

Noticing that the National Rifle Association has under consideration the allowing of "any position" in military matches at 500 yards and longer distances, and feeling that the views of some of the riflemen should be publicly consulted, I take the liberty to write on a few points that will interest every military marksman visiting Creedmoor.

First—Why do we go to Creedmoor? Is it not to prepare ourselves for what transpires in actual action? Would it not, then, be a funny sight to see two contending lines popping at each other over or between the soles of their upturned army shoes, while in the "back position," which General Wingate wishes (for the sake of the Seventh, perhaps), to allow in the coming competitions at Creedmoor? Would not the soldier sooner assume the "front position" and rest his rifle over some friendly stone or stump? Failing in this his knapsack could be utilized. At Wimbledon the "back position" has been allowed, and now what is the result? I have it from a reliable source that great pressure is being brought to bear on the council to return to the "front position" for a number of reasons. In the latter position one consumes less time in firing. He is also less liable to shoot on the wrong target, and by so doing injure for life an unoffending marker. Who that has seen a marker coming up from the pits with bleeding hands or arms, head bandaged, or as happened at Creedmoor once, an eye put out, would not regard with disfavor the alluring innovation? It is true better target scores can be made in the "back position," for the natural variations of the rifle in the "back" and "front" due to the pulsations of the heart and other causes is as three to five; but give the contestants their knapsacks to rest their rifles on and the practice gained in matches could be utilized in actual service.

Second—In small bore shooting at 500 yards and over the National Rifle Association should put a carton ring, counting six, in the bull's-eye. It would do away with the unavoidable ties at 500 and 600 yards at least. Such a count was tried at the spring meeting of 1877, when the late General Dakin took "first," with a larger score than an average of 22-inch bull's-eye, at the 800, 900 and 1,000 yards. A 36-inch bull's eye to count five is too large. One shooter puts his bullet within an inch of the very centre of the bull's-eye, but gets no more credit than another, indifferent marksman perhaps, who strikes eighteen inches from the same spot. Let the National Rifle Association take an advance step and put an 18-inch carton circle in the long range bulls-eye.

New York, March 17, 1879. W. M. FARROW.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild ducks, geese, brant, etc.

—S. Nugent Townsend, correspondent of the London *Field*, who has just completed a three years' sojourn in America, and who at one time contributed a series of interesting letters from Texas to the columns of FOREST AND STREAM, sailed for England last Saturday by the City of Richmond. Speaking of hunting antelope in Texas, he says:

"Killing an antelope had for me consisted of two operations, viz.: bringing it down and cutting its throat; but once I fluked a shot at a running antelope and severed his windpipe. Wasn't it a near chance of a miss? As it was, it proved a very deadly kill."

—Capt. Bogardus returned from the South on Wednesday morning. He shortly opens a shooting gallery for glass balls and rifles at 158 Clark street, Chicago. This will also be Capt. Bogardus' depot for the wholesale sale of his glass balls and traps.

CARTRIDGE LOADER.—We call attention to the advertisement in our current issue of the new cartridge loader of Wm. Read & Sons, Boston.

THE HAMMERLESS GUN.—A hammerless breech-loader, 16-gauge, 5¾ weight made by W. W. Greener, was recently shown us by Henry C. Squires, No. 1 Cortlandt street. It

was of first quality with patent treble wedge fast action and fitted with Greener's latest improvement, which consists of indicators that show at a glance when the gun is cocked. Two gilt pins project above the standing breech when the gun is cocked and go down when fired, so it can be seen which barrel has been discharged. The locks contain fewer pieces than those of an ordinary gun and the swivel, which is considered the weakest part of a gun lock, is altogether dispensed with. This beautiful weapon was imported for Mr. W. B. Shattuc, of Cincinnati. The exquisite symmetry and elegant finish of the piece was the admiration of all who saw it. The fact that such ardent and intelligent sportsmen as Mr. Shattuc are securing hammerless breech-loaders goes far toward establishing Mr. Greener's prediction that this is to be "the gun of the future."

HAMMERLESS GUNS.—These are rapidly coming into favor. We have repeatedly received the inquiry whether there are any hammerless guns of American make, to which we must give a negative answer. There are excellent English and German guns, however. We possess one of the latter made in Dresden and presented to us by Dr. H. Struve last fall—a most beautiful tool, but heroically heavy. We are much pleased with the new kind of arm, as, indeed, all who try hammerless guns seem to be. One Ohio correspondent sends the following line:

CLEVELAND, March 25, 1879.

MR. EDITOR:

A sporting friend of mine has just returned from England, bringing with him a splendid hammerless gun, and on being exhibited to some of the lovers of the gun it caused quite a *furore*, all of them pronouncing their guns, although fine ones, to be old-fashioned. Now, Mr. Editor, are there none of our enterprising gunmakers that have go-ahead enough in them to give us a gun of this kind? or will they suffer foreign makers to run them out of the market, and our splendid guns of home make to be called old-fashioned?

A LOVER OF A GUN.

MASSACHUSETTS—*Goshen, March* 20.—Foxes, hares and rabbits have been very plenty here this winter, and though we have had good sport with them there are plenty left for "seed." Mink, skunks, etc., are plenty, but don't pay for trapping. RUFF.

"CITY OF WORCESTER."—The palace car, City of Worcester, will leave Worcester, Mass., next week with a party of sportsmen. They go to California for a trip of about seventy-five days.

CONNECTICUT—*South Norwalk, March* 28.—The following is a record of the game birds and wild ducks shot by me the past fall and winter. Blue heron, 1; meadow hens, 2; wild pigeons, 8; grass plover, 9; yellow legs, 27; bittern, 8; meadow larks, 97; shortnecks or squatters, 98; partridges, 21; quail, 65; woodcock, 242; rail, 162; wood-ducks, 2; broadbills, 6; coots, 11; old squaws, 37; shelldrakes, 49; whistlers, 54; blackducks, 197. Grand total, 1,097.

FRANK BURBITT.

Pretty good for Connecticut, and not much of a State for game, either?

LONG ISLAND.—The duck shooting at Bellport is reported by returning sportsmen to be of the finest character. Capt. Dan'l. Petty furnishes best of accomodations and has all appurtenances for the sport. Parties should go for a week. Geese are flying, but none come within range.

ADIRONDACKS—*Meacham Lake, N. Y.*—Our winter has been an unusually severe one—no very extreme cold, but long and severe storms. We have yet four feet of snow with a hard crust. The deer have had a hard time, but in this town I cannot learn that any crusting has been done. In other towns in the country arrests have been made. In two cases the parties have been confined in the county jail, in other cases they have paid fines. But in all of the towns there is a watch upon all persons suspected, and a determination to put a stop to the slaughtering of deer at this season.

A. R. FULLER.

NEW JERSEY—*Greece, March* 26.—Last Monday, 24th, Benjamin Stowell and myself had the good fortune to kill a rare bird for this place. It was a trumpeter swan, and I think a large one for its kind. It measured from tip to tip of wing, 82 inches; from bill to tail, 52 inches; weight, $15\frac{3}{4}$ pounds. The plumage is pure white, excepting the head and neck, which is brown. Wild geese have been plenty hereabouts for the last week or so. Quite a number have been killed. Ducks not very plenty, the cold snap has driven them away. A. E. R.

QUAIL IN PENNSYLVANIA.—A correspondent who writes us from Pittsburg, Pa., takes a very gloomy view of the prospects for quail shooting in his State this fall. Owing to the great amount of snow which fell this winter he thinks that but few birds have been left to breed this year. His views on the migration of quail are deserving of notice. He says:

This has been the worst winter since 1855–'56, when quails were almost entirely cut off in Pennsylvania. I don't think there were three coveys in our county, and it was three long years before we could get even a fair day's shooting, and so it will be now. Guns and good setters may as well be laid aside for some years unless something can be done quickly. In the year 1835 quail were cut off so closely that I have heard old sportsmen say that the only birds they knew of in many miles were a dozen bought by them for $6 and turned out for stock, and they believed that all the birds in this neighborhood came from those turned out. They said it took five years for them to get moderately plenty. The fact is, birds were not so plenty then as they were twenty years afterwards, owing to the increase of cultivated farms natural to the growth of the country, and the same rule holds good now. I believe that quail are migratory, and I know many who have studied their habits closely for years, who believe the same thing. My experience proves they travel from the north and southeast to the south and southwest, that they follow the streams and are always more plenty on the west banks of a river, until stopped by rivers they cannot fly over or by mountains they cannot pass. They begin to migrate toward the south in October, and begin to move toward the north in the spring; so that when they are cut off in the Northern States it takes the birds bred below the winter's killing line about three years to reach Pennsylvania, and by that time the few birds that escape the snows of our climate have done their full share toward reproduction, and the two meeting, make comparative plenty. This is a theory, and I do not ask any one to believe it; but some time, if you desire, I will elaborate the views of some of the best sportsmen in the country on this subject, and you will see that proof can be advanced in support of their views. J. S. BROWN.

TENNESSEE—*Nashville, March* 27.—The weather has been most favorable for snipe shooting within the last week, and several fine bags have been made. On Monday Mr. J. F. Nicholson and Jno. Gilbert bagged 33 snipe and one duck, and on Tuesday the same parties bagged 19 snipe. Mr. Nicholson had his black setter bitch Belle with him. Herman Burkholz was out a day or two ago to try his pointer dog Shot, a new acquisition. He says the dog hunts beautifully, is rather too fast for snipe shooting, but retrieves remarkably well. Mr. Charles Sulzbacher has just returned from a visit to Florida. He brought back a beautiful collection of eggs of many of the different birds and reptiles of that country.

J. D. H.

FLORIDA—*Jacksonville, March* 20.—Deer, turkey and quail abundant this season. Sportsman visitors report plenty of game. W. K. L.

GULF CITY GUN CLUB.—*Mobile, March* 21.—*Editor Forest and Stream:* At the annual meeting of the Gulf City Gun Club, held Wednesday night, March 19, the following officers were elected to serve during the ensuing year: Dr. T. S. Scales, President; F. P. Davis, Vice-President (re-elected); R. P. Priester, Secretary; Dr. C. C. Sherrard, Treasurer (re-elected); Judge Wm. Boyles, Attorney. Executive Committee, G. W. Tunstall, E. Carre, M. Primo, re-elected; W. B. Holt, H. P. Vass, Jas. C. Bush, J. S. Alexander, Jr.

BLACK GEORGE.

TEXAS—*Paris, March* 25.—*Editor Forest and Stream and Rod and Gun:* North Texas is by no means deficient in the matter of game, nor are we without a goodly number of those who handle the rod and gun. This city boasts an organization known as the Paris Gun Club, which, though in its infancy, promises good results. We have abundance of game, consisting principally of deer, turkeys, water fowl, grouse, quail, plover and snipe. Just at this time our prairies are covered with plover of several kinds. These may be bagged in vast numbers within half a mile of town, hence they afford but little sport, and we are mainly dependent upon the diminutive jack snipe for genuine amusement. Owing to a dry spring, however, these are less plentiful than usual, though your correspondent has brought in several well filled bags during the past two weeks. The best quail hunt of the season is cla imed by myself and friend. With sixty shells we bagged fifty-one birds, no two killed at once, and all on the wing; time, three hours' shooting, done within two miles of corporation limits. The festive turkey begins to remind us that he merits our attention, the best of which you may rest assured he will have ere the spring time passes. FRANCOIS.

WISCONSIN—*Baraboo, March* 28.—J. H. Brewer and J. F. Kartack went out on the marsh yesterday, and bagged a few snipe. They have made their appearance earlier than usual this spring. ED. H.

AUCTION SALE OF BREECH-LOADING GUNS AND FINE FISHING RODS.—During the months of September and October, for several years past, the firm of Barker & Co. have been in the habit of making several sales by auction of sporting guns, but in consequence of their regular spring sales of paintings and other works of art, also books, they have thought it not wise to occupy any of the time necessary for such sales by any offering of guns; but, as may be learned by reference to our advertising columns, they have decided to depart from what has been their established custom by making a spring sale of guns; also, as an experiment, will include an assortment of superior trout and bass rods (fly and bait), among which may be found some of the split bamboo order. It must not be inferred that the guns to be sold are in any way inferior or imperfect, as every gun sold is guaranteed by Messrs. Barker & Co., whose responsibility and reliability is well established. The guns and rods will be on exhibition several days before the sale, thus affording would-be purchasers an opportunity of selecting an article suitable to their peculiar wants.

MOSQUITO BARS.

GUELPH, Ontario, March 25, 1879.

EDITOR FOREST AND STREAM:

An article on "Mosquito Net for the Woods" in last week's issue of your valuable paper attracted my attention, and from the excellent description given by the writer, Mr. Maire, I should judge the net would prove a perfect bar to all kinds of insects. As the time will soon be at hand when this subject will concern many of your readers, other methods for the making and putting up of mosquito nets may not be out of place.

I will mention one which I have seen used in this country by my friend, Wm. Eastland, Esq., of Peterboro (who has camped out more or less for the last thirty years).

The bar is made of cotton or linen cheese cloth (the ordinary mosquito netting would not be strong enough), the same shape as your canvas tent, except that instead of having a door or opening in front, the bar is sewed up at both ends; at the top, instead of a ridge-pole, a rope is sewed in, leaving enough at each end to tie with. The tents we used were the inverted V, with bell ends, with curtain from two to three feet deep. The bar is made with bell ends, but without a curtain. To adjust the bar, tie the projecting ends of the rope running through the top to the top of the tent-poles. It is then ready for use. Make your bed directly under the bar, which is then spread out and secured on all sides by tucking under your bed or by placing stones or any other weights around the bottom of the bar. During the day, when not in use, roll up from the bottom and stow away on the ridge-pole of your outside tent, without untying the ropes, and it is ready for use again in a moment's notice; in fact, when once put up, it need not be removed again until the storm-tent is taken down. If the weather is very sultry, the curtain of the storm-tent can be pinned or hooked up, which will give you the advantage of any cool breeze that may be blowing at night, and still the roof of your outside tent will protect you from the storms. I think, possibly, it has some advantages over the bars in use. The cost is a bare trifle. I made one last year, using $12\frac{1}{2}$ yds. (15 yards would have been better) cheese cloth, at six cents per yard, and, as I made it myself, the total cost was seventy-five cents. It requires no rods or poles to put up, and takes up very little extra room in the pack of camp equipage, and adds but a few ounces in weight. From past experience, I could not be induced to camp out any length of time during the fly season without one of Mr. Eastland's mosquito bars. C. A. POST.

CANVAS BACK SHOOTING IN OREGON.

PORTLAND, March 13, 1879.

EDITOR FOREST AND STREAM:

The Oregon canvas back resembles in appearance its Eastern brother both in size and plumage, but differs in its food, which consists mainly of a bulbous root called "wapato" or Indian potato, which is one of the natives' article of food, as well as the ducks'. These wapato lakes are not very common (that is in comparison with the ordinary lakes), but sufficiently so for every one who enjoys the sport to have an occasional chance for a day's shooting. As the *modus operandi* may differ from the Eastern method, I will give a brief sketch for the purpose of comparison. Canvas shooting is only good in the dark of the moon and on stormy days, although it happens sometimes to the contrary.

The first thing that is to be done on arriving at your lake is to observe in what portion of the lake the ducks are "using," and then to scare them out by clapping the hands, or anything that will frighten them except shooting a gun. When the ducks have left set out the decoys, which may number anywhere from 25 to 100. Sometimes the ducks will begin returning to the lake before you have finished putting out the "stools," and seem determined to alight anyhow. After the ducks or decoys are set out (generally in the shape of a long V with the point to the wind), the fun commences, and I have known as high as 200 fine ducks to be killed by three men in a single day's shooting, but the average is from 75 to 150. The writer has been lucky enough to bag 65 in six hours' shooting with only 28 decoys. It is customary to leave the dead birds to drift ashore and be picked up after the shooting is over, but some hunters use dogs and send them after the birds as they fall. The sink boat is rarely if ever used out here in hunting, as the majority of sportsmen prefer to shoot from the shores.

The canvas shooting commences here about the middle of November, and continues until nearly the first of April. Sometimes when the weather keeps stormy we have shooting even later, but it is not the rule.

We have put off our intended hunt until next Sunday, when we intend to "make a killing," as it will probably be the last time we can get at them this season. There has been considerable discussion as to whether the Oregon canvas back equals in flavor the Eastern ones, and many people contend that the celery-fed duck is superior to the wapato-fed ones, but men who have hunted both, and had an opportunity to judge, say if they did not know what duck they were eating they could not tell the difference. WM. LANG.

PIGEON MATCHES.

[FROM OUR SPECIAL CORRESPONDENT.]

PIGEON SHOOTING IN ITALY.

FLORENCE—*March* 15—*Editor Forest and Stream:* An event in pigeon shooting which will no doubt interest your readers who are disciples of the gun, is the meeting which is given by Prince Demidoff, of San Donato, Florence. This princely residence, San Donato, is in the suburbs of "the winter city," as designated by "Ouida," whose villa, as you drive to the shooting-ground, you can perceive in the distance. The close proximity of Florence to Monaco attracts the leading shots who are residing at the latter place to enter the lists for the "Grand Prix de San Donato." The ground on which the traps are laid is arranged in a manner which surpasses any similar place in the world. The elegance of the building, the luxury of the appointments, make the scene one never to be forgotten.

On Wednesday, March 10 (the first of three days), the "Prix d'Ouverture was closely contested for, and was won by by a local shot, Signor Dabbroni, who at 25 metres (27¼ yards) succeeded in grassing seven birds, the second prize being divided by Mr. A. Rush and Signor Monari. The next day, however, brought forth the greater contest, and as if in corroboration of his acknowledged skill, the Grand Prix de San Donato was won by Mr. E. R. G. Hopwood, the winner of the grand prize at Monaco a few weeks previous. He shot with the same gun as at Monaco, viz., one of Messrs. Dougall's 12-bores, on their Express system of choke-boring, whose guns, it may be added, had just taken the two preceding prizes at Monaco, and have created quite a sensation among sportsmen, in consequence of the success those using them have been obtaining.

Grand Prix de San Donato—*Un objet d'art* added to a pool of $20; 25 per cent. to the second, 15 per cent. to the third; three birds at 28, three at 29 and three at 30 yards; three birds out:

Mr. E. R. G. Hopwood, grand prize............1 1 1 1 1 1 1 1 1 1 1
Colonel Treherne, second prize.............1 1 1 1 1 1 1 1 1 1 0
Baron St Trivier, third prize...................1 1 1 1 1 1 1 1 0

The remaining shooters, making thirty-eight in all, comprised many noted for their skill both in England, Italy, France and Belgium.

The third day was devoted to the Prix de Consolation, a handicap in which Mr. Hopwood stood at 33 yards, and Colonel Treherne and Baron St. Trivier at 30 yards each.

Prix de Consolation (Handicap)—*An objet d'art* added to a pool of $11; 30 per cent. to the second; three birds, one bird out; thirty-eight shooters:

E R G Hopwood, 33 yards, first prize...........1 1 1 1 1 1 1 1 1 1 0
Signor Hecht, 25 yards, second prize............1 1 1 1 1 1 1 1 1 1 1

It is needless to remark that such skill elicited the greatest applause, and in order to enable some other shooter to come to the front, this event was followed by a double prix, at 26 yards, with a pool of $8, with the following result. Double rise, 26 yards, twenty-four shooters:

E R G Hopwood...11 11 11

It must be added that the seventeen birds which Mr. Hopwood thus brought down were all of an excellent character, and that some of the very fastest fell to his lot, and, in fact, on two occasions he was indebted to his second barrel for topping over stone dead, birds which had they been only feathered, would have fallen outside the fence. Mr. Hopwood then retired for the day, having won in two days two very valuable works of art and over $800. The final pool, another double rise, was won by the Marquis de San Germano, who had shot remarkably well throughout. I observe that a law has been passed in Connecticut making pigeon shooting illegal, and that Massachusetts may follow the example. Assuming this, which I hardly believe to be true, I should, with your permission, desire to remark that, having seen a great deal of pigeon shooting, I cannot observe any difference between a blue rock getting out of a box and a partridge rising from behind a hedge. The subject is unworthy of discussion. The excellence of modern breech-loaders is such that, as a rule, pigeons are either killed clean or altogether missed, which cannot be said on the whole of game shooting. Legal steps like that would require, to be consistent, to be followed by a prohibition of the killing of any bird of any kind whatever, and I think that a duck at eighty yards has more chance of getting away wounded than a pigeon has at twenty-five yards. Again, pigeon-pie is very good, and most people prefer them killed before being cooked and eaten.

Two matches have taken place, in one of which an American gentleman, Mr. Macalister, a gentleman well known to many of your Philadelphia readers, came off victorious. His competitor had recently won a very important prize, and to face the trap against him required not only skill but considerable nerve. The following were the conditions and result: A match at 27¼ yards, 25 birds, $1,600.

M C Macalister............1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—21
Signor Fabbroni............1 1 1 1 1 0 0 0 1 0 1 1 1 0 1 1 0 1 1 1 —14

As will be seen, it was unnecessary for Mr. Macalister to shoot beyond the twenty-first bird, as the match was won. He shot with a 10lb. 12-bore, 4 drs. and 1¼ oz. No. 6 in the left barrel, and wood-powder in the right, and 1¼ oz. No. 7 English sizes. The gun was another Dougall, as likewise was that of the Marquis Ridolfi, who won the next match.

Match at 33 yards, 25 birds, $100

Marquis Redoid.....1 1 1 0 1 1 1 1 1 0 1 1 1 0 1—12
Colonel M. D. Treherne.....1 0 1 1 0 0 0 1 0 0 0 1 0 0—6

The Marquis showed admirable form, one of his lost birds being killed out of bounds with the left barrel. Thus ended, with some minor pools, one of the most interesting shoot which I have ever witnessed.

J. D. DOUGALL.

LONG ISLAND SHOOTING CLUB—*Dexter Park, L. I., March* 23.—Regular monthly contest of the Long Island Shooting Club for the club championship cup, shot for at seven birds each, handicapped rise from H and T traps, 80 yards boundary; L. I. S. C. rules; twenty contestants:

Brewer.....21 yards.....1 1 1 1 1 1 0 0 1 0 1 1 1—10
Wynn.....26 " .....0 1 1 1 1 1 1 0 1 0 1 1 0—9
Murphy.....23 " .....0 1 1 1 1 0 1 w
Walker.....21 " .....1 0 1 1 1 0 1 w
Hance.....26 " .....1 1 1 0 1 0 1 w
Lancake.....23 " .....1 1 1 0 1 1 0 w
Blankly.....21 " .....1 1 1 1 0 1 1 w
Rivera.....25 " .....1 1 0 0 0 0 0 w

Messrs. Darfee, Brown, Talbot, King, Midway, Robinson, Bauiser, Turner, Holt, Smith, Hughes and Jones withdrew.

BROOKLYN AND PHILADELPHIA.—The return pigeon shooting match between teams of ten men each from the Brooklyn Gun Club and the Social Gun and Rifle Club, of Philadelphia, was shot last Monday, on the ground of the latter, at Riverton, N. J. The day was exceedingly windy, the air was filled with dust from a neighboring plowed field, and good shooting was rendered difficult in the extreme. Notwithstanding excellent scores were made, the totals were better than in the former match, last January, when the Brooklyn men won with a score of 101 to 93. The birds were strong flyers, many of them phenomenal twisters, and a number of those scored lost being borne out of bounds by the high winds. The conditions were: 15 birds each, 25 yards rise, 80 yards boundary, five traps, English rules. The score was:

Brooklyn Gun Club.

IOWA STATE TOURNAMENT.—The second annual tournament of the Iowa State Sportsmen's Association will be held at Marshalltown, May 20, 21 and 22. The first day there are to be two matches at ten single birds each; purses of $150 and $325, divided in four prizes each; entrance, $3 and $5, and a match at ten glass balls, revolving traps, purse of $12, divided into four prizes; entrance $3. Second Day—Match at ten single birds: purse of $182.50; entrance $3; five prizes. Team shoot for State championship silver trophy. Match at five double birds, for purse of $50, divided into four prizes, entrance $4. Third Day—Match at ten single birds, for purse of $ 82.50, divided into five prizes; entrance $5. Team shoot for Marshalltown purse of $250, divided into three prizes, and $50 worth of Tatham chilled shot. Consolation match, for purse of $100; five single birds; entrance $3; four prizes. A gold badge will be given for best six regate scores in purses No. 2, 4, 6 and 7, and a Scott gun for best aggregate of purses Nos. 1, 3, 4, 6 and 7. There are a score of other prizes; class shooting throughout; professionals barred. The Secretary of the Association is Mr. D. C. Beaman, Keosauqua, Ia.

—See Bogardus' advertisement.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout—*Salmo fontinalis*, Land-locked Salmon—*Salmo glover*; White Perch.

TROUT FLIES FOR APRIL.

The following are imitations of natural insects which first appear on head springs, and later in the season are found on ponds and rivers:

BLACK GNAT OR MIDGE.—Body and feet, black; wings, sub-hyaline.

DARK CLARET GNAT.—Body, dark claret; feet, black; wings, sub-hyaline.

BRIGHT CLARET GNAT.—Body, bright claret, mixed with yellowish gray; feet, ginger; wings of one sex, hyaline, of the other, ocherous.

OLIVE GNAT.—Body, dark olive; feet, ginger; wings, hyaline.

GRAY GNAT.—Body, dark fox fur, mixed with dark claret; feet, gray; wings, hyaline.

DARK FOX.—Body and feet, dark fox fur, mixed with lemon-colored mohair; wings, sub-hyaline; tail, three fibres of dark gray hackle.

BLUE BLOW.—Same as dark fox, but of blue shade.

POOR MAN'S FLY.—Body and feet, hare's ear and yellow mixed; wings, slightly mottled gray.

RED FOX.—Body, fur from a fox face, mixed with yellow; feet, red hackle; wings, pale gray or sub-hyaline; tail, mottled wood-duck feather.

BRIGHT FOX.—Body and feet, brightest part of fox fur, mixed with yellow; wings, brightest hyaline; tail, pale yellow.

—The rude and boisterous manner in which the trout season opened on April 1st was a "great blow" to the expectant anglers who had jointed their rods for a raid on the streams and ponds. The stated newspaper weather report of the day said:

"The storm centre touched Long Island and the New England coast as it passed on to the north and east. Snow fell to the depth of several inches on Long Island, and the sweeping gale piled it into drifts that blocked travel on the railroads. In New London, Conn., in Boston, in Portland, Me., and all through the eastern part of New England, snow fell. The night express train from Boston was delayed by the storm."

The common-sense legislation which postponed the opening of the season from March 1st at which date it was formerly, has therefore been fully exemplified. As respects western Long Island the sport was fair, for the sun came out bright and warm the day after the storm, and the wind abated sufficiently to make it possible to keep a line on the water; but as regards the rest of the State, the ground is still under snow an the ponds fast with ice. The running streams are free, but filled with snow water. All old anglers wait until the snow water runs off before they attempt to wet their first line of the season. However, the period of sport will soon be at its full, and we congratulate our patient angling friends that the evidences of abundance of fish were never more numerous or satisfactory, not only through New York State but in New England and the Middle States. Pennsylvania is perhaps the best natural trout region in America, and although its streams have been greatly depleted in times past from one cause or another, they have now become greatly rehabilitated and restored by judicious planting and proper restrictions and abstinence from fishing.

Men to whom trout have been familiar from early childhood are always astonished at the Fulton Market display of live and dead trout, which shows more varying colors, sizes, shapes and characteristics than they ever imagined did belong to the family of *Salvelinus fontinalis*. We do not know that the exhibit is better this year than the year before. There are trout in every stage of growth from the ova (April 1st, a most unusual date,) to the large five-pound mature fish. What is most gratifying is the manifest interest which not only Eugene Blackford, the pioneer exhibitor, but all his scaly brethren take in making the display and catering to the curiosity of the public. Not alone are native fish shown, but fish from the waters of England, Ireland and Scotland.

Besides speckled trout, there are on view California salmon, grayling, landlocked salmon, etc.

Messrs. Middleton & Carman the oldest fishermen on the market stand, we believe, make a most creditable display of trout and salt water fish, and one can generally supplement at one of the stands what he does not find at the others.

There was one stand which had a fine display of salt and fresh water fish in greater variety than we have ever seen at this season, including some specimens quite rare and curious: but as the pale-faced giraffe in black whiskers and blue night gown, who was in attendance, was not inclined to be communicative, we do not feel inclined to communicate the exhibitor's name. Our readers can distinguish his stand from the rest by the immense halibut laid out on the slab. This halibut answers no questions.

The market was thronged on Tuesday morning at a very early hour, even before the exhibit was fairly in shape for examination. The opening of trout season has grown to be a very important feature of the 1st of April.

Among the exhibits were: Brook trout from G. A. Starkey, Troy, N. Y.; from Thomas J. Moore, caught at Lough Neagh, Ireland; silver brook trout from James Annin, Jr., Caledonia, N. Y.; yellow brook trout from John M. Crowell, Sea Cliff; young trout fry, brook trout and live brook trout from H. D. McGovern, Brooklyn, L. I.; brook trout from Livingston Stone, Cold Spring Trout Pond, Charleston, N. H.; from Ira Hoyt, Halsey Valley, N. Y.; from G. W. Thompson, Sag Harbor, L. I.; from David Peters Sewell, Fayette County, West Va.; from Thomas Clapham, Roslyn, L. I.; from B. F. Burtis, Brooklyn, L. I.; live grayling from Prof. Spencer F. Baird, U. S. Com. Fish and Fisheries; wild brook trout from and caught by John Broadhead, Kittatinny House, Water Gap, Pa.; brook trout from South Side Club, L. I.; from Wm. Furman, Maspeth, L. I.; young California salmon, hatched in jar on stand of E. G. Blackford; brook trout from John Rowe Smith, Patchogue, L. I.; from N. C. Miller, Brookhaven, L. I.; young trout fry from James Annin, Jr., Sec'y Fish Cultural Association, Caledonia, N. Y.; young trout fry and brook trout from Seth Green, Sup't N. Y. State Fish Commission; trout eggs from James Annin, Jr., Caledonia, N. Y.; brook trout from Robinson Osterhout & Bro., Moscow, Pa.; from D. J. Barber, North Adams, Mass.; from W. H. Keetbrook, Islip, L. I.; from E. H. Seaman, Ridgwood, L. I.; from G. H. Brush, Norwalk, Conn.; from T. H. Douseman, Waterville, Wisconsin; from Geo. W. Ette, Lehmaster, Pa.; from Levi Hodges, Torrington, Conn.; from T. J. & J. L. Jannay, Newtown, Pa.. from S. P. Carpenter, East Douglass, Mass.; from G. E. Griswold, West Randolph, Vt.; from J. A. Lee & Co., Philadelphia, Pa.; from B. F. B., Ridgewood, L. I.; wild Canada trout from Montreal; wild Canada trout consigned by National Express Co.; trout from Wildwood Trout Farm, East Newton, Mass., Geo. F. Parlow; and California salmon from Thompson Bros., Newhope Pa. A ten-pound trout 30 inches long, 18 inches circumference—the largest male brook trout ever caught—taken at Rangeley, Maine, 1867, by George Shepard Page. Transported to Stanley, N. J., in a tank of water, also containing an eight-pound trout.

THE OWEGO BAMBOO RODS.—The preference for split bamboo rods seems to be increasing so rapidly as to stimulate their manufacture. New artificers, as well as old well-known rod makers, emulate each other in the endeavor to produce the best workmanship and most serviceable rods for anglers. While all rods are not of equal merit, just as all watches and guns are not alike valuable, there are many rods of several different makers whose excellence can scarcely be compared. We have just now been shown the eight-strip bamboo rods made by L. M. Hoskins, of Owego, New York, whose quality is admitted by his own rivals in the business to be of the highest grade. So far as we know, Hoskins is the only maker of eight-strip rods. The philosophy of an increased number of parts is illustrated by splitting a common pine stick. The more sub-divisions there are the more pliable the bundle becomes and the less easy to break. Moreover, it is claimed that the cane can be worked with less loss of enamel in eight-strip rods than in six or four. Certainly the Owego rods seem to be all that the most fastidious angler could desire. For further particulars, see the advertisement in our columns this week. For the information of a number of inquirers, we will state that the bamboo rods most widely known are those sold by Abbey & Imbrie, Conroy, Bissett & Malleson, Pritchard Brothers, Leonard, Mitchell, Murphy, Buckingham, Todd, Hoskins & Fowler, and Orvis.

—Messrs. Conroy, Bissett & Mallison wish to call attention to the cuts in their advertisement in our paper this week illustrating the manner of making their hexagonal split bamboo rods. It will prove quite interesting. No. 1 represents a transverse section of the bamboo; the dotted lines indicate where it is split out for one of the strips. It is then planed down to the heavy line, leaving only the hard part of the cane. No. 2 shows the strips ready to glue together, and No. 3 after being glued. In cut No. 3 the circle shows how much of the best part of the enamel has to be cut away to make a round rod, thereby weakening the cane unequally and spoiling the action. In the hexagonal rod the enamel is left intact, and it is equally strong at all parts and bends evenly, besides being much better protected against dampness, for not only is the hard enamel in itself waterproof, but is rendered doubly so by the varnish used.

CANADA—*Three Rivers, P. Q., March* 28.—The first striped bass of the season taken here to-day from the St. Lawrence River. Just saw one of 23lbs. weight, an unusually large large one for this locality. A lot of maskinonge arrived today from Lake Edward; largest one is forty inches in length, but only 10lbs. weight. Snow nearly three feet deep here yet, and winter lingers long in the lap of spring; but to-day spring is a lap ahead. EVERETT SMITH.

FISHING IN DEERFIELD RIVER.—*Weston, Vt., March* 23.—*Mr. Editor:* About a year since you stated in answer to a correspondent that fishing in the Deerfield River and its tributaries in this State was prohibited for three years ending 1st of May, 1870. I have lately been in correspondence with parties living near the the head waters of said river, and learn that the prohibition has not been observed, as no provision was made for the appointment of wardens for its enforcement. The Deerfield, with its head-water tributaries, is next to the Battenkill, the finest natural trout stream in Southern Vermont, and doubtless others, in common with myself, were anticipating rare sport in those waters the coming season, to whom this notice will be a favor.

CORPORAL LOT WARFIELD.

NEW HAMPSHIRE—*Connecticut Lakes, March* 20.—Very little ice on the lakes here and no fishing through it, owing to the danger. An immense snowfall before it had become safe. EDW. NORTON.

MASSACHUSETTS.—The schooner *Northern Eagle*, while fishing in Ipswich Bay last week, captured a codfish which measured five feet two inches, and weighed when taken from the water 105 pounds. It has been sent to the Smithsonian, where a cast of it will be made.

MOVEMENTS OF THE FISHING FLEET.—The number of arrivals the last week has been 34, and the receipts 1,200,000lbs. codfish and 17,000lbs. halibut. The receipts of Bank halibut have been liberal and prices have ruled low; 9 arrivals have been reported at this port and 8 at Boston, the home receipts being 450,000lbs. Several good fares have been received. The schooner *Nath'l Webster* weighed off 85,000lbs., the largest trip this season. Whole number of fishing arrivals for this week, 52.—*Cape Ann Advertiser, March* 26.

NEW YORK.—The first shad of the season was caught in the Hudson River last Friday, off the Elysian Fields. It was the centre of attraction throughout the day, weighed four and three-quarter pounds and brought $25. The season is fairly inaugurated. The ferryboats now make their long detours through the lines of poles, and the thousand fishermen will be very busy until June.

TENNESSEE—*Nashville, March* 27.—Col. Akers and a party of select friends have gone for several days' fishing in Big Haspeth. The Colonel says, as the bill in the Senate was killed on account of it being the rich man against the poor, he thinks his rich man's chance consists in trying to take a few fish legitimately before the poor man comes in with the seine, trap gig, and the poison berries. J. D. H.

THE CUMBERLAND ANGLING CLUB—*Nashville, March* 22.—The grand fishing club of this city is styled the "Cumberland Angling Club," and is comprised of the following gentlemen: Major W. H. Scruggs, President; Jno. P. Williams, Esq., Vice-President; James A. Sattowhite, Treasurer; D. W. Paschall, Secretary; Calvin Morgan, Commissary. For their first spring adventure they have chartered the small steamer *Hattie Bliss*, upon which they intend to ascend the Cumberland River and fish along as they please, and make excursions up all the principle tributaries, and, as a matter of course, they will have a grand time. In addition to the above-named officers they have as members Messrs. L. F. Benson, S. W. Edwards, T. O. Harris and Major A. E. Burr. These gentlemen are all true sportsmen, and have the means to enable them to have all the accoutrements incidental to a thoroughly equipped party. Every member of the club also intend becoming subscribers to the FOREST AND STREAM, and will be of invaluable assistance to your correspondent in furnishing such matter as will, no doubt, prove readable to all the patrons of the paper. I will again add that the gentlemen would be too glad to extend the hand of welcome to any one bringing from Mr. Hallock a letter, introducing him or them; and I feel satisfied in saying they would be rewarded by such genial company and excellent sport as would make it the brightest chapter in their sporting career. J. D. H.

FLORIDA—*St. Augustine, March* 25.—Several parties have been South on fishing excursions this winter. Indian River is a favorite Mecca for the fishing veterans. Our sport with hook and line in the immediate vicinity is not what it used to be by any means. Favorite "spots" are found to have been exhausted, and for a day's catch one must go further and further from the Fort or Barracks. Some day we may have protective laws here—who knows? And then how that old fellow who lives down by the Fort will open his eyes! For this same ancient fisherman caught his sheepshead and his blackfish and his drum, and the thousand and one other varieties long, long before you or I had made our *debut* upon the stage of this world's shifting scenes. He is old and wrinkled now; his speech is not such as yours and mine,

but a jargon dialect of Spanish, Greek and Seminole. When his youthful, muscular arms first propelled the dug-out in these waters, Florida was a semi-barbarous dependency of Spain. Scores of summers and winters he has dropped his line and thrown his net, undisturbed by the change of flags on the coquina Fort, and a game law which should attempt to abridge his ancient privileges would perhaps be the only thing to prevent this old animated mummy's eternal terrestrial existence. May the sea wall crumble before such a catastrophe. SMILE AXE.

Jacksonville, March 24.—The bass fishing on the St. Johns has been excellently good this year, and many of our tourists have been led by our charming scenery and balmy weather, combined with their love of sport, to try their luck. I saw a fish brought in by a gentleman to-day, weighing 12½lbs. He was a monster, and is next to the largest I have ever seen. W. K. L.

MICHIGAN—*Port Huron, March* 28.—Great numbers of anglers are now out for the sport at Sarnia Bay. Perch were never more plentiful.

WISCONSIN—*Neenah, March* 24.—For protection of fish in Lake Winnebago the recent legislature passed a law that no person shall set, place or draw any net in any of the waters adjacent or tributary thereto, and, upon conviction of any person, he shall pay for each offence a penalty no less than fifty dollars and no more than one hundred dollars and cost, and shall stand committed to the common jail until such fine and cost are paid. You see that we mean to protect and preserve fish in our lake, so that lovers of fine sport may continue to have as good times in the future as in the past pulling our gamy black bass. Roberts' summer resort will open first of May, so as to accommodate the early fisherman. J. R.

ST. MAURICE TROUT.—*Radnor Forges, St. Maurice Co, Quebec. Editor Forest and Stream:*—Since writing for FOREST AND STREAM, from the Gatineau River, March 10, I have seen some fine fish which would interest you personally more than notes on natural history or hunting. As you probably know, the extensive waters (lakes and rivers) tributary to the St. Lawrence from the north, have been but little explored by scientists or sportsmen, and among the inhabitants—lumbermen and Indians—the word trout is in most common use and as comprehensive as when used by others of more classic knowledge. I have only fished this winter to obtain a variety of food when in camp, but, as is my custom when visiting new localities, have endeavored to obtain some practical knowledge of the denizens of lake and stream, as well as of the earth and air. Hearing by chance of several hundred pounds of "trout" taken by one man from a lake not heretofore fished in, unless by Indians, and that some of these fish were "three feet long," I went to see them. I found that the size had not been exaggerated, the largest one weighing 14lbs., and that I must acknowledge that, by the decree of scientists, it was a true trout—*Salmo toma*—known in Maine as "togue," "lake trout," etc., and in New Brunswick as "tuladi." I have also heard this fish spoken of as the "black salmon," which for awhile misled me into supposing the reference was to a "spent" salmon (*Salmo salar*), one that had been in fresh water for a long time. The *Salmo toma* recently seen was taken from a lake near Rat River, a tributary of the St. Maurice, and about ninety miles from the city of Three Rivers. These fish are the only ones of the species I have seen that were taken from the St. Maurice waters.
EVERETT SMITH.

TRAITS OF ROCKY MOUNTAIN TROUT.—Our Denver correspondent writes as follows:—

Early in November, 1877, I spent a day at Wagon Wheel Gap, on the Rio Grande River, at Peck's Hotel. Peck is a great fisherman, and had that season caught and served on his own table over thirty-two hundred pounds of trout, all with a hook and line and bamboo rod, and none more than half a mile from his own door! It had snowed the day before I reached there nearly a foot deep, and though it melted in the sun, the air was freezing cold in the shade. In the evening we went out for some trout, he with his rod and I as a spectator. He began fishing in a deep hole at the foot of a riffle, under the shadow of a lofty basaltic cliff. The wind rippled the water, and in the deep shade it looked perfectly black. Ice clung to the rocks along the edge, and the water must have been below 32 deg. Fish could not be very active. They were quite plentiful, and Mr. Peck caught a number that were frozen stiff in a few minutes after being taken from the water. But for every fish he caught there were perhaps a half dozen rises, the fish generally leaping clean out of the water, and many times passing directly over the fly. Sometimes there was only a swirl in the water near the fly. We then moved down the river a couple of hundred yards into the sunshine. The fishing was better, and there were but few false rises. However, the water was different, being a narrow, deep, swift chute from the foot of a riffle. I attributed the leaping of the fish at the fly in the first described locality to the darkness in the shadow of the cliff and to the shimmering ripple on the surface of the water, caused by the wind, thereby causing an optical illusion. I noted it particularly at the time as something unusual.

I am glad to see that the "Minnesota Field Trials" are nearly over. Was apprehensive that it would run into the next show. W. N. BYERS.

THE NEW TINT FOR GUT LEADERS.—By permission we publish the following letter:

MESSRS. ABBEY & IMBRIE:—*Gentlemen:*—I have tested your "mist color" gut leaders in water, and think the color comes nearer to perfection than any I have ever seen. Due importance has never been given by most fishermen to fineness and *color* of gut leaders and gut that flies are tied on. The fact is, that almost everything in successful trout fishing depends upon these points. If flies are tied on coarse gut, without any regard to the color, the fish will see the fraud and will not take the fly. Many a fisherman has put his bait right in front of a trout's nose and the trout has declined to take it. He "smelled a mice." Let a man get his tackle so fine and so colorless that the fish cannot see the fraud, and they will take his lure just as readily as they will take their natural food. The fisherman who gets his tackle the nearest to perfection will be called the "lucky" man. Bah! I don't believe in luck. SETH GREEN.

[—One peculiarity of the "mist" colored trout and salmon leaders sold by Messrs. Abbey & Imbrie, is that they can be seen at 48 Maiden Lane, but cannot be seen in the water by the wary fish.

"SHAD BLOW" FOR FLY RODS.—Correspondents write as follows:

Mr. Editor: In answer to "Shad Blow," in March 20, I would say that shad blow (*Amelanchelt canadensis*), commonly known as sugar pear and June berry, is an uncommonly good wood for rods. I made two rods about two years ago and gave one to a friend in Vermont who is a veteran angler, who is well pleased with it. I like mine, but have not used it much. One old friend of mine in Maine says it will set—that it, will season crooked. It should be cut in December and seasoned with the bark on, otherwise it will crack or open in seasoning, as the sap is about as thick or deep as the heart, and will season warped if sawed up before seasoned. D.

Manchester, Vt., March 24.—I would like to answer "Shad Blow" by saying that some twenty-five years ago I used a shad-blow rod. This rod had shad blow but and second joint with lancewood tip. It was a good rod, and some few years ago I endeavored to get some of this wood and try it again, the rod I had used not being mine, but was not able to get any that was straight grained enough to put into a rod. I am inclined to think, could this wood be obtained of a proper quality, it would be nice wood for rods, for buts, and second joints at least, and perhaps for tips. This wood grows here, but I have as yet failed to find any that was not crooked and cross-grained. If "Shad Blow" will take the trouble to write me, I shall be glad to hear from him; and, if he knows where any shad-blow wood grows straight grained, I should like to know it. C. F. ORVIS.

VARNISH FOR RODS.—The three following finishes for fishing rods have been recommended:—

1st. Take ½lb. rosin, ¼lb. shellac, 1qt. methylated spirit and 2oz. vegetable black. Mix these well together. Give the rod two coats, rubbing down each with No. 1 glass paper, then apply copal and dry in a warm place.

2. Use copal varnish for the *whipping only;* for the rod, spirit varnish, which, being a sufficient protection to the wood, does not possess that objectionable glitter.

3. Try pumice powder on a piece of wet linen, and lightly rub over the varnished parts. Four coats of the varnish will be found better than three should the powder recommended be used.

SALMON FISHING IN OREGON.

OLYMPIA, Wash. Ter., March, 6, 1879.

EDITOR FOREST AND STREAM:

Perhaps a knowledge of the fact that excellent salmon fishing with rod and reel is enjoyed every fall and winter by anglers in this region, may induce some Eastern sportsmen who desire to escape the rigors of an Atlantic winter to betake themselves to the capital city of Wash. Ter., where the mercury seldom falls to the freezing point, and a sleigh is as useless as the majority of the Indians in this country. The salmon appear in our bay about the first of October, but do not attempt to ascend the streams until there has been rain enough to increase the flow of water therein. They are of the species known as the "silversides," and range from two to twenty-five pounds in weight, and for beauty and gameness cannot be excelled by any fish that swims. My habit has been to take them with a fly rod—such as I have used in the Rangeley region, a reel that carries sixty yards of oiled silk line, and—start not, ye votaries of the "coachman" and "professor"—a double leader, with a small herring for bait. The largest one I have killed this season weighed fifteen and three-quarter pounds, and about forty minutes were consumed in his capture. The blood tingles in my veins even now as I think of the glorious fight that chap made. Last fall a friend of mine killed sixteen during one tide. At this date there is but little fishing of any description; but about April first the trouting season opens, the rains will have ceased, and for the six ensuing months Puget Sound and the territory adjacent thereto becomes the sportsman's paradise. Imagine an inland sea of about two hundred miles in length, and with a coast line of eighteen miles, dotted with islands large and small, fed by countless streams from the lordly "Skagit," navigable by steamers for over sixty miles, to the bright rippling "Shelton" creek, where I have taken fourteen trout from one pool, whose combined weight was over thirty pounds. Its forests are alive with bear, deer, elk, grouse and pheasant. No extreme heat, the mercury rarely reaching eighty, even in the middle of the day. No musquitoes, no black flies, no venomous reptiles. Scenery such as few sections of our country can equal and none excel, and sportsmen—except in Olympia—scarcer than hen's teeth. First-class fare from "Frisco," per O. S. S. Co. and N. P. R. R., is but seventeen dollars, and I think one could make the trip from New York, remain here through the fishing season, at less expense than he would incur during a season's fishing for salmon in Canada. And, my word for it, after one trip to this section he will come to the conclusion that for pure unadulterated sport there is no place in the world that equals Puget Sound.

Yours respectfully, H. B.

YACHTING NEWS.

SAN FRANCISCO YACHTING.—The yachting season is about opening in San Francisco. The formal opening will be celebrated by the San Francisco Yacht Club at their club house, New Sausalito, on Saturday, April 19. After a chowder and dance at the club house for the benefit of the ladies, the yachts will leave for Vallejo, up the bay, and have a 30-mile brush back to windward next day. We say to windward, as the trade winds will have set in by that time out there..... The sloop *Clara*, late of New York, has been lengthened since she went to San Francisco. She has now a much larger stern, and is expected to make a good record for the season. .....The *Emerald*, the fastest sloop in the club, is having new spars and sails, and will make her appearance as a yawl at the opening.....The fast little sloop *Ariel* will also come out as a yawl this season.....The *Minnie* has had 19ft. put into her, and is now over 80ft. long.....The *Twilight*, wrecked last winter, has been put in shape again as good as ever..... Lots of yachting—not yacht—clubs have been formed re San Francisco of late, but yachts are not as plenty—for him—as clubs are. The clubs will have to take to plungers, etc, if they expect to go on the water.....Jerry Nichols' big new yacht has not been launched yet, although she is all ready, fitted and fixed for work.....The Guatemalan steam yacht *Sofia*, which came to San Francisco from South America last year, is still laid up in Richardson's Bay, off the S. F. Y. C. house, her owner, Mr. Molloy, being at present in New York. .....Dr. Merritt, of Oakland, will leave shortly for a six months' cruise among the South Sea Islands in his yacht *Casco*, a 96ft. keel boat, launched last summer, and the largest in San Francisco Bay.....The San Francisco Yacht Club have followed the Seawanhaka's example, and had a series of evening lectures this winter, which have been very successful. The last one was a description of the midwinter ocean race of 1866, between *Fleetwing, Henrietta* and *Vesta*, by Col. Stuart M. Taylor. There was a very large audience, filling the club rooms at the Palace Hotel, so there was standing room only. The previous lecture was "On the Weatherliness of Vessels," by Capt. Wm. W. Bates, of Chicago, and was also well attended.

SALEM YACHT CLUB.—Yachting matters are waking up at Salem, Mass., and a club, to be known as the Salem Yacht Club, has been formed. The club organized with the following officers for this year: Com., Arthur L. Huntingdon; Vice-Com., Wm. P. Parker; Sec'y and Treas., R. L. Newcomb; Measurer, Edw. Millett; Regatta Com.—Messrs. Rich, Gardner, Sewey, Raymond and J. Newcomb. The *Latona* is being lengthened at Frisbee's. The Raymond Bros. are altering their cat to a sloop. Jack Towne is getting out a new sloop, and Browne is at work on a new one. The *Anna* is for sale, a fine, well built craft by J. Brown, who always does good work. The club will hold a regular regatta during the summer, of the "union" sort, most likely, which will draw many entries from Boston waters.

A NEW SHARPIE.—What the actual capabilities of the sharpie are is certain to be settled this season, for Mr. Clapham, of Roslyn, L. I., has now nearly finished a fine 40ft.-boat of this description, which will approach nearer to the full-fledged yacht than anything before built in this line. She has received a regular yacht finish in all her details, narrow deck plank, cabin house, cockpit, hard wood trimmings, etc. She is said to be very handsome in appearance and will certainly lead to the building of others of the same class, for it cannot be denied that the sharpie yacht fulfills the wants of yachtsmen in many localities, and her cheap first cost is a strong recommendation. The new boat will be rigged as a sloop, with jib stay leading down to stem head. Her cabin is very roomy, as no centre-board will be used, two bilge keels being supplied to secure the necessary lateral resistance. These keels are about 12ft. long and 8in. deep. If actual trial demonstrates such an arrangement to be satisfactory, valuable room will be gained inside by their use. The builder has also applied his new patent fore-foot to his boat, which will do away to a large extent with the spanking to which sharpies are liable in a seaway, and he proposes to put this experimental craft through a regular series of tests as soon as completed. We have at our office a couple of very handsome half-models of the sharpie as usually built and also with Mr. Clapham's improvements. The results of the trial of the new boat we will lay before our readers in time, as well as a more minute description.

JACKSONVILLE (FLA.) YACHT CLUB.—The annual election of this club resulted as follows: Commodore, Wm. Astor; Vice-Commodore, Chas. J. Kenworthy; Captain, J. De Bartnett.

COOPER'S POINT (PHILA.) YACHT CLUB.—The officers for the year are as follows: Com., Charles Cohill, yacht *Cohill;* Vice-Com., John B. Hammell, Jr., yacht *Anita;* Rear-Com., Wm. Stone, yacht *Phil. Kramer;* Sec., John Dougherty, yacht *Chas. Keenan;* Treas., Elmer W. Barr, yacht *Barr;* Mens., H. King, yacht *Feeney;* Regatta Committee, Jacob Gnang, John Mayberry, Dennis Holland, Joseph Vanderslice. The day for the annual spring regatta is not yet fixed, but will probably be the 12th of May. The club now owns two first-class boats (18 to 20ft.) and twelve second-class (16 to 18ft.). Capt. R. G. Wilkins is building six new boats, ranging from 15 to 18ft., of which several will be added to the club.

SOUTHWARK (PHILA.) YACHT CLUB.—The annual regatta of the Southwark Yacht Club will be sailed on the 26th of May to Chester buoy and return. There will be about fifty boats participate in this regatta. They are divided into first and second-class double-enders and tuckups. The prizes will consist of a champion flag and articles of silverware.

NEW JERSEY YACHT CLUB.—At the annual meeting of the New Jersey Yacht Club, March 28, the following named officers were elected: Com., T. H. Rogers; Vice-Com., W. H. Dilworth; Rec. Sec., A. Jeanneret; Fin. Sec., L. Kayser; Cor. Sec., P. Campbell; Treas., G. E. Gartland; Regatta Committee, A. Hennion, G. J. Peters, E. W. Ketcham; Trustees, W. H. Dilworth, E. W. Ketcham, A. Jeanneret, C. I. Rogers, A. Hennion.

LONG ISLAND YACHT CLUB.—This club held their annual meeting March 27, 1879, at the club house, 37th street, Brooklyn. The following officers were elected for the ensuing year: Commodore, J. P. Tribken, yacht *Minnie T.*, 8 tons; Vice-Commodore, Franklin Beames, yacht *Marie*, 5 tons; President, James R. Finlay; Treasurer, Frank Bates; Secretary, Ellsworth Bond; Measurer, George Crolius; Regatta Committee, George Farley, C. M. Felt, J. H. Sawyer, William Duffy, George Heap, James Lenox. Five new members were enrolled, and three new yachts added to the club fleet. The Treasurer's report shows the club finances to be in a very flourishing condition. After the meeting the prizes won at the last annual regatta were presented by Vice-Com. Beames: To first-class sloop, *Hope*, champion whip; to first-class sloop, *Sophia*, aneroid barometer; to second-class sloop, *Admiral Rowan*, an oil painting; to third-class sloop (open boat), *Nettle*, a marine clock; to cat-boat, *Hi-Pi*, a silver marine clock; to cat-boat, *X. L. C. R.*, a compass watch charm; to the *Joe Saunders*, marine clock. The annual regatta will be held as usual in June, but the day will not be fixed until the next meeting.

BEVERLY YACHT CLUB.—The following dates have been selected for their regattas of the ensuing season: July 12, at Swampscott; Aug. 4, at Beverly; Aug. 23, at Swampscott; Sept. 6, at Nahant; and have decided to hold a regatta at Cotuit, date not yet fixed.

NEWBURYPORT YACHT CLUB.—Tuesday evening, March 25, the Newburyport Y. C. held their annual ball at Washington Hall, under the supervision of Messrs. D. B. Pierce, L. W. Piper and H. T. Moody. Com. Wm. C. Thompson officiated on the floor, and, it is needless to add, the merry dance was kept up way into the morning watch, and was brought to a successful termination amid much *eclat*.

THE LAKE CHAMPIONSHIP.—In the Oswego *Morning Herald* appears recently a challenge from Oswego's crack sloop *Ella*, to the effect that she will sail any first class yacht of the Bay of Quinte three races of thirty-two miles each for $200. First race to come off at Belleville, May 24; second on Big Sodus Bay, June 15; and the third at Oswego, July 4. Thereupon the Belleville (Ont.) *Daily Intelligencer* replies that the challenge is windy, as there are no first class yachts likely to hoist racing colors this year, and that the prize-money business is not very clear, and expresses a hope that second class yachts may be included in the challenge. By all means let the match come to something, for it will liven up matters on the lakes.

SEAWANHAKA YACHT CLUB.—The fourth lecture of the winter series on "Sails," by A. Carey Smith, Esq., was delivered Thursday last to a large audience, at Delmonico's, New York, and was received with marked satisfaction. Com. R. L. Ogden, of San Francisco, was present and favored the audience with an account of yachting affairs on the Pacific coast. As soon as we can spare the space, the rest of the lectures will be published. The last of the series, "Centreboards vs. Keels," will be delivered April 8.

LITTLE STEAMERS AND SHARPIES.

ROSLYN, L. I., March 20, 1879.

EDITOR FOREST AND STREAM:

My experience during the past few months has convinced me of four facts: First, the FOREST AND STREAM has a great and wide-spread circulation; second, the name of gentlemen desiring something new in the way of boats is legion; third, light-draught steam yachts are at a premium; fourth, the times are hard. The innumerable letters I have received concerning the sailing sharpie have been, to the best of my ability, answered. And now the mail begins to bring its budget of inquiries for cheap, swift and light-draught steam yachts. So, Mr. Editor, I pray you, come to my rescue, and allow me, in very self defence, to once again borrow your friendly columns. The sharpie is, without question, unequaled as a cheap and swift light-draught steam yacht. She has more available space in her than any other craft, size for size; she can be propelled at a given rate of speed, with less power; she can navigate waters of from five to ten inches depth, and she costs, complete, one-half the dollars any other boat does. Now, gentlemen, what more do you ask? You need somebody to build these nice little steamboats for you. Well, send in your orders; it will give me much pleasure and a little profit to fit your fancies. Allow me to announce that I have lately perfected and patented certain improvements in the sharpie's model, which do away with her only fault—spanking in a seaway—and am now prepared to build boats of this or any other type, and any size from 100ft. down to 20, "which is as low as we go." In rough times, and during squalls, the sharpie spanks. Now, it occurred to me that this spanking might be obviated, and I am glad to say that in carrying out my idea, a model has been produced which possesses more practical good points for a cruising yacht than are to be found in any other kind of boat. I am also prepared to build these boats (for sailing) entirely without centreboard or leeboard, so that the cabin will be unincumbered with the awkward trunk. With this last change the draught is increased by from eight to twelve inches, and, at the same time, the boat's steering balance is greatly improved; while no necessity remains for such an enormous rudder as the ordinary sharpie must have, and her sails can be placed in their proper position, instead of setting her foresail where her jib ought to be. T. C.

CUTTER OR SLOOP?

THE UNION LEAGUE CLUB, New York, March 22, 1877.

EDITOR FOREST AND STREAM:

I do not deny that small vessels may, and do, go about in bad weather without any particular risk. I have knocked about the waters adjacent to Nantucket and the Vineyard in open boats too much to deny the capabilities of the little ones, if properly built and handled. I do not believe that the addition of a keel with or without weight makes a great deal of difference in the sea-standing power of a sharp-floored, well-ballasted small vessel, while I know that the friction of the aforesaid keel takes a good deal of speed out of the ship in moderate winds. Still, for extremely nasty going, which, by the way, we seldom have until so late in the season that the cold destroys all pleasure in sailing, I am willing to admit that the small cutter may be a trifle the best, but is she enough better to make up for her additional cost?

This brings me to the point of my objection. My desire to see yachting of the small boat, blueshirt, Corinthian variety popularized is as great as that of any man. To that end I wish to see the expenses of the sport cut as low as possible; small cutters are not the way to attain this. *Julian*, or *Midge* can be built for $1,500; *Thyra*, built here, would cost, at least, $2,500, and her owner, bearing in mind the fact that smooth water and light winds are the rule of our sailing, would be disgusted with the beatings he would receive, and when desirous of selling would find purchasers scarce and coy. We have not the large class of men of fair fixed incomes which maintains in England. Most of our most efficient Corinthians are workingmen who have little time and money to spare on long cruises and expensive seagoing boats. In view of these facts I am led to believe that the small cutter will not take in our waters, and that we had better devote ourselves to perfecting the small deep sloop as better suited to our environment. G. M.

THE QUESTION OF TYPE.

BOSTON, Mass., March 17, 1879.

EDITOR FOREST AND STREAM:

In reply to your remarks appended to my letter of the 14th ult., must say that I differ from you in the necessity of a yacht of 40ft. keel or upward being of the English cutter type to secure sea-going qualities; and I feel all the more at liberty to do so, because I so cordially agree with you in your desire to instil into this manly sport the vigor of which it is capable. I love the broad ocean. I want no yacht that will not outride the heaviest weather, and claw off a lee shore. I also want a boat which will give the maximum of comfort compatible with these qualities, and I believe that I have such an one. Again, I want a yacht which will give me a good degree of speed, and I know I have that. My yacht is less than a year old, and yet, winter and summer, as a business, she has been tested at sea in our heaviest gales, from Cape Cod to the Newfoundland Banks for twenty years. This seems a paradox, and therefore I will explain.

One year ago I began to look around for a larger yacht. I had previously, some years ago, owned a sloop built by Smedley, of New York, which I ran for, say, three years in business in South Carolina and Georgia waters, as a tender to my cotton plantations. She was, say, 28ft. water line, 12ft. beam; drew 24in. of water aft, and 8in. forward. I altered her with my own hands from a cat rig, and put into her a new keel and centreboard box and board. She was the fastest craft in those waters of her size, and you may judge of her qualities when I say that I have beat her dead to windward against a six-knot tide in a creek four rods wide, with a moderate breeze, and made three or four knots per hour. Yet, good as she was in smooth water, she was, as I realized by experience, not a sea-going boat.

So much for my experience with light draught and wide beam craft with centreboards. From it I say emphatically with you they are unfit for sea going, and ever will be. On the other hand, for the past five years I have owned a boat of 33ft. keel and 39ft. over all, of what may be called an English model, almost, as her beam was 12ft. scant, and she had no flat floor or what I should call a floor at all, for her bottom was like a wedge. In this craft I have made three trips up the coast of Maine, and one southward to Long Island. While she had not speed she was a first-class sea boat. I was caught in a nasty blow off Cape Cod with her one night, and she behaved nobly. At the same time, like all vessels of her build, she heeled in a blow down to her rail, and I consider it necessary in a good sea boat, which would work to windward in a nasty chop, to do so. But I wanted a larger yacht—one that would make the run to Labrador, Bermuda, Cuba, or even Europe. For this I needed:

1. A perfect sea boat. And by perfect I mean safe and powerful—one in which I should not only not fear, but rejoice to ride out any gale on the Atlantic.

2. A comfortable boat. And by comfortable I mean one in which the room is ample and convenient, for I intended to live aboard her for at least a month every year.

3. As fast a boat as could be had consistent with the two first qualities.

4. The least draught of water consistent with the three first qualifications.

Of the three first qualities I need say nothing. There we agree. But let me say a word upon the last. From my experience in navigating my own yacht upon our coast for five years, every foot of water a yacht draws over six cuts her off from 20 per cent. of our harbors and channels. For instance: 7 to 8ft. is all you can carry into Rockport (Mass.), Squam, Essex, York, etc.; and 9ft. is all you can carry into Biddeford Pool or Block Island, and most of the reaches and channels of Casco, St. John, St. George, Penobscot and Blue Hill bays. I mean, of course, without a pilot. To be at the mercy of the pilot is to be a slave in the midst of luxury. The beauty of yachting is to go it alone. Now, your yacht should be of the right draught, not only to go to sea but to enjoy the lovely scenery of our island-studded coast; to turn out from the common tracks of commerce into the winding channels and beautiful bays, known only by the fishermen as a place of refuge, if by any one. I have spent two weeks of a season upon the Maine coast in this kind of cruising, which can never be forgotten when once enjoyed. Here your English cutter would be useless if over 50ft. keel, because she will draw at least 10ft. of water on paper, and probably 11ft. in the water; for it is a peculiarity of a vessel to draw more as a rule than is figured on paper. I searched the country for what I wanted. I examined the oyster boats of the Chesapeake, the river yachts at Philadelphia, and the best yachts of New York and Boston. I went on board *Morning Light*, *Comet*, *Dauntless*, *Rambler*, *Sappho*, and many others too numerous too mention, and came back as unsatisfied as ever. I also looked over the model of *America*. All were just like the discussions in your valuable paper: it was either all keel or no keel. If keel, 12, 13, or 14ft.; if centreboard, then no sea boat; if keel, then no coast boat. I will except one class which combined keel and centreboard, so as to get the full disadvantage of both, and less of the benefits of either.

While in this quandary I sent my sailing master to Swampscott to look at the fishermen. He came back with the model of the crack boat of the fleet. On seeing it I was struck with its peculiar combination of elements. It had the bold sea bow, indicating power; the flat floor and long, clean run, denoting stiffness and speed; the light forefoot and deep drag, showing hold on the water;—in short, it was a combination of the wedge of the cutter, made thinner with the body of the American model. The remarkable character of the model led me to inquire into the history of this fisherman. I found that for twenty years she had been in daily use, winter and summer—that no weather was too nasty for her. I saw her myself come from sea in a gale that swept the chimneys from our houses, and stripped them of their roofs, which she had worked into port against for fifty miles when no other fisherman did it. I found that she could outsail any other fisherman of the fleet at least three miles per hour, dead to windward; carry full sail when others had to reef, and the harder it blew and the nastier the sea the better she sailed proportionately. Lastly, she had beaten most yachts that had ventured to "hitch on" to her, and had held her own with *America*, working to windward in a seaway around Cape Ann. Her model was got up among the fishermen at Swampscott. After this inquiry I came back to the model, and said: "I will risk it; I will have a yacht built after it to the slightest fraction of an inch. I will have the same spars, the same amount of canvas, the same solid and substantial seagoing rig. I will build the hull stronger than her prototype, but in all else she shall be the same, except, of course, altering her top lines to the modern yacht sheer and form."

So I went to Essex, where we build fishermen, and contracted for my hull and spars—the hull to be built with the timbers and plank of a 200-ton fisherman for the Newfoundland Banks, viz.: Keel, one piece, best white oak, 10x18in.; timbers, 6x7in., set double, white oak; plank, 2½in., best white oak, only one but in any strake, buts to break joints; ceiling, 1½in., except on bilge, and clamps, which are 2½in., white oak; fastenings, best white oak tree-nails, 10in. apart, lengthways of the hull, and copper but and bilge bolted thoroughly—no other metal allowed; decks, 2½in. clear pine, no buts; house, all abaft the mainmast, 4in. stuff, secured to timbers (oak) framed down into the hull, and fastened to deck timbers, 8x12in., by copper bolts headed at both ends.; main deck beams, 8x12in., white oak, well kneed with hackmatack; house deck beams, white oak, 4x6in.; spars, A 1; mainmast, 18in. at but and 12in. at top, 73½ft. long; foremast, 17in. at but and 11in. at top, 71½ft. long; best pine, besides a full set of light spars of best spruce; sky-lights, hatches, patent lights, windlass, etc.,—all to order; total contract price, $2,800. The house was placed abaft of the mainmast to avoid the weak point of all our schooner yachts, as the mainmast can never be secured in it as in the main deck, also to let us have the deck to work the sails upon, which is of great importance in a nasty seaway. The house is 20 ft. long by an average width of 12ft. It gives a main cabin of 12x 12ft.x6ft. 4in. in the clear, and two staterooms each 4½x6ft. floor. There are four berths in the main cabin, and two double berths in the staterooms, all roomy and ample, thus giving accommodations for eight in a party, which is enough. Sailing master's and steward's staterooms are forward, as well as a pantry, cook room, hold for rigging, etc.; and forecastle as usual. OPEN SEA.

(To be continued.)

OUR CORINTHIAN CUTTER.

BROOKLYN, N. Y., March 17, 1879.

"Good fellow, in conundrums you are speaking,
Sing hey, the silly sailor that you are."
—*H. M. S. Pinafore.*

EDITOR FOREST AND STREAM:

If "Grampus" had taken the trouble of referring to the design before plunging into his calculations, he would have discovered that the keel was nearer 8in. than 4in. at the garboards, and about 4in. at the bottom, giving an average thickness of, say, 6in. Moreover, it strikes me, after mature deliberation, that if a 9 ton boat, with 7-tons of ballast in her, did not "dive like a loon" in a seaway, it would be chiefly because she would sink too rapidly to get a fair chance. Call her keel 6in. thick, "Grampus," and figure it over again, and just for safety don't let's put more than five tons of ballast in her. I don't know how it may be up your way but my calculations were based on a ton of 2,240 lbs.

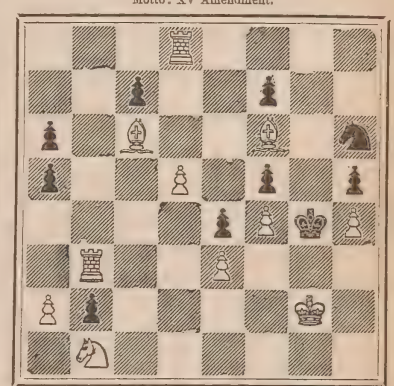
MARTIN GALE.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 51.

Motto: XV Amendment.



White to play and give mate in two moves.

SOLUTIONS TO PROBLEMS—NO. 48.

1—Q-R6	1—K-K5	1—	1—K-Kt6
2—Q-B4 ch	2—K-K4	2—Q-Q3 ch	2—Any
3—B-R2 mate		3—Mates	

Game No. 110.

A drawn game in the International Tourney played by Mr. I. E. Orchard, of Columbia, S. C., and J. Parker, of England. We take the game and notes from the Nottingham *Daily Express*:

White. Orchard.	Black. Parker.	White. Orchard.	Black. Parker.
1—P-K4	1—P-K4	13—B tks Kt	13—Q-B sq
2—Kt-Q B3	2—Kt-Q B3	14—P-K B4	14—Kt tks B
3—B-Q Kt5	3—P-Q R3	15—R P tks Kt	15—P-Q B4
4—B-R4	4—Kt-K B3	16—B-K B3	16—P-K B4
5—Castles	5—Kt tks K P	17—Kt-K K2	17—P-Q5
6—P-Q4	6—P-Q Kt4	18—Kt-K Kt5	18—B tks Kt
7—B-Kt3	7—P-Q4	19—P tks P	19—Q-B3
8—P tks K P	8—B-Kt3 (a)	20—B-Kt3	20—Q-K5
9—B-K3	9—B-Kt3	21—Q-Q3	21—K R-Q sq
10—Q Kt-Q2	10—Kt-Q B4	22—K R-K sq	22—Q-Q4
11—Q-K2 (b)	11—Castles	23—Q-Q3 (c)	
12—Kt-Q4 (c)	12—Kt tks Kt (d)		

NOTES.

(*a*) This move is recommended by Max Lange.

(*b*) All this is book.

(*c*) A bold but very good move—in fact, play of the highest order. If we consider that in correspondence the winning of a Pawn—nay, even the gain of a single move—will sometimes decide the fate of a game, it appears very hazardous on the part of White to offer this K P, which can be taken with perfect impunity.

(*d*) Very well played, and wisely refusing the proffered Pawn. Had Black ventured to capture the same, White would have recovered the

Pawn or else have obtained a very strong attack. It would lead us too far to give the variations, of which there are many, but we cannot abstain from giving the following one, where, if not all, most of Black's moves are forced, *e. g.*:

	12—Kt takes P	16—P-K B5	16—Kt-Q B4
13—P-K B4	13—Kt-Q B4	17—P-K B6	17—P takes P
14—B takes Kt	14—Q P takes B	18—B-R6	
15—Kt takes B	15—Kt takes Kt		

(*c*) And the game was abandoned as a draw. And if continued in the same cautious way as up to this point, it would certainly terminate as such. This game, though uninteresting, has been very well and carefully fought on both sides, with a decided determination not to lose It is the first game of a style of play that we should have expected would occur oftener in this contest. There is no fault to find on either side.

ANDERSSEN.

TWO weeks ago, Prof. Adolph Anderssen, the illustrious German Chess Master and Chess King, died at Berlin, Prussia, where he held the position of teacher of mathematics in the principal Berlin college. He was born at Breslau, Germany, on July 6, 1818, and had consequently closely approached his sixty-second year. He has always been regarded one of the famous chess geniuses, and as a brilliant and profound player of unwavering allegiance to the Queen of Chess. He filled for years a "Professor's Chair" at the University at Breslau, Germany, similar to that which he held at Berlin. No chess master's record is more enviable than that of Anderssen. In his thirty-fourth year he won the first prize at the grand London tournament of 1851, in which Staunton, Szen, Kieseritzky, Wyville and Williams were contestants, and in the same year won the cup in the London Chess Club tournament, in which Lowenthal, Harrwitz, Deacon Kling and others participated. Six years later we find him again in the field at Manchester, in which tournament he stood second. In his forty-fifth year he won a remarkable tournament victory in another grand International tournament held at London, in which he defeated every player, losing only one game to Rev. Owen. The players engaged in that tournament were all strong players, including Paulsen, Blackburne, Lowenthal, Barnes, Dubois, Steinitz, MacDonnell, Owen and Mongredien. In the handicap tournament in the same year, in which MacKenzie won first prize, he stood in the second place. In 1870 (his fifty-third year) he won the first at the Baden International tournament. At Vienna in 1873 he stood third, and at Paris in 1878 he stood fifth on the list. As a match player Prof. Anderssen was not very fortunate, losing matches with Steinitz in 1866, Zukertort in 1870, and Morphy in 1858 by a score of 2 won, 7 lost and 2 draws.

CURSORY JOTTINGS.

—Mr. J. T. Palmer, formerly Chess Editor of the *Amateur World*, now edits the Chess department in the *Royal Exchange*.

—Mr. Jenkins, Chess Editor of the Glasgow *Herald*, recently played ten simultaneous games at the Glasgow Central Club, losing only one.

—The West of Scotland Challenge Cup is now the property of Mr. A. Hunter, for having held it against all comers for the stipulated period of two years.

—The English Counties Chess Association will probably hold its annual meeting this year at Oxford the last week in July.

—Another handicap tourney has begun at the Cafe de la Regence, Paris. Fifty-one players have entered. The prizes are four in number, the first prize being a work of art presented by M. P. Thibaud, valued at 100 francs. The remaining prizes are valued at about 102 francs.

—The probable contestants in the principal tourney of the first German Chess Congress, to be held this year at Leipsic, are: L. Paulsen, W. Paulsen, Herren Schwartz, Englisch, Schallopp, Knorre, Metger, Fritz, Fechsig, Riemann, Minkwitz, and Drs. Goring and Schmidt, and other players from the Rhine.

—The Florence (Italy) handicap tourney ended with Sig. Fossati gaining the first prize, and Sig. Mecagni the second.

—A tourney of thirty contestants, each having to play two games with every other player, has just commenced at Rome, Italy.

—The award in the Italian National Problem Tourney has been made as follows: 1st, Sig. Teardotsch, of Trieste; 2d, Sig. Salvioli, of Venice; 3, Sig. Liberali, of Patrasso; 4th, Count Guicciardi, of Spezia.

—Mephisto, the famous automaton chess player, is now located at Mephisto's Chess Rooms, No. 9 Strand, London. A good move,

—The *Chess Players' Chronicle* problem tourney closed with forty-four competitors. The problems will be published at the rate of four each month, two with large diagrams and two with small diagrams. The solver's tourney is further enriched by a contribution of £1 from "Zeus," one of the *Chronicle's* famous solvers.

—At a meeting of the British Chess Problem Association, held at the residence of Prof. Tomlinson, F. R. S., it was decided to hold a problem tourney, to close Sept. 30, 1879, the rules of the last tourney to govern the present. Robt. Proctor, F. R. A. S., was elected Vice-President in conjunction with Mr. Andrews. Prof. Proctor gives an extra prize of £2 for the best problem in the tourney.

—Thompson, Chess Editor of the Derbyshire *Advertiser*, complains that no American chess editor has to this day published his book of Dr. Moore's prize problems. This is indeed too piteous an appeal to our good nature, and we therefore succumb. Our readers will please to note that Thompson aforesaid has cooked—in what manner we know not, and also reluctantly inform our readers that the Derbyshire cook has, as yet, not intimated how he intends to dish it out—one of Dr. Moore's prize problems. In the *Advertiser's* chess column before us, our attention is not alone called to this cook, but we are further treated to a reprinted reprint of Thompson's Problem No. 400, Miles' "Chess Gems." Keep it up, say we, if you believe that that cook and Thompson's 400 are good things. Good things will bear repetition, some believe. Make it a good 400, Fred, and then, we pray you, rest content at least a while.

—The moves made thus far in the Glasgow vs. Copenhagen correspondence contests are:

Game No. 1.		Game No. 2.	
White. Glasgow.	Black. Copenhagen.	White. Copenhagen.	Black. Glasgow.
1—P-Q4	1—P-K3	1—P K4	1—P K4
2—P-Q B4	2—P-K B4	2—P-K B4	2—P takes P
3—P-Q K3	3—Kt-K B3	3—B-Q B4	3—P-Q4
4—Kt-Q B3	4—B-K2	4—B takes Q P	4—Q-K R5 ch
5—Kt-B B3	5—Castles	5—K-B	5—P K Kt4
6—B-K B4		6—Kt-K B3	6—Q-K Kt4

—It seems to be quite the fashion now for chess editors to specially notice their exchanges. As we are invariably pressed for space, our exchanges will, we trust, feel contented if we, in the future as in the past, clip from and notice each as occasion offers.

—Mr. Reichelm has amended his famous 121-move problem, and as it now stands, is sound in 118 moves. This is the only lengthy mate problem, either conditional or unconditional, that appears to be sound It is a profound study, and a proud triumph for the author. We hope to see it lithographed on a large scale.

—The London correspondent of the Glasgow *Herald* says of Mr. Mason, the winner by a score of two to one in a recent match with Blackburne for a small prize offered by Mr. Tousley: "I have been struck with one thing, which may perhaps be the notion of an old fogy, that the chess world is growing old. When I first visited London a good many years ago, there was a brilliant galaxy of young players, all fresh with blossoming honors. There are, for the most part, the same players still; but where are their successors? I do not know. Perhaps they are coming; but it cannot yet be said that

'Superfluous lags the veteran on the stage.'

It might be more correct to say that he does lag. Superfluous encounters between the veterans there are not many. Each ironclad knows the number of his rival's guns, and is not disposed to risk his own sides without adequate cause. Of the ring here undoubtedly the most promising is Mr. Mason, who, notwithstanding his bad success at Paris, is when in force a really formidable player. He is 'blue moulded for want of bating,' and has been trying without success to get up a match with some first-class opponent."

—The annual contest between the chess clubs of Cambridge and Oxford universities will begin April 3, Herr Steinitz acting as umpire. Belden, of the *Times*, guarantees a suitable trophy to Harvard and Yale for a similar match, and says: "When once begun a contest of this kind would excite as much interest as the boat races or ball matches."

—Over sixty problems were entered in the *American Chess Journa* Problem Tourney. The award is now in Mr. Loyd's hands, and is only withheld that solvers may send in their time scores, and indicate the problem winners of the five prizes. We think Mohle's four 'er, "Finis Polince," is entitled to the first prize according to the rules of the tourney. The *Journal* should be patronized by American chessers. Address Dr. C. C. Moore, 68 Courtland st., New York.

—The Hull *Bellman* announces a two-move problem tourney, offering a copy of Taylo.'s "Chess Chips" as a prize for the best one entered. The conditions are according to the *Huddersfield College Magazine*—"the usual motto and sealed envelope arrangement." Address Mr. J. Crake, 14 Walmsley st., Hull, England, on or before April 1.

New Publications.

THE APRIL MAGAZINES.

APPLETON'S JOURNAL.—"A French Borgia," by J. D. Osborne "Dr. Johnson, His Biographers and Critics," "The Dome of the Continent," by Eugene H. Cowles; "Shakespeare and the Musical Glasses," by Myron B. Benton; "Godwin and Shelley," by Leslie Stephen; "Picking up the Pieces: A Comedy;" "The Higher Criticism;" "Mr. Gladstone on Heroes;" "Prince Bismark on Swells, Snobs and Cockneys." —Mr. William H. Hunt, Jr., who, while a resident of New Orleans, contributed occasional sketches to the FOREST AND STREAM, has, in connection with his brother, published a little pamphlet descriptive of the rapid growth of Fargo, Dakota, and the wonderful grain country in which that city is situated. We have become so accustomed to the rapid transformation scenes of the West, the sudden rise to-day of a city where yesterday saw only the savage wigwam, that our capacity for wonderment has become sadly blunted, else the story told by the Messrs. Hunt might well pass for a fairy tale. The first white settler located in 1871 where Fargo now stands. Now the city publishes a very creditable business directory. The well-worn advice of Greeley has not yet lost its meaning. Fargo has only nineteen lawyers. There is always room for one more at the top. Send to Mr. W. H. Hunt, Jr., Fargo, Dakota, for a copy of this pamphlet.

—The Savannah *Weekly News* is assuming great proportions, both of size and merit. It is the weekly family paper of the South.

—Erich's *Fashion Quarterly* contains a judicious selection of reading matter for the fair sex, and page after page of shopping catalogues and illustrated descriptions of all the styles and fashions. It is published at 287 Eighth avenue, New York.

—The transactions of the American Institute, which were formerly published by the State, but which, strange to say, have not appeared for the past six years, are hereafter to appear in *Our Home*, a monthly journal published at 37 Park Row, New York.

—*The Library Table*, which has attained such a success as a fortnightly review of literature, now appears as a weekly. The editors, Messrs. Bothwell and Hinton, have secured the services of a very large number of able contributors, and the book reviews, literary, social and philosophical essays and discussions of timely topics promise to be both bright and reliable.

—Mr. F. H. Corbin, of Newington, Conn., who is a well-known fancier, publishes a manual upon the breeding and care of Plymouth Rocks. It contains a history of the breed, full directions for their care, plans of poultry houses, etc., etc., and will prove very attractive to amateurs and experienced fanciers. Its price is 75 cents.

SACCHARINE MEMORIES.—*Boston, March 20.—Editor Forest and Stream:* The maple sugar season is now at hand, and the farmers of Maine, New Hampshire and Vermont, having been busy during the winter months hauling lumber and preparing their year's supply of firewood, the boys' school closed, the colts and steers all broken to harness and sled, will now turn their attention to making maple sugar. The season is subject to local and climatic influences, and begins from March 10 to 20, and continues about four weeks. In some parts of New England it is an important branch of farming, and improvements in the process and implements of manufacture have kept pace with those in other departments of the farm. The old style of catching the sap from the maples in roughly hewn troughs, and hanging a row of big kettles, surrounded by rocks, out in the forest to evaporate it, has gradually given place to snug houses with brick arches where the fireman can quietly tend his improved "evaporator" from morning till night, while the boys gather the delicious sap from bright tin or wooden pails which hang on the trees. Well do I remember the sugar making in New Hampshire in the days of my boyhood, when the long delightful winter, with its driving snowstorms and big drifts, the snow houses, the snow men, and the coasting, all began to melt away beneath the warming influence of the March sun. At last we feel assured of the changing temperature sufficient for the purpose, and we load up the sleds with big kettles, pails, and tubs, and the gun (I never could chop wood or make sugar without a gun), and drive into the woods. Then after tapping the trees, gathering and boiling the sap to a thick syrup, it was taken to the farm-house; there in the old kitchen fire-place to be clarified and reduced to solid sugar. In fact this last operation was not the least interesting, for although I had sampled the delicate flavored sap in all its stages of development since it came from the tree, now that it began to thicken and take that beautiful amber color, I was always anxious to tend it—with a spoon, of course—and "help mother." Then came the sugar parties, and maple wax on snow is again established as a New England institution. But the hand of time is relentless in its decrees, the years roll steadily over our heads and we cannot always be boys, though the blessed faculty of memory helps us to look back upon our early sports and pleasures and live over again our happy boyhood days.

"I remember the fireplace, with mouth high and wide,
The old-fashioned oven that stood by its side,
Out of which each Thanksgiving came puddings and pies,
That fairly bewildered and dazzled my eyes.
And then, too, St. Nicholas, slyly and still,
Came down every Christmas our stockings to fill;
But the sweetest of memories I've laid up in store,
Is the mother that trod on that old kitchen floor."

M.

HUDSON BAY DOG-TRAMS.—Profanity—and particularly French profanity—seems a necessary adjunct to dog-driving. It is unfortunate that, by some inscrutable dispensation of Providence, the only method of reaching a dog's reason should be through unlimited imprecation. But, speaking with the experience of many days of dog-travel and an intimate acquaintance with a score or more of dog-trains, I have never seen an attempt made to reach it in any other way. I do not seek to exaggerate, but simply to present dog-driving as it really is—an inhuman thrashing and varied cursing. The cruelty with which dogs are treated cannot be excused. It is true they are often obstinate and provoking, and require severe beating, especially from a new driver, till the team is brought into subjection. But when helpless animals, undergoing severe labor in the trains, are not merely beaten on the body with heavy lashes, but systematically flogged on the head till their ears drip blood—beaten with whip-handles till their jaws and noses are cut open with deep wounds—cudgeled with clubs, knelt upon and stamped upon until their howls turn into low moans of agony—punishment merges into sheer brutality. And yet such treatment is of common occurrence. As I said, the beatings from being intermittent became incessant. Many of the dogs had so exhausted themselves by violent dartings hither and thither in their endeavors to dodge the blows of the descending whip, that they had no strength left for the legitimate task of hauling the sledge. The heads of others were reduced to a swollen, pulpy mass by tremendous thrashings, while one or two had given out altogether and had been taken from the harness and abandoned on the plain. The operation of "sending a dog to Rome" had been performed more than once—a brutal operation in which the driver sinks below the level of the beast. Sending a dog to Rome is effected by simply beating him over the head with a club or heavy whip-handle until he falls insensible to the ground. When he revives, with the memory of the awful blows that deprived him of consciousness fresh upon him he pulls frantically at his load. A dog is sent to Rome for various and often trivial provocations—because he shirks or will not pull, because he will not permit the driver to adjust some hitch in his harness. While he is insensible, the necessary alteration is made, and upon recovering consciousness he receives a terrible lash of the whip to set him going again.—*Lippincott's Magazine.*

RULES FOR LADIES TRAVELING ALONE.—From time to time we read of mishaps meeting women traveling alone, till it sometimes seems as if it were unsafe for a women to travel alone. Still, women must travel, and very often alone, and by exercise of due caution and foresight, there is no reason why it should not be perfectly safe for them to do so. There are a few rules, which if followed, it seems, would save a world of anxiety and trouble.

1. Before starting on a journey familiarize yourself with the route and with names of good hotels at the various stopping places.

2. Never travel with just enough money, but always carry enough to provide for any possible emergency. This will save much anxiety.

3. Wear but little jewelry, and keep the larger part of your money in some inside pocket, out of sight.

4. Always look after yourself, and do not allow a stranger to procure your tickets or checks for your baggage.

5. Avoid, if possible, making changes in cars by night; but, when unavoidable, go with others. Do not become separated from the crowd.

6. Take no hacks, but go in an omnibus where there are other people. These are perfectly safe.

7. If in any doubt as to changing cars, checking baggage, etc., inquire in advance of the conductor. The conductors on our trains are always polite and willing to be of service, especially to women traveling alone.

8. Do not wait till about to make some change in train before inquiring of the conductor; for, ten to one, he will then be hurried, and you will only half inform yourself.

9. Under all circumstances endeavor to retain your presence of mind. One who can do this will have no trouble in traveling; and instead of its being unwise for women to travel alone, I think it an advantage for them to make trips alone, for there are few people who are not at times obliged to do so, and experience does away with much of the possible danger in traveling.—*St. Louis Spirit.*

THE WHISTLING OYSTER.—The shop was first established by a Mr. Pearkes, in 1825. "It appears," says the writer in the *Daily Telegraph*, "that about the year 1840 the proprietor of the house in question, which had then as it has now a great name for the superior excellence of its delicate little 'natives,' heard a strange and unusual sound proceeding from one of the tubs in which the shell-fish lay piled in layers one over the other, placidly fattening upon oatmeal and awaiting the inevitable advent of the remorseless knife. Mr. Pearkes, the landlord, listened, hardly at first believing his ears. There was, however, no doubt about the matter; one of the oysters was distinctly whistling, or, at any rate, producing a sort of 'sifflement' with its shell! It was not difficult to detect this phenomenal bivalve, and in a very few minutes he was triumphantly picked out from among his fellows and put by himself in a spacious tub, with a plentiful supply of brine and water. The news spread through the town, and for some days the fortunate Mr. Pearkes found his house besieged by curious crowds. * * Douglas Jerrold's suggestion was that the said oyster had been crossed in love, and now whistled to keep up appearances with an idea of showing that it did not care." Thackeray used to declare that he was once actually in the shop when an American came in to see the phenomenon, as everybody else was doing, and after hearing the talented mollusk go through his usual performance, strolled contemptuously out, declaring "it was nothing to an oyster he knew of in Massachusetts, which whistled 'Yankee Doodle' right through, and followed its master about the house like a dog."—*Old and New London, Thornbury.*

THE PIG OF THE PANDORA.—While at Igigtut, (South Greenland cryolite mine,) on our outward passage, the sailors bought a pig, which was petted to the last degree, and so jealous were they of his rights that the dogs were driven in all directions that poor Dennis, as they christened the pig, might not be disturbed. The dogs made several attempts to attack this favored animal, but a constant look out—such as one could never expect for ice, rock, or land from any seamen on board was kept, and the dogs were driven off at the moment when victory seemed certain. Pea-soup, broken biscuits, and slops of all kinds were given to the dainty animal, whereas if a dog attempted to ask for a share of the remains of the sailor's dinners he was scouted with derision. In fact, the pig was the pet of the ship, and the only thing worth navigating the Arctic Sea for. Finding that he was uncomfortable under the top-gallant forecastle, and liable to be disturbed by the chain running out when anchoring, or the water coming in at the hawse-pipe when at sea, a snug cask was found for him, and he was housed in with canvas and straw under the bows of the long-boat. Never I should think, had any other pig such comforts showered on him. Bit now came a change. Our decks became full of snow, and everything froze. It was necessary to clear away the ice and dirt from Mr. Pig's sty as well as from the others parts of the ship, and to do this involved an amount of scraping which was not agreeable to his former friends, and, with the decision and readiness in meeting difficulties for which the seaman is so pre-eminent, the pig was condemned to death without remorse or apology. In fact, from that moment he was a nuisance, and only fit to be killed and eaten; his throat was cut by his dearest friends, and he was eaten for dinner on the 7th of September, having died only at 10 A. M.—*Two Voyages of the Pandora—Sir Allen Young.*

AN EEL STORY.—The following is published in the Easton (Penn.) *Express* as a true fish story: "George Bryant, train-master at High Bridge, N. J., and William Hibbler, conductor on the Central Railroad of New Jersey, were fishing from the Newark Bay bridge three years ago. Bryant lost his sinker, and substituted for it a Central Railroad switch-key. He got a 'huge bite,' and in drawing in his line discovered a large eel on his hook; but before he could land him, the eel broke loose, carrying away the hook and switch-key. Eight months after an eel was caught by Capt. Simon Chapman in an old barge at Chapman's Wharf on the Thames River, three miles above New London, Conn. When the eel was cut open the lost Central Railroad key was found inside of it. Last evening, on Conductor Hibbler's train, the son of Capt. Chapman introduced himself to Mr. Hibbler, and said his father still had the key in his possession. Arrangements were made to have it returned to Mr. Bryant at High Bridge.—*Times.*

HE DIDN'T TAKE PEPPER IN HIS—Boys are sometimes more logical in their methods of thought than they get credit for, and they can, when the motive is strong enough, resist a temptation. Said a superintendent, "Will the little boy who threw pepper on the stove please step up to the desk? I have a nice book which I want to present to him." The genial invitation was not accepted.

—A little girl, visiting a neighbor with her mother, was gazing curiously at the hostess' new bonnet, when the owner queried, "Do you like it, Laura?" The innocent replied: "Why, mother said it was a perfect fright; but it don't scare me." Laura's mother didn't stay long after that.

—"'Tis sweet to hear the watchdog's honest bark, bay deep-mouthed welcome," etc., murmurs the poet, and from the poet's standpoint it may be all right, but when we are coming down a dark road at night in a strange place, we don't want any watchdog and but very little bay in ours.—*Bridgeport Standard.*

—The first public gas lamps introduced into New York were located in the City Hall Park in August, 1812, as an experiment.

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

IRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

Mr. Charles Folsom, agent for Stevens' Arms, 53 Chambers St., New York:

DEAR SIR—Enclosed please find check for the Pet Rifle, 18 inch, 32 caliber, you sent me. I did not find sale for it, as it being so small folks thought it would not do much shooting, but I changed their opinion as to that point. I must tell you what I did with it. Some turkey shooting is customary here for the holidays, so I took the little gun and showed them how to get birds, but after a few shots was ruled out at forty rods and then ruled out at sixty-five rods, and then took chickens at seventy rods, which made some with their big guns look rather sick and laugh out of the left corner of their mouth. I took fifteen turkeys, to all the other guns, numbering five or six, getting ten. So you see the Pet Rifle stood No. 1. I shot alongside of the Remington Army Rifle, and have offered ten cents for turkeys at eighty rods, but cannot get the chance. You need not fear to recommend those guns, for they shoot like business.

Yours, GEO. M. BISSELL, Owasco, N. Y.

A GREAT INVENTION!

Imitation STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, & MFR'S. Patentee 717 Sansom Street, (Sole Agt. for U. S. & Canada. PHILADELPHIA, Pa.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agen's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

"THE FISHING LINE"

TAKE THE

Grand Rapids & Indiana R.R

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass FISHERIES,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the Grand Traverse region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. Brook Trout abound in the streams, and the famous American Grayling is found only in those waters.

The Trout Season begins May 1 and ends Sept. 1. The Grayling Season opens June 1 and ends Nov. 1. Black Bass, Pike, Pickerel and Muscalonge also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points. Take your family with you; the scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with hay fever and asthmatic affections. The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing. During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at Owner's Risk.

It is our aim to make sportsmen feel "at home on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT,* OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

GUNPOWDER.

DUPONT'S

Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength quickness and cleanliness; adapted for Glass Bal and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong and clean Powder of very fine grain for Pistol shooting.

DUPONT'S RIFLE, FG., "SEA SHOOTING,"

FFg and FFFg.—The Fg for long-range rifle shooting, the FFg and FFFg for general use, burning strong and moist.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L KNEELAND, 70 WALL ST. N. Y.

N. B.—Use NONE but DUPONT'S Fg or FFg Powder for long-range rifle shooting.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.,

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by woodcut, sent free on application to the above address.

Alford's Practice Target.

PURDY'S PATENT, DEC. 1873.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shotgun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desir to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and thy other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

FOREST AND STREAM
ROD AND GUN
THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year
Ten Cents a Copy.
6 months, $2; 3 months, $1.

NEW YORK, THURSDAY, APRIL 10, 1879.

Volume 12—No. 10.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

Down the Big River.

ON the 23d of May I started from Rock Island, Ill., with one companion—a young man named Charles Caywood—in a sixteen-foot flat-bottomed skiff. The boat was provided with a wooden cover, which could be taken down when not wanted, and the front end was partitioned off to form a sort of chest, in which were stored provisions and such other truck as is usually carried on such or similar expeditions.

During the first week of our voyage we passed through the most uninteresting part of our journey. Between the mouths of the Rock and Illinois rivers the Mississippi possesses few elements of attractiveness. The shores are low, or, when rising higher, slope up into rounded bluffs, which have little or nothing of the picturesque about them. Oaks and willows alone meet the eye, the numerous small islands being usually covered with the latter tree. The game, with the exception of quail, which are everywhere, consists solely of squirrels and young rabbits; and the fish, though abundant, have few attractions for the sportsman, for most of them refuse to be taken, save by the unsportsmanlike methods of seine, trot-line and hoop-net.

There are, in my opinion, a great many varieties of game food less palatable than young rabbits and fox-squirrels. Every day for a week we managed to secure enough of these for our supper, while for breakfast, nice wheat "slapjacks," sweetened with maple syrup and washed down with warm coffee, supplied us with a satisfying breakfast. Occasionally we had fish, procured from some of the many fishermen who ply their calling along this river, for none would take the well-baited hooks I nightly set before them. The mosquitoes did not bother us much, and though head winds delayed our progress and rain visited us two nights out of every three, we considered ourselves enjoying life immensely.

With the exception of the rounded hills before mentioned, and an occasional stretch of rocky bluff, the banks of the river are from one to ten feet above the water's edge, composed of pure, rich alluvium. As we float along, we see many times a day large masses of these banks, loaded with wheat or corn, undermined by the current, give way and fall with a splash into the water. Sometimes several lengths of fence tumble over. Old cabins and out-buildings lie on their beam-ends. Large trees are everywhere prone, sometimes floating clear, but oftener clinging by their long roots. For miles at a stretch, the shores presented the appearance of an abbatis of huge trunks. It was not always safe floating too near such banks, for it was impossible to tell at what moment some trees might topple over and smash the boat. We had one narrow escape from such a fate. A storm had sprung up suddenly when we were in mid-stream, and we turned shoreward to fasten the boat and erect our cover. Caywood pulled with all his strength, while I steered toward the ragged roots of a large tree standing close to the bank, which was here too high and steep to climb upon from the boat. The current was very strong and swift, and swept us past to another smaller one, about a rod below. The circumstance proved our salvation. We had barely reached the shore when the big tree fell over with a splash, some of the spray falling on us.

Many queer characters dwell at intervals along these banks. I remember once, just above Quincy, Illinois, we had stopped pulling and let the boat drift near the shore. At that point an old farmer was engaged in planting corn. As soon as he caught sight of us, he halted his old bony horse and hailed:

"Hillo, Mister! Where ye boun'?"

"Down South!"

"I don't think ye'll find any work in St. Louis," (he evidently took us for tramps!) "and I'm mighty sure ye won't find any this side. Ye'd a-better waited till harvest. They're fighting like the devil in St. Louis now."

"Fighting! Who? What for?"

"The tramps and the perlice and the militsher. The people are fighting for bread and the cussed monopolists are fighting to keep 'em down and starve 'em. They're breaking open warehouses, and day before yesterday they burned down the Post Office and three blocks next to it; and they've called on the Gov'nor for help."

"Are they fighting now?"

"I reckon they are, Mister. 'T all events, tain't safe for a working man to go there. You'd better stop this side and wait for harvest. There's a hundred thousand tramps in St. Louis, and they swear they'll have enough to eat for once if they have to sack the whole city."

By this time the boat had swept too far down for further conversation. We were then not far from Quincy, and on arriving at that place, I hastened ashore and bought a St. Louis paper to learn the details of the riot, and to my surprise learned that there had been no fighting in that city for a year and that none was apprehended. Probably some tramp had happened along, and finding the old farmer one of the gullible sort, had stuffed him to overflowing.

A day or two later, early in the morning, a man in red shirt and drawers and wearing a nightcap, hailed us from an old flat-boat:

"Hillo, Mister! What's the river doing up above?"

I answered at random that when we left it was all running down stream.

"It's rising like the devil here," he shouted back. "Rose three feet in the last ten hours. If it keeps on it'll flood us all out!"

I thought of the old covey who had fooled us about the St. Louis riots and determined on a *revanche*. I shouted:

"If that's what you mean, you'd better yet your small boats ready. The water was fifteen feet above high water mark at New Boston, and twenty feet above at Oquawka, and still rising. They've had a terrible storm up around Dubuque, and the water rose twenty-five feet in fifteen minutes!" I was now out of hearing without straining my throat, and I left him to ponder over the terrible news.

What is it that impels a countryman to yearn so anxiously after the private affairs of persons on whom he never set eyes till that moment, and on whom, in all probability, he will never set eyes again? When, in the Garden, the luckless first-ones had by their overweening curiosity aroused the not unreasonable ire of their Creator, was it not a part of the consequences that the tillers of the soil and all dwellers in the rural districts should be forever after more curious than wise? I have never yet met a person raised outside the shadow of city walls who could not and would not ply a stranger with more questions concerning subjects in which the questioner had not the slightest interest than Job and all his descendants would have patience to answer. The Eastern Question never troubles the farmer so long as the price of wheat is not affected, and his "Turkeys" are not forced to undergo a tripartite division between himself and the two negro preachers living across the slough. He doesn't care a nickel whether we have war with Mexico or not, and as for the transit of Venus and Edison's bottled sound, if any one had the patience to explain these wonders to him, his first thought would probably be whether they would in any way affect the price of "crops." But when you come to the personal affairs of the chance passer-by—ah! that is something worth talking about—that is knowledge it pays a man to acquire.

Colonel Marcy has given the world a chapter on this characteristic of the backwoodsman as seen in Arkansas, and a very amusing chapter it is, and, as I know from experience, true to life as a photograph. Day after day, and dozens of times every day we were catechised, until I became so nervous that I finally would not approach the shore at all if any human beings were in sight.

As we floated by the cities we often beheld that institution peculiar to these waters denominated the "gunboat." Out of the sickly light of their dimly lighted recesses the sounds of song and dance and midnight revelry came floating over the waters, and the men of the world, and the women of the world, know from whence and where they came.

The fishermen along this river make a fair livelihood by their vocation. The fish are very abundant, and can be seen jumping everywhere at all hours. The principal species fished for by the market fishermen are the silver cat, sunfish, buffalo, perch, carp, eel and sturgeon. Of these last there is one species worthy a brief notice. It is called the spoonbill sturgeon. So far as my experience went on this trip it is the only fish that will take the worm—that is, it is the only fish I succeeded in catching with such bait. All the specimens I saw were about two feet in length. Their upper jaw is hard and bony, and is elongated and flattened till it resembles a table-spoon flattened out. Their mouth is round as a circle, and an inch in diameter, and resembles the mouth of a sucker save in being more directly under the throat. The body is encased in a tough skin with a bony ridge along the back, like the ridge of an alligator. The tail is one-sided, like that of a fox shark, and the body next the tail is very small in proportion. *The bones are all on the outside.* The flesh is very white and palatable, but there is very little of it. To skin it, it is first necessary to lay it on the fire until the skin cracks open, when it easily peels off. The sturgeon proper is a very marketable fish in some of the river cities, but I have never seen this species offered for sale.

I have mentioned two kinds of catfish. The silver cat is a *fac simile* of the bullhead of Eastern ponds, while the channel cat is of a duller slatish color, and attains an immense size, sometimes being caught weighing as much as one hundred and fifty pounds. Think of that, ye boyish manipulators of pin hook and cotton line, as ye pull some half-dozen five-inch bullheads from some Eastern mill-pond! Think of one of those five-inch bull-heads growing till it outmeasures you in every way, and the next dark night steal your mother's clothes-line and bend round the tine of a hay rake for a hook and bid farewell to the parental rooftree and start clandestinely for the setting sun and the river of the big catfish.

Neither as bullhead nor cat can this fish be called game, but in my humble opinion, with the exception of trout and shad, there are few more toothsome fishes, fresh or salt.

GUY RIVERS.

For Forest and Stream and Rod and Gun.

ON THE WHITE RIVER TROUTING GROUNDS.

BY SAM S. FIFIELD.

"IS there anything else to be done?" asked Doc, as Prince finished packing the camp chest, and we all stood looking on and giving him sage advice.

"Nothing, except to call the roll," said Prince. And so the roll was called:

Dr. E. R. E. Carpenter, Chicago, Captain; Silas Humphrey, Stillman Valley, Ill., First Lieutenant; Eugene Prince, Orderly Sergeant; Sam S. Fifield, Commissary; Alec Welcom, alias "Buckshot," Guide; John Me-qua-gon, cook, and Stoddard and Whitebird, boatmen.

Thus was our party made up, fully equipped and furnished with twenty days' rations, our destination being the headwaters of White River, one of the famous trout streams that flow into Lake Superior after winding down the Northern Watershed through Bayfield and Ashland counties; our mission, to take from its crystal waters the speckled brook trout and enjoy a season of camp life. Our preparations began during the last days of August, and we were all ready for the start on the first day of September. Charley Allen and John Herrick, of Wirt Dexter's law firm, Chicago, were to join us; but at the last moment were disappointed, and left us sad in heart, indeed.

Doc and the men, with a team and the outfit, were to go across lots to White River Crossing, seven miles from Ashland, where "Buck" kept his batteaux, and from there pole up over the rapids, a distance of twenty-five miles, while Prince, "Uncle Sile" and I were to take the train on the Wisconsin Central, go to Marengo Station, and there take the wagon road up the Marengo Valley as far as the Reohm place, a distance of four miles, where we were to spend a day whipping the Marengo for red trout and then follow on the next day and meet the "boys" at Stavely's Camp. To do this involved a tramp of thirteen miles, but the prospect of a fine day's sport on the river lightened the task. Prince had been on the Marengo several times during the season, and the marvelous stories he and Ed Curtis, of Madison, and Capt. Rich, of Ashland, had told me, as well as the fine catches exhibited at "The Chequamegon" made me eager to try my luck. So the tramp was made with a light heart, and by eleven o'clock we were at Reohm's, with the beautiful Marengo whirling past us at our feet.

After a hearty lunch we made our arrangements. Prince and I were to go up the stream, and "Uncle Sile" and Billy Reohm were to go down, both parties to return to the starting point at six in the evening. Prince led off and we soon struck the stream half a mile up, and, taking to the water, we began our work. It was a bright, cloudless day and high noon; the trout were shy, and we did not meet with much encouragement. One six-ounce trout alone rewarded our patience. We did our best, but we could hardly get a "flash." Prince was as dumb as an oyster, and, after fishing awhile, coolly left the stream and bade us to follow him. Up the river through the woods for a full mile we tramped, and then to the water again. Here Prince sat down on a log and fixed up one of his patent baits, known only to himself, muttering all the while a charm that sounded to me like the chant of Macbeth's witches, but which, he said, was a sort of an Indian prayer for something to eat; then, with the stealthy step of a Sioux warrior, he crept up to a mass of driftwood and threw his hook into a dark hole no larger than a hat, where a mass of foam spun around like a top. In an instant there was a "regular commotion," and a quick, steady pull lifted a bright-spotted two-pounder out of the hole just over the drift that formed it and into the stream again, where, with scarcely a splash, it was lowered to its native element. Then the reel spun out with a vim, and Prince began to play his captive with a science that would have done old Izaak's heart good to witness. It was too heavy and too smart a trout to land by main strength or in a "trust to luck" way; but in a few moments he was safely secured.

"That's for Doc's dinner to-morrow," said Prince, as he gathered grass and moss in which to lay it away in his creel.

I was the next to meet with a "strike," and captured a fine sixteen-ounce beauty, quickly followed by others. We whipped the stream down as far as Reohm's, and there joined "Uncle Sile" and Billy. Uncle had been quite successful, taking one that weighed over a pound, and we found that our total catch, while it only numbered twenty-nine, weighed fourteen pounds. It was no fair afternoon's work for the Marengo, but we had enough for supper and a few over for Doc and the boys, so we were satisfied. Billy got us a good supper, and, after spending the evening pleasantly, we retired to rest on a straw bed and slept the sleep of the tired man.

Next morning we were off for White River bright and

early. The road across the country was through the pines and we took it leisurely, as we only had nine miles to make and were not to join our comrades until noon. We were on time, and as we approached the valley we could hear the "boys" chopping wood for their camp fire and see the smoke curling above the tree-tops below. We soon joined them and found all in good spirits. John had a splendid dinner of partridge and "dough-gods," to which we added Marengo trout; and, as Doc sat down at the head of the "table" with the air of an old English baron, he said:

"Now, boys, this is what I call just as fine as silk!"

We all agreed with him and stowed away that dinner until John began to estimate the commissary stores and remarked in Chippewa to Buck that he had better send our packer back to town for another sack of flour, as we had evidently underestimated our capacity. As this was our first camp, after the party was joined together, a tree was blazed and we named it "Camp Carpenter" in honor of our captain.

Everything was again stowed away in the batteaux. We had two fine ones. The largest was manned by Buck and John and carried the passengers and baggage, while the other took the supplies, and Stoddard and Whitebird followed us with it. The camp chest formed a table in the centre, around which we sat and played whist while the boys polled along at the rate of four miles an hour. Occasionally our sport was varied with a shot at a stray duck or a lunge at a pickerel with the boat poles. Two beautiful deer were startled from the tangled thickets and went leaping into the forest, their "signal flags" waving us mockingly.

At six o'clock in the evening, after paddling through six miles of meadow where the stream was sluggish, we pulled up to the shore at a beautiful spot where a grove of young fir balsams stood on a sloping bank like orchard trees, and where the ground was thickly carpeted with moss. A spot was quickly cleared, the tent went up like magic, the campfire lighted and the pots and kettles soon steaming. Just as we had got fairly settled the report of a rifle brought every one to their feet, and a dull thud told us that game had been brought down. Doc's hearty cheer settled the business, as with considerable pride he brought forth his trophy—a fine fat porcupine. Whitebird was detailed to skin him, and soon his hide was nailed to a tree and undergoing the first process of Indian tanning. "For," said Doc, "there are lots of folks in Chicago who never saw one, and I will tie it to my belt and play Big Injin when I go home." Camp "Silc Humphrey" we named it, and a jolly good time we had there, too. Doc and Prince won every game of whist, but Uncle and I beat them out of the "rations" at "seven up."

On the morning of the 4th of September we broke camp at seven o'clock and at noon we reached our destination—Camp "Charles Hallock"—twenty-four miles above and nearly sixty-five miles up the stream above the lower landing, the way the water runs. No sooner landed than the fishing tackle was out and Doc, Prince, Uncle Sile and I were pulling out half-pound trout right from under the boats. The boys were busy making camp, and John said he wanted fish for dinner, hence our hasty action. In twenty minutes we had two large fry-pans full of as fat and pretty trout as were ever caught. And such a dinner as John served us! It was fit for the Royal House of England. After all, there is about as much real solid enjoyment in eating a good square meal as there is in anything else in life. That dinner—our first at "Camp Hallock"—was over at last, though it took as long to go through it as it generally does a regular Johnny Bull dinner. As we sat down to our pipe we could but recall the lines in Lucille:

> "We may live without poetry, music and art;
> We may live without conscience, and live without heart;
> We may live without friends; we may live without books;
> But civilized man cannot live without cooks.
> He may live without books—what is knowledge but grieving?
> He may live without hope—what is hope but deceiving?
> He may live without love—what is passion but pining?
> But where is the man that can live without dining?"

While the boys were finishing the camp Doc and Prince took the big batteau and went up the river nearly a mile, and Uncle and I, with Buck, went down stream with the other. To each batteau we had attached a box bored full of holes that floated alongside. Each box had a hole in the cover, through which we put the trout when caught. The fishing is done from the bow of the boat as we float along. We soon struck the trout, thick and gamy, and had all we could well attend to. Upon returning to camp at six o'clock our score stood sixty-three, while Prince and Doc brought in eighty. Nearly all were saved alive in the boxes.

"Camp Hallock" was one that had been occupied before, though we gave it its name and rebuilt it complete. Our big tent faced the west and the stream. To the right was the small tent for the stores, while a larger one near by was for the men. Buck had his own "shake down" surrounded with frame work and covered with cedar bark. It looked like an Indian grave, and we dubbed it the "bone yard." In the square facing our tent a long table with shaved poles for seats was erected, while on the left side a regular campfire, surrounded by tall Norway pines, completed John's kitchen. In the foreground White River flowed "on to the sea," making music with its eddies and ripples. Here the boats were tied to balsams that shaded the camp and the "landing." Here, also, was a huge crate set in the river, built of peeled cedar poles—a sort of large box in which to keep our trout alive. This was invented by Buck at the suggestion of Munger, the well-known Chicago sportsman, who had filled it only a month before. Our camp was beautifully located, indeed, and was all that a sportsman could desire. The boys had gathered balsam and hemlock boughs, and each tent was supplied with a good "feather bed." John was now in his element, and he served us like a Delmonico. We were all hearty and not a bit dainty, and we kept him busy. Doc was the champion eater, though I held him a close race, for a "little follow;" but I was forced to acknowledge that size governed capacity.

Yarns? Why, bless you, there never was such a place to swap lies as around a camp-fire. It inspires a man and gives him a new imagination. Hours slip away before one knows it. The stories told have only gone half way round the circle. Doc has only just commenced his experience on the St. Clair Flats; Prince has only lifted a dozen five-pound trout out of the waters of Washington Harbor, Isle Royale; Uncle Sile has but just commenced to spear suckers down in Illinois, and I had only reached the first chapter on the Wisconsin Brule, before Buck says, "Boys, you must turn in, for there is work for to-morrow." So we turn in.

Did you ever sleep under a tent on a bed of boughs, a dense forest surrounding you on every side, the winds moaning through the dark and gloomy pine tops and the stars above twinkling through the open spaces just as though they were golden eyes set to watch you? Did you ever think and plan and dream, while the flickering camp-fire seemed to keep company with your flashing ideas as they leap from one subject to another, until, like the dying embers, the mind ceases to act; first fluttering-like, just as the sparks die away, go out and leave a blank—the darkness of sweet slumber? Never? Why, man: there is no time when the mind is so active and clear as amid such surroundings. The music of the brooklet, the sighing of the winds, the weird song of the pines, strike the heart-strings and fill the soul with content such as only those who have experienced its soothing charms can feel and understand.

The morning of the second day at camp found us all up at daylight and ready for a full day's sport. We had made all our plans the night before. Buck was to take the large batteau, and with Doc and Prince go to the head of navigation on the stream and work down to camp. Humphreys and I were to take Stoddard and the smaller batteau and ascend the stream two miles and work down, stopping at camp for our dinner, and then fish the stream below as far as we could go and return at six in the evening. Our fish boxes were put into the boats, and we got started just as the sun rose above the horizon. We all started together, and the boys poled up stream as quietly as possible. Upon reaching the lower ford we parted company, our boat, with Uncle Sile in the bow and Stoddard in the stern with his long pike-pole to hold the boat in position, while I sat in the centre ready to take care of the trout and bait the hooks. Our fish box was fastened to the side within easy reach, and operations commenced. In ten minutes Humphreys was bringing the trout into the boat about as fast as I could take them, and when he got tired I changed places with him, and thus we floated along until we reached camp at noon with over one hundred live trout in our box, besides several dead ones in the boat that had been hooked too hard to save. Here we stopped for dinner and then off again down the river, where the same fine sport was continued. We had emptied our box into the crate at noon, but on our return we added ninety-six more, making our total catch one hundred and ninety-six. Doc and Prince had not returned, and came in late. About seven o'clock we went to the landing to meet them and learn their success. They had two hundred and sixty in their boat and box, and were as tired a set of men as ever landed from a boat. Doc had blistered his hands handling his rod, and Prince said he did not wish to see another trout in a month. The work of unloading their box at once commenced, and, as it was crowded, many were found dead. The boys were soon at work dressing them by the light of birch-bark torches, and those that were alive were lifted into the crate with a landing-net. The dressed trout were put into sugar pickle, and Buck packed them nicely in firkins for Doc's friends in Chicago. Our total catch for the day was four hundred and fifty. Weighing an average lot of dead fish demonstrated that the average weight was half a pound each, or two hundred and twenty-five pounds. It was a glorious day's sport, and we felt proud of it. We had over two hundred and fifty trout alive in the crate, besides those pickled in sugar. Certainly we could sleep on that. The great distance from home had made it impossible to bring ice with which to keep our trout fresh, so we had decided to build a huge fish boat fourteen feet long, secure as many alive as possible, and float them down the river with us to the lower landing, where the team would meet us with ice, and we could kill and pack them fresh, and save them all. For this purpose we had brought along boards for top and bottom, and Prince and Buck were to be the Noahs and build the ark.

Next day Buck, Doc and Prince began work, while Sile and I went fishing. We returned at noon with forty-four more trout, all alive but three. These were added to the stock in the crib. The ark was soon finished and launched. It was a success. Doc and Prince went up the stream again in the afternoon and returned with another fine catch of forty-two, which were secured. During the night a large number of the previous day's catch had died in the crate owing to being too far gone when put in. These were all taken out and packed in pickle like the others.

As the weather had become unsettled and the stream muddy from the rain of the previous night, we concluded to start home. So, late in the forenoon of the fourth day, we placed our live trout—over two hundred in number—in the ark and started. Our total catch was five hundred and thirty-six, besides those taken in the Marengo and the first noon at Camp Hallock; weight, two hundred and sixty pounds.

Just as we started it commenced to rain again, so our rifles were put into their cases and stowed away under the rubber blanket. And this carelessness cost us a fine deer, for, just as we turned a bend in the river a few rods from our landing, a noble buck walked leisurely from a little marsh, and, stopping on the bank not over three yards away, looked at us for fully two minutes, when a movement made for the rifle sent him flying through the thickets. It was a fine shot, but lost, of course. It is needless to add that our guns were kept handy after that. We had to content ourselves with duck and partridge, however, for we only caught a glimpse of one more deer on our trip down. Toward night the weather cleared, and just as we reached the meadows the sun went down amid rose-tinted clouds. Here we went into Camp Welcom.

The fifth day we made the head of the rapids at noon and took dinner at Camp Prince. And then came the excitement and struggle of running them. The river was rising rapidly and the rocks were ugly and lashed the water into a seething foam and endangered our boats every minute; but Buck and his men were skilled boatmen, and, while we had hairbreadth escapes, we reached Camp Fifield, half way down, in safety that night.

The scenery of White River is grand and beautiful beyond description. Especially is this true of the rapids, which are a succession of cataracts and waterfalls for over twenty-five miles. The forests that line the banks are a mixture of pine and hard woods. The river is very crooked and the views are in endless variety. It also contains many beautiful little islands, and numerous branches come pouring into the main river at intervals through high, bluffy valleys, charming in their green and golden foliage. It is a grand trip to make at any time during the season, but especially in August or September.

The sixth day from our arrival at Camp Hallock, and the tenth since leaving Ashland, we reach the crossing at noon with our boat all right—only one dead fish in the ark. Doc, Prince, Uncle Sile and I walk into town, arriving home early in the evening. We sent the team out for the boys in the morning, and they came in with the camp outfit and the trout which they killed and packed nicely in the ice sent them. We exhibited our trout during the forenoon and then distributed them among our friends.

And thus we end our sketch of our trip up White River in September, 1878. It will at least give your sportsmen readers an idea of what there is in our Northern Wisconsin land to interest them.

Ashland, March 24, 1879.

For Forest and Stream and Rod and Gun.

AMONG THE HARES.

"GET up, you lazy loon! Get up! How about being all ready to start at half-past three?" And, finally, by dint of kicking and thumping, our friend B. appeared at his door, looking for all the world, in the pale moonlight, like a pugilistic ghost, whose conk had been well pounded. However, after swabbing himself down, and diving into various miscellaneous articles of apparel, he was dressed, not taking longer in the operation than that proverbial gentleman, who

> "Being minus a vest and coat,
> Used to button his pantaloons up to his throat."

We then shouldered our guns, loosed the two hounds—Bluebell and Scout—rigged out the buggy, and were soon bowling over the road to Mr. C——'s farm, some six miles distant.

It was a glorious November morning, the new moon paling slowly before the early streaks of light, and the fields and trees looking weird and white under their hoar-frost mantle; not a sound to be heard but the bark of the sheep-dog, the crow of the cock, or the clink, clink of our trusty little mare along the hard, crisp road.

By the time we reached the farm the gray dawn made all things visible, at the same time not giving sufficient light to shoot by, so, putting our nag up, we sat down to warm the inner man, and then systematically proceeded to get outside of a package of sandwiches. Just as we were finishing the last piece, Bluebell, who had been gently feathering around the barn, opened on the hill-side that ran down from the farm buildings into a narrow valley, overgrown with brambles.

"Whooo-ah! whooo-ah! huic, huic! to her, Scout?" and, notwithstanding poor B——'s despair (his benumbed fingers refusing to adjust the caps), I hastened after the hounds, and took up a place of vantage at the end of the ravine, B—— soon facing me on the opposite bank; but whether the frosty ground refused to hold the scent, or whether the dogs went on the principle that "a good beginning makes a bad ending," they lost their first hare.

However, better luck next time, so we began to walk in line, beating the bushes as we went. "Wh-i-s-h!" Out came bunny at thirty miles an hour, dodged behind a tree, and was gone. "Loo! Loo! hie on to her!" but the two hounds were already on her trail, racing with one another, and giving tongue at every bound. "Now, B——, if you will go farther downthe gorge I will stay where I am." B—— hurried off, and I was left to enjoy what, to my mind, is one of the chief charms of rabbit hunting, viz, the quiet enjoyment of nature in her early winter garb, to the accompaniment of that sweetest of all music—the bay of a hound—while the chances of the game turning at any moment in one's direction keeps one sufficiently on the *qui vive* to afford a pleasant excitement. I sat still for some ten minutes, the voices of the hounds growing fainter and fainter in the distance, and then all was still, save the monotonous "chip, chip" of the red squirrel, and the harsh cry of the jay, as he flew from tree to tree.

Hark! "Whooo-oo! whooo-oo!" They are at it again, and by the sound they have worked her around to the bottom of the ravine, and she is running in our direction. "Whoo-ah-oo-ah!" By Diana, how little Bluebell is rattling her!

Suddenly, a hundred yards below me, I hear "bang! bang!" a pause, and then renewed baying. "Halloa! what is that disappearing behind you rock? B—— must have missed her, and, sure enough, puss reappears, squats for a minute, listens, and then comes cantering leisurely past, her whole thoughts evidently taken up by the hounds. For a second or two I think of Cooper's "Tiney,"

> "Whom hounds did ne'er pursue,
> Nor swifter greyhound follow;
> Whose foot ne'er tainted morning dew,
> Nor ear heard huntsman's halloo,"

and felt inclined to spare her life on a day like this, but some how or other the gun is raised, goes off, and, with a convulsive quiver, puss yields up the ghost, and before I can get to her Bluebell and Scout are mouthing her with rapture. And now the fun grows fast and furious; we put up hare after hare, at times bringing one to hand, and, to vary the bag, while slowly walking through a snug lying copse, a "wh-i-r-r" is heard. As I live, a covey of quail! But it is well nigh noon, so merely knocking over a brace of birds, we turn toward home. Upon reaching a thick briar patch, some sixty yards from the farm, the hounds began to whimper. Out darted a gray and white object. "Bang!" went B——. Miau-au! "What was that?" he yelled! "Sh-o-o-h, silent be, it was the cat." Sadly, then, did we enter our buggy, and drove home with six or seven rabbits and a brace of quail.

LEPUS.

Fish Culture.

HOW FISH SPAWN.

WEST HOBOKEN, March 6, 1879.

MR. EDITOR:—The general belief seems to be, if I understand it right, that the spawn is fecundated by the male on the spawning-bed after its extrusion from the female. This theory I have always doubted. First, because it could be but imperfectly done at best; and secondly, because there could be no sexual pleasure in doing so. Having, finally, many times witnessed their intercourse in their natural element and on the spawning-bed, a few lines may perhaps prove interesting to some of your readers.

Away up in the wilderness of Pike County, Pennsylvania, lies a beautiful sheet of water called the "Big Pond of the Knob," whose ever pure and crystal waters can be penetrated to a great depth. The lake is shaped like a horseshoe, and on the western shore the beach is sandy and gravelly. Years ago, when game was plenty, I have lain for hours on the rocky bluffs, waiting for the noble buck to take his last fatal swim, and with nothing to occupy my mind except to listen to the far-off hound, I often watched the spawning of the fish beneath me, and cannot but assert that the spawn is fecundated before it ever leaves the female.

The fish appear on the spawning-ground in pairs. A suitable ground is selected and worked, until it takes the ap-

pearance of a spring bubbling up through gravel, and is easily discernible from the surrounding bottom. The bed for the eggs being thus carefully prepared, the fecundating of the same is next in order. This is successfully accomplished by both male and female fish turning flat on their sides, belly to belly, and swimming rapidly, pressed close together, for a short distance, when they part and resume their natural position, the female returning to the nest to drop the now impregnated eggs and the male watching sharp for intruders close by. This is repeated at short intervals, until all the eggs are successfully deposited.

Bird, Animal, Reptile or Insect, each species has its own peculiar mode of sexual intercourse. If you have seen it of the one you have seen it of all belonging to that species. Their habits are the same. The flashing of the silver side of the herring in our brackish waters during the month of June is occasioned by their swimming broadside up while spawning. Should any of your readers visit the Big Pond of the Knob in June, they will find the above just as told. The pond is still there; so are the fish; and the water just as pure; but no noble buck will disturb your reverie. They have all departed for the happy land. WHIPPOORWILL.

TENNESSEE SHAD AND SALMON.—*Nashville, April* 1.—Judge Clapp, Senator from Shelby Co., and a great advocate of fish protection, has just told me that recently some shad and salmon have been taken in the Mississippi River near Memphis, the result of a plant made there some years ago.

Natural History.

MIGRATION OF BIRDS.

NOTES ON ARRIVAL, PRESENCE AND DEPARTURE OF (MOSTLY) WATER BIRDS AT AND NEAR CLARK'S ISLAND, PLYMOUTH, MASS., FROM MAY 1 TO DEC. 26, 1852.

BY F. C. BROWNE.

THE "Gurnet" is the seaward point, several miles out, rocky. "Saquish" is the inner point, sandy. Between these points are about two miles of sandy beach on the ocean side, backed by a corresponding strip of marsh on the inner side. These features indicate a favorite ground for a large variety of *Limicolæ*, which in fact it was in "old times," but it is now nearly deserted. A glance at any good map of Massachusetts will give an idea of the locality.

May 3—Hundreds of long-tailed duck (*H. glacialis*) still about the Gurnet, and Mergansers (*M. serrator*) seen almost every day. Many brant still here. First observed greater yellowlegs (*T. melanoleucus*).

May 19—Semipalmated sandpiper (*E. pusillus*) numerous. A few ring plover (*Æ. semipalmata*).

May 21—Observed two mergansers (late for them), also long-tailed duck and velvet duck (*E. fusca*). Loons abundant. First observed sanderling (*C. arenaria*) and little sandpiper (*T. minutilla*), and first noticed spotted sandpiper (*T. maculariius*), though they may have been about some days. Not many of the waders had arrived previous to the 19th; now large flocks passing daily.

May 26—Four brant seen; very late for them. Loons still linger in large numbers. Velvet ducks and Mergansers still around the Gurnet. Two flocks black-breast plover (*S. Helvetica*) passing.

June 1—Saw a single brant on Saquish.

June 18—Two mergansers on Saquish. Last of the waders disappeared, northward bound, with exception of piping plover (*Æ. melodus*), which is breeding abundantly on Saquish, and perhaps two or three pairs of spotted sandpipers. Of the latter I saw young to-day just hatched.

July 25—A flock of ducks, either surf or velvet, seen in the bay to-day. These birds could not have bred this season. First arrivals of waders from the north, ring plover, semipalmated and little sandpipers.

Aug. 1—Found a flock of the least tern (*S. minuta* of Wils) at Beach Point; a few great tern (*S. hirundo*) in company.

Aug. 3—Saw first black breast plover. The last (apparently) of red-breast snipe (*M. griseus*) passing to the southward. Sanderling should have been recorded several days ago. Observe no upland plover (*A. bartramius*) yet, but their note has been heard.

Aug. 7—Heavy arrival of waders from the north; thousands passing; very few seem inclined to stop. First observed golden plover (*C. virginicus*) and yellow legs (*T. flavipes*). To-day Mr. W. shot a tern new to me, which proved to be young of *S. nigra** of Aud.

Aug. 9—Saw and secured a single specimen of the long-billed curlew (*N. longirostris*). Mr. W. tells me this is a rare visitor of late.

Aug. 14—Pectoral sandpiper (*T. maculata*) here. A few Bonaparte's gull (*L. philadelphia*) about.

Aug. 18—Black-breast plover back again. Obtained one in interesting plumage, half way between summer and winter.

Aug. 26—Obtained one turnstone (*S. interpres*); not at all abundant; only occasionally seen. *Sterna nigra* made very short stay; should think not more than a fortnight. None seen now for several days.

Sept. 6—Golden plover occasionally seen for a month past, but the main flight is only now arriving after a severe northeaster.

Sept. 7—Red-breast sandpiper (*T. canutus*) here. Obtained only young, however, in the gray plumage, many gunners considering them a different bird under name of "grayback." Bonaparte's sandpiper (*T. schinzii*, now *fuscicollis*) arriving in small numbers.

Sept. 8—B. shot one red-breast snipe. Mr. W. says sometimes a stray bird about as late as the middle of September.

Sept. 10—Many golden plover. The papers report them more abundant around Boston than for many years.

(*To be continued.*)

* This specimen (now *Hydrochelidon lariformis*) unfortunately was not preserved, I not being aware at the time of its great rarity. In fact, it had not then been, and was not subsequently until 1870, put on record as taken in this State. (Allen in Naturalist, vol. 3, p. 644). Indeed, in the latest authoritative list we have (Allen's or 1873), the above is the only instance cited. But in the numoer of *Nuttall Bulletin* just issued (Jan., 1879), Mr. Brewster, in a charming article on our New England terns, gives us the result of large personal observation in regard to this species as follows: "*Nigra* can no longer be regarded as a rare or accidental visitor. Their numbers vary considerably in different years, but they are always to be found during their migrations. At Nantucket they were fairly numerous in Aug. and Sept., 1878." This places on a firm foundation the right of this species to a place among birds of Massachusetts.

NOTES FROM CORRESPONDENTS.—One of our friends, who writes from New Canton, Va., sends us a little strip of skin taken from an albino muskrat. The fur on the specimen is, except at the tip, white, while the long hairs are the palest possible gold color. The rat from which this skin came had the feet and tail pure white, but the eyes are said not to have been pink. Apropos of this, an exchange says:

Charles Flewellen, of Katonah, N. Y., last week caught on Croton River a pure white muskrat, and has it alive at his home.

The same correspondent says that while plowing some corn stubble, March 14, he came upon the nest of a woodcock containing three eggs, on which the bird was setting.

A correspondent from Ohio sends us a rather interesting specimen in the shape of a bit of barrel hoop pierced by a "sap sucker" (*? Picus* or *Sphyrapicus*) to get at some larvæ which were snugly ensconsed in their warm cottony nests behind it. The hole bored by the bird is close to a nail hole in the hoop, and the observer thought that he was trying to pick out the nail, which, indeed, bears some marks of his strong bill. One of the larvæ taken from behind the hoop is sent to us for identification, but in such bad condition that nothing can be made of it. Query—How did the bird come to look for grubs behind the hoop?

"H" writes us from Foxcraft, Maine, under date of March 24, that Elija Norton and Cole Weston, two fox hunters, shot two loupcerviers last week. A deer was seen about two miles below our village on Saturday.

COMMENT UNNECESSARY.—A Brookfield, Ohio, correspondent writes of a toad which was discovered in the middle of a huge chunk of coal dug out in a mine 150 feet below the surface of the ground. The discoverer shut it up in an air-tight vessel and buried it in the earth for a year, at the end of which time it was dug up again and found to be alive and lively. Another year in the air-tight vessel in no way sobered this sprightly ancient, and three years seclusion have now been granted him.

LARVÆ OF THE PARTRIDGE FLY.—A Gilbertsville, N. Y., correspondent writes that grouse in his vicinity were very scarce last season, owing, as he believes, to the ravages of the "grouse ticks." Capturing a grouse he found on each side of its head, where the beak of the bird could not reach them, thirteen of these vermin. Great numbers of birds were similarly affected. We wish to enter our protest against the term "tick," so often applied to these insects. As we have said before, they are not ticks at all.

SYLVIA CISTICOLA.—*Medford, Mass.—Editor Forest and Stream:* Can you give me the common name for the inclosed scientific title, *Sylvia cisticola?* The label came with a nest from Africa. Also, through what medium can I learn of the bird's habits, etc.? WILLIAM GIBBS.

Sylvia cisticola is one of the wood warblers of Northern Africa, perhaps better known at present as *Drymoica schœnicola*. It is said to inhabit Northern Egypt and Arabia. The older name was given by Temminck. It is doubtful whether you can find a full account of its habits in any work on ornithology, but for information as to the genus, consult "Jordan's Illustrations of Indian Ornithology."

WILD FOWL CARRIED OVER NIAGARA FALLS.—"Skeptic" writes from Boston to ask if wild fowl are ever borne over Niagara Falls, being rendered helpless by the extreme cold, or from other cause; to which one of our Niagara Falls correspondents replies:

A great many ducks and geese, wild and tame, do float down and over the Falls, but cold weather has nothing to do with it. The thermometer has not been lower this winter than 8 degrees below zero. The birds go over mostly in the night. I don't think any of them are killed; a great many are found wing-hurt and fall easy victims as they swim in the eddies below. A great many are killed in the eddies in the Falls in September, October and November, before the cold weather comes on, but of course a few of these only are wounded ones. My own theory is that most of the injuries are inflicted above the falls by shaky marksmen, and the bird floating with the current gets into the rapids which he cannot stem, and as he cannot fly must go over. HIRAM E. GRIFFITH.

DO WOODCOCK BREED TWICE A YEAR?—*Waynesboro, Burke Co., Ga.—Mr. Editor:* While selecting a site for a "fish trap," I flushed a woodcock, shot it down, and simultaneously a young one arose and flew some twenty feet. After rambling through the swamp I returned over the same ground and found two young ones. I was surprised to find them at this season, supposing Aug. or Sept. to be the time of their laying and hatching. Is it not unusual? Why are ducks so scarce in our Southern country this season? There has been no sport in this line, and now that the snipe season is upon us I find them equally scarce, without any appreciable reason.

Woodcock are among the very earliest birds to breed, and no doubt in your section their eggs are laid in February. We cannot answer your second question as we know nothing of the conditions which prevail in your locality.

A REVISED LIST OF CINCINNATI BIRDS.*—Under the above title Mr. F. W. Langdon has made several changes in his previous list,† and, by giving authorities for rarities, has added much to its value. In addition to the list of identified species, numbering 256, there are 26 others given as probabilities, and with sufficient reasons, it seems to us. Under General Observations at the end, the author calls attention to the changes which have taken place during forty years, causing the extermination of some species while others have increased. Altogether it is one of the best local lists, and we would have a much better knowledge of distribution of birds were there more as reliable collectors as Mr. Langdon.

* A Revised List of Cincinnati Birds, by Frank W. Langdon, extracted from the journal of the Cincinnati Society of Natural History, Jan., 1879, pp. 27.

† A Catalogue of the Birds of the Vicinity of Cincinnati, with Notes, by Frank W. Langdon. The Naturalist's Agency, Salem, Mass., April, 1877, pp. 19.

MORE WHITE WOODCOCK.—*Hoosick Falls, March* 24.—*Mr. Editor:* Seeing in your columns of albino woodcock, I myself shot one last season, and Mr. Chas. Cole, of Poughkeepsie, also shot one and had it preserved. His was larger than mine, and if any one wishes to see it they can, by calling on the above gentleman farmer, or by addressing him at the above place, or hear from him. C. H. YOUNG.

ARE RABBITS CARNIVEROUS?—*Philadelphia, March* 6.—*Editor Forest and Stream:* Are the large white mountain rabbits carniverous? My reasons for asking are these: In the fall of '58 I was living at Lake Lewis, Sullivan Co., Pa. Some cattle that had died were placed at the edge of a swamp. Soon animals of some kind made inroads on them. Although I set traps and snares, I was never able to catch anything but rabbits. Visiting the same county last fall, I was told by a number of hunters that they never eat the white rabbit on account of it living on mice, carrion, etc. C. T. JONES, JR.

Can any of our correspondents answer this question?—ED.

ANIMALS RECEIVED AT CINCINNATI ZOOLOGICAL GARDENS FOR THE WEEK ENDING APRIL 1, 1879.—Two grizzly bears, *Ursus horribilis;* two black bears, *U. americanus;* one great kangaroo, *Macropus giganteus;* one aondad, *A. tragelaphus;* one pony, *Equus caballus;* all born in Garden; two passenger pigeons, *Ectopistes migratoria,* hatched in Garden; one badger, *Taxidea americana,* purchased; one lion, *Felis leo;* one leopard, *Felis pardus,* deposited by Mr. Jno. Robinson; one magpie, *Pica hudsonica,* presented by Mr. R. M. Shoemaker.

FRANK J. THOMPSON, Supt.

The Kennel.

THE NEW YORK DOG SHOW.

THE third annual New York Dog Show is a decided success in every particular. Such a collection of fine sporting dogs has never been seen in this, if in any country. The attendance has been, so far, in excess of what it was last year. The three-judge system appears to work well and give general satisfaction. There are remarkably few absentees among the dogs. The judging of sporting dogs commenced at one o'clock, and by six o'clock all the pointers and the English setter champion classes had been judged. Mr. John Davidson was very warmly greeted by sportsmen from various parts of the country. Of course, every one knows that there is no such place for a dog show as Gilmore's Garden, but in the improved arrangements this year it is simply superb. The entire building had been floored over, and the dust and dampness of former years were absent. The experience of previous shows enabled exhibitors, managers and attendants to work harmoniously together, and there was no confusion. The usual throng of the fashionable society of the city was present even on the opening day, as well as visitors from every part of the Union, the attendance reaching (on Tuesday) 6,000. The hour at which we go to press prevents any detailed criticism of the dogs, which must be deferred until next week. As was mentioned in our last issue, the sporting classes filled in a manner totally unexpected, and the improvement in the quality is strongly indicative of the results of an increased attention to breeding. The show of pointers, particularly the puppies, was remarkably fine, considering the number—116. The same may be said of English setters, of which there were 156. The red Irish setters were also remarkably fine. The following is the list of awards made up to Tuesday evening:

Greyhounds.—1st, F W Luyties, Prince; 2d, Raymond J. Chatry, Fida; V h c.—Robert L Lee, Barou; H c.—Henry W Livingston, Charlie; C.—H Steiner, Fosdick. First prize, $15; second, silver medal.

Deerhounds.—1st, P T Barlow, Thor; 2d, P T Barlow, Maida; H c.—Luke W White, Stanley. First prize, $15; second, silver medal.

Pointers.—Champion—Dogs over 55 lbs.—1st, Lincoln & Hellyar, Snapshot; V h c, G A Strong, Pete; John H B Latrobe, Jr, Bounce, and Irwin & Waddell, Sleaford; H c, C Dubois and E A Wagstaff, Till. For the best, $35. Bitches—over 50 lbs.—1st, Columbus (Ohio) Kennel Club, Fan; V h c, H N Munn, Psyche; G A Strong, Fan; H c, Edmund Orgill, Romp. For the best, $35.

Pointers.—Dogs over 55 lbs.—1st, Fisher Howe, Jr, Rex; 2d, W R Hobart, Rapp; 3d, John H Meyer, Sport; V h c, Hubert Schenherr, Ranger; H c, Nelson Cornwall, Rob; S S Cobb, Range; J J Snellenberg, Fisk; J W Coffin, Belle II; Dr C H H Sayer, Patch; John F Harrison Dash; C, Benjamin Peer, Don; Washington A Coster, Royal Don; E Langdon Wells, Tramp. For best, $30; second best, 20; third best, silver medal. Bitches, over 50 lbs.—1st, Luke W White, Grace; 2d, David G Hartt, Flash; 3d, H C Glover, Gwendolin. For the best, $30; second best, $20; third best, silver medal.

Pointers.—Champion—Dogs under 55 lbs.—1st, E A Willard, Sefton; V h c, Albert M Wright, Dick; J J Snellenburg, Button; Edmund Orgill, Rust. For the best, $35. Bitches under 56 lbs.—1st, Edmund Orgill, Rose; V h c, A E Godeffroy, Queen; J J Snellenburg, Topsy. For the best, $35.

Pointers.—Dogs under 55 lbs.—1st, I Weighell, Bob; 2d, John Gill, Dash; 3d, Guernsey L Strong, Ben; V h c, Max Hellmick, Blick; H c, W E Doane, Rob; Baltimore Kennel Club, Black Prince; Thomas H Terry, Chiswick; George H Everall, Ranger. For the best, $30; second best, $20; third best, silver medal. Bitches—J P Lawrence, ——; Chas Walton, Nellie; Geo Snook, Crafty; J F Ferguson, Fannie; Egerton Brown, ——, ——, ——; Fred Goodridge, Puss.

—We publish below a chart, by which can be determined, at a glance, the number of points allotted to any particular characteristic in all kinds of dogs, according to "Stonehenge's" scale. The chart was prepared by Edward J. Forster, Esq., Secretary of the Massachusetts Kennel Club, to whom is also due the merit of having conceived the idea.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

FOX-HOUNDS OF NEW JERSEY.

NEWARK, N. J., April 1, 1879.

EDITOR FOREST AND STREAM:

Until the year 1820 we can get but little history of the fox-hounds in this State, though no doubt there was, previous to that date, occasionally owned, by lovers of the chase, a dog of fine strain, since we learn that at about that time a gentleman by the name of Col. Salter, living near Elizabeth, imported from England thirty-five dogs, and that these English dogs found warm competitors among the dogs previously owned here. Early in the decade extending from 1820 to 1830, the dogs of three or four northeast counties of the State were divided up into the Union County dogs, the Somerset County dogs, the Essex County dogs and Hudson County dogs; and these were subdivided into the Elizabethtown pack, the Rahway pack, the Westfield pack, the Newark pack, etc., each pack amounting to from ten to forty dogs, taking the name of the town or village to which they belonged. At this time it was not necessary to go into the back, or even the central, portions of the State to find Reynard in all his glory, since even in the city of Newark at that time the citizens frequently had to drive them out of their poultry yards; and it was almost of weekly occurrence that some of these sections brought their packs together for a friendly tilt; and it is said they did not keep the Lord's Day either, since it is said quite frequently some of the good burgers, while at their devotions in the church, would hear the dogs running near by and would quietly steal out, and, after listening awhile, would come in as quietly and report to his next neighbor in the adjoining pew that "Belleville Bowy was ahead," or "Westfield Trounce was leading." The Union and Somerset dogs were, as a rule, lighter and finer dogs than those bred about Essex, Hudson and Bergen, and when the former got the latter in the mountains they usually took charge of the fox, but when the latter got the former down among the swamps and creeks bordering the Hackensack and Passaic rivers, their fine competitors would get a fearful punishing. The only names of those owning dogs coming to us at this time were: the Salters and the Woodruffs, of Union; the Parcels, of Somerset; the Penningtons, Woodruffs, Roffs, Doremuses, Joralemans, etc., of Essex, and the Van Ripers, of Hudson.

The most of those who kept hounds for these friendly contests among the dogs did not often shoot a fox; but those who kept dogs and hunted for Reynard's pelt, or to protect their chicken coops, gave him a fusilade with their old flint locks at every opportunity. The leaders among these several strains of dogs were intermixed, and one that cropped out as a stud dog was Salters' Ring, a fair-sized dog, black and white, with tan ears and head. By the beginning of the next decade, from 1830 to 1840, perhaps Jersey had as fine fox dogs as any country could boast, and, with the exceptions of a few instances, were owned by the same families. In 1832 a millwright, by the name of Richard Silence, came from the powder mill on the Brandywine, Del., and brought a fine black and yellow tan slut called Spring, and made his home near Westfield. This slut was slightly hooped-back, well proportioned and rather undersized, and brought with her a reputation that she never lost in Jersey. She was known as "the Powder Mill Slut," and was four years old. Among the Westfield dogs she at once went to the front. At once the challenge went out far and near, and from time to time the different sections closed battle, but every time the "Powder Mill Slut" took the lead, and became the most notorious dog in New Jersey, as she had been in Delaware. This powder mill slut was purchased in 1838 by Enus Parcels at Springfield. She had been bred to Robt. Montgomery's Sport when about six years old. Two of this progeny came to the front—En. Parcels' Sport and John R. Clarges' Bone. This year Abraham Joraleman, of Belleville, got a fine black-tan slut pup from Daniel Vreland, Bergen, Hudson County, which he called Fashion. In the early part of the decade, from 1840 to 1850, while there were many fine dogs, this slut went to the front. She bred many fine pups, but her best litter was in 1846 from Dal, owned by Peter Bush, at Saddle River, Bergen County. Dal was bred from white June, owned by the Ludlows, at Hohokus (dog unknown). Of this litter of pups the principals were Philo, Zac and Fashion II., and perhaps there never was in this section three more powerful fox-hounds bred in one litter; in fact, nearly all the Fashion and Dal strains were perfect models of fox hounds, full size, and the larger number were black tans, though Zac was black and white speckled. This Fashion stock got into Morris County, and now runs in the veins of their fox-hounds, as will appear presently. About this time Hon. Adolphus Pennington imported two beagles, Whip and Ready, from England, and at about the same time Mr. Joraleman gave him a beautiful slut pup from Fashion II., which was called Bettie. From Bettie and Whip 'Dolph filled the country full of mixed trash. Near this time also, a French gentleman living near Orange by the name of Pillot, an admirer of the chase, imported from his native country two or three beagles. The mixing of these beagles with the old fox strain that had been perfecting for thirty years was nearly their destruction, and now there will be seldom seen in Bergen, Hudson, Essex and Union counties anything but what bears the flat head, flat ears, flat tail, and sometimes the bow-legged marks of their beagle origin. It must not be supposed that the persons named were the only ones who had fine fox-hounds, for the blood of old Ring, Spring, Dal and Fashion ran in the veins of more than 100 dogs; and in Newark, in twenty minutes, for a hunt, a dozen dogs could be gathered that had been graduated at High School. High School was kept by a colored man by the name of Harry Blower, up near the Rizer or Moonocky Swamp, where he had an old yellow fox who was skillful in all the arts of his species—he could run shallow ditches, fallen logs, fences, brooks, cattle and sheep herds, etc., greatly to the discomfiture of the young fry; and before a pup could graduate he must master the rules of geometry. In 1854, greatly to his shame, your correspondent upset the old yellow fellow with a charge of shot, when he was found toothless from age. There were many other foxes in the near vicinity of Harry's, but this old yellow chap made it a point to live within a quarter of a mile of the house ready, and if an evening escaped that he did not have a tilt he must have felt neglected.

From 1850 to 1860, the thickening of the population, improvement in fire-arms, backed by these well-bred and well-trained dogs, the foxes soon began to diminish, and by the year 1860 there were no foxes worth hunting for east of the Orange and Westfield mountains in this State. In 1850 Union County had very few foxes. This decade opened with a tolerable sprinkling of foxes in Essex, Bergen and Hudson counties, and Philo, Zac, Fashion II., and several other dogs of promise in Essex; Hudson had several good dogs, and so among the Bushes there were good dogs. In 1850, also, James Campbell, Belleville, purchased two fine fox dogs at Fort Lee, N. Y., called Bogus and Europe. Bogus was all over tan, and Europe was black and tan. In 1854 Bloomfield Leard brought some fine dogs from the State of Maryland; in 1856 he brought a slut called Lace; all noble dogs. Not a week passed, summer or winter, but the heavy bay of the hound was heard either in the Hackensack meadows or on the Orange Mountain. At Bloomfield, in 1858, Mr. Artemus Vangiesen, had a good slut called Liz, who littered to old Zac, then belonging to Mr. Leard, who then, notwithstanding his twelve years, could make a strong run. Of this litter Dr. Robinson had the choice pup. This pup, with a slut pup received from Canada, was sent to the Leonard Brothers, Great Swamp, Morris County. The slut was called Pet and the dog Veno. The Leonards also had a splendid dog called Dan. When Veno got old enough to hunt foxes there was sent up for his education a very practical dog called Loud, raised at Highberney, Morris County. The dog Veno grew and waxed strong, and his fame went out over the land for skill, speed, beauty and endurance. Old fox hunters would totter on their staves for miles to admire him. He was large, average size, square made, medium tail for thickness; a beautiful black and tan; long, high head, deep nose, good lip; ears average, pointed, came out low on the head, drooped with a gentle twist, and were as fine and soft as a lady's cheek. Pet bore two litters of pups to Veno; Harry Kelly, at Chatham, had a slut littered to him; a slut near Danville bore him pups, and there were others. It will be seen how these noble animals had followed the tide of empire. When their work was done in the eastern part of the State they were ready in the fox regions of the West. From 1860 to 1870 opens in Hunterdon and Morris, and a new set of men. The Smiths in Hunterdon, who had a pup from Leard's plunder, bred from Zac and Meriland's Lace; the Leonards in great Swamp; Kelly and Cranes in Chatham; Ballentines in Bernardsville; Loues, Walnut Grove; Helms and Kings, near Berkshire Valley; Deckers, Hyberny. All these hunters were not possessed of dogs that came through the Zac line, since there were some of Fashion II.'s pups got up that way, and many good dogs from other parts; but where the old Eastern strain was fairly infused it was telling in the chase. There is no use for fox dogs now east of the Pickle range of mountains, Hunterdon County, and the western edge of Morris County, and the only good dogs within my knowledge now are owned about Hopatcong Lake.

I am indebted to Mr. B. Leard and Mr. Chauncy Woodruff for valuable information relative to these dogs, and Mr. Woodruff has skulls enough of these noted dogs to stock a museum, and pretends to point out their leading characteristics by the bumps on their heads. He has made these skulls a study for more than forty years. STRAIGHT BORE.

Twelve Months Experience with a Sportsman: or, How to Prevent his Dog from Barking Nights.

EDITOR FOREST AND STREAM:

Conscious that I am about to trespass on foreign grounds, it is becoming in me to approach cautiously, not fearlessly, and write Dear Editor.

I am a sportsman's wife. None of my many friends mourn more over this fact than do I; but if this is the avenue through which I may yet prove a blessing to mankind I am reconciled. I married my husband many miles away from his home (in fact, the ceremony was performed in my own father's house), and for the reason that he was handsome and I loved him. At that time as to his genealogy and particular traits of character I knew nothing and cared less. Oh! the devotion, that delightful accompaniment of the first six months of married life. The dear boys! What paragons of consecration they then are!

My husband has a father (my father-in-law). He—that father—mailed a letter, which read as follows:

"John, I think you have played about long enough, and, as I intend the old homestead shall be yours, I wish you would think about settling, and come home immediately. You must remember you have left us heavily burdened. I shall certainly be obliged to dispose of the pack if you don't put in an appearance pretty soon. That institution is a source of annoyance day and night. Let me know by return mail when we hall see you. Your aff. father,

"JOHN J. JONES, SR."

The only part of that letter which made any impression on me were the two words "settling" and "pack." "Pack" I didn't understand, and I was too well bred to insist on the interpretation. "Settling" made me uncomfortable, for I felt that meant business of some sort. That awful word "settling!" Demolisher of air castles! Annihilator of honeymoons!

Shortly after the receipt of this fatherly epistle, I awakened one morning to find the sunlight struggling through the heavy blinds of the "old homestead." In a moment more I discovered that I was alone—the first time that I had been in a room all by myself in almost seven months. I was quietly pantomiming a scene, when my attention was arrested by a fearful, roaring, rushing sound, as though all creation was torn loose. Believing myself to be in a land of tornadoes, I hastened to the window, threw open the shutters with a determination to leap before the house fell on my head. Imagine my horror at beholding my John—my darling!—dashing down the avenue on a black steed, surrounded by what seemed to me a million dogs. "Merciful God! He will be torn into shreds before he can ever escape them!" Nearer dead than alive, I staggered into the hall, down the long stair-case, to give the alarm. The only word I could utter was "dog." "Swallow the wine, child!" was what I heard, and forcing myself to the command, I was soon sufficiently restored to be made to comprehend that my "better half" was only exercising the hounds. His dear presence at the breakfast table, handsomer than I had ever seen him, assured me that he existed, and not in tatters.

My nerves had undergone so severe a shock that I was bade to remain in doors for the day, with a promise that in the early evening I should witness a display of fire-works from the back porch. A sly hug at the library door, and I am alone again. I used to be fond of books, but since, since—I can only compare myself to the man who experienced a change of heart at a revival of religion. "What he once loved he now hated, and what he once hated he now loved." Precisely me. The characters in the book were stupid; nothing but a real live hero would hold my attention now. However, the day was before me, and, pettishly enough, I sauntered to the centre-table for a glance at the journals. FOREST AND STREAM AND ROD AND GUN! "Delightful," thought I, "something new. I have never seen this publication—and "The American Sportsman's Journal!" If the printer's ink had stung me I could not have dropped the paper quicker. A sportsman's journal, and in my husband's library! No doubt it displays all kinds of secret keys; explains all manner of ways of house-breaking, etc., with representations of night lamps and dark lanterns in every corner.

I sat and thought, and thought, and thought, until my curiosity getting the better of my senses, I picked up the journal. I ventured to open it, and furthermore, I traveled straight through it, column after column, until I came to the end; but never letting loose of the conviction that a "sporting man" was but a twin-brother to the thief and the robber. A gentle tap on my shoulder caused a hasty movement of the muscles of the neck, when just under my left ear shot out to view the muzzle of a gun. The cold steel touched my face. With a shriek, I sprang to my feet. "Dearest, I have got a 'Parker.'" In his glee he (for it was my John) pressed the treasure to his bosom, but that treasure was not me.

"Hip, hip, hurrah!" and I was forced through a series of Present arms! Forward, March! and Halt! clear out to the back porch! Next in order was to sit on a block of wood, over which hung a sheep-skin, and to look at a white patch fastened to a big oak, away down in the field yonder. "Now, pet, I am going to put a dozen shots into that paper the first time." "Oh! oh! oh! he intends to shoot it." In my amazement I looked up to the heavens, and then down to the earth. There, spread out at my feet, were what I am now familiar with; a rifle, two revolvers, a pair of spurs and a case of knives. Every possible means of torture in existence. "John! I say, John! come here." Frightened at my command, my husband hastened to my side. Trembling from head to foot, I mustered all the courage I could, and said, "John, are you a sporting man?" "Ha! ha! ha! Why, dear? "The Governor calls me a sport when I slack up on the books occasionally." "The Governor! Does the Governor of your State reside in this place?" "Not exactly—father, I meant." "For shame!" and away went the gun and my heart, too, in the shape of my husband, as fast as his long legs could carry him.

"Perfectly adapted to the race-course," mused I?

Six months have passed since that day of experiences. How wise I have become in that short time.

I still read FOREST AND STREAM AND ROD AND GUN. For what so much interests my husband must interest me. And very much as I would wander through a succession of masonic lodge-rooms, have I waded through the columns of that journal. Ever looking from the right to the left, with the hope to discover some "side degree" by which I could, at least, "rest peacefully next my husband." A star of promise has peeped over the horizon at last. My Eastern Star! All hail! bright messenger of love. I can now join hands with my lord, for I am satisfied he is chief among the sportsmen.

The doses of discipline I have swallowed would distress all the quack doctors in the Union. Firearms! Why they are nothing. I don't mind the pistol under John's pillow at all. I even gripped the horrid thing myself one night, when John was away, and walked straight down to my father-in-law, and presented arms. It was a new piece, and on being questioned as to whether I understood it, I promptly responded, "Yes, sir." The servant had lost the key of the wood-house door, and we were in danger. Taking the deadly weapon to the lamp, I said, "You see, sir, it is loaded, and you have only to pull back the top thing and pull on the under thing and you are all right." I delivered this information deliberately, and went back to bed as serenely as though I had pulled the thing myself.

This is not all. I am acquainted with every dog in the "pack." I now understand the meaning of this term, and wonder how John's father ever did manage. It is odd how I took possession of those animals. But here is the secret. If I had John at all, except when he was fast asleep, I must run with the dogs. I could not afford to lose my husband, consequently I must follow him. The time was when he followed me. Oh! that detestable "settling." Nevertheless, I am happy in the thought that I am a dutiful wife. To share in the joys of my husband is the mainspring to my zeal.

My ingenuity has been taxed to the uttermost in order to keep pace with his freaks. Now that I assume the responsibility of the "pack," he never notices a dog unless it annoys him; but then I don't mind that. What I am after is the dear man's society, and at last have devised a plan whereby I obtain it. A walk is the only thing that will settle a supper for John. I have repeatedly suggested a Seidlitz powder, magnesia, common cooking soda, etc. But none of them will he adopt. The walk is the one thing needful. Imagine how weary he must be when he at last reaches his own door, always between the small hours of one and three o'clock A. M. On one of these occasions he happened to make an unusual amount of noise. The gate clicked, bang went the front door, and at this the "pack" set up a howl. Each individual dog barked naturally enough. It is dog-nature to bark at a noise in the night. John was much disturbed, and so was I. A terrible gust of cold air, and a cold hand on my forehead, with a hoarse whisper in my ear, "Wifey, did you feed the dogs to-day?" made me realize that I had been needlessly disturbed. I was thoroughly awake. "It is all I ask you to do, dear, and I do wish you would remember."

"It is yourself and not hunger that causes the dogs to bark," I tartly replied; at the next moment repenting, and giving the cradle an extra jog I went out to pat the creatures on the head, that he might fall asleep. This will never do. I shall catch my death. This barking must be forever stopped. My joy knew no bounds when I discovered through your popular journal that others as well as myself were laboring for this same result.

I have studied each man's plan carefully, and agree with the last one mentioned—that the use of the whip would result in injury to both man and beast. The dog is liable to bark any time after a flogging, and the man might take cold. The "elevator plan" is certainly dangerous, and the "magnetic treatment" altogether too expensive. At the outset every sportsman possessing a wife would reject it. For no live woman would consent to have a hole bored through the window casing. That peek-hole could never exist in my bed-

room. And then the thought of your husband down on his hands and knees groveling in the dust under the arbor vitæ after a long-necked black bottle. Suppose Francis Murphy should chance to be riding by and ask him what he was prospecting for. What in the world could he say for himself? Again, the wear and tear of the diamond ring would condemn the treatment. That which may yet grace the hand of my first born must be preserved. But worst of all

That top-gearing to dust overhead
And a live thing under the bed.

Mr. Editor, the "magnetic treatment" is a failure. While I would clamor as loud as any man on election day for the merits of my plan, I wish to modestly dedicate it to the wives and engaged daughters of sportsmen.

I claim (not yet by letters patent) a triple capacity for the plan, which bears the simple cognomen of the "Button." In the first place my husband is perfectly delighted with it, whereby I behold his dear image three hours longer every day than I did previous to its adoption.

Secondly—A dog is never known to bark after a single acceptance of the "Button."

Thirdly—It encourages marriage; for the reason that the woman does all the work.

The most ordinary and least ingenious wife can suspend a sheet from the ceiling directly across the bed you occupy, and about midway between the head and footboards of the bedstead. But before your sheet is put in position sew upon it several strips of cloth divided off into spaces, which may serve as pockets. Upon these strips of cloth you can display your skill in water-colors, hand-embroidery or finish by plain machine stitching. On your husband's side of the curtain arrange the pocket perpendicularly, leaving a space in the center sufficient to pin on a copy of FOREST AND STREAM AND ROD AND GUN open. This can easily be removed and replaced for the morning paper. In the pockets you may place some bronchial troches, a few peppermints or whole browned coffee, a comb, a razor and straps, a jackknife and a few fine sticks. These will generally keep the man amused during his waking hours—from one-half to three-quarters of an hour. I have known my husband to enjoy these articles in excess of one hour. It is also quite necessary to place beside the bed a small stand, upon which may be placed a tankard of hot punch, a glass of water and a pipe and tobacco. Under this stand you place a cuspadore, in range. On your own side the pockets need not be so numerous, neither so much space utilized. A bottle of soothing syrup, a place for your false hair, when you are in a hurry, and in a safe corner the "Buttons." They should on all accounts be the "old fashioned dog buttons." At the first yelp of a dog you have only to see that the "button" passes properly and surely down his throat and your work is done. I have treated a whole pack of hounds to these "buttons" and never a one has failed to produce instantaneous relief. Believing the "Button" to be the blessing of the future as well as the past, I am, through the medium of the fraternity, one of the daughters, REBECCA.

THE BOSTON DOG SHOW.—One of the most notable features of the second annual dog show of the Massachusetts Kennel Club, which is to be held the first week in May, is the list of special prizes. One of $500, for the best pointer or setter in the show, heads the list. It is a magnificent prize, and would go far toward paying the cost of some recent importations. The members of the Massachusetts Kennel Club are most energetic, and their show will be a signal success most thoroughly deserved. This club does not confine itself to bench shows or breeding, but interests itself in everything pertaining to field sports.

THE VON CULIN KENNEL.—This celebrated kennel is offered for sale. There are good dogs in it, and any person wishing a trusty hunting companion who will go with him, find and fetch all the birds, and do all the work except firing the gun, will do well to run down to Delaware City, where the kennel is located, and pick one out, for money. We are sorry that ill health compels Mr. Von Culin to give up his kennel. Mr. V. has done much for sporting interests and breeds of good dogs in his section and in others. May the good that he has done live after him, and may his dogs recognize many of their get and kith.

EASTERN DOGS ON WESTERN GAME.—Mr. Ethan Allin, of Pomfret, Ct., has now a kennel of eleven dogs, all of his own breeding. In a private note to us on the work of Eastern bred dogs on Western game, Mr. Allin very pertinently remarks:

"Our dogs are generally broken for close or cover shooting, and do not range as wide as required for the West; but a well-broken, steady dog here will work equally steady there, and if he back-sets here steadily, I can see no reason why he would not do equally well there. Then again, if the dog is of the best blood he would not forego his natural propensity to stand his game under any and all circumstances. A well-bred puppy, as soon as he notices scents, will come to a staunch point the first scent he strikes. I have shot in the West, and took my own dog with me, and I saw no difference in her work there from here."

The gist of the whole question lies in these first three lines. We have editorially claimed what Mr. Allin affirms, and nothing beyond. Some of our correspondents may have gone farther, but we think the points given by Mr. Allin cover the case thoroughly.

ENGLISH POINTERS FOR AMERICA.—*Bell's Life* of March 15 has the following: Mr. Pilkington has sold Faust to the St. Louis Kennel Club for £250. This is one of the largest prices ever paid for a pointer, but we heartily congratulate the members of the St. Louis Kennel Club on their very excellent purchase, as our country correspondent has, from the first time he saw Faust, pronounced him to be the best pointer in England, and his successes last year at the Crystal Palace, Birmingham, and the Alexandra Palace quite corroborated the opinion. Faust is a magnificent liver and white pointer, possessing immense power and bone, and he is beautifully put together from head to stern. His credentials as a performer in the field are quite as good as they are on the bench, as he ran very well in the only field trial he has competed in; and he went so well with Garnut on grouse last season that the brace was kept down together three days in succession in preference to a fresh relay of dogs. The Americans are going in strong for pointers, but they insist on the highest pedigree, good looks and first class field performances. The St. Louis Kennel Club last year purchased Bow, by Champion Bang, but not until he had been tried very highly on the prairies, and we hear now that the same society, besides purchasing Faust, have bought, Jaunty, sister to Fancy, out of Mr. Pilkington's kennel, and Zeal and Lassie, own sisters to Bow Bells, out of Mr. S. Price's kennel.

GOOD FOR ONE, GOOD FOR ALL.—*Mr. Editor:* I think your correspondents ought to "let up" on "Ivanhoe" after the explanation made by him. My experience is that a thoroughly broken dog is good anywhere and everywhere, barring those occasional freaks of the "studs" that sometimes overtake the best of them. But I never saw two strange dogs hunt well together, no matter how well broken; and when it comes to taking a good dog in the field with curs, fice and all sorts, nothing better than what happened to "Ivanhoe" could be expected. It would have been remarkable had it turned out otherwise than he describes. JACK.

Detroit, Mich., March 29.—A. Y. Ladue, Esq., of Detroit, Mich., has received (March 24) from Wm. Nelson, Esq., of Liverpool, England, a brace of Gordon setters, dog and bitch—Hugo and Rosalind. They were held at Boston, Mass., for about a week by the Custom House authorities for duty, but were finally released and arrived here as above. They are a very fine pair, and were bred by Geo. Wm. Wilson Slator, Whitehill, Edgeworthstown. The following is their pedigree: By Shot, 1st prize dog Dublin show, 1877, out of Koragh; Koragh by Russell, winner of great challenge prize Birmingham show, out of Deuce; Shot by Valdor, winner of 1st prize at Belfast, Deuce by Charlie, imported Scotch dog, property of the late Robt. F. Rynd, Esq., out of Fan, from Lord Charlesworth's kennels. They are now nearly seventeen months old. Hugo is good size, beautifully marked with tan, no white, rather large, and with age will make a very fine dog. Rosalind is considerably smaller, tan markings not as distinct as Hugo's, and has a small white frill on breast. They look a little slim now on account of their recent passage.

TYPES OF DOGS.—Apropos of the Great Dog Show to be held at Gilmore's Garden in this city next week, under the auspices of the Westminster Kennel Club, the FOREST AND STREAM has printed a full page gallery of portraits of celebrated typical dogs, which will not only be looked upon with a general interest by the curious, but will be examined critically by those who make dog physiology and canine characteristics a study. These portraits include the pointer Sensation, Skye terrier Ruffles, St. Bernard Monarque, pug Rex, Yorkshire terrier Kitty, bull terrier Tarquin, Gordon setter Lu, St. Bernard Alp bulldog Duke, cocker spaniel Witch, mastiff King Olaf, dachshund Diana and English setter Lark, all prize winners of high degree. The Kennel Department of FOREST AND STREAM is always replete with instructive essays on canine pathology, traits, breeding, training, family characteristics, etc., the interest in all of which seems not to have abated since the general subject was first introduced into its columns.

It was through the direct agency of FOREST AND STREAM that Bench Shows and Field Trials were first introduced into America, its then editor being Captain John M. Taylor, an English gentleman of intelligence and good repute, member of the Kennel Club, of England, and well known on both sides of the Atlantic.—*New York Telegram, April* 5.

AN OHIO FOX STORY.—The London *Sporting and Dramatic News*, which has just expressed great amusement at the American custom of hunting foxes with fire-arms, may perhaps be further edified by the account of an Ohio fox-chase. We may premise, by the way, that our English cousins will doubtless make due allowance for the exaggeration induced by our American climate, and will understand that the "entire township" is an old field; the 5,000 men and boys are really half a dozen urchins playing hookey, and a tramp or two who happened along about that time; and as for the cannon—

There was a great hue and cry over the capture of one poor fox near Dayton, O. Nearly 5,000 men and boys from all parts of the country formed a line around an entire township, in which many foxes were known to dwell. The arrangements had been carefully made, and the discharge of heavy cannon at three points was the signal for a general movement toward the centre. Every person had a horn or bell, or something else with which to make a din, the idea being to drive the foxes to a certain gulch and there dispatch them. But one division did not start promptly, and a gap was left in the line through which all the foxes but one escaped. This lone victim hid in a hollow tree and was killed by a dog.

HALLOCK'S GAZETTEER ON DOGS.—Dr. Sam. Q. Robinson, U. S. A., now stationed at Fort Missoula, W. T., says, March 2, 1879:

"I have never seen Canine Pathology and Therapeutics so well treated in any work before."

TENNESSEE—*Nashville, April* 2.—Mr. Buckholz has had the misfortune to lose his pointer dog Shot a few days ago. The dog was thrown from a buggy and had his thigh joint shattered, which necessitated killing. J. D. H.

AN ERROR—*Vincennes, Ind., March* 31.—In your number of Jan. 30 you are in error as to the puppy bought of T. F. Taylor, Richmond, Va. Names should be Champion Rupert and Champion Fan, not Champion Floss, as you have it. E. M. KELLUM.

NAMES CLAIMED.—E. F. Mercilliott, 186 Broome street, N. Y., claims the name of Ed. Forest for his orange and white (Grouse-Quail) dog puppy.

—Mr. R. E. McClenahan, Port Deposit, Md., claims the name Rex for his white, with orange ears and ticked, dark points, dog puppy—Royal Duke-Fleet (Snipe-Fanny)—whelped Dec. 20, 1878.

—Mr. Joseph W. Reynolds, Port Deposit, Md., claims the name Vixen for his white, with orange ears and ticked, bitch puppy—Royal Duke-Fleet—whelped Dec. 20, 1878.

—Dr. J. L. Morrill, of New York, claims the name of Flake for his liver and white cocker spaniel puppy by Goff's Dandy out of Bosworth's Clare, whelped Nov. 3, 1878.

—Dr. J. S. Niven's, of London, Ont., Gordon setter Mel III. (7,250) has been bred to Toledo Kennel Club's Grouse (5,097), March 28.

—Mr. H. N. Packer, of Philadelphia, has purchased of Mr. W. H. Pierce, of Peekskill, N. Y., the setter dog Ned, by One-eyed Sancho out of Horace Smith's Flora, advertised in your paper. He claims the name of Royal Ned for him.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild ducks, geese, brant, etc.

—Every duck shooter knows how important it is to have his decoys imitate nature closely. We can tell them out into proper situations in front of our blinds, just as the stage manager assigns the characters and parts in a tableau; we can make the attitudes natural, and all that; but to make the birds lift their wings and flap; dive; and perform the odd little movements which ducks at rest and quietly feeding indulge in; is not often easily accomplished. In general the antics of decoys are so gross that they excite the very suspicion which they were employed to allay. The diving attribute seems now to have been fully imitated and imparted by the new apparatus advertised in our columns under the head of "Diving Decoys." If they meet the success claimed for them, they will be of great service to the gunner.

—The Card Rotating Trap, now advertised in our columns, possesses qualities which are not claimed for other ball traps. It throws in all directions at random, or can be set so as to throw in any desired direction. It is rotated by a cord on sleeve, and when pulled the ball is thrown in a direction that it is impossible for any one to foresee, thus resembling the flight of a startled bird. No screen is needed, and no percentage can be given to the shooter by the puller or attendant. Each trap is furnished with a guard (which can be taken out and put in at will), which prevents the ball from being thrown directly at shooter and spectators, but throws in all other direction.

CANADA—*Gravenhurst, March* 31.—Lakes and rivers are all frozen over yet in Muskoka, and likely to be for two or three weeks to come. We have a foot and a half of snow on the ground yet. No spring birds arrived, so far as I have seen, up to date. We have had a very hard winter. J SCOTT.

MANCHESTER SHOOTING CLUB.—Manchester, N. H., has a newly organized shooting club, with the following officers: President, C. B. Littlefield; Vice-President, B. Frank Clark; Secretary, Julius E. Wilson; Treasurer, Chas. B. Bradley; Executive Committee, Ira A. Moore, Charles J. Darrah, Charles W. Farmer.

MASSACHUSETTS—*Salem, March* 30.—Hard weather all the week. One snipe seen the 3d of March. Some woodcock about. I have just received a fine lot of Fulman petals and Burgomaster gulls from Banks of Newfoundland, which I will sell to societies or collectors. R. L. N.

CONNECTICUT—*Pomfret, April* 2.—Quail have wintered well here, and our prospect the coming fall looks better than the past season. E. A.

NEW YORK—*Hayts, April* 7.—Wild geese are plenty here. They light in corn fields almost every day, and go to Cayuga and Seneca Lakes at night. A flock of nine lit within twenty-five rods of our house a few days since. We do not molest them. L. E. W.

NEW YORK—*Niagara Falls, April* 1.—This must be good weather for ducks. By the way, there were two gentlemen here on Saturday from the East, returning from St. Clair marshes, near Detroit, and report fine sport with the ducks. My next door neighbor had a visit from a woodcock about the first of March. We hear nothing yet of the snipe. Spring shooting does not amount to much with us, but we do have glorious fishing, and we are already overhauling our tackle. G.

THE COMING STATE TOURNAMENT.—At a regular meeting of the Monroe County Sportsmen's Club, of Rochester, N. Y., held April 3d, the Committee on Prizes reported favorable progress in securing prizes for the coming State Tournament. There are already more than twenty prizes, valued at from $10 to $250 each, and with those to be added before the Convention, the list will be as large and as valuable as was ever presented. The committee on birds reported that they had employed Henry Knapp to secure the birds for the State shoot, and that there was every reason to believe that he could capture a large supply. The committee on grounds reported that the Driving Park had been secured, and the committee on ways and means reported that measures had been taken to raise the necessary funds.

CHEROKEE GUN CLUB.—*Rome, Ga., April* 3.—At a meeting, March 25, at this place, we organized the Cherokee Gun Club and elected the following officers for the ensuing year: Dr. R. I. Hampton, President; W. M. Gammon, Vice-President, and Joseph E. Veal, Jr., Secretary and Treasurer. We start out with a dozen good members. On the 27th Frank Robinson, one of the club, was out after snipe, and bagged twenty-five in the afternoon. HAL RAQUET.

GULF CITY GUN CLUB—*Mobile, Ala., March* 25—*Editor Forest and Stream:*—At the annual meeting of the Gulf City Gun Club, held on Wednesday, 19th inst., the following gentlemen were elected for the ensuing year: President, Dr. T. S. Scales; Vice-President, F. P. Davis; Secretary, R. P Priester; Treasurer, Dr. C. C. Sherrard. This club now numbers sixty active members, and is in splendid condition. W. D. B.

ILLINOIS—*Grand Tower, April* 5.—Our severe winter drove the ducks south and our glade shooting did not begin as early as usual; but since the latter part of February we have had uninterrupted sport, and as long as we have an occasional cold storm the mallard and teal will stay in our woods feeding on the small black oak acorns. Green-winged teal have been thick, and there are a few yet. The sprigtails were with us a month ago, but now the mallards hold possession in countless numbers. No blue-winged teal have appeared as yet. The deep snows of last winter almost exterminated our quail, but there are several remnants of the large coveys still left, and a mild winter or two would enable them to increase rapidly. Turkeys are plentiful, but the deer have all been run out of our glades, crossing the river to the Missouri hills.

PENNSYLVANIA—*Titusville, April* 4.—A large flock of wild swans were captured in this city one day last week. It was raining and quite cold, their feathers became wet and frozen, and they could not fly. Many were sold for $4 per pair. Our chances for our usual good sport among the grouse and woodcock will be slim, as but very few birds were left over.
G. H. W.

KENTUCKY—*Mount Sterling, March* 3.—Snipe have made their appearance, although I have not yet heard of any good bags being made. The cold nearly exterminated our quail.
W. VAN A.

TENNESSEE—*Nashville, April* 2.—Jack snipe were never so abundant about here as this season. Mr. Nicholson killed eleven yesterday morning. Mr. Wm. Ervin, one of our crack field shots, says that on Saturday, while on a visit to the Hermitage, he must have seen at least one hundred. J. D. H.

UP A TREE.—"Tip" writes from Berkeley Springs, W. Va., of the discovery of a steel bear trap imbedded in the wood and bark of a tree-fork several feet from the ground. The mystery of its being there was readily dispelled by a man who remembered that his father, fifty years ago, lost this identical trap and afterward killed a bear which had only three legs. Hence, the bear took the trap up the tree; the trap became wedged in the fork; the bear left it there and his leg with it. Awful warning to bears who get caught in steel traps not to climb trees. There is nothing curious about the wood growing around and finally burying the steel.

THE HAMMERLESS GUN.—*Washington, D. C., April* 5.—*Editor Forest and Stream:* I have a 16-gauge hammerless gun of German make, purchased in Hamburg about ten years ago. It is an excellent shooting gun, and especially for woodcock and ortolan (*Sora rail*). The beauty of the hammer arrangement is its simplicity. It is located at the extreme end of the barrels and is made up of a small steel pin or rod attached to a spiral spring and inclosed in a cylinder about 2½ inches long and of the same diameter as the barrels at the base. It has often occurred to me that the hammerless arrangement might be substituted for the inconvenient hammers. But it never occurred to me that a hammerless gun was a novelty. FRANKLIN RIVES.

A FINE GUN.—I have a gun, made by Mortimer H. Kirkwood, 24 Elm street, Boston. The barrels are fine English Damascus, 12-bore, and 30 inches long, with double bolt, top-snap, rebounding locks and extension rib, price $200. It was made to order for me a year ago last summer, weight 8½ pounds, and choke-bore. I have diagrams that I made at 40 yards with the left barrel, 3¾ drs. powder, 1⅛ oz. No. 8 American chilled shot, 356 pellets in a 30-inch circle. I don't say I can do this every time, but the left barrel runs from 300 to 350, and right barrel from 250 to 310. I have got a diagram that I made at 30 yards, 3¾ drs. powder, 1⅛ oz. No. 8 shot, at 18 inch circle, 365, and I made a pattern with No. 4 shot, 167 in 30 inch circle, at 40 yards, with immense penetration. I have shot single birds, 80 yards, with No. 8 shot, 3¾drs. powder. If there is any one can equal this, or beat it, I should be happy to hear from them.
Cambridge, Mass. J. T. WARD.

THE PLAINTS OF TWO CLERGYMEN.

INDIANAPOLIS, Ind., March 22, 1879.

EDITOR FOREST AND STREAM:

Dear Sir: Inclosed find the pencilled grief of Rev. J. C. Fletcher, my neighbor and friend. There is something in it.
Yours truly, MYRON W. REED.

TO REV. MYRON W. REED:

I come to you for protection, and, having always found you a sympathetic person, I believe that my appeal will not be in vain. The whole thing is in a nut shell. I have been taken for somebody else, and am suffering for it.

A few week ago the editor of the FOREST AND STREAM (which able and well-known sporting weekly has now absorbed the ROD AND GUN), writing to a layman in Indianapolis, asked for the whereabouts of your humble servant, with whom the aforesaid editor had once made a most pleasant journey to the forests of Maine. In fact, the genial Charles Hallock and I are old friends, but we have not met since my return to the United States. The Indianapolis gentleman, in my absence, wrote in reply to Mr. H.'s question the following: "Your old friend, J. C. Fletcher, is now located in Indianapolis." Nothing could be simpler and more to the point; but, the gentleman having information on another subject to impart to the editor, he added: "I herewith inclose you three dollars for a year's subscription to the FOREST AND STREAM, to be mailed to James M. Bradshaw, Esq., of Indianapolis, one of the best shots and most enthusiastic hunters in the West, possessor of fine dogs, and who is now engaged in importing 180 migratory quails from Messina, Italy, in order to stock Indiana with them." There was certainly nothing wrong about that. On the contrary, it only told the truth about Mr. Bradshaw's (or as the Indianapolis boys call him Jim Bradshaw) hunting excellencies. But it so happened that about the time of the reception of that letter the editor was meeting with the Brooklyn Sporting Club, and there was much talk about the importation of Messina quail. The editor made a speech, but had not read the letter straight, as I judge from the editorial written anent the discussion of migratory quail. Now it is just here that my troubles come in.

I returned home from lecturing, hoping for a few days of well-earned repose, but I was soon interviewed by a gentleman who is an expert with rod and gun, and who complimented me on my fame as "an enthusiastic hunter, etc., etc." I did not understand the allusions until I saw the FOREST AND STREAM, and there, to my horror, I found this sentence: "Rev. J. C. Fletcher, author of 'Brazil and Brazilians,' is now located in Indianapolis. He is one of the most enthusiastic hunters in the West, etc., etc., and is now engaged in importing 180 migratory quail, etc., etc., to stock Indiana." And, as if that were not enough, there is another editorial paragraph reiterating the same thing. I at once saw that the editor was not squibbing, was not poking fun at me, but was in downright earnest. I traced up the matter, or, as a sportsman, I should say I "ran it down," with the result mentioned, viz.: the discovery that a letter had been written containing facts about Mr. Bradshaw, which were true, and one fact about myself which was strictly true. But when the editor in his haste skipped over Mr. B.'s name and attributed to me the enthusiasm, the skill and the migratory quail business of Mr. Bradshaw, I felt as if Mr. B. had been wronged out of the greatness he had achieved, and that I had "greatness thrust upon me." And, although it was somewhat annoying to be greeted by my friends as a great shot, an enthusiastic hunter, etc., etc., I concluded to grin and bear it. I confess to you that my last shot was fired when I was a boy of eleven, in the wild woods where Brightwood now stands. My father had given me an old-fashioned flint-lock shot-gun, which he had taken for a debt. The touch-hole was large and the pan was of corresponding size. I blazed away at a squirrel, and the big touch-hole and the capacious pan blazed away at me. It was my first and last shot at any living thing. The squirrel, unharmed, leisurely went up a tree, and I went away with burned fingers and singed hair.

Now, at this stage, comes in my desire to be understood and to be published. The mistake of the editor of the FOREST AND STREAM is undoubtedly a true bill and unintentional, and I am willing my friends shall laugh at me; but when I return, as I did yesterday, from Cincinnati, and find letters and papers from such extremes as Boston and Chicago, from persons entirely unknown to me, who have been innocently misled by the FOREST AND STREAM into the solemn belief that I am a "mighty hunter," ranking along with General Morris, Thos. H. Sharpe, General Ben Harrison, Judge Hines, "Jim" Bradshaw and yourself, it is too bad, especially when they send me letters and advertisements soliciting my patronage, offering to import Messina quails for me, showing me that their guns for ducking, their rods and flies for fishing, their powder for precision, their hunting boots for impermeability, are superior to all others ever brought to the notice of a generous public, I say again it is too bad. I beg you, as a sporting man, to let the sporting-advertisement fraternity know that I can't shoot, that I never killed anything, that I know nothing about powder or fishing flies and rods, that I do not like impermeable boots, and that all I know of Messina quails is that in a residence of several years in Southern Italy I come to the conclusion that I would rather have one Hoosier Bob White than four migratories. Furthermore, tell that fraternity that it's all a mistake, that I'm not the man, but that James M. Bradshaw is the man, and for this and all other favors, I am gratefully yours, J. C. FLETCHER.

PIGEON MATCHES.

NEW YORK—*Port Morris, March* 25.—Knickerbocker Gun Club; regular monthly shoot for club medal; 15 balls; 3 Huber traps, 18 yards rise, Bogardus rules; N. Jacques, referee; very windy:

Hover	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1—14
Potter	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—14
Dannerlein	1 1 1 1 0 1 1 0 1 1 1 1 0 1 1—12

C Meyer	1 1 0 1 1 1 0 1 1 1—8	C Moller	1 0 0 1 1 1 0 0 1 1—6
C Toujes	0 1 1 1 1 * 1 1 0 1—7	W Manzels	0 1 1 * 1 1 0 1 * 0—5
D F Moller	0 1 1 0 1 0 1 1 1 1—7	F Miller	0 0 1 1 1 0 0 1 0 1—5
J M Moller	0 1 1 1 1 0 1 0 1 1—7		

Ties on nine.

J Moller	1 0 1—2	J H Miller	0 1 0—1

After the club shooting a team match was shot at five birds as follows:

J Moller	0 1 1 1 1—4	J H Miller	0 1 1 1 1—4
P Moller	1 0 1 1 0—3— 7	W Mangels	0 0 1 0 0—1— 5

Referee—Mr. J. C. Rapp.

TENNESSEE—*Nashville, April* 3.—A few pigeon matches were shot yesterday near here. The first was for a dog, offered by Mr. Campbell of Maury County. Ten dollars was charged as entrance fee. Kirkman and Perkins tied on five birds, Kirkman winning the dog in the shoot off. He then put the dog up again, same conditions. Mr. Campbell won him with five straight birds. Several sweepstakes were then shot, Charles Newman winning the first, Mr. Gardner the second. Then came two team matches, six on a side—Messrs. Newman, Mitchell, Culbert, Gardiner, Carter and Savage on one, Martin, Campbell, Brown, Buzzard, Valentine and Clinton on the other. Newman's team won first match, Martin's team winning second. J. D. H.

WASHINGTON, D. C., *April* 7.—An interesting match was shot here April 5 at Riley's Corral. The first prize was $12; second, $8; 5 birds each, 21 yards rise, except Messrs. Derrick and Mills, who were handicapped 25 yards each:

Derrick	1 1 0 1 1—4	Woody	1 0 1 1 1—4
Robinson	0 1 1 1 1—4	Lipscomb	1 1 1 1 1—5
Curtin	1 1 0 0 0—2	Mills	1 1 1 1 1—5
Daw	1 0 1 0 1—3	Jones	1 1 1 0 1—4
McLeod	1 1 1 1 1—5	Alexander	1 1 1 1 1—5

Ties on five.

McLeod	0 1 1—2	Lipscomb	1 1 1—3
Mills	1 1 1—3	Alexander	1 0 1—2

First money divided by Lipscomb and Mills; second money by those who killed four each. J. C. B.

KANSAS—*Larned, April* 3.—Glass ball match of Larned Gun Club; three Bogardus traps, 18 yards:

Huntley W T	1 1 1 1 1 1 0 0 1 1 1 0 1 0 1—11
Geo M Cartwright	1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—14

Samuel Thompson	1 0 1 1 1 1 0 1 1 1 1 1 1 1 0—12
F R Poole	1 0 0 0 1 0 0 1 1 1 1 1 1 1 0— 9

Tie on fourteen—21 yards.

Cartwright	1 1 1 1 0—4	Gillham	1 1 0 1 0—3

—See Bogardus' advertisement.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

W. VAN A.—See our last issue for notes on shad blow fly rods.

J. B. T., Eaton, Ky.—For books on taxidermy see answer in last issue.

G. W. B., Philadephia.—We know nothing of the breed of dogs you mention.

J. B. T.—Can procure you "Yachtsman's Handy Book" from England for $1.25. Time, three weeks.

S. M. L., Belleville, Ont.—We have no colored photographs of dogs. We do not know of any breeders in the places you name.

C. H., Ottawa.—An excellent canoe for your purposes, to carry four persons and baggage, is the Berthol boat, of Battle Creek, Mich.

BOYDTON, Va.—Should a setter from English dam and Gordon sire have dew claws on hind legs? Ans. No; it would be a freak of nature if he did.

J. M., Perry.—For particulars of "English canoe" write to Wm English, of Peterboro, Ont. Cannot give you the plans you ask for. Have neither time nor space in this column.

W. S. N., New York.—What kind and color of setter bitch should I breed my dog—by Plunket out of Nellie—to to get the proper result? Ans. To a red Irish bitch. One of the get of Elcho would do well.

H. S, Monroe, N. C.—Please tell me what kind of a bird it is, the head and foot of which I send you? Is it the game snipe we read so much about? I want to know exactly. Ans. Yes, *Gallinago wilsonii*.

R. M. O., Danville, Pa.—Would hard rubber injure silkworm gut if kept continuously in contact with it, as, for instance, if gut leaders were kept in a hard rubber box, or distended on a fly-hook cover? Ans. Where there is no abrasion there will be no chafing, and the gut will not be injured.

DUPONT, Philadelphia.—1. Is there any danger of shells exploding during the loading process? 2. Are the loads hammered in, or forced in firmly by the hand? Ans. 1. Not if placed on a block with a cavity under the cap. 2. The wads should be forced firmly down. We do not believe in hammering.

F. L., Broadway, City.—How many volumes are there already published of "Birds of the Colorado Valley," by Elliott Coues, where can I get them, what will they cost, and what will be the expressage on them? Ans. One volume so far. Apply to the Secretary of the Interior, or to the author, Washington, D. C.

R. E. F., Milford, Mass.—Can you inform me where I can procure togues, or lake trout to stock a pond. And also if they will breed with black bass? Our pond is well stocked with black bass. The water is cold and pure. Ans. Write to E. A. Brackett, Fish Commissioner, Winchester. Bass and lake trout are often found in the same water. If your "pond" is a lake the two fish will not interfere disastrously with each other.

L. C. B., Framingham, Mass.—1. I see in your paper frequent recommendations of Cosmoline for use on guns. A petroleum jelly, under the name of Vaseline, is sold here. In what respect does it differ from Cosmoline? 2. I have a Damascus muzzle-loader of English make, which has seen 30 years of service, bearing the stamp, A. W. Spies. Can you tell me anything of this maker? Ans. 1. They are the same thing. 2. It was probably made in England for a dealer in this city.

CONSTANT READER.—For boat 15½x3ft. 2in. use a sail of the standing lug pattern. Foot, 10ft. 3in.; luff, 5ft.; head, 7ft.; leech, 14ft. Make luff at right angles to foot; then with 7ft. from knock and 14ft. from clew describe arcs. Their intersection will give the peak. Bend halliards 2ft. 2in. from knock, and hoist away. This will give necessary peak to head and rise to foot. Step mast 3ft. 6in. from bow; 11ft. 3in. high above rail, 2¼in. diam. at deck. Boom, 10ft. 8in. long, 1⅝in. at centre. Yard, 7ft. 6in., 1½in. at centre. Sail of light duck or stout sheeting.

U. S. A., Fort Bliss, Texas.—What is it? Size, larger than a black tail deer; color, claybank or light-dunn; horns, flat and approaching each other six inches from the head then widening out; hoofs, mule-like, not cloven; moves clumsily with a canter; called by Mexicans "mulas," owing to its resemblance to the domestic mule. Killed in the Guadaloupe Mountains, December, 1878. Ans. *Quien sabe?* No such animal known to us. One with such a combination of characters would be very extraordinary, and we would give a good round sum for a skin and skeleton, if genuine.

SPRITE, New York.—About three weeks ago my setter pup, aged one year, had two violent spasms, followed by most melancholy howling, and I was advised by a friend to treat him for worms. I did so, as directed by Holberton, and he seemed better till yesterday, when, while quietly walking "to heel," he suddenly keeled over in another fit. What ails him; do you think it can be worms? Ans. The fits are probably due to the presence of worms, which should be determined by his general appearance. If mere puppy fits, caused by dentition, they will cease when the cause has passed away.

DOMINO, Matawan, N. J.—A, B, C and D are playing commercial (buy and sell) at dominoes. The game is 31. B and D (partners, of course) are 28; A and C are 30. It is B's "sell." C offers 3; D raises it to 4; B accepts, making 30 each. B and D take the first trick, making 31, after which A and C take a trick, B and D, however, taking the rest, maintaining their offer. Who wins the game. Ans. We are not proficient in dominoes. Think A and B win, but this particular game and its rules are out of mind. Better consult Hoyle. By the way, we recall that Steinitz is one of the best domino players living, as well as chess players.

W. E. R., Charleston, Vt.—1. Do you charge anything for questions answered in your paper? 2. What is a choke-bored gun, and what advantages does it possess over others? 3. Can a muzzle-loading gun with a common bore be altered to a choke bore? 4. About what would be the cost, and by whom should it be done? Ans. 1. By no means. 2. The barrel is contracted so as to increase the effectiveness of the gun at long range; 1-16 of an inch is regarded as the extreme choke for any gun. 3. Yes. 4. The cost of choke-boring is about $1.50 to $5. Send your gun to the maker, whoever he is. Each maker has a different method of choking.

G. F. W.—Iron centreboards add but little to the stability of a boat of any size, as they cannot be made very heavy without becoming unmanageable. They do not lower the centre of gravity much, as half the board remains in the well, so that the centre of the board would not be much lower than the keel anyway. They have not given satisfaction in the East when tried on shallow boats, though experience with them is extremely limited. Boats for sailing on the coast need only differ from those of the lakes in as far as they are expected to make longer runs and keep the sea more, without the facilities of picking up a port of refuge as readily as on the lakes.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 10, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

HOLY DAY AND HOLIDAY.

Last Thursday, according to time-honored custom, was Fast Day in Massachusetts, and a portion of the Commonwealth observed the anniversary by going to church and eating extra big dinners. If we may draw our inferences from the programmes of events for the day as published in the newspapers, the people who went to church were greatly outnumbered by those who went to theatres, sailed their yachts in regattas, contended in athletic meetings, went forth on sporting expeditions, and indulged in a great variety of other approved amusements. In short, Fast Day in Massachusetts means a day of relaxation and pleasure seeking. Possibly the founders of the anniversary did not foresee this change in the mode of its observance. Nevertheless it is a change which nearly universal history has proved inevitable.

There are suggestive lessons in words. Take that word "holiday." Every school boy who swings his cap and hurrahs for his liberty knows that "holiday" was originally "holy day." But it is possible that he—and some older persons—never reflected upon that element of human nature whereby holy days which were originally set apart for fasting and prayer have always eventually become days of mirth and merry making, while the term "holy day" or "holiday" having wholly lost its original significance has long been applied to times and seasons never holy at all. Among all the anniversaries observed by the Christian world, none should be so full of solemn import as Christmas, which commemorates an event the most momentous in the history of the world. And yet while Christmas is the recognized season for the renewal and interchange of social and household affection and good will, its distinctively religious observance is the exception not the rule, individual not popular. The truth, from which each one will probably draw the conclusions which best suit himself or herself, is that when any community, the world over, appoints for itself a holy day for the observance of religious rites and ceremonies, that day will eventually become one of merriment with just enough religion about it to keep up hollow appearances.

—It is not always possible to keep from having mud thrown at you, but you can always keep from throwing it at others.

THIS IS EVIDENCE.

IN a recent contribution to the columns of our contemporary, *The Scientific Farmer*, Mr. C. J. Maynard gives some very interesting results of his dissection of a large number of English sparrows, and his conclusions will be welcomed by those who have taken sides in the controversy. It is scarcely necessary for us to tell our readers that the war between the friends and foes of this most talked of bird is raging with as much fury now as at any time in the past. The two knights who by common consent have been chosen as champions of the opposing functions, each convinced of the justice of his cause, continue to battle with the utmost vigor.

It is not very long since Dr. Coues proposed to decide the question whether the sparrows were as destructive to insects as their friends claimed, by having a large number of the birds examined, the point in debate to be determined by the contents of the stomachs. Nothing, however, had been done to carry out this plan, so far as we know, until Mr. Maynard took hold of it. It is perfectly obvious that it is only by some such means as this that we can arrive at the true facts of the question which has excited so much interest, not only here, but in Great Britain and Ireland as well. Dr. Coues' proposal was, we believe, that the authorities should appoint persons to make the necessary examinations; but, as no action to this end has as yet been taken, Mr. Maynard, with the assistance of some friends, has dissected no less than fifty-six specimens. It is in Boston, if all we hear be true, that the sparrows are particularly devoted to the capture of insect food and these specimens having been secured in that city, we should naturally expect to find their crops crammed full of insects, to the utter exclusion of seeds, oats picked from the droppings of horses and other animal matter. Mr. Maynard gives the locality in which the specimens were taken as follows:

These birds were killed along the streets from the Watertown arsenal to Winter street, Boston, and therefore I judged that they were fair representatives of the typical, and now famous, sparrows of the "Hub." Through the kindness of my friends, the birds were given to me fresh, and thus I could tell exactly what they had in their crops and stomachs.

It has been stated that it is impossible to detect the presence of any insects, especially of the softer larvæ, after they have been swallowed and partly digested. This is not a fact, however, and any one who has examined the interior of even a strictly insectiverous bird, and in summer, will bear me out in this statement. The wing coverts of beetles, and the harder portions of all other insects, never digest, and thus are always to be seen; while by washing the half-digested mass in water the skins of the larvæ may be found, even after they have been swallowed for some time, and are always plainly perceptible when first eaten. In every case examined, where there was the slightest obscurity as to what had been eaten by the sparrows, I washed the contents of the stomach in water, and in all cases used a lens in determining what they were. In fact, I exercised all the care possible, and am perfectly satisfied that nothing of importance, least of all an insect or anything pertaining to an insect, could have escaped my observation.

The examination of these stomachs began September 17 and ended October 10, fifty-six specimens, as has been said, having been dissected. Now, in how many of the birds do our readers suppose that insects were found? In one-half? in one-quarter? in ten per cent? Hear, oh heavens! and give ear oh earth, to the sad, the disappointing conclusion, that in no one of these fifty-six birds could a trace of insect food be discovered.

With regard to the season at which these investigations were made, Mr. Maynard says:

At first thought it may appear that I have chosen a time which was unfavorable to the English sparrows, as seeds are very abundant in the autumn; but neither are insects scarce then, and I chose this time as being one in which the birds would exhibit their preference, and they certainly have shown no inclination to take insects.

If, however, we turn to some of our native species of sparrows which often take insects (and I will, at the suggestion of my friend, Mr. J. A. Allen, select the song sparrow), we shall find that they eat some insects all through the autumn, although seeds of course, form the greater portion of their food. Yet the few insects taken show that they occasionally prefer them.

In view of the facts above stated we are not surprised to find that the author of this paper concludes that the English sparrows are utterly unworthy of protection. He recommends that the Massachusetts Legislature authorize some competent person to make dissections of the sparrows for a year, so that the point may be decided one way or the other. Finally he says:

I do not consider my proofs as conclusive, but as far as they have gone they are certainly convincing. Yet I am still open to conviction in their favor, if any one will show me one—I ask not ten, or even three, but only *one*—English sparrow from Boston that has voluntarily eaten an insect of any sort or kind, I will at once modify my opinion respecting them.

A valued correspondent, who writes to us from Boston on the same subject, says that the eggs of the sulphur-crested caterpillar (*Orgyia leucostigma*) are as deposited last fall on the trees, houses and fences, only waiting warm weather to hatch out and go to work. He asks: "Why have not the sparrows all this winter devoured these *morceaux?* That they will not eat them I have demonstrated to my entire satisfaction, having tried them several times."

A SOUTH AFRICAN TONGUE.—When St. Paul spoke of the tongue as "a little member" he evidently did not refer to the organ which graces the mouth of a South African Cape buffalo. This beast has monstrous horns, hump and hoofs, but the most remarkably remarkable part of him is his remarkably remarkable tongue, and the use he can make of it when he wants to. He is a morose, ill-natured brute, melancholy, affected with chronic blues, never known to smile. Sometimes he has maniacal fits, during which he plunges madly into the thorny thickets and puts out his own eyes. His favorite amusement is to suddenly dash from his lair upon the unsuspecting traveler, hurl him into the air, trample him, kneel upon him, and then with his tongue actually lick the flesh from the bones.

It is a subject for devout thankfulness that this tongue is indigenous to South Africa, where by prudently staying away from its lickings one may daily save his own life 365 times in the year. If the beast should decide to emigrate, assume pants or petticoats, and turn politicians or go into the tea party business, we know a score of public and private scandal mongers who would have to take a back seat. And speaking of tongues we are acquainted with a woman—

WHAT IS IT?—Rev. W. H. H. Murray's *Golden Rule* prints a picture of a common game bird and asks its young readers to tell what it is. As the cut is a tolerably correct representation of a snipe, the editors will probably find themselves up to their ears in answers. This is an entirely novel method of teaching natural history. We recommend the editors to republish from a certain sporting paper some of those marvelous products of the engraver's imagination, which, despite the names appended to them, no naturalist nor sportsman has as yet recognized as belonging to the feathered kingdom. The *Golden Rule* would be doing an incalculable good to science by solving these puzzling pictorial conundrums.

GAME PROTECTION.

UNIFORM CLOSE SEASONS.

ROCHESTER, April 2, 1879.

EDITOR FOREST AND STREAM:

Your editorial of 27th of March, referring to the means which should be employed to extinguish poachers and their receivers, is most excellent. When you say "Evidently there is no alternative except to make the seasons uniform on all kinds of game, so that there can be no excuse or possible pretext for a man being in the field prior to or after a designated date," and again, "What we aim at is to make the season uniform on all kinds of game alike, beginning at Sept. 1 and closing Dec. 31," you hit the nail on the head. On the single question of a general opening for all shooting in the early autumn, and the absolute prohibition of the pursuit of any game in any way until the designated day, depends the possibility of protecting game. A 1st of September opening (I would rather say the 7th or 10th, but we will not split hairs) will confer on all parts of the State ample time for the exercise of sport. Indeed, the period existing between Sept. 1 and Dec. 31, exhibits the limits between which the instincts of the true sportsman are aroused. The only excuse ever offered in extenuation of summer woodcock shooting, besides the transparent pretext of the "August migration," which has been fully dwelt upon, has been this: "Unless we kill them somebody else will." One has heard a short wail now and then from a very junior class to the effect that if it were not for killing woodcock chicks there would be no summer shooting. Where else has there ever been any? It would add immensely to the literature of the craft if information could be furnished as to the breeding and rearing seasons in other countries being employed for the pursuit of nestlings, on a basis of "sport." It cannot be too frequently urged that every practice inimical to game protection, which is capable of being dealt with by the Legislature at all, may be only satisfactorily treated by restricting all shooting to the one season of a September opening and a December closing. By no process of reasoning can a state of things be reached where game can be preserved in the State of New York by opening the covers, either to close them again or not, in July or August, or by instituting any plurality of seasons.

The one proper and natural autumnal season, however, will, from its law-protected inception, bar the havoc of the last days of June, when multitudinous prowlers ice down bins of half fledged woodcock for sale on the auspicious advent of July to the disciples of Mr. Winkle. It will curtail the license of loafers, who deplete the covers of grouse and quail under the excuse of looking for woodcock. It will encourage farmers, who now look upon an effort to protect birds bred upon their own farms as simply an invitation to ridicule. It will make the game constable a useful officer instead of a nonentity; and, now that there is something intelligible to do and some real end to accomplish, a host of willing deputies will spring up in every town. Then it will remove a practice which every candid man must admit is most unsportsman-like. I am aware that much has been said upon this topic, but now is the time to say more—to impel action, if possible.

It is well to remember the vital elements of the question at this juncture. The meaningless jumble which existing "legislation" presents on this subject is only known as the prize medalist farrago among questions of masterly vacuity. The Governor, in paying a fitting tribute to the genius of this carefully prepared fog, recommends that a simple, intelligible Act be passed in its place. See to it, brother sportsmen, that your influence shall tend to avert a repetition of the sickening delay and destruction of the past twenty years. It is preposterous that the unseasonable pot-hunter and the dealer in his wretched spoils—men who bear the same relation to sport that the burglar and the fence do to legitimate trade—that these men should be factors in an opposition to a legislative boon to the commonwealth. Purchasers of game are, as a rule, persons of education and position, and in large way amenable to the requirements of civilization; but in many instances their city residence renders them unacquainted with the true seasons of game, and they are uninformed as to when it is in perfection and when it is undesirable. These persons belong to one of the very last classes who would knowingly encourage the extermination of the delicious birds they so highly prize. Let us do all we can to preserve our native game. The State of New York is abundantly supplied with beautiful and suitable cover. That a man may ever cast his eye over an autumnal landscape here and deplore a

state of things nearer game extinction than exists now is a reflection suggestive of poverty indeed. But, gentlemen of the State, take the word of a man whose only impulse is conviction born of love for the sport to which you, too, are devoted, and who has had some experience here and elsewhere in its pursuit, and in preserving the means of its enjoyment, that our waning supply of game will be only vastly impoverished by any future act of the Legislature which excludes as a key-note the creation of one, and only one, comprehensive season, commencing in September and ending in December.

JOHN ALDERGROVE.

SIR—I trust some effort will be made by Western sporting clubs to prevent the shooting of young birds long before the season legally commences. Last year in Minnesota, at Sleepeye Lake, I was coolly told: "We don't wait for you Eastern fellows to come out here; we shoot in July and as soon as the birds are fit to fry." He and another shot 200 one day. Why, the birds are so tame at this time that it is butchery. I found on my arrival, on 15th, that most of the young birds had been killed. There is only one way to check this, viz., employ detectives and prosecute. Residents who are willing to put a stop to this are afraid to inform and thereby produce enmity on the part of their neighbors. J. F. M.

ROCHESTER, N. Y., April 3, 1878.

EDITOR FOREST AND STREAM:

I am very pleased to notice in your issue of March 27 an article advocating the season for all shooting to begin on Sept. 1 and end Dec. 31. This is the only way game can be effectually preserved in this State. The summer woodcock shooting has been the great evil, as the acres have been devastated by the process, grouse and quail suffering as much, or more, than the woodcock. This measure comes none too soon, as I am advised of a movement among farmers to forbid any sporting on their lands. This state of things has arisen from the stupid confusion of the law and multiplicity of close days which have prevented farmers from protecting the game. E. C. B.

THE CANADIAN GAME LAWS.

MR. EDITOR: In the interests of game protection I think you should let your readers in the Western States know that, although we have no prairie fowl in this Province (Quebec), it is illegal to have the same in possession between March 15 and September 1, as the law provides that no person shall have in his possession, custody, or care (among other birds and animals) any "grouse" during the period above named. Now, as prairie fowl are grouse, it follows that it is illegal to have them in possession, etc. Here we have a strong Fish and Game Protection Club, but hitherto it has not been deemed advisable to take cognizance of infractions of the law in the matter of prairie fowl, because, as I have already stated, none are found in this Province. Our markets are now full of these birds, and will remain so as long as the weather continues cold enough. It would, of course, be an easy matter for our club to put a stop to the selling of prairie fowl in Montreal, but there would be little use in doing so, so long as it was permitted in other cities and towns in the Province. What I would suggest is, that the Game Protection Associations in the Western States should make an effort to get the associations in this Province to have the law enforced. If this were done it would close a large market against the reception of prairie fowl after 15th of March. As far as the Fish and Game Protection Club here is concerned, I can guarantee their support, provided measures are taken to enforce the law in the other parts of the Province.

CLOSE SEASONS FOR FISH.—Ontario: Whitefish cannot be caught from November 12 to December 1; salmon trout and lake trout cannot be caught from November 12 to December 1; speckled trout, brook or river trout cannot be caught from September 15 to May 1; bass cannot be caught from May 15 to June 15; pickerel (Dore) cannot be caught from April 15 to May 15; Maskinonge cannot be caught from April 15 to May 15. Quebec: Whitefish cannot be caught from November 10 to December 1; salmon trout and lake trout cannot be caught from October 15 to December 1; speckled trout, brook or river trout cannot be caught from October 1 to December 31: bass cannot be caught from May 15 to June 15; pickerel (Dore) cannot be caught from April 15 to May 15; maskinonge cannot be caught from April 15 to May 15.

CLOSE SEASONS FOR GAME.—Ontario: Deer and cariboo cannot be killed from December 15 to September 15; Moose cannot be killed from December 15 to September 15; partridge cannot be killed from February 1 to October 1; duck cannot be killed from January 1 to September 1; woodcock cannot be killed from January 1 to August 1; snipe cannot be killed from May 1 to August 15; quail cannot be killed from January 1 to October 1. Quebec: Deer and cariboo cannot be killed from February 1 to September 1; Moose cannot be killed from February 1 to September 1; partridge cannot be killed from March 1 to September 1; duck cannot be killed from May 1 to September 1; woodcock cannot be killed from March 1 to September 1; snipe cannot be killed from March 1 to September.

In the Province of Ontario it is illegal to sell prairie fowl between March 1 and October 1. I therefore think, that with a little trouble, and without much expense, the sportsmen of the Western States might close the markets of Ontario and Quebec (which, in the aggregate, consume a large quantity), against this species of game, the former on 1st and the latter on 15th of March. I wish you had included the various Provinces of the Dominion in your "Co-operative Game Law" scheme. I inclose a memo. of the close seasons for fish and game in Quebec and Ontario, which shows the most glaring incongruities, especially when it is borne in mind that the dividing line between the Provinces runs for an immense distance through the virgin forest. Deer, for instance, may not be killed on one side of an imaginary line after the 15th December, while on the other side they may be killed up to 1st February. H. R.

Montreal, March 25, 1879.

Our correspondent's suggestions are very proper and timely. With regard to the co-operative scheme, we beg to inform our valued friend that it does include Canadian territory, and the only reason why it was omitted from our published table of February 27, was that we preferred to let each county adjust its close seasons, and then reconcile them to each other. We do not see why the close seasons of Canada should not be uniform with those of the United States. As respects the sale of Western game in Eastern markets, it is obvious, as we have repeatedly urged, that if shooting were prohibited in the West at a given date, and the law enforced, there would be no game to ship eastward or elsewhere.

MASSACHUSETTS FISH AND GAME ASSOCIATION.—At the annual meeting of the Association held in Boston last Friday evening the following officers were elected for the ensuing year:

President, Walter M. Brackett; Vice Presidents, Hon. Thomas Talbot, Hon. Daniel Needham, Hon. Chas. Levi Woodbury, Col. Henry Smith, Augustus T. Perkins, Esq., J. Lewis Stackpole, Esq., William Emerson Baker, Esq. Treasurer, L. M. Chase; Recording and Corresponding Secretary, Walton C. Taft; Librarian, E. M. Messinger; Executive Committee, W. S. Hills, John Fottler, Jr., C. W. Hersey, F. R. Shattuck, C. T. Jenkins; Committe on Membership, L. Prouty, F. Tuckerman, E. Delano.

Various amendments to the constitution were adopted, the most important of which provides for the election of a "Fund Committee" and the creation of a fund by setting aside fifty per cent. of the surplus of each year. The Treasurer reported that he had received during the year $1,086 and expended $971 71, leaving a balance in the treasury of $191 76.

IOWA.—The Iowa game law as passed recently makes it unlawful to net; trap, kill or injure woodcock between January 1 and July 1.

RHODE ISLAND'S NEW LAW.—*Providence, March* 31.—*Editor Forest and Stream:* It is our privilege to chronicle the important fact that Rhode Island—though not the first of the States to make a move towards preventing the total extermination of the tidal fisheries—has taken a conservative step toward the prevention of a total annahilation of all kinds of fishes natural to Narragansett Bay, by the trappers, netters and pound fishermen. For the past twenty years the rapid increase in numbers of traps, nets, pounds and other destructive engines, used to destroy fish in these waters has as could easily have been predicted—nearly destroyed one of the best fisheries in the tidal waters of New England. Why should not the offenders of Rhode Island, or any other State, suffer the penalty of such high-handed outrage against natural laws? Every man of common intelligence and education knows, or might know, that to destroy a greater and greater percentage of the fish that come into certain waters for the purpose of spawning and feeding, must, sooner or later, cause a dearth of this invaluable food. Once these waters teemed with immense numbers and great variety of commercial fish. So with our rivers and streams that once were densely populated with salmon, shad, herring, alewives, and trout. But to-day how does the matter stand? Our prolific bay is nearly barren; our rivers and streams dammed for all time. Cause, total, unjustifiable greed of man. Man, the destroyer, who in his intense selfishness, erected impassable barriers to the ascent of the anadromous fishes, and, to make annihilation doubly sure, speared, netted, and even clubbed to death the remaining few that came below these fatal obstructions, led by the strongest of all instincts of these creatures—nativity and perpetuation of species. In the other case—that of the tidal fisheries—every method of destruction has been put in force, with what result we all know, and a few deeply deplore the ignorance of our fathers and the cupidity of the many who persist in pursuits contrary to all right or reason. But in pondering over this sad state of things I have wandered from the simple statement which I started to make, viz., that Rhode Island has just moved in the matter of arresting the destruction of the last fish in the Narragansett. An act has lately passed both houses of the General Assembly, making it a misdemeanor to take fish—within certain tidal waters, generally known as Narragansett Bay—by traps, weirs, pounds, or other devices of like nature, after sunrise of each Saturday until sunrise on Monday. Penalty, $100 and three months' imprisonment—the latter optional with the judge. The enforcement of this act is left to the Commissioners of Inland Fisheries. After so much effort to obtain this most conservative law, we hope that this great trust placed in our most excellent Commissioners will give us some relief from our present dilemma.

ESPRIT FORT.

ALABAMA CLOSE SEASON.—The Alabama law, approved Feb. 13, 1879, prescribes in the counties of Mobile, Monroe, Baldwin, Marengo, Lowndes, Hale, Dallas, Montgomery, Clarke, Greene, Wilcox, Pike, Talladega, Pickens, Bibb, Autauga, Chilton, Clay and Jefferson, a close season for deer between the 14th of February and the 20th of October; wild turkeys, May 1 and October 20; turtle dove, or mourning dove, April 1 and August 1; quail or partridge, March 15 and September 15; wild duck, May 1 and October 1; no waterfowl may be killed in the night time, nor with float, sneak-boat, box or battery. The mocking bird, cat bird and thrush are protected at all seasons. Having in possession and the transportation of game in the close season is included.

MICHIGAN.—A club for the protection of game and fish has been organized at Cadillac with the following officers: Silas Tam, President; D. E. McIntyre, Vice-President; E. L. Metheany, Secretary; R. McDonell, Treasurer; Board of Directors, G. E Adams, A. W. Mitchell, A. K. Moyer. The editor of this journal acknowledges the courtesy extended in his election as an honorary member.

MICHIGAN—*East Saginaw, March* 31—*Editor Forest and Stream:* One clause in your digest of the new Michigan Game Law, in your last issue, is obviously a mistake, viz.: "No person shall hunt deer in the Upper Peninsula from September 1 to December 15, or in the Lower Peninsula from October 1 to November 15." This should read, "Save only from September 1 to December 15 in the Upper Peninsula, and from October 1 to November 15 in the Lower Peninsula." Another clause prohibits the killing of deer in water, and the use of hounds in the Upper Peninsula. With the exception of the hounding clause, the bill is substantially as recommended by the Michigan Sportsman's Association at its meeting of January last. The bill has passed the Senate, and is now in the hands of a committee in the House, who have agreed to recommend to the House concurrence in the Senate's action. It will come up in the House for final passage this week, and probably by your next issue will have become a law.

H. B. RONEY, Sec. Mich. Sportsman's Asso'n.

INDIANA.—Hope, Ind., has a recently organized "Society for the Protection of Birds and Game." The officers are: President, John Clouse; Vice-President, Christian Bauer; Secretary, Francis Rothrock; Treasurer, Joseph Holder; Prosecuting Committee, George W. Conner, J. D. Sidener, M. H. Boswell, John E. Gilliland, David Reed, Anderson Shore, Thomas Clouse.

The Rifle.

MASSACHUSETTS—*Gardner.*—The Gardner Rifle Club opened shooting for the season at Hackmatack Range, Fast Day, April 3; distance, 200 yards, off-hand, ring and Creedmoor targets; open to all; no restrictions in regard to rifle; fee, two cents per shot:

	Ring.	Creed.	Ring.	Creed.	Totals.	
G F Ellsworth	84	45	80	44	163	89
H C Knowlton	70	45	84	46	163	90
Chester Hinds	75	44	84	45	159	89
G R Pratt	81	45	69	44	150	89
C O Bent	73	45	69	44	150	89
F E Nichols	71	44	75	44	146	88
I N Dodge	62	43	76	43	138	86
Leon Walker	69	42	54	43	123	84
Amos Coleman	43	40	60	41	103	81
Fred H Knowlton	50	42	70	46	120	88

The match was a very spirited one, and at the close each selected his prize as follows: Ellsworth, folding chair; H. C. Knowlton, broom; Hinds, bracket; Pratt, hat brush; Bent, twenty-five cents; Nichols, brush and comb; Dodge, toy plane; Walker, dozen of eggs.

Boston, April 5.—The regular monthly prize shoot for April at the Mammoth Rifle Gallery has opened with some very brilliant shooting; the record standing, 150 feet, rounds 5, possible 40:

W A Pollard	5	4	5	4	5	5	5	5—38
C Edwards	5	5	4	4	5	5	5	5—38
George Lamb	5	5	4	5	5	4	5	5—38
Frank Holds	5	5	4	5	5	5	4	5—38
A P Holman	4	5	4	5	5	4	5	5—37
A W Robinson	5	5	4	4	4	4	5	5—36
Prescott Ely	5	5	4	4	4	4	5	5—36
A E Robbins	4	4	4	5	5	5	4	5—36
E P Dickerman	5	5	4	4	4	5	4	5—36
L W Farrar	4	5	4	5	4	5	5	4—36
M L Pratt	4	4	5	4	4	4	5	5—35
Geo E Everett	5	4	4	4	4	4	5	5—35
F H Harmon	5	4	4	5	4	4	5	5—36
H L Brown	4	5	4	4	5	4	5	5—35
H F Borden	4	4	5	4	4	5	5	4—35

Brooklyn, March 5.—A glass ball match took place, in Flatbush, between Eugene M. Boughton, a professional, and John Schliemann, an amateur. The professional had to break more out of 27 balls than the amateur out of 30 balls; 18 yards rise; 1¼ oz. shot:

John Schliemann....1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1
1 1 1 0 1—27.
Boughton.....1 0 1 1 1 1 0 1 1 1 0 0 1 1 0 0 1 1 1 0 1 1 1 1 0
1—19. KENEBEL.

Boston—Walnut Hill.—Fast Day last week was well kept at the range of the Massachusetts Rifle Association, and many persons took advantage of the favorable weather to visit the range. The forenoon and early afternoon trains came crowded with spectators, and the several competitions on the list for the day's sport filled well, 90 contestants appearing in the "ring target" match alone. Three contests at 200 yards each were the programme, and while, owing to the brisk 9 o'clock wind, no extraordinarily good scores were made, a high average was maintained. Firing at 9 o'clock, and all the ranges—short, mid and long—were occupied a major portion of the day, some fine work having been done at the 800, 900 and 1,000 yards distances by Messrs. Gerrish and Brown, the latter rolling up respectively 73, 72 and 68, or 213 out of a possible 225. At the mid-range excellent scores were put in by several of the competitors, though no official record was taken. The first regular competion concluded was the "amateur series" at 200 yards. This had 32 entries, the best scores running:

G L Winship	4	5	4	5	4	5	4	4—44
J Borden	5	3	4	5	4	4	5	4—43
C L Meiggs	5	4	4	4	3	4	5	5—42
C R Griffing	5	4	3	4	5	5	4	4—42
E W Archer	4	3	5	4	4	5	4	3	5—42
A B Archer	4	4	4	4	5	4	4	4	4—41
F E Stimpson	4	4	4	4	4	2	5	4	4—40
A W Howland	4	4	4	4	3	3	5	4	4—40
R Davis	4	4	4	4	4	5	4	4	3—40
G Bodwell	4	4	4	4	3	5	4	4	3—39
S B Henry	4	4	3	3	4	4	5	4	3—38
R P Buzzell	4	5	3	3	3	3	4	3	3—34
F R Shattuck	4	4	0	3	4	4	4	3	4—33

The "ring target" match was open to all comers. The conditions were: Rifle, any within the rules; rounds, 5; entry fee, 50 cents; re-entries permitted; two best scores of each competitor to count; ties to be decided by string measure. Seventy per cent. of the entry fees to be divided into seven prizes. There was good shooting in this competition, which was finally decided as follows, only the names and scores of the winners being given: O. M. Jewell, 43, 41, total 84; J. B. Osborn, 42, 40, total 82; J. N. Frye, 37, 42, total 79; W. Charles, 35, 40, total 75; W. Tyler, 42, 32, total 74; G. L. Winship, 37, 37, total 74; W. H. Howland, 33, 36, total 69.

In the "rapid firing" match but nine competitors entered. This competition was also open to all comers; rifle, any, with pull of three pounds, all to be used as single loaders; each competitor to take his place at the firing point, with loaded rifle, and begin firing at the word "Fire." "Time" to be called at the expiration of 30 seconds, and for any shot fired after the call of time as many points to be deducted as are indicated by the best shot in the score; self-cocking guns to concede four points to other rifles; to be decided by most hits, fewest outers, fewest inners, etc.; entry fee, 50 cents; re-entries permitted; 70 per cent. of the entry fees to be divided. Following is the result: Peabody-Martini, D. Kirkwood, eight rounds, self-cocking rifle, total score 27, corrected score 33; W. Tyler, six rounds, Springfield rifle, corrected score 21; O. M. Jewell, five rounds, Maynard rifle, corrected score 20; W. H. Jackson, six rounds, self-cocking rifle (Borchardt), total score 20, corrected score 16; J. N. Frye, four rounds, Springfield rifle, corrected score 16; W. Lithgow, three rounds, Springfield rifle, corrected score 11; T. Penrose, three rounds, Springfield rifle, corrected score 10; H. B. Henry, five shots, self-cocking rifle (Borchardt), total score 13, corrected score 9; C. U. Meiggs, three rounds, Maynard rifle, corrected score 9.

Medford—The Medford Amateur Rifle Association held the first competition in the April series Wednesday afternoon, the 2d inst., at Bellevue range, Medford; 200 yard; rounds, 10; rifle, any within the rules; off-hand, all comers. The principal scores stood:

J B Osborn	5	5	5	5	4	5	4	4—40
A B Archer	5	5	4	4	4	5	5	4	4—45
C H Russell	4	5	5	4	4	5	4	4	4—43
K Sawyer	4	5	5	4	5	5	4	4	4—42
E W Archer	5	4	4	4	4	4	5	4	4—42
H Withington	4	3	4	5	4	4	4	5	4	4—41

On Thursday (Fast Day) a large number of riflemen assembled at Bellevue range at 9 A. M., to shoot in the classified competition, with following scores:

First class.

H H D Cushing	5	5	4	4	5	5	5	5	5	5—47
H K Richardson	5	5	4	5	5	5	5	4	4	5—47
C H Russell	4	5	4	4	5	5	5	4	5	5—46

Second class.

J H Eames	5	5	5	4	5	5	4	4	4	5—45
W G Tousey	4	4	5	5	4	4	4	5	5	5—41
H S Harris	4	4	5	5	5	4	5	4	4	4—44
E Wyman	4	4	4	4	4	4	5	4	5	5—43
J R Teele	4	5	3	4	4	4	3	4	5	5—42
G H Howe	4	4	4	4	4	4	5	4	4	4—41
D N Howard	4	4	5	3	4	4	4	4	4	5—41
E S Piper	5	4	4	4	3	4	5	4	4	4—41
W E Gibbs	4	4	4	4	3	4	3	4	4	4—38
W P Metcalf	4	3	4	4	4	4	4	4	4	3—38

Third class.

E F Kendrick	3	5	5	4	5	4	5	4	5	4—44
F E Garden	5	4	4	4	4	4	5	5	4	4—43
G B Gill	4	4	4	4	4	4	4	4	4	4—38
F A Tucker	4	5	3	2	3	4	5	5	2	4—38

The following are the winners of prizes in the "March series": First class—First prize, J. B. Osborn, 66; second prize, H. H. D. Cushing, 66; third prize, H. Withington, 65. Second lass—First prize, E. S. Piper, 61; second prize, G. H. Howe, 60; third prize, E. F. Kendrick, 59.

CONNECTICUT—*Collinsville, April* 3.—At a regular meeting of the Canton Rod and Gun Club held to-day, the following scores were made by the members; off-hand, 200 yards, 10 shots:

	Mass.	Creed.		Mass.	Creed.
J D Andrews	102	46	O B Hull	93	42
J Hamilton	97	43	G F Lewis	92	41

At the meeting last week the scores were:

O B Hull	94	41	J D Andrews	82
J Hamilton	94	42	W Mills	81
G F Lewis	92	42	H Kouold	73
J Laubenstein	84	41	J Pister	64

NEW HAVEN RIFLE ASSOCIATION.—There will be a prize meeting of the New Haven Rifle Association at Quinnipiac Range, near New Haven, to-morrow, commencing at nine o'clock A. M. There will be "all-comers" and "military" matches, "pool" shooting, etc., at the 200-yard and 500-yard ranges. In the matches, cash prizes will be given in the proportion of one prize to each ten entries, and re-entries will be allowed.

NEW YORK MILITARY RIFLE PRACTICE.—General Wingate under date of March 27, issues his preliminary circular, for the season of 1879. The experiences of the several preceding season is seen in the more business-like grasp of the subject and the succinct directions given for the work in hand. He says:

It is recommended that the shooting in each Division should commence with a day devoted to practice for the Marksman's Badge by the present Marksmen, and those known to be likely to qualify. This practice should be optional. Those who qualify are not to shoot further but may be required to act as instructors, or to perform any other military duty required by their officers. All others must shoot through the regular classes prescribed in the Manual, and are prohibited from firing in any class to which they do not belong.

The allowance of ammunition and transportation having been limited, no pains must be spared to obtain the best results with what is available, and with the greatest saving of time to the officers and men. The detatchments sent to the ranges should be no larger than can be conveniently handled during the time available, and all the details of their practice carefully arranged beforehand. The men should be instructed as much as possible while waiting their turn to shoot, and should have their sights blackened, and their correct elevation and windage given them before going to the firing points.

All Inspectors of Rifle Practice should use their utmost exertions to cause the various companies of their commands to be thoroughly instructed in position and aiming drill before the drill season closes.

It is a waste of ammunition for men to shoot more than twice at the same distance in any class on same day.

In view of the limited amount of transportation and ammunition available, the rule prohibiting musicians from shooting is to be strictly enforced by all Officers and Inspectors of Rifle Practice. This rule includes drummers.

Whenever practicable, the estimating of distances should be practiced.

Scores, in class firing, should be kept by an officer or non-commission officer of a different company from that firing, is to be recognized, except in the case of separate companies.

Any amunition may hereafter be used in all matches for prizes offered by the State.

No score made by any officer or man, in class firing is to be recognized, except when made at a target to which he has been regularly assigned, and where his name had previously been entered upon a score blank. All must stand upon the first scores made in any class.

One-half the allowance of ammunition will be issued to each organization on receipt by him of the shells for the first issue.

Attention is called to the loss in re-loading, arising from the shells returned by the various organizations not being forwarded promptly, and in good condition, to the Chief of Ordnance.

They should be thrown in water directly after firing, and allowed to remain until the powder crust is removed. It is better, but not indispensible, to dry them. Special pains should be taken to prevent their being bent or crushed.

A deduction of one cartridge will be made from the allowance of each organization for every three shells not returned, or returned in bad order.

SEPPENFELDT RIFLE CLUB—*New York, April* 4.—Creedmoor rules, 200 yards, target reduced, possible 50: John W. Adams, 47; Henry Jaehne, 47; W. Seppenfeldt, 47; John Rein, 46; A. H. Anderson, 46; John Maher, 46; Max Kern, 46; P. Brennan, 44; Isaac Garrison, 43; Er. Holtzmann, 43; E. T. Mander, 43; Owen Fitzpatrick, 43; John Chambers, 43; Er. Vooth, 43; C. Rasch, 43; Chas. Jaehne, 42; G. C. Walters, 41; O. Decker, 40; Chas. Laing, 38; J. Hagland, 25. The South Brooklyn and the Seppenfeldt rifle clubs will shoot a match on Wednesday, April 16, in Seppenfeldt's gallery, 177 Bowery.

—Hellwig announces a weekly shooting at his gallery, 221 Sixth avenue, every Saturday from 1 to 12 P. M., at point targets reduced for gallery distance. The price will be fifty cents for ten shots, and half of the money paid in during the shooting to go for shooting expenses and the other half to be equally divided on the whole number of points made during the time of shooting, as above stated. Mr. W. Milton Farrow has given a medal to the person making the highest score in ten shots during the time of shooting, at three different days, not necessarily consecutively. The point target is a two-inch carton divided into three equal parts, the outer counting 1, the inner 2, and the centre 3. Shooting to be strictly off-hand with rifle, globe and peep-sight, trigger to pull two pounds, 22 calibre.

ZETTLER RIFLE CLUB, 207 *Bowery*.—Ten shots per man; Creedmoor targets reduced to gallery distance; possible 50:

M B Engel	50	Henry Oehl	47
C Judson	50	D Miller	46
C Fenning	50	G Zettler	46
H Bunzinger	49	G A Schurman	46
M L Jiger	48	B Zettler	46
A E Moore	48	Wm Klein	45
R Zimmerman	48	F Fabarus	45
W M Farrow	47	R Rathbone	45
L Trabel	47	N D Ward	43
M Dorrier	48	C Recht	43

C. VOLLORS, Sec.

NEW JERSEY STATE RIFLE ASSOCIATION.—At the annual meeting of the New Jersey State Rifle Association, held in February, the following gentlemen were elected to fill vacancies: Col. Edward H. Wright, Hon. B. A. Vail, Major F. Frelinghuysen, Messrs. W. H. Inslee, Chas. B. Squire and Frank Hyde. The board reorganized by the election of Col. Edward H. Wright, President; Capt. W. H. DeHart, Vice-President; H. F. Anderson, Treasurer, and P. Bonnett, Secretary. At the regular monthly meeting of the Board of Directors, held 3d inst., it was decided to open the Brinton Range on Tuesday, the 15th of April, with a competition at 200 yards, open to all comers, for the Remington rifle, which was shot for last year and won once by Messrs. Wm. Hayes, W. M. Farrow and A. J. Howlett, to be followed on Saturday, April 19, with the fourth competition for the Ballard rifle. Open to all comers, 200 yards. Programmes will be distributed in a few days, giving particulars of further matches, of which there will be two in each week, on Tuesdays and Saturdays, at 3:30 P. M. All local trains on Central Railroad of New Jersey, and on the Newark and Elizabeth branch, will stop at Brinton Range. The Board of Directors have decided to add 200 feet to the width of the range, which is now 400 feet wide, and put up ten more targets, provided said improvement is sanctioned by the State authorities. The National Guard of New Jersey are now being instructed in armory practice, and will be ordered to the range as soon as the weather becomes suitable. The Board of Directors at their last annual meeting fixed two dollars as the fee for annual membership.

VIRGINIA—*Richmond, April* 5.—The following score made to-day in a match by Mr. C. J. Stokes, with a Ballard rifle .38 cal., demonstrates very clearly that for 200 yards this cal. will do as good work as a .40 cal. The target used was the German twenty-five ring target; the trigger pull, 3lbs.: 20, 24, 19, 22, 25, 16, 24, 23, 23, 22, 23, 19, 24, 22, 25—331. We are now negotiating for a beautiful place in the West End. We will soon have a range equal in natural beauty to any in this country. Z.

OHIO—*Cincinnati, March.*—The Cincinnati Shooting and Fishing Club had their fifth competition for club prizes to-day; distance, 200 yards; position, off-hand:

First class.

T J Baum	4	4	5	4	4	5	5	4	5	5—45
W Hall	5	4	3	4	4	4	5	4	4	5—42
D T Disney	4	4	4	4	4	5	5	4	5	5—42
W Caldwell	5	4	4	4	4	4	4	3	5	4—41
W Hamilton	4	4	5	4	4	4	4	4	4	5—41
G Heusch	4	4	4	4	4	4	4	4	4	4—40
L Fender	3	4	4	4	4	4	4	4	4	3—38

Second class.

A Kochler	4	5	5	4	4	4	4	4	4	5—43
I Topf	4	4	4	3	4	4	4	4	5	5—41

New Orleans, March 55.—Frank Hyde, of New York, who has been here for the last few days, shot a match at Frogmoor this afternoon with Messrs. Glynn and Selph, of the Crescent City Rifle Club. The scores were as follows:

Dudley Selph.

800	3	5	3	5	4	5	4	4	4	5	4—66
900	5	5	4	5	5	5	5	5	4	5	5—72
1,000	5	4	5	3	5	5	5	5	5	5	5—72—210

Frank Hyde.

800	3	5	4	3	5	5	5	5	3	5	4—64
900	5	5	4	5	2	5	4	2	3	2	5—61—125
1,000	Withdrew.										

Wm. Arms.

800	3	2	4	4	4	5	5	5	5	4	5—66
900	2	5	4	4	5	3	3	4	4	4	5—63—129
1,000	Withdrew.										

CHICAGO, *April* 5.—The regular weekly practice of the Thomas Post Club had to be omitted to-day in consequence of some defects in the butts, which are being remedied as rapidly as possible. It is also doubtful whether the Lake View boys are out on their range to-day. Their new range, which will be opened on the 12th inst., is now so nearly completed that one can form an idea of its comfort and conveniences, and I think it will be one of the most pleasant and best arranged short ranges in the country. All the riflemen I have seen since the reception of the FOREST AND STREAM of the 3d inst. have expressed themselves most favorably in regard to the views of Mr. Farrow on "Position" for long range shooting. The back position, "with feet to the foe and face to the sky," seems to us about the *last* position a soldier should take. It handicaps persons of the physical conformation of the President of the New York Rifle Club and the Secretary of the Thomas Post Club, who, in the back position, cannot see anything less than 500 feet in height at 1,000 yards, in favor of the captains (Blydenburg and Lyman) of the two teams, whose slim anatomies are scarcely distinguishable from their weapons at a little distance. The front position, with the knapsack rest, recommended by Mr. Farrow, seems altogether preferable to us. We do not consider the knapsack, to a soldier, in the light of an artificial rest, or at least any more so than it would be to rest his rifle between the toes of his army brogans.

LT. H. DRURY.

THE SEASON OF 1879.—An ex-captain of the American team, speaking recently of the prospects for the opening season, said:

A great many seem to think that interest in rifle shooting is on the wane, while others (and these the best informed) are of the opinion that interest in the movement is spreading widely. To me it seems as though the country at large had but just arrived at a faint conception of the vast importance of the movement to a people like ours, thoroughly republican, distrustful of large standing armies, and wholly dependent in time of war upon the citizen soldiery. Our people are just beginning to understand how important in a country like this is the wide diffusion of a knowledge of the use of arms, and nowhere cana knowledge of the use and power of arms be so easily and well acquired as in the rifle range. What has been done to give us increased facilities for rifle practice this year? And, looking over the work of the past year, we find that much has been done, too. For instance, in New Jersey, mainly through the efforts of one of our veteran riflemen, Major Henry Fulton, two associations have been formed and put in successful operation. The first (the New York Rifle Association) has a range, Brinton, on the line of the New Jersey Central Railroad, distant fifty minutes from New York, the other on the line of the Erie Railroad, distant from this city only twenty-five minutes, accessible by seven ferries, and from all parts of the State of New York by seven lines of railroad. Being so near New York, this range (owned by the Columbia Rifle Association) will be of great use to the New Yorkers, and should be liberally patronized by them, as it seems to meet the long felt want of a range so near the centre of business that one can, with comparative ease, slip across the river, and practice for an hour or two after business hours. The new association has a golden opportunity before it, if it will realize the importance of liberality in its arrangements and dealings with riflemen, and of losing no time in putting the range in condition for use. Creedmoor will undoubtedly continue (as it should) to be the Mecca of American riflemen, and Columbia will be one of its most powerful auxiliaries, as, on its ground, riflemen will be able, with but slight expenditure of time and money to fit themselves to take part in the great meetings held annually at Creedmoor.

OFF-HAND POSITION.—There is a vast possibility involved in the seeming modest request which Secretary Jones makes in the annexed letter. The question is worth discussion, and we will gladly accord all of our readers and practical riflemen an opportunity to express their opinion and narrate their experiences. But spare us! oh, spare us! anything approaching the recoil discussion:

NEW YORK, April 1, 1879.

EDITOR FOREST AND STREAM:

SIR—I have been directed by the executive committee of this Association to request you to invite discussion through the columns of your paper on the question of permitting competitors in military matches to shoot in other than the prone position at distances over 200 yards.

Very truly yours, JAMES H. JONES, Sec'y N. R. A.

Yachting and Boating.

YACHTING NEWS.

NEW YACHTS.—Besides the yachts building mentioned in our various correspondence from all parts of the country, there are quite a number of vessels building, though comparatively few in the yards about New York. Harrington, of Bath, has a schooner of about 50ft. well under weigh for Mr. Copeland, of the Boston Yacht Club. Thos. Armstrong, of East Boston, has rebuilt the sloop *Esperance*, one of Steers' craft originally. Her racing season will give some interesting comparisons between the well-known Steers model and the modern yachts. J. H. Keating, of Marblehead, Mass., has finished a schooner 28ft. keel, 39ft. 4in. over all and 11ft. beam. Pity she has not been yawl-rigged, for she would be a better sailer and quite as handy as with two sticks in her. A large number of small craft are also building at the many ports down East, and the small fry expect a lively season. Alonzo E. Smith will soon put the new 30ft. sloop overboard for Mr. Prague, of New York. He also has other work in prospect. Desmond, of Peck Slip, this city, has his hands full on gig work, having received an order to furnish Mr. Boucicault's new steam yacht with a full line of boats, including a handsome 24ft. gig and a 24ft. steam launch. In the latter he has put some excellent work and material, her deadwood aft being all a solid piece and not built up as usual. Mr. Sam'l Holmes expects soon to lay down a large sea-going yacht for Philadelphia parties. Builders of small open craft have a fair amount of work in hand.

SAILING CANOES.—Mr. Geo. Roahr, of Harlem, has applied to his *Shadow* canoes an elbowed centreboard. The slot and well are very small and pretty well forward. The board is an annular section of about 45 deg., which is passed endwise down through the slot, its circular shape securing a large area and sending this area further aft than the slot. By this means the latter can be small and placed forward out of the way. This makes the *Shadow* an excellent sailer, and as her paddling capacities are fair, she is just what is needed for open waters.

RUSHTON'S SPORTING CANVAS.—Rushton, of Canton, N. Y., has so long made a specialty of light, strong, portable canoes for inland waters that his Rob Roy and traveling canoes are well known and appreciated. For single persons an eleven foot boat is most suitable. This size is 2ft. 6in. wide, and 10in. deep, weighs only 25lbs. to 30lbs., and can be had for about $40. For two or three persons, a suitable size is 13ft. long, 2ft. 10in. wide, and 12in. deep. Weight about 55lbs., and price $50. The models of Rushton's canoes are exceedingly handsome, and though of light scantling, they are so well put together that they will stand a good deal of wear and rough usage.

HANDINESS OF THE CUTTER RIG.—This is what a little shaver of a cutter, 23ft. water-line, does, single-handed, while knocking about the English channel with impunity, unequaled by a 60-feet sloop: Before it came quite dark, and forseeing wind and squalls, I took in the large jib, shortened the bowsprit, reefed the mainsail, and hauled down the foresail, putting up the third jib, and only running the traveler out a third of the bowsprit from the stem, so that it might act as jib and foresail. I now felt quite snug, and lay to for a short time, while I had some grog and food. In practice, the notion that the cutter rig is complicated, owing to her having one more sail than our sloop, does not seem to count for much. So far as

our own experience goes, we never noticed any difference in the amount of work between the two. If there was more to attend to on the cutter, all the work became so much easier that handiness more than made up for complexity. You cannot have one without the other.

PEERLESS YACHT CLUB (San Francisco).—The following officers have been elected: Robert McMillan, President; Chas. W. Starrs, Vice-President; Dan Jones, Secretary; D. McMillan, Treasurer; Thos. Craig, Commander. Another one of those clubs in which all hands are "kurnals, jedges and sich," and no high privates for the rear ranks, which are peculiar to San Francisco. Come, gentlemen, stop such child's play and join an honest yacht club like the S. F. Y. C.

STARBOARD AND PORT.—It was high time that some one should come out most forcibly against the silly crusade recently started in England against the terms starboard and port, and we are glad to see that a sailor has at last taken up the cudgels against the lubbers who would fain substitute right and left and use these terms in a sense conflicting with the nautical conceptions of steering and conning in vogue since time immemorial. The writer in the March number of the *Nautical Magazine*, London, leaves little worth saving of the stupid anarchists, who itch to try experiments, for which there exists no call whatever save in their own narrowed sphere of conception. Steamers may have done away with a good deal of the seamanship of olden times, but the day has not yet arrived for landsmen to mount a ship on cart wheels and steer her as you would a nag before a 'bus. The *Nautical Magazine* is on the right side of the question, and until the movement reaches America, which is not likely, we leave the lubbers and their phantom grievances and petty crotchets in its care. The magazine contains much interesting matter besides. Protection and free-trade crop up again in its pages, while very full accounts of the recent voyages to the Obi and Yenisei Rivers in Siberia afford material for relief to economists seeking for "new markets."

HOLMESBURG YACHT CLUB.—This is the title of a new organization with headquarters at Holmesburg, Pa., on the Delaware. The club's fleet consists mainly of that type which has become peculiar to Philadelphia and vicinity. The officers are: Captain, Charles Myers; President, George Anglan; Vice-President, George Hart; Secretary, Robert Fleming; Treasurer, George Ward. Several other private clubs have sprung into existence, all of which will sooner or later merge into one strong body. Their formation, however, argues much for the spread of the sport among the masses.

NAUTICUS IN THE SOUTH.—Our well-known contributor "Nauticus" has been sojourning in Florida for some time past. This is what he says of the boat for those waters: "Since coming to Florida I have discovered that my favorite model would be comparatively useless in these waters. What is wanted here is a boat that will run on a heavy dew, as most of our water is very shoal, and she must at the same time be a fair sea boat, for a storm in these wide waters is no child's play. Perhaps the sharpie may be the coming boat for Florida, who knows?

OUR BOSTON FRIEND.—Says a correspondent: "One 'Binnacle,' who recently wrote to a small turf paper in New York about the models of D. J. Lawlor, of Chelsea, has made himself the laughing stock among the few that see that journal here in Boston. Commenting upon the schooner now building for Mr. Jones at Lawley & Sons upon a Lawlor model, 'Binnacle' says: 'It embodies all of his many vagaries, and is not much unlike the *Vanitas'* consumptive bow, dropsical stern.' Now, when it is considered that the *Vanitas* is acknowledged to be by far the fastest schooner of her length in these waters, the readers of FOREST AND STREAM can imagine how much the fellow 'Binnacle,' who, by the way, keeps a junk yard in East Boston, knows about Boston yachts."

ORIGIN OF LONG BOWS.—Hollow lines and a long bow are not the result of the divine genius commonly attributed to Geo. Steers, builder of the *America*, but were in this country the result of theoretical investigations by the famous Stevens, of Hoboken. Is is well known that he had delineated the wave-line bow upon paper and attached much importance to it as a necessary adjunct to speed many years before the advent of the famous schooner that turned all vessels end for end. Stevens engaged in some experiments with the old time *Una*, concerning which the following from the *Boston Herald* will be found of interest:

"The *Una*, also a former Long Wharf yacht, has been changed into a schooner. She is now hauled up at Portsmouth, and is being rebuilt above the water-line. The history of the *Una* is one of the great improvements in American yacht building. She made her first appearance in 1845, being built upon a model furnished by George Steers, which combined what were then considered the essential points for great speed, 'a cod's head and mackerel tail.' Her full entrance caused so much resistance forward that it was determined to lengthen her bow seven feet, and in 1846 she showed a marked increase in speed. Subsequently, Mr. Stevens suggested to Steers that if an addition of seven feet had been so great an improvement, how much greater speed could be attained by making it seventeen. Ten more feet were added, and the result was a sloop which is still considered to have been second only to the *Julia*. These experiments may be considered the cause of the supremacy of American yachts over all others. George Steers declared that if it were not for the success of the *Una* he would not dared to have given the *America* her long, fine bow, which upon her triumph over all the English yachts, caused such a revolution in English yacht building."

CUTTER STOCK LOOKING UP.—Piepgras, of Greenpoint, whose yard is located in Huron st., below Franklin, has in hand and nearly finished a fine little cutter of the Corinthian order. She is 24ft. on water-line, 29ft. on deck, 8ft. beam and 4ft. 3in. hold. She will have a small house and cockpit, and will be full cutter rigged, sliding bowsprit and all. Just the style of boat we wish to see displace the everlasting shingle bottoms with their confined quarters, lack of deck room and general unseaworthiness. As this cutter represents a change which indicates an important modification in the coming type of small cruisers, we reserve a more minute description for a future number. The same builder has finished a fine steam launch for Mr. Roosevelt, of Skaneateles Lake, this State. She was built under the superintendence of Mr. Roosevelt Schuyler. Piepgras also expects to lay down another cutter, 26ft. water-line and 7ft. beam, before long. The cutter is evidently destined to become quite popular among those who desire to have a reliable boat under their feet, and combine roominess with handiness and good all-round qualities.

IRON ON THE KEEL.—We are coming to it. What, with the cutters building in New York and the deep keel boats of Boston, it is evident that a new type of boat will soon be evolved. Mr. Rood, of Boston, is now building a sloop 29ft. over all, 26ft. on water-line, 9ft. 8in. beam and 4ft. 6in. draft, with 1,000 lbs. of iron on her keel.

QUINCY (MASS.) YACHT CLUB.—This club now numbers sixty-five members, of whom the very large proportion of forty-two are yacht owners. The craft range from 16 to 30ft.

BUFFALO YACHT CLUB.—The Buffalo Yacht Club have adopted the Seawanhaka sailing regulations, including the Corinthian features.

COLUMBIA YACHT CLUB.—The annual match of the club has been set down for June 23.

EMPIRE (HARLEM) YACHT CLUB.—The following officers have been elected for the year: Commodore, A. I. Bruck; Vice-Commodore, Daniel O'Brien; Rear-Commodore, John S. McDuff; President, N. Lockwood; Secretary, James MacClymont; Assistant Secretary, Wm. Richards; Treasurer, William C. Forman; Measurer, Daniel Quinn, Fleet Surgeon, E. Ruger, M. D.; Judge Advocate, H. Andrews; Chaplain, William H. Sharp. Trustees, George W. Rennert, William H. Decker, L. P. Decker, A. Panicke, John Widder. Regatta Committee—Henry Weyman, Jr., E. J. McDonald, I. Lowenthal, T. Wersbe, Richard Cullen; Sergeant-at-Arms, Edward Phelan. The annual regatta will take place on Tuesday, June 10, to and around Gangway Buoy and return.

SOUTH BOSTON YACHT CLUB.—There were admitted 124 new members for the year against only twenty-four dropped. The fleet comprises 42 vessels; 6 schooners, 24 sloops and 12 cats. The following officers have been elected for the year: Commodore, John M. Charnock; Vice-Commodore, John H. Giblin; Fleet Captain, J. G. Chambers; Treasurer, T. Christian; Secretary, William Morris; Measurer, W. K. Pryor.

BOSTON YACHT CLUB.—A "union regatta," in other words an open match, will be held June 21. Entries accepted from all recognized yacht clubs.

SALE OF THE IDLER.—The schooner *Idler*, Mr. Sam'l. J. Colgate, N. Y. Y. C., has been sold to parties from Chicago. She will hereafter hail from the lakes. This winds up Mr. Colgate's career as a yachtsman, unless he should determine to build again, something that is to be devoutly wished, as the community cannot spare such yachtsmen without seriously feeling their loss. Mr. Colgate is Commodore of the Seawanhaka Y. C. at the present time.

THE MURIEL.—This pretty cutter has been on the screw-docks, this city, during last week, and has had $1\frac{3}{4}$ tons of her inside ballast removed, and the same amount bolted to the keel, making $7\frac{3}{4}$ tons in all outside.

THE QUESTION OF TYPE.

(*Continued from page* 175.)

When I had my yacht completed and commenced to sail her, I was, as may be imagined, somewhat nervous as to the result. I had been solemnly assured that she was too heavy and solid to sail fast, as she would not yield to the sea; that she was over-sparred, and could not stand her canvas; that she had not spars enough, and ought to have more canvas; that she was too blunt-bowed, and would not enter the water right; that she didn't have enough overhang astern; that she needed wider counters to make her sail better;—in short, I got advice from everybody who saw me, gratis, from yacht builders in Boston down to the boy that picked up chips in the ship-yard, and one and all were confident that they knew just how to improve upon my rig or model. I had a constant battle to carry out my idea and rigidly conform to her prototype. Well, we tried her. The first day, the crack deep-water yacht of Lynn came out by preconcerted arrangement, and hitched on, sea smooth and breeze light, and we sailed by her to leeward within a few rods, going three feet to her two. Before my trial trip, some of our yachtsmen had dubbed her "the fisherman," but they soon learned to let me alone. I have tried her with the best fair-weather sloops in this vicinity, and I can work right away from them to windward with a moderate breeze and smooth sea. *Madcap*, among others, hitched on to me while I was going free, being a quarter of a mile to windward, and her bowsprit lapping my after quarter, and in running three miles we were close hauled, having her dead astern and leaving her fast. On another occasion I tried my yacht in a stiff breeze and head sea with *America*, and kept up with her close hauled. Of course, going free, she can outrun me, being longer, the same as she would an English cutter of my size.

So much for the seagoing qualities and speed of my yacht. I think you will agree with me that, being exactly like her fisherman-prototype, I am justified in saying that she has for twenty years been tested in a way that no pleasure yacht is tested in sea going; for, bad as the English Channel may be, I will match a good winter's gale off Cape Ann—such as my boat has weathered (by proxy) for twenty years, many and many a time—and give them odds.

Now for the question of comfort. Your English cutter has her cabin below decks, consequently she has a narrow cabin floor, say 4 to 5ft. On each side are transoms, covering the rise of her skin, between her floor and berths. Even with a cabin 12ft. long this will be found narrow quarters for eight people. The truth is, comfortable room in a cabin must be estimated by the floor, and not by the deck. My cabin floor goes clear across from berth to berth, with no transoms, giving me 12x12ft. of clear floor room. I have easy chairs and common chairs, which can be moved and stretched out or arranged as at home, and plenty of room for them around my round centre-table. In the cutter the only place to put my cabin furniture would be to hang it up to the ceiling. Again, the staterooms in your yawl of 14ft. beam would be narrower than mine. Take out $2\frac{1}{2}$ft. for the passageway between them. There is left $5\frac{3}{4}$ft. of breadth for each stateroom, including berth. Subtract 3ft. for berth (same as I have), and the remainder will be $2\frac{3}{4}$ft., while my floor room is $4\frac{1}{2}$ft. breadth in the stateroom. It is an old saying that the same amount of space in a square room goes twice as far as in a long, narrow one, and I have found it more true in a yacht than anywhere else.

In the next place, I have the most important element of comfort in an American yacht—that is, the house over the cabin. The Englishman does not have it, because he does not need it, for the temperature of Great Britain never varies to that extent to make it uncomfortable below decks. With us the case is different. All along our Atlantic coast our temperature varies 40 deg. in each month. While the Englishman would be cool in his cutter cabin at a temperature of 70 deg., we would be sweltering in the same cabin under a temperature of 95 deg. The natives of Greenland may live buried in the earth to avoid their extreme cold, but we would think the natives of Cuba fools to follow the plan because Greenland set the fashion. No more do I see why I should swelter in a yacht cabin below decks because John Bull adopted that fashion for his comfort. Hence I affirm that a house with its side lights and skylight is absolutely necessary for comfort on an American yacht. I am entirely heterodox on this subject. I have a good house on my yacht, and I would not part with it for any consideration. Last summer, while I lay in Newport harbor, the staterooms of *America* were so uncomfortable below decks that some of the company, as they told me, went to a hotel to sleep in comfort, while my cabin and staterooms were more comfortable than the hotel, within a cable's length of her.

In the third place, my boat is more comfortable than your cutter because she is stiffer. It is all well enough to say that the cutter does not heel over unduly, but that does not help one to warm dinners, eaten as if on board a steamer. *America* does not heel over more than an English cutter, and yet I have been out to sea on the same day with her off Block Island, and had my meals as usual, when she heeled too much to get a warm meal aboard. A cutter carrying her lee rail down to the water is a very trifling thing to endure for a short trip, but when you must work dead to windward for three or four days, and she keeps it up as a business, it gets somewhat monotonous. We have a different climate and a different coast from England, and we will find that our fishermen who weather this climate and run this coast, give us the vessel we want for cruising in every quality except speed, and I believe they have also given us this. I propose that the English cutter or yawl of my size come here, and I will take the ugliest day that blows on this coast, and put to sea with him. The result will be that I shall outwork him to windward without overworking myself, while he will be obliged to work hard in wet and discomfort until he gives up from exhaustion or lays to.

A word or two about rig. Why do our large fishermen all go schooner rigged? Our small ones are, many of them, yawl rigged, and a splendid rig it is, too, for smaller craft. But it is not suitable for craft of large size, which make a business of going to sea. If it were, it would have been adopted among our large fishermen, when for the past twenty years we have had it in daily use on the smaller ones. And if a cutter or yawl rig is not suitable for a business fisherman, how can it be more suitable for a business yachtsman—not a dress parade craft? It is because a large vessel can be handled quicker, easier and safer with the schooner rig. When a yacht is above 50ft. keel, if a yawl or a cutter, her mainsail gets too large to handle readily in a blow, without a large force—and not always then. The schooner, on the contrary, has her sail divided. Take in the foresail, and it is the same as a reef in the yawl or a cutter's mainsail. If the mainsail is to be reefed, the foresail can be relied on to keep her up to the wind and riding easy while doing it, or *vice versa*; and the same is true in handling the jib.

My yacht stands me in to-day $5,000 less than your cutter or yawl can be built for. This is an important item. Yachting is now regarded by many as too expensive a recreation to be indulged in, and unjustly so. Many a man would participate in it if he could do so at a reasonable expense. After the first outlay is made for your cutter, the expense of running her will be greater than mine. I manage my yacht with two men, a sailing master and a boy when at sea, and I can handle her very well with one man less. This could not be done with an 80ft. cutter. I should like to tell you of something new I have adopted in the way of cabin finish, but I have already occupied too much space, the only apology for which is a desire in common with you to find the best vessel and rig for a cruising yacht in our climate and upon our coast. By giving my experience I may assist in the work. To sum up, therefore, I think I have, as compared with your cutter; 1, as good a sea boat (I believe a better); 2, a far more comfortable and roomy one; 3, one as speedy, especially to windward; 4, one with less draught of water, and therefore far better for our coast; 5, a yacht less expensive in the outset, and less expensive to run;—all of which qualities are indispensable in a cruiser, however they may be in a racing machine.

OPEN SEA.

HOW THE WIND BLOWS IN 'FRISCO.

EDITOR FOREST AND STREAM:

Being struck by the statement of your correspondent "Saucelito," touching the 25 to 30 miles per hour zephyrs of San Francisco Bay, I have taken the trouble to investigate the rate of winds as reported from there to the Signal Office in this city, and though I could not get a full report of each day, I subjoin enough to show that the average breeze there is not quite up to our native gales as represented. The observations are taken at 7:47 A. M., Washington time, which would be at about 3 A.M., San Francisco time:

Feb 11	11	miles per hour.	Aug 8	5	miles per hour.
" 12	2	" "	" 10	6	" "
" 13	24	" "	" 31	12	" "
" 14	12	" "	Sept 1	[illegible]	" "
" 15	2	" "	" 2	8	" "
" 16	8	" "	" 8	8	" "
" 17	14	" "	" 20	5	" "
" 18	9	" "	" 26	2	" "
" 19 N W	28	" "	" 27	4	" "
" 20	6	" "	Oct 3	4	" "
March 13	6	" "	" 14	12	" "
" 21	8	" "	" 16	4	" "
" 24	5	" "	" 18	2	" "
" 26	5	" "	Nov 7	4	" "
May 13	12	" "	" 25	4	" "
" 27	4	" "	" 26	1	" "
" 28	12	" "	" 27	4	" "
June 6	12	" "	" 28	2	" "
July 31	6	" "	Dec 1	6	" "
Aug 1	8	" "	" 2	4	" "
" 2	8	" "	" 3	8	" "
" 3	6	" "	" 6	4	" "
" 4	8	" "	" 28	8	" "
" 6	2	" "			

I do not think that a yacht will do any more or less in San Francisco Bay than she can in Long Island Sound, and with a northeaster blowing at the rate of thirty miles an hour I think most craft would not care to beat from Sand's Point to New Haven, or stir from an anchorage.

W. K.

As the winds lull at night time, they may freshen up 10 miles or more during the day, bringing their strength very nearly up to that mentioned by our correspondent "Saucelito."

BOATING AT BINGHAMTON.

BINGHAMTON, N. Y., April 3, 1879.

EDITOR FOREST AND STREAM:

A few days since I paid a visit to the Parlor City, and inspected the quarters of the Argonauts. The club was organised in August, 1875, and has steadily increased its active membership as well as its enviable reputation.

Boating at Binghamton began with a juvenile club called the Acacias, which died several years ago from natural causes. Subsequently another boat club, yclept the Binghamtons, took their place, but expired likewise after a short term of life. The Argonauts then came to the front. Their list includes about fifty names. Their president is a leading banker, and their vice-president a well-known college caremeo. The names of the officers are as follows: Pres., Tracy R. Morgan; Vice-Pres., Geo. S. Lyon; Sec., Chas. E. Ensign; Capt. Geo. T. Rogers; Treas., Geo. C. Pierce.

This club has absorbed most of the property and active members of the defunct Binghamtons, and the result is not only an excellent record, but a strong organization possessed of considerable property. Indeed, the boat-house, which stands on the south side of the "long and crooked" river—Susquehanna—just above the great State Dam and new iron bridge at Rock Bottom, in Millville, is lined on each side with some of the finest shells and working boats. The house is solidly built, about 60ft. in length, is nicely painted, and stands just above high water mark. The club expects to row with the Elmiras at Owego this season, and a crack Brooklyn club is down for a spin over the Argonauts' magnificent course above the dam this season.

Their list of boats is as follows: One six-oared cedar shell; two paper four-oared shells for first-class racing, built by Waters, of Troy; one pair-oared working boat, one double scull, and two four-oared working boats, one of which is a Tyne model, about 50ft. in length, and has never been beaten.

They have never lost a race. Their record is herewith given: One home regatta, 1875—Argo's first crew took first prize for four-oared shell; same regatta—Argo's second crew won a handsome prize over the Acacias; same regatta—contestants, Watkins, Owego, Binghamton, Acacia and Argonaut clubs; regatta at Owego, 1876—Argo's first crew captured silver salver, goblets and pitcher from the Watkins Centennial crew; Owego regatta, 1878—Argo's first crew captured an elegant silver ice pitcher from the Owegos and the Elmiras.

Several years ago I assisted two or three members of the original Binghamton Boat Club in measuring the course. It was done with a surveyor's chain along the middle of the river on the ice. The distance is exactly a mile and five-eighths, and is comprised in the curved area lying between the iron bridge already mentioned and the D. L. and W. Railroad bridge. Courtney has rowed over it, and pronounces it a very pretty stretch of water. The starting-point is on the down-stream side of the railroad bridge, and the finish has usually been located opposite the Argo's boat-house. Harding's bluff, just below the water works, affords a commanding view of the whole course. From the high lands surrounding the Susquehanna Valley Home a comprehensive view of the start may be obtained, and generally the winning boat is easily distinguishable before it has passed out of range below Harding's. The only bad place in the course is where the brook has washed a bar of gravel into the stream, but even there a full hundred feet of water, deep enough to float a heavy working boat, may be depended on in the driest seasons. From mid-stream northeastward, off this bar, the water is very deep, and a south or west wind often renders it very rough, owing to the current, which is most perceptible at the point. Ordinarily, from June to October, it does not average more than two or three miles an hour.

The Argonauts held a meeting March 29, at which provision was made for the requisite repairs to houses and boats. Several new members were voted in. A delegate has been sent to the meeting of rowing men at Gilmore's Garden, and he will bring a new single shell for the club on his return. The club will send a crew to all of the principal regattas which take place this season. EGO.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout—*Salmo fontinalis*, Land-locked Salmon—*Salmo glover*; White Perch.

TROUT FLIES FOR APRIL.

The following are imitations of natural insects which first appear on head springs, and later in the season are found on ponds and rivers:

BLACK GNAT OR MIDGE.—Body and feet, black; wings, sub-hyaline.

DARK CLARET GNAT.—Body, dark claret; feet, black; wings, sub-hyaline.

BRIGHT CLARET GNAT.—Body, bright claret, mixed with yellowish gray; feet, ginger; wings of one sex, hyaline, of the other, ocherous.

OLIVE GNAT.—Body, dark olive; feet, ginger; wings, hyaline.

GRAY GNAT.—Body, dark fox fur, mixed with dark claret; feet, gray; wings, hyaline.

DARK FOX.—Body and feet, dark fox fur, mixed with lemon-colored mohair; wings, sub-hyaline; tail, three fibres of dark gray hackle.

BLUE BLOW.—Same as dark fox, but of blue shade.

POOR MAN'S FLY.—Body and feet, hare's ear and yellow mixed; wings, slightly mottled gray.

BRIGHT FOX.—Body and feet, brightest part of fox fur, mixed with yellow; wings, brightest hyaline; tail, pale yellow.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; smelts, 15; blue fish, 12½; salmon, Kennebec, $1.50; shad, per pound, 20 cents; white perch, 15 cents; green turtle, 15 cents; terrapin, per doz., $18; frost fish, per pound, 8 cents; halibut, 18 cents; haddock, 8 cents; codfish, 8 cents; herring, 6 cents; flounders, 8 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 15 cents; turbot, 18 cents; scallops, per quart, 35 cents; soft clams; 30 to 75 cents; pickerel, per pound, 18 cents; perch, yellow, 10 cents; brook trout, Canada, 35 cents; brook trout, Long Island, $1; red snapper, 18 cents; pompano, 75 cents; prawns, per quart, 30 cents; shrimps, per quart, 35 cents; hard crabs, per dozen, 36 cents.

HOW THE TROUT SEASON OPENED.

Having read in your paper
How trout take a fly,
On the first day of April
We thought we would try,
If the weather was fair
And our health did not fail,
To see if a trout
Really "bit with his tail."
So Mr. E. and myself,
With fly-rod and reel,
Struck out for a stream,
Each to fill up his creel;
But when we arrived
On the north of the hill
We discovered the snow
Was lying there still.
And, to make matters worse,
The wind blew a gale,
And the trout would not bite
With their head or their tail.
But while fishing a pool,
Now what do you think?
One came to the surface
And gave me a wink;
And in order to please him
I threw him the fly,
And he actually jumped up
And bit with his eye!

SANCHO-PANZA.

MR. EDITOR—I send the foregoing as the result of our trout fish on the 1st instant. S. P.
Mifflintown, Pa.

—Mr. Eugene Blackford has four specimens of the parrot fish (*Scurus*). This species was fully described and illustrated in a late number of the FOREST AND STREAM. The largest wild trout received so far weighed 7½ pounds with entrails out. It came from Lake Piseco, Hamilton Co., N. Y.

—Messrs. Conroy, Bissett & Malleson, of 65 Fulton street, have just forwarded an extra fine rubber and nickel salmon reel to Allan Gilmour, Esq., of Ottawa, Canada, who is the proprietor of the celebrated salmon river, the Godbout.

—Mr. Chas. F. Orvis, of Manchester, Vermont, wishes us to inform our readers that he has a very large stock of superfine trout flies on hand, which he is disposed to brag on; also that his trout leaders will *mist*-ify trout as well as some others we read of. These leaders have a series of loops for the droppers by which the droppers are not only put on with little trouble, but the wear and tear of the gut is saved in changing flies.

EIGHT-STRIP BAMBOO RODS.—We were altogether in error in stating last week that L. M. Hoskins, of Owego, was the *only* manufacturer of eight-strip bamboo fishing rods, as Messrs. Buckingham & Perrie, of Utica, have made such rods for a long time. When we wrote, we were for the moment under the impression that their rods were six-strip rods, though having often examined them, we were really better informed. The statement was made inadvertently.

MOVEMENTS OF THE FISHING FLEET.—The marked incident of the week has been the arrival of 3 vessels from Western Bank codfishing. Six Bankers have arrived from halibut trips since our last issue, bringing 200,000 lbs. halibut. Number of Georges arrivals, 11,375,000 lbs. codfish and 5,000 lbs. halibut. One arrival of frozen herring has been reported from New Brunswick. Whole numbers of fishing arrivals for the week, 22. The fish market remains firm, with a light stock in all departments, and prices well maintained. A large portion of the Georges fleet has been detained in port the past ten or twelve days by easterly winds, and many of them have lost their bait from the detention.—*Cape Ann Advertiser, April 4.*

NEW YORK—*Niagara Falls, March* 31.—By the middle of April our creeks will be filled with the plucky little rock bass and perch; then the sport will begin, and indeed we are very hungry for a sun bath as well. We should have had some law passed this winter for the protection of fish in Niagara River, whereby it would have been dangerous for any one to be seen near a seine. Our neighbors over the way—the Canadians—have well protected their water, and it is too bad that ours is not as well secured. Niagara is the true home of the black bass, and the recollections of the sport we have had there with them will brighten up any gloomy day. We introduced a few friends to the sport last summer, and henceforth Niagara is to be their summer home, they say.

H. E. G.

NEW YORK—*Chatham Village, April* 4.—The winds have kept up an almost incessant howl thus far this month. The prevailing clouds, surcharged with fury, shut out the sun and shut in the angler. There is precious little fun in stringing up for trout with the mercury at 20 deg., the wind blowing a gale, the streams brim full, and snow-water at that. Yesterday morning early there was a lull, the wind had fallen, the clouds were gone and the sun came up once again in a clear sky. My neighbor fell in readily with the proposition to try it. Breakfast dispatched, horse in the harness, tackling in the wagon, and ourselves tucked in the robes, we were off for Pulver Creek, a stream a short drive away. Before we arrived there, however, the heavens began again to frown and the winds to blow, and we landed our first and only trout against a driving snow storm, which grew to be so terrific and troublesome as to really force a suspension of operations. Hence, with our solitary beauty, we journeyed homeward through a storm which almost equaled, for severity, any that visited this section during the winter, whose final "laps," extending into April, seem bound to blast the angler's wakeful hopes. Two other members of our club were a little more fortunate. They took an excursion on the second day to the State Line, Mass., and returned in the evening with a fair showing of trout. Six of the larger ones averaged half a pound. The sheriff of our county said to me on Tuesday that he saw at Pittsfield, Mass., on the previous day (April 1), a magnificent lot of trout, which were caught in the streams of the Berkshires. So the prospect brightens. We have only to be patient a little longer till the thermometers wake up and the snow banks melt and the winds go to sleep, and then we shall report bigger and better things, and send you some samples to tickle your palate with. HIX.

—The waters of Hemlock rose and spread over the flat land at its head, last week, and quickly receding, left countless numbers of pickerel lying on the ground. It is asserted that the finny denizens were carried away by the wagon load.

Ellenville, N. Y., March 24.—I notice in your last issue a communication inquiring if any one other than the writer has used the shad-blow wood (*Amelanchier canadensis*) for fly-rod making. In answer I would say that I have used it solely in the construction of my rods ever since I discovered its value, which was about ten years ago. With the exception of split-bamboo, there is no material that surpasses it, in my opinion, for rod fishing.

VIRGINIA—*Staunton, April* 5.—A few of us wet our first line on the 2d inst., in "Ramsay's Draft," about 22 miles west of here; but the wind blew so hard that we soon abandoned the sport, having taken 36 trout in two hours, and "blessed" the wind ten times to each fish. Ice, March, tornadoes and black clouds are not conducive to the piety of the average fisherman. JACK.

WEST VIRGINIA—*Berkeley Springs, April* 2.—We had some very fine bass fishing on the Potomac on St. Patrick's Day. C. P. and myself caught eighteen in three hours, averaging 1½ pounds. Took the red worm equally as well as the minnow. TIP.

TENNESSEE—*Nashville, April* 2.—Col. Akers returned from his Little Harpeth fishing with nine bass which collectively weighed thirty-one pounds. One or two of the larger ones were alive when the Colonel got back home. He told me a curious fact in connection with bass at this season. In the stomach of the adult fish no sign of food could be found save a slimy substance which had the appearance of sediment from the water they had taken in, whereas in the smaller fish the stomachs were filled with flies, bugs and animalculæ. Minnows were the only bait the fish would bite at, and only the liveliest and choicest of them. Another peculiarity about the fish in these waters is, they will not bite except when the wind is in the south or in that quarter. The weather is as yet too cold for the less enthusiastic of our anglers to start out, although at almost every store in the wholesale part of the city preparations can be seen going on for the coming expeditions. J. D. H.

KENTUCKY—*Mt. Sterling, March* 31.—Fishing has commenced in earnest on Red River. One day last week a good string of pike were taken. We first bait for suckers; that brings the pickerel, and the suckers flee. Then we use a sucker for bait and capture the pike. A party started for Licking River to-day. W. VAN A.

FLORIDA—*Halifax Inlet, March* 28.—The fishing has so far been poor this season. Have had only three good days. March 4—two anglers—55 sheepshead, from 2 to 8 lbs. March 19—three anglers—22 red bass, from 4 to 10 lbs, besides many small fish. March 20—three anglers—12 red bass, with some sheepshead, whiting and pig-fish. S. C. C.

JUDICIAL FISHERMEN.—*St. Louis, March* 30.—*Editor Forest and Stream:* With the advent of warm spring weather there is a general desire to get away to the lakes and streams around the city, and our Judges are among the first to "light out." To day's *Globe-Democrat* says: "None of the Circuit Judges were on the bench yesterday. Judges Hindley and Adams went down to Murdock Lake, on Friday night, to hear the case of Hook et al. vs. Bass, Cropple et al. Mr. D. P. Dyer Went along as *amicus curiæ piscatorius*."

J. W. M.

MURDOCK LAKE CLUB.—*St. Louis, March* 27.—The adjourned meeting of the Murdock Lake Club was held on the evening of the first Monday in March, at which a goodly number were present. New officers were chosen for the present year, and each individual member seemed imbued with more energy. Several parties have been down to the club-house for shooting and fishing, and the sport has not been better for many years. It is not an uncommon thing for parties of two in a boat to take from fifty to one hundred and fifty black bass in a single day's fishing, and they bring them all away. I am making my feeble protest against such depletion at this season of the year and just before spawning time. I know it is a great temptation to haul out the gamy fellows when they bite so voraciously. But after awhile we may be wondering why it is that we don't catch fish as we used to. So far we don't hear much from our States Fish Commissioners, but we shall get awake to the necessity of protecting our fish and game by stringent legislation and enforcement of wholesome laws. D. L. D.

AN IOWA FISH SHOOT.—A Vail, Iowa, correspondent, who went out duck hunting, turned his attention to pickerel shooting instead. One of the party shot a pickerel that measured just twenty-six inches. There was nothing peculiar about his outward appearance, but upon being opened he was found to contain a pickerel fifteen inches long, which had been swallowed headforemost. The writer adds: "I measured these two fish carefully that the story might not be exaggerated. Please tell me, is this not almost incredible?"

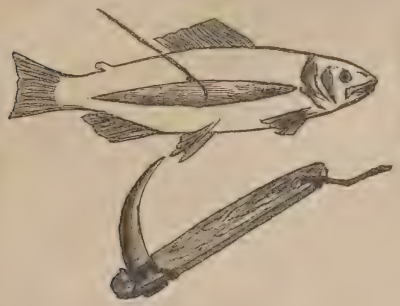
Not at all incredible. This is only a fifteen-inch fish story. We have often told bigger ones than that ourselves Let us see: 15 into 26, once and 11 over.

HOW TO DRAW SILKWORM'S GUT.—An English work entitled "Sea Fishing as a Sport," contains the following directions:—

"Select a number of the largest and best silkworms, just when they are beginning to spin, which is known by their refusing to eat and having a fine silk thread hanging from their mouth; immerse them in strong vinegar and cover them closely for twelve hours if the weather be warm, but two or three hours longer if it be cool. When taken out and pulled asunder, two transparent guts will be observed of a yellow-green color, as thick as a small straw, bent double; the rest of the entrails resemble boiled spinach, and therefore can occasion no mistake. As to the silk gut, if this be soft, or break upon stretching it, it is a proof that the worm has not been long enough under the influence of the vinegar. When the gut is fit to draw out, the one end of it is to be dipped into vinegar and the other end is to be stretched gently to the proper length. When thus drawn out it must be kept ex-

tended on a thin piece of board by putting its extremities into slits in the end of the wood or fastening them to pins and then exposed in the sun to dry; in this manner the best gut is made."

PREHISTORIC FISH HOOKS.—At the last meeting of the American Fish Culturists' Association, one of the members exhibited a fish-hook such as was used by the Pre-Columbian



inhabitants of this continent, at the same time remarking that it was peculiarly strange that so few fish hooks, supposed to be used by this people, had been found. For myself and many others that have opened numerous mounds and kitchen-refuse heaps of these pre-historic people, I can say we have found but a single fish-hook. This lately came into the possession of Mr. H. C. Baldwin, of Elysia, Ohio, and was unearthed from one of the many kitchen heaps that are found in the caves which border the banks of the Black River, which runs along the outskirts of the town. This hook is of bone, beautifully fashioned, without barb, and about the size (though more bulky) of the ordinary black bass hook. Now, I believe that the former dwellers in this country knew how to catch fish as well as ourselves of to day, and not only with the net and spear, but also with baited hook and line; and, what is more, they did not kill for a foreign market or for the sake of killing, as sports of to-day are wont to do; but they fished simply for their daily food As late as 1845 the fish hook here illustrated, and the way of baiting it, was used by the Indians of the Lake Superior region. It is simply a bit of hard wood, from two to four inches long, as may be required, sharpened at each end. The line is fastened in the middle, and on this stick the bait is spitted, according to the size of the fish the fisherman is working for. The hook is baited as follows: One end of it is inserted into the back of the fish, and passed forward until the other end enters the opening, when it is forced backwards toward the tail, and left as seen in the cut, with the line coming out of the original opening. Now, you can imagine what a fast hook a twenty-pound trout swallows, when he has taken into his gullet an eight-ounce herring with this double-pointed stick in the inside. One pull on the line after he has gorged the bait and he is fixed. No bone, iron, or steel hook ever invented could hold him more securely. Believing that this wooden hook (which would readily decay) was the popular one used by "poor LO," and that the bone one was an exception—a sort of luxury—it is easy to be explained why we do not find more fish hooks in the mounds and Kjork Kenmorddings of the country.

Cleveland, March 19, 1879. DR. E. STERLING.

The bottom cut in the engraving represents a bone shank with hook made of a bird's claw lashed on it with a thong. It is altogether primitive, certainly.—ED.

MOONLIGHT—*Halifax Inlet, Fla. March* 28.—*Editor Forest and Stream:* An old fisherman of this coast who has been in the business of catching fish with the cast net all his life—and this is usually done in the night—tells me that he has never found any difference in the keeping of the fish of this coast, whether left out in the moonlight or otherwise. Bartolo Pacetti is an oracle in this region on all fishy matters. S. C. C.

A PHYSICIAN'S VIEW OF MOONSHINE.—*Editor Forest and Stream:* I have read with some interest the various communications in your valuable paper on the subject of the moon's rays and the effects produced thereby, as detailed by your correspondents. First, then, it is stoutly maintained by many that the full moon shining upon, or at least bright moonlight falling upon, fresh fish will cause a rapid and unexpected decomposition or putrefaction, and for which no cause was assigned other than the aforesaid exposure. It is not stated whether the effect is due to the thermic, chemical or light-bearing rays, but mysteriously hinted by some that accute or unexplained powers are exerted. Now, as is well known, the moon as a light-producing body is entirely negative, and all her light, and all the qualities that pertain to it is borrowed from the sun, all the mellow rays she pours down upon us come from the burning heart of that great central luminary, and, as if unsatisfied with the cold and barren surface of the dead moon, are reflected back into space, and so, many of them reach us. Experiment has taught us that the moon's rays possess all the qualities of the sun's rays, but in a much feebler degree, and nothing beyond these—no inherent quality of their own. After what has just been said, the amount of heat imparted to the air near the surface of the earth, and the amount of that heat which is retained—in other words, the conditions of temperature and moisture of the air at the time of the exposure—have much more to do with the putrefication of the fish, etc., than the moonshine. It has been proven that full moon does furnish a perceptible amount of heat when tested by delicate instruments. In the tropics, of course the amount of heat is greater; that animal matter so prone to putrefy as dead fish might possibly be slightly accelerated in this direction by the heat from the moon's rays is possible, but that the moon exercises the influence which has been ascribed to it is preposterous. As to the effects on man, detailed by two of your correspondents (March 13, 1879, page 115), "C. L." speaks of sailors in the tropics who suffered as a result of exposure, as he believes, to the moon's rays, from slight paralysis and a partial blindness. The reverend gentleman of Pennsylvania also details cases of night blindness that had come under his observation, and attributed by him to the same cause. These partial paralyses, as is well known to the medical profession, are peculiarly liable to occur in the person of those greatly exposed to the vicissitudes of climate and weather, particularly if the constitution is somewhat impaired by overwork or insufficiency of food or want of variety in diet, and consequently is frequently met with in civil practice. The curious affection of the vision mentioned by your Pennsylvania correspondent is known to the profession as night blindness (*Hemeralopia*), and is a sort of paralysis or lowering of the functioning power in the retina, and is due to too prolonged or powerful impressions on the retinal surface, and is peculiarly liable to affect the eyes of persons exposed to strong light or glare and those who strain the eyes in any way, as microscopic work at night, etc. A more severe degree of the same affection is often produced by the glare of light on the snow in northern regions, and is known as snow blindness. Long exposure to the glaring rays of the tropical sun, also probably augmented by the exposure of night watches and glare of moonshine, very frequently produces this affection of night blindness, particularly if the man has been subjected to considerable hardships and want of variety or deficiency of food. But that the moon is directly responsible in some peculiar way for this affection is absurd.

Mobile, Ala., March 17, 1879. W. D. BIZZELL, M D.

OPENING DAY ON LONG ISLAND.

EDITOR FOREST AND STREAM:

Snow is no doubt "beautiful," but it was a most unexpected and unwelcome visitor to those of us who made a crusade against the *Saxelinus fontinalis* of Long Island on the first instant. On stepping from the cars the evening of March 31, at the Sayville station, we found snow drifts nearly a foot deep. The wind was blowing almost a gale. The prospects of taking trout the next day did not seem very good. We made up our minds to try it, any way. We went to Foster's most hospitable inn, where a good supper and a good fire braced us up and put us in better humor with ourselves and the world; but not with the weather. Nothing could make us resigned to that. Every few minutes somebody would open the door for the sake of fostering the hope of better "probabilities." The wind would nearly take him off of his feet. At length we went to bed.

The morning was clear, but the wind was fearful. It blew from all quarters at once, with a preponderance of west. The good people of the hotel were highly amused at seeing us start out with our rods and baskets just as if the weather was all that could be desired. It was suggested that there was no harm in taking our rods, but no need in taking the baskets. We did not feel nearly so funny as we looked walking down the road with our coat-tails flying about our ears; with one hand carrying traps and holding on our hats with the other. In fact there was a sadness about our general demeanor which should have melted the hearts of the small urchins who met us on the way to the stream. But they were obdurate; they asked us many questions which we found no ready answers for. They made many suggestions and gave a good deal of miscellaneous and irritating advice. We walked on in solemn silence—we had nothing to say. There are, indeed, times in one's life when silence is preserved because there are no words which afford the slightest relief.

The nine hundred and ninety-ninth cast induced a four-ounce trout to shiver out from beneath a bank and take my fly. This so much encouraged Abbey and me that we made several hundred more casts in a comparatively hopeful and cheerful manner. One o'clock found us with ten infant trout weighing in all two pounds. We began to feel somewhat ashamed of those big baskets we had brought with us—thought our coat pockets would have been large enough. We concluded to again try the lower part of the stream which we had given up as hopeless early in the morning. At this time we were joined by a friend from New York. Six hours' fishing rewarded us with seventeen trout weighing five pounds. Worn out and hungry we returned to Foster's with twenty-seven trout weighing seven pounds.

The next day was windy, "but a man could stand up without sitting down." We began at nine o'clock and fished more than two hours without a rise. Then the circus began. During the time between noon and half-past two o'clock we took forty-six trout weighing from six ounces up to a pound and a half—total weight twenty-four and three-quarter pounds. Then we stopped; we had enough. We could have taken away more, but there is a limit to be set somewhere.

The trout of Green's River—the stream we fished—have a chance at both salt and fresh water. This improves them for the artist, the angler and the epicure. The change of water and food adds vastly to their activity and vitality, gives them that beautiful salmon sheen and imparts a flavor to them which can be easily recognized and appreciated by any one. I have a great respect for your opinion, Mr. Editor, but must out with it and say they are exactly the same variety as the mountain trout of this State—they are veritable *Salvelinus fontinalis*. They have a better place to live in, more kinds of food and more of each kind than their cousins in the mountains have, and of course they look better. There! I won't say anything more now, but, I give you fair warning, some of these days I am "going for you."

When we came to pack our trout on the next morning we found that our two large (much ridiculed baskets) were not large enough; we had to buy another basket. I never expect to see a bill presented to me that will be as cheerfully paid as that one was. I felt like paying for a hamper. We looked out for those small boys; they could not be seen. You may have noticed that it is a peculiarity of the small boy to be aggressively present when he is not wanted and invariably absent when he is needed. They could laugh at our two empty baskets, but could not carry a full one.

If any of your readers want to spend a couple of pleasant days on the Island (not Blackwell's,) let them go to Foster's, at Sayville. They can't fish Green's River, but they can find a stream leased by Mr. Foster, where two splendid messes of trout were taken on the first and second of this month. They must fish entirely with flies—no worms or minnows allowed. CHAS. F. IMBRIE.

EDITOR FOREST AND STREAM:

Seeing so many interesting accounts in your paper of trout fishing I became fired with a desire to do something of the kind also, and toward the first of April went down to Conroy's to purchase an outfit. I picked out a good, strong, serviceable rod, but the clerk there talked me out of it, called it a chum rod, or some such name, and insisted upon my taking a little light thing that looked as if a "shiner" would break it. They also selected some flies and things for me—nothing like as big and handsome as some flies that one of my friends gave me.

The first found me down to a place where I had been advised to go, and early next morning I put on my ulster and started for the pond near the house. To my surprise I found it covered with snow. I threw stones on it until I broke a hole big enough to fish in and then dropped my flies in. They must have forgotten the sinkers, which probably accounts for my catching no fish, as the flies wouldn't sink, although I tried half a dozen on.

After watching patiently for half an hour and getting nearly frozen, I went back to breakfast. The other fishermen seemed surprised when I told them I had no luck, and advised me to put on more flies. The breakfast and a cocktail made me feel better and I started again; but somehow had no better luck and had to go back to the house to get warm, where I found the other fellows playing "poker".

I was persuaded to join in and learn the game, but found it rather expensive, for every time I had curiosity enough to look at a hand I had to lose a lot of checks. After dinner the landlord took me one side and told me that he would show me how to catch trout. Following him to the end of the pond he showed me a sluiceway filled with big trout. Taking a big dip net he soon caught enough for all of us. We transferred blank dollars to his pocket and we went back with a fine lot of trout. JAMES GREEN.

P. S.—I am told by an old fisherman that this is not the way all anglers catch their trout, and that if I will go with him he will show me how to do it. J. G.

NEW YORK, April 7, 1879.

EDITOR FOREST AND STREAM:

At the South Side Club there was a jolly party of about thirty who managed to keep warm in spite of the piercing Northeaster. The morning of the First looked anything but auspicious for a fishing day, but the catch showed that the fears were unfounded, as 293 fish, weighing 198 pounds, were taken, each member having about twelve fish.

The catch on the Second was as good in proportion to number fishing. This result shows that the labor of the fish committee has not been in vain—their efforts in stocking the ponds being rewarded by the results, and with every prospect of very good fishing for the balance of the season. F. DE L.

Rational Pastimes.

CHARLESTON LIGHT DRAGOONS.—*Charleston, S. C.—Editor Forest and Stream:* The annual tilt of the Charleston Light Dragoons came off at the Washington Race Course on the 1st, and was witnessed by a large number of ladies and gentlemen, who occupied the grand stand. It is estimated that there were at least four hundred ladies present, and the Dragoons showed their appreciation of this honor by some splendid riding and gallant horsemanship. The tilt adopted this year was that laid down in Upton's Tactics as the "Regulation Tilt." It is much more difficult than the old Dragoon Tilt, and requires a good rider with an abundance of muscle and nerve to make a good score. In view of the fact that the Dragoons had been practicing the new tilt but three weeks, the scores made were remarkably good, and would compare favorably with those made by other companies who have had considerably more practice. Capt. L. S. Jervey succeeded in carrying off the first prize, a handsome silver goblet, and also the champion gold badge for the best score made during the day, and silver badge for highest score made in one run. Lieut. P. G. Stoney, Privates Whilden, Signeous, Middleton and Walpoole were also winners of handsome prizes. The day was intensely enjoyed by all who were present, and the tilt of April 1, 1879, will always be looked back to as one of the pleasantest of the many pleasant entertainments given by the Charleston Light Dragoons. Y.

PIGEON FLYING.—The sport of flying and homing Antwerp pigeons is starting all over the country, and this season promises to eclipse all others in racing from long distances. Several fanciers of New York, Brooklyn and Hoboken, will soon commence to train a large number of birds to Buffalo, N. Y., Wheeling, Va., and Colmmbus, Ohio. Mr. L. Wenfelner, of Hoboken, is having manufactured by Messrs. Tiffany & Co., N. Y., a solid silver cup, valued at $100, of appropriate and artistic design, that he will present as a prize to the Champion Coop of Homing Antwerps. The distance to fly will be 240 miles as the crow flys; each competitor will have to fly twenty of his own birds, and the prize will be awarded to the owner of the loft which first receives back by flight ten of its birds. We will ask as a favor from the country sporting men not to shoot at any of these birds while being trained, as the owner of a bird so killed may lose thereby a valuable prize, besides the value of the bird, which is considerable.

THE NEW YORK RIDING CLUB.—The annual reception and exhibition of the New York Riding Club was held at Dickel's new riding academy, Fifty-sixth street, last Saturday evening. Twelve riders, gentlemen amateurs, mounted as hunters, rode around the ring singly and in pairs and abreast, and finally performed many pretty circus designs. The "High School" was a solo performance by Mr. A. Bender. Messrs. H. Stoerzer, George C. Clausen, A. Bender and G. F. Eisemann performed an interlude. A quadrille on horseback was admirably rendered, and a "Jeu de Barre" caused great excitement in the audience and led to repeated bursts of merriment and applause. The "Squadron Evolutions" concluded the very enjoyable entertainment.

INTER-COLLEGIATE ATHLETICS.—Representatives from nine colleges of the eighteen composing the Inter-Collegiate Athletic Association, met at the Fifth Avenue Hotel, New York, last Thursday. The officers elected for the following year, were: W. W. Townbley, Harvard, '79, President; W. K. Jewett, Williams, '79, Vice-President; F. J. Porter, Lehigh, '78, Treasurer; Horace Lee, University of Pennsylvania, '79, Secretary; Messrs. Townbley, Parsons and Brooks, Executive Committee. The next annual meeting will be held at Mott Haven, on the grounds of the New York Athletic Club, May 9th. It was decided that the programme of field sports at the annual meeting should be as follows:—Under-graduates—One mile walk, two mile walk, 100 yards dash, one-quarter mile run, half mile run, 220 yards run, one mile run, hurdle race, running high jump, running broad jump, pole vaulting, putting the shot, throwing the hammer, standing high jump, standing broad jump. Graduates—100 yards' dash, one mile walk.

COLUMBIA COLLEGE SPORTS.—The athletic meeting under the auspices of the Columbia College Boat Club, at Gilmore's Garden, last Friday and Saturday evenings, was a grand success so far as regards attendance, competitors and work done. The events of the first evening were as follows:—

Seventy-five Yards Handicap Run; 23 competitors.—D O Fowler, S I A C, 8 yards in 7⅝ seconds; second heat, W G Morse, N Y A C, 7 yards in the same time; third heat, C S Phillips, New York, 6 yards in the same time; H Looyer, 6 yards in the same time; Bertram Hughes, Philadelphia, 5½ yards, won the fifth heat in 7½ seconds; W J Crowley, New York, 4 yards, won the sixth heat in 7¾ seconds, and Horace H Lee, University of Pennsylvania, scratch, in 7⅝ seconds.

One-mile walk for collegians, three competitors, won by Chas Eldridge, C C B C, in 8m.

One-mile walk for college men, four entries, won by R T P Fiske, C C B C, in 5m 12½s.

Light-weight Tug of War—The Union Boat Club team defeated the Scottish-American Athletic Club team in the first heat; the New York Athletic Club defeated the Eagle Base ball Club team in the second heat.

Two-mile handicap walk, first heat ten starters, won by J A Hess, Empire A C, in 1m 40s actual time; second heat, ten starters, won by J B Clark, New York, in 1m 10s.

One-mile handicap walk, first heat seven entries, won by J A

Bresiin, New York, in 8m 29s, actual time; second heat, ten entries, William T Goodwin, 40s, in 8m 15⅗s actual time.

Half-mile handicap run, nine starters, won by R H Sayre, 40 yards, in 2m 10s.

Two hundred and twenty yards run for college men, won by E J Wennell, Harvard, in 26⅘e.

A match race, bicycle vs velocipede, and an exhibition of a chase by the Westchester Hare and Hounds Club, brought the first evening's sport to a close.

The first event Saturday evening was the go-as-please four-hours' race. Of 122 entries there were 102 starters. After the first two hours the laggards began to drop out, but at the end of the walk there were still fifty-three remaining on the track. Chas L Mann, a deaf mute, won with 29 miles to his credit.

Running high jump, won by G L Harris, University of Pennsylvania, with 5ft 3in.

Handicap seventy-five yards, won by H Mooyer, 6 yards, in 7 4-5s.

The hurdle handicap of 440 yards, twenty flights, fell to P McMahan, Jersey City A C, 20 yards in 1m 10 4-5s.

Handicap one-mile run, twelve starters, William B Trask, 44 yds in 5m 3-5s.

The Empire City Athletic Club team beat the Ninth Regiment Athletic Club boys in the heavy-weight tug.

J D Freeman, Manhattan A C, twenty-seven yards, won the handicap quarter-mile run. Time, final heat, 54 2-5s.

The one mile walk, in which the seven-minute men were barred, was won by Charles Eldridge, C C B C. Time, 7m 23 4-5s.

W J Roberts, Columbia, won the half-mile run. Time, 2m 20s.

J A Bresiin, New York, won the final heat of the handicap one mile walk in 8m 6 3-5s actual.

Horace H Lee, University of Pennsylvania, won the level seventy-five yards run for college men. He was set back six feet for false starts. Time, 8 1-5s.

The three-mile bicycle race was captured by Joseph Lafon, Essex A C, in 14m 41⅘s.

The light-weight tug of war, final pull, fell to the New York Athletic Club team, beating the Union Boat Club team. Time, 11m 10s.

Joseph A Hess, Empire A C, 1m 40s., won the final heat of the handicap two-mile walk.

Company B team, Seventh Regiment, N G S N Y, beat the team of Company F, Twenty-second Infantry, N G S N Y, in the military tug of war. Time, 3m 47⅗s.

CRICKET.

—An informal meeting was held on the evening of March 24th, at No. 901 Broad street, Newark, N. J., for the purpose of re-organizing the Newark Cricket Club. Besides a large number of old members, there were enough new faces present to suggest the feasibility of again making Newark a cricketing centre.

J. D. Orton, Esq., was elected chairman, and John Mills, Esq., secretary. The selection and procuring of a suitable ground was discussed, and a committee of three gentlemen —Messrs. Nichols, Elverson and Warner—was appointed to look up the most available locations in the neighborhood and to report at the next meeting, to be held April 7th.

Newark has many admirers of the game of cricket, and, as it numbers many good players, an excellent eleven will undoubtedly take the field this season.

It may be well to give briefly the history of the old club. The Newark C. C. was organized in the winter of 1849 and 1841; the promoters being Messrs. Wheatcroft, Beaver, and the three brothers Elverson. The famous St. George's of New York had been formed in 1839, and the Newark club following closely at its heels was among the first of clubs in the second revival of the noble game in this country. In 1844 the Newark Junior C. C. sprung up, and though this was not an offshoot from the elder club, yet in 1855 it was ingrafted into it; and dating from the amalgamation, the name of the old club was retained.

In 1871 the grounds of the club were cut up into building lots. This proved its death-blow; for though it had weathered the seasons of 1861 to '65, so fatal to many clubs, the loss of its ground and other causes induced the organization to be disbanded, the last match being with the Paterson Club, which it won.

During thirty years the Newark Cricket Club was one of the most active clubs in the country, and for years held its own against all comers, among whose ranks were the St. Georges, Philadelphia and New York clubs. In the early days its eleven was composed of Englishmen, but as it grew the club boasted of excellent native talent. Cricket is a thoroughly English game, and is known as such, and yet, strange as it may seem, almost every prominent cricket club in this country is now supported and managed by Americans.

—The second annual convention of the "Cricketers' Association of the United States," was held in Philadelphia, last Saturday, representatives being present from the following clubs:

St. George, Statin Island, Manhattan, Baltimore, Peninsular, of Detroit; Young America, Germantown, Philadelphia, Merion, Belmont, Chestnut Hill and Oxford. It was decided to hold the next annual meeting in Philadelphia, and the convention agreed to forward an invitation to Mr. A. Marsh, of the St. George Club, who is now in Ireland, to bring over an Irish team. The officers elected for the following year, are: President, A. A. Outerbridge, of Philadelphia; First Vice-President, J. T. Soutter, of St. George, New York; Second Vice-President, J. Harry Lee, of Baltimore; Secretary and Treasurer, J. P. Greene, of Belmont; Corresponding Secretary, William H. Castle, of Germantown; Executive Committee, L. Haines, of Merion; D. S. Newhall, of Young America, and R. Moore, of Staten Island.

In June of last year the Executive Committee of the association did everything in its power to arrange the revival of an international match between the United States and Canada, and for this purpose communication was had with all the Canadian organizations. An unfortunate disagreement between the Toronto and Hamilton clubs, however, prevented Canada from coming to the front, and the match fell to the ground. The bone of contention appeared to be that each of the above named clubs evinced a strong desire that the match should be played in its own city, the Toronto club claiming that as all the international matches had heretofore been played in Toronto, it regarded that metropolis as the most favorable locality to reorganize and to permanently establish the match in question. In July, however, the Toronto club extended a challenge to the United States Eleven; this was not accepted by the American committee, who decided not to treat with any one Canadian club, but only with parties who should represent as far as possible the entire strength of Canadian cricket, in order that the match might have a fairly international character. Thus the matter was dropped for the season of 1878.

It is certainly to be regretted that the Canadian clubs cannot unite and adjust their personal differences, and that the match, United States *vs.* Canada, cannot become an annual fixture, as it would be beneficial to the interests of the game in both localities.

Of the seven international matches which have been played, the United States have won five and lost two. The first of the series took place in New York in 1853, and the last was played in 1860, since which time no regular contest has come off.

The United States eleven stands ready to go to Canada this season, the match to be played annually, alternately in the United States and Canada.

For Forest and Stream and Rod and Gun.

AMERICAN BOWS.

BECAUSE of great cost of the imported bows, and difficulty in obtaining a supply from England last season, many archers were necessarily compelled to use bows of American manufacture, and these were generally of very rude and inelegant form, and made of poorly seasoned and unfit wood. But with commendable zeal several American manufacturers have this year begun the task of supplying the American market with a better grade of bows and arrows, and with most gratifying results. In many of the cities and villages throughout the United States there are local mechanics who are turning out good bows on special orders only, but I only propose in this paper to examine a few bows from some of the larger manufactories from which many of our fine bows will be drawn during the coming season:

The first to which I shall refer is the split bamboo bow of Conroy Bissett & Malleson's manufacture. In the early part of the month of February last, I procured one of their $20 grade, 6 ft. long, 57 pounds weight, having nickel-plated tips, and silk wound at intervals of every two inches from tip to tip. This bow is made of three strips of split bamboo forming the belly, the hollow being filled with a core of snakewood, and the whole backed with a thin band of white second growth hickory. These are put together with boiling glue, and then wound with the green silk bands. These bindings of silk were adapted by the manufacturers at my suggestion, and although they claim that the glue used is so strong that the winding of silk is unnecessary, yet I am fully persuaded that no glue will stand in a 60 pound bow through a season's shooting, unless the bow is so wound, the powerful recoil, equal to twelve hundred pounds, disintegrating the glue. No archer complained last season that the foreign bows did not shoot well, but we all complained bitterly at their extreme tenderness. Not one archer in ten was able to procure one which would last three months. This was due to three reasons: first, the great demand for archery in this country could not be supplied by the English makers, and American dealers ransacked every auction room and warehouse in England for old and rejected goods, and brought them to this market; second, the backed bows were all injured by the ocean voyage; and lastly, the manufacturers finding themselves overwhelmed with orders, hastily worked up half-seasoned and worthless timber and sent out large quantities of very inferior bows. To insure a supply of good bows this season, will require several large manufactories, and much seasoned timber. This latter I understand the Messrs. Conroy, Bissett & Malleson to possess, not only in the way of split bamboo, but snakewood, and lancewood in abundance. The split bamboo bow which I possess is not perfect, but it is a very high grade bow. It is very quick in its action, has a soft and delightful pull, and sends an arrow with enormous force, as low a flight as any bow I have ever used of its weight, with the one exception of a 56 pound Spanish yew, the property of Mr. Henry C. Carver of Chicago.

The bamboo bow is not heavy in the hand, and is in appearance very showy and elegant. But its chief excellence is its durability. No archer need fear to break one of these bows. I have drawn a 37inch arrow to the head repeatedly on mine; have broken several strings and thoroughly tested its endurance, and am satisfied that with half decent usage it will last for many years. This quality of withstanding rough usage is one of the first requisites of a bow, for what archer cares to invest from $10 to $75 in a bow and break it within a week? Not only is the expense an unpleasant feature, but the impossibility of shooting well with a bow until one becomes used to its action renders it very exasperating to the archer to have his bow break just when he is acquiring control of it. I have doubtless broken more bows than any archer in America last season, and besides the expense in money. I may say that the monotonous snapping of all my fine bows did not cause me to "grow in grace." My shooting is very severe upon a bow, from the fact that I always pull the arrow squarely to the head, with a very quick pull, and loose on the draw. I have not known of any other archer whose experience has been so disastrous as mine. So when I find that *I* cannot break the split bamboo bow, I feel confident that no other archer will. The metal tips on these bows are an improvement in two respects; they never split or break as horn do and thereby break the bow, and they are very handsome. Their only defect is their greater weight, acting as a loaded end to the bow causes the breaking of strings. However, strings are cheaper than bows, and one had better break many strings than lose one good bow. Summing up the qualities of the split bamboo bow, I conclude that it is very enduring, handsome, quick in action, very hard shooting,—having a soft sweet pull, and likely to be very popular with archers who are willing to pay a good price for a fine bow. The Messrs. Conroy, Bisset & Malleson have done a good work and no doubt will reap a fine profit during the coming season. I have found by experimenting that my bow at least, and I think other bows of bamboo, will do best with heavy arrows, not less than five shillings weight, 5. 8. being preferable, the peculiar springy leap of the bow when the string is loosed being suited to a strong, rigid arrow. When a light, weak arrow is used the powerful and sudden blow of the string springs the arrow, either breaking it or injuring its flight. Given a strong string, a rigid arrow and a steady pull, and the split bamboo will drive the arrow with beautiful steadiness, and great force.

E. I. Horsman of 80 & 82 William street, N. Y., has begun the manufacturing of fine archery goods at his factory at Little Falls, Rhode Island. I have two snakewood-backed with lance, one amaranth-backed with lance, two lance-backed with hickory, and one self lance, of his make, and I not only give it as my own opinion, but as the opinion of every member of the Wabash Merry Bowmen who has seen them, that they are the finest lot of bows, of those woods, ever seen together. The workmanship is perfect, the joining of the two pieces being a triumph of skill. The handle of plush, the horns, the polish, and every item of finish could not be improved. The two snakewood bows are of 48 and 58 pounds weight, and the pull of each is so sharp and true, that an arrow is carried with a most beautiful flight. Having seen so many futile attempts of our American bowyers to get up a good wood bow last year, I had about reached the conclusion that it could not be done, but I am satisfied that ere the summer is over we will be buying most of our cheaper bows from American makers. Of course when a gentleman desires a fine Spanish or Italian yew bow of a price from $55 to $250, he will send to Europe for it, as several of our archers have done this spring, but for lance, snake, amaranth, bamboo and other bows costing from $5 to $20 each, we will rely upon home makers. I happen to know that Mr. Horsman has prepared a magnificent silver mounted, velvet lined, mahogany case, containing six fine bows, each one a marvel of beauty, and two dozen finest arrows, which he offers as a prize at the Chicago Tournament, to take place in August, 1879, under the auspices of the National Archery Association. This elegant case will not be of less than $125 in value, and will be keenly fought for on the target field. No archer seeing these bows, can doubt their excellence. Their symmetry, the perfect curvature of each limb, the sweetness of their pull, and the quickness of their action proclaim them the perfection of hardwood bows. Of course no hardwood bow, however perfect, can compare with a finest Spanish or Italian self yew, but the majority of American archers will not care to invest $50 to $75 in one bow, and I would not advise the purchase of a yew bow at a less price. Mr. Henry C. Carver of Chicago, Ill. has one of 56 pounds weight, which cost, delivered at Chicago, $77, and one which cost $135. The last is the perfection of the bowyers art. Such bows as these are an endless delight to the owner, but few will be willing to bear such expense. I have two of Aldred's make, one of which cost $49, and the other $77 delivered at Crawfordsville.

The cheaper bow shoots as well as the costlier one, but I think it will not endure so well. Two very fine Spanish yew bows, are among the prizes offered by Mr. Aldred at the Chicago Meeting. Messrs. W. A. Russell, and Charles A. Jay of the Kokomo Archers have each two fine yews of Aldred's make costing about $75 each, delivered. Outside of these I know of no yew bows of more than $30 valuation in America. So long as our archers are using bows of lancewood, rosewood, or snakewood, I would not advise them to import them, for the word bows of Mr. Horsman, the split bamboo of Conroy, Bissett & Malleson, and the three piece bows of Messrs. A. G. Spalding & Bro.'s of 118 Randolph street, Chicago, will give greater satisfaction. These latter bows are made upon special orders only, and are so constructed that it appears almost impossible for them to break. Two thin bands of split bamboo are used to form the belly and back of the bow, the center piece being of the finest heart snakewood. These three pieces are first put together with glue, great care being taken not to race the fine natural enamel upon the bamboo. Then the bow is strongly wrapped from tip to tip with heavy silk, in bands an inch wide and placed about an inch apart. Some of these bows in the hands of members of the Chicago Archery Association have been used constantly all winter, and are now as straight and perfect as the day they were made. Of some forty or more now in use, not one has ever shown an evidence of yielding. As the bamboo on the belly is so hard that it cannot pinch, and the bow is so strongly wrapped that it cannot yield in the glue joints or splinter up on the back, it is difficult to see how one can break. Their shooting qualities are most excellent, they being very quick, smooth in the pull, and causing no jar in the hand at the recoil of the bow. I do not know the cost of them, as the one I have ordered built for me has not reached me yet. I think about $18 is the retail price. Messrs. Spalding will offer some of their finest make as prizes at the Chicago meeting. I do not advocate the sacrifice of buying poor bows from American makers, simply to encourage home manufacture, but when such work as the bows above described are turned out at home, I feel sure that our archers can rely upon getting good gear at less price at home than they can by going abroad. I intend soon to give the result of my examination and testing of American strings and arrows, some handsome specimens of which I have been using for the past three months.

WILL H. THOMPSON.

BROOKLYN ARCHERY CLUB.—The Brooklyn archers met together recently and organized themselves into a club, which will meet again tomorrow for the election of officers and other business. Many of the members of the new club have already acquired considerable skill at the butts. One of the more enthusiastic of them has fitted up a range in the attic of his store, whither he and his comrades repair on rainy days and "keep their hands in." Through the courtesy of Mr. J. Y. Cullyer, the club have secured most excellent grounds in Prospect Park.

AMERICAN MADE BOWS—When it comes to a question of mechanical skill we need not go abroad to England or any other country for good work. Only let American manufacturers understand that an article is wanted and they will very soon supply the demand. A recent illustration of this ready adaptation of skill is afforded by the manufacture of archery goods. When Maurice Thompson wrote the articles for *Scribner's*, which first brought archery into notice as a pastime, he referred to the bows of English makers as the only satisfactory ones in the market. This was all very true at the time, but it is true no longer. Mr. E. I. Horsman, of New York City, now manufactures bows and arrows which are not only equal in every way to the best imported goods, but according to the testimony of the best judges in the country, are a great deal better. We have examined some very beautiful lemon and lancewood, rosewood and snakewood bows, which are beautiful specimens of material and of workmanship. There may be no royal road to good shooting, but if there were it would be by such implements.

A FINE SCORE.—While in Chicago recently as the guest of Mr. H. C. Carver, at Highland Park, Mr. Will H. Thompson, of Crawfordsville, Ind., shot three arrows at a range of 100 yards, driving them all into a circle ten inches in diameter. This heads the list of American scores, and is a feat whose skill will be readily appreciated by our archery readers. We shall not be surprised to chronicle something even more wonderful than this before a twelve-month has passed, for from all appearances, archery is the coming pastime, and when all America comes to squint along the arrow, as all America will before very long, the bowmen who pulled their strings a thousand years ago may look to their laurels.

AN EXCEPTION.—In the race for matrimony it isn't always the girl that covers the most laps that wins.—*New Haven Register.*

MANHATTAN ATHLETIC CLUB.—The open handicap games of this club will be held on their grounds, Eighth avenue and Fifty-sixth street, next Saturday.

—Dr. Willard sums up his views on the temperance question in five conclusions: First—There is a wide distinction, which ought to be recognized by temperance reformers, between fermented and distilled liquors. In fermented liquor alcohol is found in its natural chemical combination; in distilled liquor it is found pure and simple. In the one case it may be employed in diet and for nourishment; in the other case it is to be regarded only as a medicine, and as a dangerous one, to be used only with caution. Fermented liquors include ale, beer, cider, and the various wines. Second—If men would use pure fermented liquors in moderate quantities, as a condiment, and only in connection with their meals, the use need not be harmful, and at least in the case of those past the middle life might be beneficial. Therefore the State ought to license only real inns, and for the sale of fermented liquors alone. Third—Total abstinence is a good thing for everybody, because the use of even fermented liquors is dangerous, in that in some individuals, especially in those who inherit a tendency to inebriety, it creates or awakens an appetite for drink, and healthy persons do not need them. Fourth—Distilled liquors are deadly. Their use is productive of more disease, physical, mental and moral, than that of any other known agent, and produces an immeasurably greater number of untimely deaths. Fifth—Distilled liquor is an indispensable medicine, but it sale should be confined to drug stores, and on the prescription of a physician.

A WOMAN JOCKEY.—In a certain London boarding house, not far from Regent's Park, the guest who comes in late at night will sometimes see a side saddle lying on the floor in the lower hall. Usually it has disappeared before he is down in the morning. If not, a finely-formed, healthy young English woman will be one of the Anglo-American company that gathers at the breakfast table. She is its owner.

This boarding house is her home. Riding horses at races and sales is her occupation. An orphan of respectable parentage, obliged to support herself, the avenues to a livelihood that opened before such a young girl as she, in the crowded, elbowing life of England, were few and unpromising. She had an English woman's love of animals and out-door occupations. And she had dauntless, magnificent physical courage. So she drifted into this strange life.

She finds employment from one end of England to the other. One morning she is off to cab, her saddle beside her, for a horse market in the east of London. The next, perhaps, she is hurrying from her early breakfast to take the train at King's Cross for Doncaster. There is no horse so vicious that she hesitates to mount him. He may fall with her; he cannot throw her.

She is sent for to ride horses that men dare not or will not; horses that have killed their riders more than once, and that will do their best to kill her. But she has a reputation that, for bread's sake and shelter's sake, she cannot afford to lose, and she never declines to mount a horse because it is dangerous to do so. One night she comes home bruised and weak—her horse fell on her to day. Another, her face flushes with satisfaction as she tells her kind friend, the landlady, that her horse won the race.

FINE ARCHERY.

SPECIAL ATTENTION GIVEN TO THE MANUFACTURE OF

SNAKE-WOOD and other FINE BOWS, FINE ARROWS and Archery Equipments.

It has generally been supposed that all fine bows and arrows were made in England Such however is not the case. MR. WILL H. THOMPSON, of Crawfordsville, Ind. (brother of Maurice Thompson), who is universally regarded as an Authority in Archery, writes as follows:

"The best bows I have ever seen are now being made by Mr. E. I. Horsman, of 82 William street, New York. A month ago I would not have believed it possible for us to get an American bow which would at all compare with the better class of English work; but having given HORSMAN'S MAKE a thorough test, I am free to say his Lemonwood and Lancewood Bows are the finest specimens of such bows I have yet seen. His Rosewood bows are simply splendid. But the Snake-wood! Now here comes the rub! How shall I tell just what I think of them! I don't want to say one word which I shall ever have cause to modify, and I shall only say in the simplest and most direct language that they are the finest specimens of wood work I have ever seen. I have searched closely for a defect, but none is to be found.

"The bows are perfect; they are utterly without a blemish from tip to tip. I have owned several fine snake-wood, but never so perfect a bow before. Need I say they shoot as well as they look? My 48-lb. Snake-wood of HORSMAN'S MAKE is the quickest bow I ever saw. It sends an arrow with a flatter trajectory than my old 70-lb. Lance and Hickory. I could not have believed it if I had not seen it.

"I consider that Horsman's Fine Club Arrows are as perfectly fashioned as ever came from Fletcher's hand.

"I feel sure it is the best Arrow in the World. They will be the only Arrow used in America by the time this season is over.

"I intend to shoot them only at all matches during the summer, and give them a chance at the Championship Medal at the Tournament in Chicago next August.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

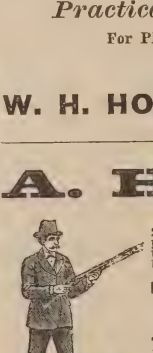
W. H. HOLABIRD, Valparaiso, Indiana.

A. H. Bogardus.



My Patent Rough Glass Balls are now made even, and carefully packed, with 250 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by Transportation,

N. B.—The Bohemian Glass Works advertise what is not so. Beware of them They advertised about one year ago that they would give $1,000 for every ball found weighing over maximum weight, and I found six balls in less than fifty that ran a good deal over weight, and I went to them to get the $6,000, but I did not get it, and I will take $5 for the debt. When in Mobile I saw one of Paine's balls that was hit with four shot, and glanced off without breaking. There is no ball made that gives the same dispute as the feather-filled ball. In the first place there are lots of them that feathers come out of when sprung from a trap, and they break when falling on the ground, and they are given to the shooter whether he hits them or not. They have got to be made so thin, to break when hit by shot, that sometimes one-third of them break by shipping. Do not use any but the best, and that is the Bogardus Rough Ball, which is warranted round, as low in price, and better than any other ball made. My traps are the best.

Price of Balls, 1,000, $14; by single barrel, $4; "Field, Cover and Trap Shooting," $2.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

Mr. Charles Folsom, Esq., agent for Stevens' Arms, 53 Chambers St., New York:

SIR—I have been using the Stevens' rifle in my galleries for the last four years, and I find that it gives the best satisfaction of any rifle made. I can cheerfully recommend it. For beauty and finish, ease of loading, accurate shooting and durability it takes the lead. I now have the first one I ever owned. It has been fired more than a hundred thousand times, and is as good to-day as when I got it. I have rifles of other makes in my racks, but the Stevens' is called for ten times to others once.

Respectfully, R. B. FULLER,

Shooting Galleries, 172 S. Clark st., and 300 State st., Chicago, Ill.

A GREAT INVENTION!

Imitation
STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to { LUM SMITH, Patentee & Mf'r's. 717 Sansom Street, PHILADELPHIA, Pa. } Sole Agt. for U. S & Canada.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass FISHERIES,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the Grand Traverse region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. Brook Trout abound in the streams, and the famous American Grayling is found only in those waters.

The Trout Season begins May 1 and ends Sept. 1. The Grayling Season opens June 1 and ends Nov. 1. Black Bass, Pike, Pickerel and Muscalonge also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points. Take your family with you; the scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with hay fever and asthmatic affections. The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing. During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at Owner's Risk.

It is our aim to make sportsmen feel "at home on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address

Cazenovia, N. Y.

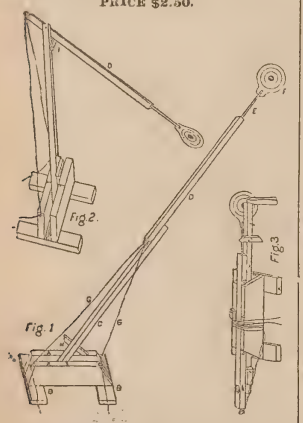
Alford's Practice Target.

PURDY'S PATENT, DEC 1878.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shotgun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.



A. ALFORD, 283 Broadway,
P. O. Box 3,994. New York.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 18, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desir to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and thy other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrel, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

CHICKAREE.

In a wide-spreading tree
A spry chickaree,
With heart full of glee,
Had chattered a noisy good-morning;
And seemed in his fun
To be telling some one
Of the work he had done
His nest in the branches adorning.

A bright squirrel guest
He had brought to his nest,
And was doing his best
In showing his snug little dwelling;
He had said in his pride
He would like to reside
With her as a bride,—
And that is the tale he was telling.

So high in the beach,
So far out of reach,
So cosy for each,
And a brown-thrush too for a neighbor;
She could hear the bird sing
While nuts he would bring—
Or any sweet thing,—
And love would thus hallow his labor.

They could see the sun set,
And tell how they met,
And would never regret
The day they had started together,
To work and to play,
From danger away,
From day unto day,
Whatever the season or weather.

The gay little guest
Accepted the nest—
She thought it was best—
Where the beautiful branches were spreading;
And tho' coy and demure,
Heart willing and pure,
Said "Yes" to her wooer,
And the wood-bells rang out for a wedding.

In the wide-spreading tree
They sing "Chickaree"
With hearts full of glee,
And chatter a noisy good-morning;
While he in his way,
Light-hearted and gay,
Is seeming to say,
Her love now his home is adorning.

J. C. BURNETT.

For Forest and Stream and Rod and Gun.

Down the Connecticut in a Canoe.

OUR trip was made in a double canoe, and, though not of the latest model, it carried us through places which would surely have wrecked an ordinary canoe. It was of half-inch pine, flat bottom, 15ft. long, 20in. across bottom and 32in. on top, with great sheer. It was rigged with low kneeling seats and cross-bars to sit upon, which arrangement gives perfect control in rough water; but its use is attended with rather less comfort than "riding a rail." This canoe weighed about fifty pounds when dry, but when soaked, as on our last carry, a ton or so would be a fair estimate, though, like our big trout, I shouldn't care to see it weighed.

We left Second Lake Aug. 26, with something like a hundred pounds of baggage, too much for the canoe, as we found out in the first rapid. I will not relate in detail the adventures of the first fifty miles to North Stratford, the first town on the railroad, for the canoeist will hardly care to have his boat transported beyond this point. Enough to say that we were four days running this distance, which time covered the most wretched series of mishaps on record. The water was very low, and, in the words of an old colored man who attended us on some of our earlier excursions, the river was "all bottom" and "mighty jubous." "White water" was something we had never encountered before, but a capsize and general smash up the first day out showed us that we couldn't successfully drift through rapids.

From North Stratford the river winds along quite rapidly at first, and then, with long smooth reaches where the quiet beauty of the ever-changing shores and stream, seemed a grateful relief after the three miles of gravel bars above the town. A little back from the river, here grown to considerable size, the mountains rise with sometimes only their forest-covered tops appearing above the banks, while in the wider places the whole landscape appears, the hills gradually rising as they approach the White Mountains, fifty miles south. This is a farming country, and eggs, milk, and supplies generally, are cheap and of the best. Teal are seen every mile or two, as are black ducks and mergansers at that season. Our rough appearance after two months in the woods caused us to be taken for river men; to our advantage, perhaps, for these rather reckless characters command great respect among the inhabitants, who take some care to avoid provoking them. The upper half of the river is generally clear of logs before July, and until this time no canoeing can be done.

The Fifteen Mile Falls commence in the town of Dalton and end in Lower Waterford. Their name would seem to indicate their length, but it is eighteen miles by river from the long bar at the upper end to the rough ledges about the Last Pitch, and for two days and a half our ears never lost the constant roar. We chose our camps between two bars, if possible, but even then the sound would fill our dreams and greet us on awakening. If one wishes to enjoy merely a quiet voyage on smooth water he can get a farmer's wagon and ride around the falls in style, or, if the water be very low, it is better to carry, unless one has a decided taste for wading over boulders and sacking a canoe all day. But with a good state of the water, say a foot higher than is usual in summer, and a double canoe, I could ask no wilder, more thrilling excitement than would be afforded by a run through these rapids. They open with a gravel-bar nearly a mile long, followed by an equal extent of smooth water in which to take breath. I would add, parenthetically, that the term "gravel" seems to be applied by the rivermen to all boulders of less size than a small house. On account of the low water we could get along only by alternately wading and paddling. The flat, water-soaked bottom of the canoe would slide over a rock and yield considerably without splitting, though the sensation produced by this operation, while going with lightning speed down the current, was not agreeable. A boat with an inflexible keelson would inevitably have been wrecked.

We worried along over six or seven miles of shallow, screaming gravel-bars to the Middle Pitch, which was run in good style. In fact, for seven or eight miles further, in spite of some terrible thumps, we ran wherever the volume of water was sufficient. But when we saw the dark water shattered to spray and foaming with a heavy roar down Holbrook's Bar, for the first time we dared not trust our overloaded boat to the current. Heavy rains to the northward had doubled the volume of the river since morning, and for more than a mile we could see the water rushing down, with the huge black boulders standing grim and immovable in the leaping spray. It took us all the afternoon to "lead by" this bar, being nearly swept off several times. Often one of us would slip off a rock into seven or eight feet of water, but the other would hold the canoe fast, and in this way a wetting was the only result. As we had not been dry since leaving the lake, the plunges of this day did not cause much discomfiture. Next morning an easy carry of less than a mile ended our trouble as far as long rapids were concerned, and we were by no means sorry to hear the roar die away behind as the canoe sped away down the swift and still rising river. The surges were then six or seven feet high in the last part of the pitch, but from the high rocky bank a single passage could be traced where a light canoe might live.

The rivermen have worn a good path on the west shore, for even they carry around all but their best boats, though the rocks are far below the surface when the drive passes this point. A few miles below is a short carry at Barnet Pitch, McIndoe's necessitates another of a few rods, and finally a hundred rods around Dodge's Pitch, a few miles from McIndoe's, leaves us clear water more than forty miles to the Lebanon Falls near White River Junction. Here are three pitches which we did not try to run. The Franconia Mountains are visible for many miles below McIndoe's, and a few days' tramp through them and the White Mountains would be a most enjoyable feature of a voyage down the river, but in our own case the time was too limited. Four miles below W. R. Junc. is a little fall not difficult to run. We passed this on our last day's run of over sixty miles, including a short carry at Bellows Falls, and on the eleventh day from Second Lake pulled up at our little wharf at Brattleboro, none the worse for seventy-five days' spent on the Upper Connecticut.

X.

SALMON FISHING IN CANADA.

EDITOR FOREST AND STREAM:

Why is it that so few of our anglers indulge in the glorious sport of salmon fishing? Perhaps because those who tell you your first fish will cost $500 do not want what they call their "sanctuaries" made so public, and therefore scare us by magnifying the cost of the trip. I am satisfied that very few of the many who read your valuable paper are aware that within forty hours by rail from this city as good sport can be found as anywhere under the sun, in a river, thanks to protection of the right sort, where one of the oldest Indian guides told me only last summer there were ten times as many salmon as thirty years ago, when among the first he guided strangers to the fishing grounds, and where an angler can go and have one week's fishing for an expense not exceeding $100, not including tackle, of course. I refer to Metapediac, a delightfully located settlement at the confluence of the Metapediac and Restigouche Rivers, in the Province of Quebec, Canada, a station on the Intercolonial Railway, 302 miles east from Quebec, and reached in less than 23 hours from Montreal, or 12 hours from St. John, N. B.

The Restigouche means "the river which divides like the Hand," alluding to its separating into five large branches, which are the Metapediac or Musical River, Upsalguitch or Blanket River, Wetarrokegewick or Large River, Mistouche or Little River, and the Waagan or Knife River. Where the main river enters the Baie des Chaleurs it is three miles wide and very deep. From tide water to its source, near Lake Temisconata, it is 200 miles, and drains 5,000 square miles of territory. Its waters flow over a bed of rock and pebbles, and are always clear and pure as crystal. The wild grandeur of its scenery is beyond description, especially that portion where it forces its way through the mountains.

Here on its upper waters the eagle, unmolested, builds its nest upon high cliffs, the bear and wildcat secrete themselves in caves and rocky fissures; the moose and carriboo browse upon their favorite food; and salmon, fearless and free, reflect the sunshine in the deepest and darkest pools. At many of the windings a grand panoramic view is produced, impressing one with the idea of some mighty amphitheatre situated in the midst of Nature's wilds, which completely dazzles the eye with delight, and for the moment almost overcomes the mind with awe.

[This description is taken from the "Intercolonial Railway Guide Book." For a lengthy article read *Harper's Magazine* for 1869. It is entitled the "Restigouche," by Chas. Hallock.]

After leaving the cars at Metapediac, you find yourself very near a good hotel kept by Mr. Daniel Frazer. Here you can be fitted out at short notice with all the requisites, guides (Indians), canoes, tents and provisions for camping out if one takes a notion that way, and in fifteen minutes time from the hotel be on the pools where the salmon are lying, and in ten minutes more know what it is to be playing a twenty-five pound fish (which was brought to gaff in forty minutes), as was my experience last summer, although late for the best fishing.

The season when the salmon begins to take the fly varies more or less every year. What is called the first run are all large fish ranging in weight from 30 to 40 pounds each, and even as heavy as 42 or 45 pounds have been taken, and they are fighters I can tell you. It is seldom one of these fish is killed in less than two hours, and we have known some of our most renowned and experienced anglers to get hooked on to a sulker that took him four hours to bring to gaff. When they are in the mood of it you must follow them down swift and dangerous rapids and bring to bear all the skill and knowledge of the oldest and most experienced canoemen, with cool heads and strong arms.

Besides good salmon fishing there are fine large trout to be had in all the streams. You have only to go up the Metapediac River to Cooks Brook on Mill Stream or some of the other well known resorts, and be sure of bringing back a fine string. Last July I put my canoe, guides and other outfit on the up-train that comes along at Metapediac about 7 o'clock A. M., and at 8 o'clock was on the Metapediac River, 20 miles up stream, casting for whatever might happen to be inclined to take the hook. On our way down two salmon were hooked, but as I was a poacher as far as those fish were concerned, it might not be well to say whether they were brought to gaff or not, but what can an angler do who is fishing for trout and salmon insist upon getting on his hooks? At the mouth of the Assametquaghan River, I took in about fifteen minutes 22 trout that weighed when we got back to the hotel at night 49½ pounds, and they were all beauties and very gamy. At my first cast three fish struck me at the same moment, and I was not aware that I had more than one fish hooked until I saw three tails working up stream. As I was heavily rigged, and my guides were getting dinner, I dragged them all out on the stones at my feet, and they weighed 3½, 1¾, 1½ pounds. My Indians said that was the first time they had seen three fish of that size taken at one cast, but it is often done in those streams that abound in large trout. The season when large numbers of trout may be taken is from the middle of August to late in the fall. There never has been a time, even in the early part of July, that I have not had a good day's sport when I went for it.

Your readers may by this time be getting tired of my long story, and want to know more fully the particulars of a trip

that costs only $100. You must calculate on 10 days; 6 days on the pools fishing—viz.:

Fare from New York via Montreal and Quebec, and back to New York	$35 60
10 days' board, at $2 per day	20 00
4 nights in sleeping coach, at $2 per night	8 00
6 days' fishing, $1 per day a rod	6 00
6 days guides and canoe, $2.50 per day	15 00
6 days' board of guides, $1.20 per day	7 20
Extras	8 20
Total	$100 00

For an outfit (always remembering that the best is the cheapest) you will need a good wood rod (I believe the greenheart the best), reel, line, flies and casting lines on leaders, $50 will suffice, but in purchasing be sure you get none but the very best and strongest, and such can be had of William Mills & Son, 7 Warren street, New York, or Bradford & Anthony, 374 Washington street, Boston.

My fishing for several years has been done with one of H. L. Leonard's split bamboo rods, and nothing can equal them for lightness or elasticity and the exquisite finish of the ferrules, requiring no holdfasts to keep the rod from coming apart while casting, as are required on all English or Scotch rods which I have used or seen. Weight is a great consideration in a rod where you are sometimes obliged to swing for hours tempting the fish with every variety of fly in your book when they are not in the mood to be thus imposed upon.

Speaking of Leonard's rods, I am glad to see by your advertising columns that the old (established 1822) and very reliable fishing tackle house of William Mills & Son, No. 7 Warren street, New York city, are the sole agents for this truly celebrated article in piscatorial implements. GHILSE.

For Forest and Stream and Rod and Gun.

THE FLEAS OF FLORIDA.

AT this present time, March, Florida is literally a land of flowers, as the orange trees are in full bloom and the wild flowers of the woods greet the lover of nature. The average winter visitor does not learn much of Florida; he hurries from one fashionable resort to another, and skips all the country between. The best way to study the country and the people, to find game, or to save money, is to keep away from the fashionable resorts. You will learn more in six months than you would in six years' visitations made in the ordinary mode.

This point (Orange Park) is a good base for the ordinary sportsman; the "Park View" house is a good one, kept by Mr. Crittenden, of the "Cooper House," at Cooperstown, N. Y. There are two good stores where almost everything wanted may be obtained at reasonable prices. Jacksonville is only twelve miles distant, with convenient access three or four times a day by steamers. "Doctors' Lake" joins its waters with the St. Johns River a half mile from the hamlet, and its borders furnish hunting grounds for almost everything, from quail to alligators. Fishing is good if you know how, when and where to catch the finny tribe. A few miles back from the river on either side turkey and deer may be found, and if the sportsman is fond of snakes he can find a variety within a reasonable walking distance.

The discomforts of life in Florida are few, but as warmer weather approaches they become more apparent. I have made the acquaintance of the "wood-tick" who "sticketh closer than a brother;" have had some experience with "red bugs," sand flies, etc., but for pertinacity, agility, industriousness and general meanness I cheerfully award the palm to the flea. My experience has been amusing. One day I discovered some ugly red blotches on my person which required scratching. I spoke to several friends about my disease, and they pronounced it the "hives, or herpes," and advised the use of cream of tartar and sulphur. So of course cream of tartar and sulphur occupied a prominent place in my bill of fare for three or four days. As my disease rapidly grew worse, I applied to a medical gentleman for relief; he prescribed sarsaparilla and iron, said my blood was out of order, and a dose or two of pills would do me good. I followed the prescription for two more days of agony and passed two long, sleepless nights. On the next day I concluded I would take a critical inspection of my scarified cuticle, and stripped off all my clothing, and, as luck would have it, I fortunately had on white underclothing, that revealed the miserable little wretches to my astonished gaze—Fleas! Fleas!! Fleas!!! I threw my physic to the dogs, bought a bottle of Persian insect powder, and am once more resigned to life.

Moral—Keep away from all old log houses, pens, dogs, etc., at this time of the year. It is said that when watermelons come fleas go, which is poor consolation, as I intend to be home in New York by June if possible, as by that time the malarial fiend lays violent hands on nine-tenths of the people, or did last summer, if the testimony of residents who are not intrested in selling lands can be believed.

NAUTICUS.

SHOOTING ON THE CHATIWISKA RIVER, FLORIDA.

EDITOR FOREST AND STREAM:

The little village of Bay Port, west coast of Florida, comprises only four families. Fifteen miles north of Bay Port lies the Chatiwiska River, the home of the deer, bear, wild turkey and water-fowl. On account of the dense, low swamp on either side, it is only approached by boat. Seldom does any one visit this wild retreat, and the deer that never before saw a white man suffer a boat to approach very near. At midnight on the 10th of January, my man of all work, Steve, and myself started for the river, and at sunrise we were well up into its mouth We had stripped our oars, and Steve was poling the boat slowly, while I was looking up stream. Suddenly I was startled by Steve shooting both barrels at once. He quickly landed the boat, and, bounding ashore, was struggling with a large buck. I went to his assistance, and we soon had the fellow in the boat. The tide was coming in, and we drifted up stream. I could not withstand the temptation to let go both barrels at a flock, although we had decided not to shoot at ducks, for fear of frightening away the larger game. We picked up nine gray ducks. We soon arrived at the shell mound, and after carefully looking around for game, landed and built a fire, and made a breakfast of broiled deer liver, hot coffee and condensed milk, with sweet potatoes and soda crackers. Steve said he knew of a scrub about one-half mile from the river, and was sure of some large game by going there. I gave him my ride, and I remained on the mound. I made a kind of wooden shovel, and was busy digging into the shell mound. I had already found human bones and pieces of pottery, when I was startled by the "Quit, quit, quit," of a turkey. Looking carefully over the swamp, I saw a turkey coming, seemingly frightened, and looking beyond, I saw a red creature kind of crawling for her. I waited until the turkey was within ten yards of me, then fired, and turning quickly, had a snap shot at the retreating creature. As there was water between it and where I was, I could not go there. I had heard Steve shoot three times. I heard him shoot again, nearer, and in a few moments three deer bounded past. One stumbled; then coming nearer, stumbled again, fell, and lay quiet within forty yards of where I stood. In a few moments Steve came with a small deer and a large turkey, and said he had crippled another deer. I told him what I had seen and done, and as I could see the motion of the head of the deer that had fallen I shot at it twice with the rifle. On account of the appearance of a coming storm, we started for home as soon as possible, and with both wind and tide in our favor, at half-past four o'clock we were safely moored at the little wharf at Bay Port. W.

Fish Culture.

STATE FISH COMMISSIONERS.

WE publish below a correct list of the Fish Commissioners of 21 States. The names have been obtained by direct application to some member of each of the boards, and may therefore be relied upon as accurate. A comparison of this list with those published in the various State reports will develop the curious fact that no one of the latter is correct. We shall supplement the present list with the names of other commissioners as soon as they are received. To the gentlemen who have so promptly responded to our request for these names we return our thanks. Any State Commissions whose members may not have received our written request, will oblige us and will render material service to fish-culturalists by promptly sending to us their names:—

CALIFORNIA.—S. R. Throcmorton, San Francisco; B. B. Redding, San Francisco; J. D. Farwell, Alameda.

COLORADO.—Wilson E. Sisty, Brookvale.

CONNECTICUT.—Wm. M. Hudson, Hartford; Robert G. Pike, Middletown; James A. Bill, Lyme.

GEORGIA.—No fish commission. T. B. James is State Agricultural Commissioner.

IOWA.—B. F. Shaw, Anamosa.

KENTUCKY.—Executive Committee: Wm. Griffith, P. H. Darby, Dr. S. W. Coombs, J. A. Steele, J. H. Burns. Commissioners: Jno. B. Walker, T. T. Garra, Jas. B. Casey, C. J. Walton, W. C. Allen, P. H. Darby.

MAINE.—E. M. Stilwell, Bangor; Henry O. Stanley, Dixfield.

MARYLAND.—T. B. Ferguson, Baltimore; Thomas Hughlett Easton.

MASSACHUSETTS.—Theodore Lyman, Brookline; E. A. Brackett, Winchester; Aza French, So. Braintree.

MICHIGAN.—Eli R. Miller, Richland; Andrew J. Kellogg, Detroit; J. C. Parker, Grand Rapids; Geo. H. Jerome, Niles, Superintendent.

MINNESOTA.—*St. Paul, March* 21.—1st Dist., Daniel Cameron, La Crescent; 2d Dist., Wm. W. Sweney, M. D., Red Wing; 3d Dist. Rob't Ormsby Sweeny, St. Paul.

NEVADA.—H. G. Parker, Carson.

NEW HAMPSHIRE.—Sam'l. Webber, Manchester; Luther Hayes, South Milton; Albina H. Powers, Plymouth.

NEW JERSEY.—B. P. Howell, M. D. Woodbury, Col. E. J. Anderson, Trenton; Theodore Morford, Newton.

NEW YORK.—R. Barnwell Roosevelt, 76 Chambers street, New York; Edward M. Smith, Rochester; Richard U. Sherman, New Hartford, Oneida Co.

OHIO.—J. C. Fisher, Coshocton; L. A. Harris, Cincinnati; R. Cummings, Toledo.

PENNSYLVANIA.—H. J. Reeder, Easton; James Duffy, Marietta; Ben. L. Hewit, Hollidaysburg.

RHODE ISLAND.—Alfred A. Reed, Jr., Providence; Newton Dexter, Providence; John H. Barden, Rockland.

VERMONT.—M. Goldsmith, Rutland; Charles Barrett, Grafton.

VIRGINIA.—W. W. Marshall McDonald, Lexington. He has recommended in report that the duties be turned over to Commissioner of Agriculture.

WISCONSIN.—Gov. Wm. E. Smith, *ex-officio*, Madison; Wm. Welch, President, Madison; Moses Hooper, Secretary, Oskosh; P. R. Hoy, Treasurer, Racine; H. W. Welcher, Sup't, Madison; Mark Douglas, Melrose, Jackson Co.; John F. Antisdel, Milwaukee; Christopher Hutchinson, Beetown, Grant Co.

Remarks Upon the Management of Public Aquaria, With a Plan for Reducing Their Running Expenses.

BY FRED MATHER.

[Read before the American Fish Cultural Association.]

In the practical working of a large public aquarium, it is found that the well-known principle upon which parlor aquaria are kept, known as the "self-sustaining" principle of oxygenation by means of plant life, is deficient in furnishing a sufficient quantity of oxygen to completely consume all feculent matter and to sustain the large specimens and numbers of animals required to be shown. Another reason is that there are some forms of life which refuse to live in still water, no matter how well it may be supplied with oxygen. In fresh water this is readily seen in the salmon tribe and some of the percoids and brook cyprinoids, while in a self-sustaining marine aquarium there are but few fishes that will live. Two modes then remain as at all possible for an aquarium built upon a large scale, viz.: the introduction of air by means of an air pump, and the circulating system.

The former of these methods is only fit for a temporary exhibition, and, even then, requires great care and cleanliness or the fish will not thrive even for a few days; and in this I found my views corroborated by the experience of the oldest and best aquarium keepers in Europe, most of whom have entirely abandoned the use of air pumps as the cause of more harm than good. The Great Brighton Aquarium has a combination of methods—the sea-water being pumped from the sea into reservoirs and then distributed. At the same time a system of air pipes is relied on for aeration, as the water is kept until it gets cloudy and then is furnished anew, causing it to be clear at times and at others cloudy.

I may as well explain here that sea-water, no matter how clear it may be when procured, will become so clouded within a week that a person cannot see in it to the extent of a foot. This is caused by the decay of the organic matter, which, if the water is circulated, will in time become burned up and deposited upon the bottom of the reservoirs in the form of harmless sediment, say in from one to three months, or even longer, before the water becomes beautifully limpid and of the highest transparency.

It is after this purification that plants begin to grow and beautify the hard lines of the rockwork; and, in my opinion, the water in a marine aquarium should be circulated for six months in a dim twilight before a fish is placed in it. One of the worst things to contend with in a public aquarium is the light, which, however necessary for the people who visit it, is very detrimental to the fishes.

In speaking of aquarium keeping, I will say that I would not include in this term any system in which the entire stock requires renewing every three months, as there are many fishes which are quite well adapted to aquarium life and which will thrive there if the tanks are properly kept. Although aeration by circulation is the proper and only correct method for public aquaria, the aid of vegetation is not to be despised, and marine vegetation is somewhat difficult to grow; yet, if the rock work is so arranged as to give light and shade, and even gloom in some places, the plants which would thrive will appear of themselves, their spores being everywhere in sea water. The green algæ (*Chlorosperma*) will come in the lighter parts, while in the obscure portions those most delicate red weeds (*Rhodosperma*) may grow. If, however, it is thought best to introduce these plants, it will be found that most of them will die, as, before they get fairly settled in their new home, the stimulus of the light will have covered them with green or purple filamentous weeds, as Conferva, Oscillatoria, etc., which conceal them with their abundant growth, and finally smother them. The mullets (family *Mugilidæ*) are the only good vegetable eaters among our marine fishes which thrive in aquaria, and, with the vegetable-eating mulluska which may be carefully introduced, are beneficial in keeping this growth down to some extent, but are as likely to eat the plants which they should not, as all other things are to work against our wishes. The well-known Venus' ear (*Haliotis tuberculata*) is a favorite in English tanks and eats conferva clean, and in the two best aquaria in that country the tanks are never cleaned on the inside, yet they look as if that operation had just been performed.

In a French book on acclimatization, by H. de la Blanchere, it is stated that the more the plants belong to the inferior organisms the greater their oxygenating power, and that cryptogamic plants have a greater power of vivifying water on account of their greater evolution of oxygen, and also that M. St. Hilaire has found that conferva in the aquarium of the Société d'Acclimatation in Paris produces a constant and enormous evolution of oxygen. Such is the influence of light upon vegetation that in my own fresh-water parlor tanks I have found it necessary to shield them at night during the periods of full moon in order to check the growth of conferva; and in a public aquarium it is hardly possible to have it too dim for the well-being of the inhabitants, few of whom live in strong lights. No more light should be allowed than that which comes through the water, as then the visitor standing in obscurity can readily see what would otherwise be indistinct; hence all attempt at ornament or display outside the tanks is useless.

These remarks, so far, have been intended more for those unfamiliar with the subject, and really contain little that is new to the few who have studied it closely; but, in order to render what I intend to say intelligible to the former class, I wish to add the well-known fact that, in aquarium keeping, the longer the water is used the better it is, and that the introduction of new, or fresh water, is often fatal. To sum it up in fewest words, there is not a drop of new water in the world: it has been breathed over and drank over millions of times; the sun draws it up to a certain height only, and it is blown over the land and precipitated in rain, and then returns to the sea. An aquarium such as I am describing is a miniature world, the reservoirs represent the sea, the pump is the sun, the pipes are the clouds which convey the water where it is required, the spigots represent the rain, and the overflow pipes are the brooks and rivers which return the water to its starting-place; and, as the fish only need water to keep them moist and their gills free to absorb the oxygen contained in the water, therefore what they require is water supplied with fresh oxygen, which is fresh water.

With these explanations I will now give my idea of constructing an aquarium upon a new plan, the advantage of which is its economy. First: I would aerate the water by flowing over a shallow bed between the tanks, and then introduce it into the bottoms of them; that is, in at the bottom and out at the top; then over another wide shallow space and down an aperture to the bottom of the next tank. It takes but the slightest contact with the atmosphere for water to absorb its fill of oxygen, if spread out and exposed; a flow of a foot in length by three feet in width, with a depth of half an inch, would be all sufficient. The object of this is economy of water, hence economy of motive power, and was suggested while studying the working of Williamson's "double riffle" hatching trough. In all aquaria, as at present arranged, there are small pipes supplying each tank, and the tanks flow into each other, the second one getting all that flowed into the first in addition to its own stream, while the tenth, in addition to being furnished with as much new water as the first one received gets all that has passed through the other nine. It is evident that if the water is properly aerated after leaving tank No. 1, it is as good as new for the next one, and so on, making a saving in a row of ten tanks of nine-tenths of the water, and consequently of the power required to raise it.

The aquarium at Southport, England, has an elevated reservoir into which the water is pumped from the lower ones and then flows into a few of the show tanks, and the curator, Mr. John Long, remarked that if it was large enough to contain a supply for a week it could be filled in one day and then the engine might rest. Combining this idea with the former one there seems to be no objection to building an aquarium with an elevated reservoir (in addition to the lower one), and by using the aerating principle given before, saving nine-tenths of the fuel and labor required to run a set of tanks as is now done by pumping night and day. The main difficulty would seem to be the high temperature to which an elevated reservoir would be exposed during the summer. This might be fatal, unless it could be overcome by natural advantages, as in case of a hill where the reservoir could be placed in its side, or, if connected with some institution which could combine an ice house with its elevated reservoir.

It has seemed almost impossible to sustain a public aquarium without the objectionable features of what are known as "additional attractions," and yet it should not be. There are a few aquaria which are managed without these, as the one at Southport, the Crystal Palace Aquarium and the pretty little one in Hamburg. These have not even music to disturb one's

thoughts, and an aquarium proper should not have. These aquaria, however, are situated in the midst of other attractions and require an additional fee from the visitor, the first-named being in the Winter Garden, the second in the Crystal Palace, and the third within the Zoological Garden.

I have long hoped to see an aquarium built in America which would be conducted upon correct scientific principles, and in which men of science could become interested. Such an institution would not only be valuable to the public as an educational medium, but also to fish culturists and scientists as a place for experiment.

THE BELASTOMA GRANDIS.—*St. Elie, P. Q., April* 1.—*Editor Forest and Stream:* In your issue of March 20 I notice the paper read before the American Fish Cultural Association by Mr. H. D. McGovern, of Brooklyn, in regard to the "Bear Bug," which, from the description, I am inclined to believe exists in waters of the St. Maurice Territory. Some four years since, while fishing in a lake in this parish and meeting with great success, I proposed to the friend who was sharing the sport with me to have some of the trout we were taking carried over to a small lake near the one we were fishing in, and where, for some unaccountable reason, no fish were to be found. We accordingly caught a number of small-sized fish, put them in a tin-pail and started off for the lake. On depositing them in the water one of the largest was pounced upon by a bug answering the description and plate of the *Belastoma grandis*, who grasped the poor fish by the side of the head and soon disappeared from sight. On exploring the shores of the lake we found a number of the queer-looking bugs. I came to the conclusion that no fish could live long in those waters with such enemies to encounter. I noticed this bug some years ago on a large lake of the west branch of the Riviere du Loup, and can now account for the absence of all fish in those waters. The east branch of the same river is one of the best trout streams in the Laurentides.

WM. H. PARKER.

—Seth Green still insists in a letter to the Rochester *Herald* that he does not know how eels breed. They tried to show him at Fulton Market, but he "couldn't see it."

Natural History.

LIST OF THE BIRDS OF NOVA SCOTIA.
—Land Birds.

BY J. MATTHEW JONES.

[*Continued.*]

WE presume that some of our ornithological readers have felt considerable surprise at certain statements made in the installments of the present list already published, and will be glad to have further information on some of the points brought out in it. The announcement that *Turdus mustelinus*, *Sitta pusilla*, and *Siurus motacilla* occur in Nova Scotia, were so startling that we felt that the statements regarding these species ought to be backed up by the most positive evidence. In order to obtain this, we wrote to Mr. Jones with regard to these and some other points in the list, and now print his reply. With regard to *Sitta pusilla* he says:

In the year 1856 I passed through the press (*Naturalist*, England, Vol. VI., Groombridge), for my friend, Lieut. (now Colonel) Bland, R. E., "A List of the Birds of Nova Scotia." In the preparation of this list Col. Bland was assisted by Mr. Andrew Downs and Lieut. Blakiston, R. A. The list was made out with especial care as regards identification of species. In this list is given "brown-headed nuthatch (*S. pusilla*), very rare." Knowing how careful Colonel B. was in preparing this list, I inserted the species in mine. As Col. B. is now quartered in England, I write to him to make further inquiries regarding the species." Mr. Jones further says: "*Turdus mustelinus* rests on the authority of Mr. Winton, of Stewiache—a close observer of birds for many years—who promises to set the matter at rest by procuring next June (the time he observes the species during nidification about his residence, in the backwoods of Colchester Co.) specimens for conclusive identification."

Mr. Jones tells us that *Siurus motacilla* (*Seiurus ludovicianus*), should not have been included in the list, its appearance there being due to a mistake. He also says:

I have omitted one species, viz.: *Melospiza Lincolnii* (Aud.) Bd., which Mr. Downs informs me was identified for him by Mr. Lawrence, of New York, a few years ago. *Ammodromus maritimus* was inserted on my own authority. I shot a single *Ammodromus* about the middle of April, 1877, on the open shore by the Lawrencetown sand-hills among the bent grass. I carefully compared it with Coues, and came to the conclusion that it was *maritimus* rather than *caudacutus*. I shall send it to Washington for identification.

The author's remarks on some other species in the list will be found in their places below. He says, however, in regard to stragglers, which may be found in Nova Scotia, that it must be borne in mind, when considering the question of extreme limit of range of North American birds, the position of our province, which, being placed far out East of the Northern States, is frequently, during violent southerly revolving gales, visited by Southern forms, rarely, if ever, observed in New England. Witness *Tachypetes aquilus* and *Phæthon flavirostri*, and others, so you must not be surprised to see some species of land birds in our list of equal rarity. Recollect these are very rare, or merely stragglers.

76. *Cyanospiza cyanea* (L.), Bd., Indigo Bird.—Very rare.

77. *Cardinalis Virginianus* (Brisson), Bp., Cardinal Red Bird.—Only one instance on record of its occurrence in the province, and, singular to relate, it was in winter time. On the 31st of January, 1871, a female was shot in the open woods at Point Pleasant, near Halifax, the male bird being with her. The specimen was in perfect plumage, and nothing in its appearance denoted the probability of its having escaped from confinement.

78. *Dolichonyx oryzivorus* (L.), Sw., Bobolink, Ricebird.—This bird is very abundant during the summer months in the interior of the province, especially in the alluvial valleys of Windsor and Annapolis, where numbers breed in the large grain fields and dyke-lands.

79. *Molothrus pecoris* (Gm.), Sw., Cow Bird.—Rare.

80. *Agelæus phœniceus* (L.), V., Red-winged Blackbird.—Mr. Eagan has received specimens of adult and young birds, but it must be considered a rare bird.

81. *Scolecophagus ferrugineus* (Gm.), Sw., Rusty Grackle.—Common; arriving from the North about the last week in March.

82. *Quiscalus major*, Vieil., Boat-tailed Grackle.—Very rare. This species is mentioned in Col. Bland's list, above referred to, and is introduced here for that reason.

83. *Q. purpureus* (Bart.), Licht., Purple Grackle.—Rare; only a few having been observed.

84. *Corvus corax*, L., Raven.—This cannot be considered a common bird in the province, for it is only occasionally that we have an opportunity of seeing it, at least on the sea-coast. It is known to breed here, however, and remains the whole year. Mr. Egan informs me that it is far more common in parts of the interior covered by dense forest.

85. *Corvus americanus*, Aud., Crow.—Very common, especially on the sea-coast, where it gains its food by deligently hunting along the sandy beaches for shell fish, crustaceans, or any stray edible waifs the sea casts up. In winter when the beach is all covered by a dense mass of ice, it has a hard time of it and has to resort to the heaps of rotted seaweed piled up by the farmers for manure, in which it bores holes with its beak in search of maggots. Sometimes the sportsman affords him, unknowingly, a welcome meal, for a wounded sea duck cast upon the ice barrier which skirts the shore is soon perceived by the keen eye of the crow, and quickly torn to pieces; and should a poor wounded elder be cast high and dry upon the strand by the flowing tide, the crow soon has his eye upon him and has not even the decency to allow the debt of nature to be paid before the work of carnage begins.

86. *Cyanurus cristatus* (L.), Sw., Blue Jay.—Common in the interior of the province, but not often seen on the coast. It seems to prefer the localities where the larger timber trees grow.

87. *Perisoreus canadensis* (L.), Bp., Canada Jay.—This bird is not as common about Halifax as it was some years ago, and some seasons it disappears mysteriously from the spots it usually frequents, as if a partial migration took place at such periods. On a cold autumnal morning in the forest, just before breakfast time, when the camp frying-pan is giving out its pleasant odors, several of these birds will come provokingly near, evidently on the look-out for a treat.

88. *Tyrannus carolinensis* (L.), Bd., King Bird.—Rare on the coast, but very common inland, especially in the more cultivated parts. Near Windsor, in Hants Co., I have seen half-fledged young ones in the nest, the first week in July. I have observed that this bird generally lays an egg on alternate days. They are partial to apple trees as a nesting-place.

89. *Contopus virens* (L.), Cab., Wood Pewee.—Common in the cultivated districts of the interior.

90. *Empidonax acadicus* (Gm.), Bd., Green-crested Fly-catcher.—Rather rare.

91. *E. minimus*, Bd., Least Fly-catcher.—Very rare.

92. *Antrostomus vociferus* (Wils.), Bp., Whippoorwill.—Rare of late years, although formerly it was considered as not uncommon. One or two pairs bred regularly until within a few years close to the town, in a secluded spot near the Northwest Arm, in the open woods. Mr. Downs has had a specimen in his hands, procured from the same locality.

93. *Chordeiles virginianus* (Briss.), Bp, Night Hawk.—Very common, arriving from the South about the middle of May.

94. *Chætura pelagica*, (L.), Steph., Chimney Swift.—Very common. In the interior, about the larger lakes, far away from the settlements, these birds breed in their natural state in holes of trees, and seem to choose a site near the water's edge, where a portion of the larger forest trees, having been burned, still stand withered and bleached by the hand of time. Here, high up on their smooth trunks, in some cavities made by the decay of the larger branches, these birds make their nest and rear their young without fear of molestation.

95. *Trochilus colubris*, L., Ruby-throat Humming Bird.—Common, arriving from the South about the last week in May, and leaves about the middle of September. A very pretty specimen of its nest may be seen in the Halifax Museum, attached to a branch of the black birch (*Betula nigra*), which was procured near the N. W. Arm. The young from this nest were hatched about the 23d of June.

96. *Cerylo alcyon* (L.), Boie, Belted Kingfisher.—Very common about the lakes and rivers. The earliest date of its arrival I have recorded in my journal is May 2. It departs South about the middle of September.

97. *Coccyzus erythrophthalmus*, (Wils.), Bd., Black-billed Cuckoo.—Common.

98. *C. americanus* (L.), Bp., Yellow-billed Cuckoo.—Rare.

99. *Hylotomus pileatus* (L.), Bd., Pileated Woodpecker.—Not uncommon in the more densely wooded districts of the interior.

100. *Picus villosus*, L., Hairy Woodpecker.—Very common all the year. In the spring I have frequently observed it busily employed searching at the base of the alder trunks in swamps, hammering away to get at the larva of insects, which I found, on examination, had eaten the heart of many of the trees completely away. Some few years ago, a neighbor of mine, who attracted numbers of the smaller birds about his premises by feeding them regularly with seed, bread, and even cake! informed me that a hairy woodpecker frequented his back yard for food. It was very fond of the cake, but refused both the seed and the bread. At first it would take a piece of cake in its bill and fly off to the trunk of a tree, on which it would rest in its usual perpendicular position; but finding that the cake fell to the ground when placed against the tree, it at last resorted to the more satisfactory plan of placing the cake in a cleft of the trunk, and so secured it as to be able to peck away until the whole was consumed. Was this instinct or reason?

(To be continued.)

SKUNK BITE.—*Halifax Inlet, W. Florida, March* 28.—*Editor Forest and Stream:* Old hunters in this region tell me that they have never heard of any dangerous results from skunk bites, either on man or dog. There are two species of the animal here, one not larger than a gray squirrel, and they are both essence peddlers. S. C. C.

CORRECTION.—In the very interesting notice of the "Nesting of the Great Northern and Loggerhead Shrikes in Maine," which appeared in our issue of April 3, the date at which the nest was taken was given as May simply, when it should have been May 20.

HABITS OF THE WOODCOCK.

MONROETON, Pa., Jan. 27, 1879.

EDITOR FOREST AND STREAM:

Seeing in your issue of Jan. 23 a question as to the habits of woodcock, I am prompted by a desire to repay, in a small part, the many pleasant hours I have spent in the perusal of the entertaining and instructive articles always to be found in FOREST AND STREAM, to give you a little of the result of my own observations on the habits of that king of all game birds. Residing in the northern part of Pennsylvania, and in a locality in which, until recently, the woodcock and ruffed grouse were the only game birds we had, has led me to watch closely their habits. I have stood for hours in the spring of the year, from early twilight until late in the night, listening to the hollow, ringing "Zisb, zisb," of the woodcock, which he repeats at intervals of about twenty seconds for four or five minutes; then for a moment all will be still. Next is heard the sharp whirr of his wings as he takes flight, swinging around and upward in a spiral, rising, as they tell us the English lark does, high in the air, until the sound of his wings is almost lost. When the bird begins to descend, the sound of the wings is wholly changed, seeming almost like the twittering song of the canary bird, until the bird reaches to within about one hundred feet of the place from which he started, when he sets his wings like a parachute, and drops silently and swiftly to the ground, to repeat the performance again and again. I have lain on the ground in moonlight nights, and watched him come out of his cover, strutting about much as an old gobbler does at times, and uttering his peculiar cry, which would be answered by other birds in hearing. Whether both sexes participate in the dance I am unable to say, never having shot one of them during the performance. I have shot woodcock at all times of the day, from earliest daylight until it was too dark to see the barrels of a gun, and have found fresh worms between their bills, which they had not had time to swallow; and I have seen them boring and feeding at all hours of the night. I think the bird sleeps and feeds alternately, at short intervals, during the entire twenty-four hours, except, perhaps, during the moulting season, when they feed during the night. Our best month for woodcock shooting is July, for then the old birds and full-grown young ones are in the cover along the streams and bottom lands. In August you can hardly find one there, although you will find fresh boring every morning. They are then away on the steep side hills and mountains, moulting, and feed less than usual, coming down to the feeding-grounds only in the night, and returning before daylight to their mountain fastnesses. In September they begin to work in the cornfields wherever there is a damp, soft soil, and remain in the cover of the corn during the day. Then it is grand sport to get into the corn, with a stool tall enough to raise you above the corn tops and a merry little cocker flying about to flush the birds, and bang away at them. What if your gun does kick you off the stool occasionally; there is soft ground to fall on—"up and at them again." As soon as hard frost comes the birds start for a more genial climate; and I have noticed that, with us, they follow the streams toward the coast, stopping occasionally to feed, which they do in the soft ground close to the water's edge, rarely going more than a few feet from the stream; and upon looking along in these places one will be surprised at the great amount of boring, compared with the number of birds, which he will find. An incident came under my observation which illustrates the rapidity of their flight: I was standing on a slight elevation overlooking a cornfield on the bottom land, and was watching the manœuvres of a chicken hawk which was sailing about in small circles. Suddenly he poised himself for an instant, then darted almost perpendicularly into the corn. About the time he reached the tops of the corn, I heard the whirr of a woodcock, and saw him emerge from the corn with the hawk in close pursuit. Away he darted, at the same time seeming to look back to see if his adversary was coming. I soon saw he was in no danger, for he could handicap that hawk one rod in ten, and then beat him. After flying fifty or sixty rods he darted into a dense cover, and the hawk gave up the chase in disgust, several rods behind. I hope to learn still further of the habits and customs of *Philohela minor*. ORTYX V.

NEW YORK, Jan. 29, 1879.

EDITOR FOREST AND STREAM:

I read with great interest the letter of "Portsa" in a recent number, and having once had a very similar experience with woodcock, I can add my testimony to his as regards both their "singing" and appearance at night. Two years ago I spent a week in camp upon Greenwood Lake, N. Y., and one evening, as we were sitting around our fire after the day's shoot, my attention was called to a bird which flitted past the fire, and alighted at a short distance, immediately commencing its peculiar cry, which, having heard it in the spring of the year, I recognized as that of a woodcock. It was a bright moonlight night, and my companion and myself, going out into an adjacent field covered with small undergrowth, were enabled to shoot three of our nocturnal visitors. Having never heard of such a thing being done before, when the letter from "Portsa" met my eye I immediately recognized an experience similar to my own, and write this, hoping that somebody may take interest enough in the subject to give a little information concerning the nocturnal habits of *Scolopax minor*. W. D.

GERMANTOWN, Pa., Jan. 25, 1879.

EDITOR FOREST AND STREAM:

In the article headed "Are Woodcock Nocturnal?" there is certainly a mistake as regards time. About mating season, which takes place in early spring, the woodcock is in the habit of soaring, and often ascends to the height of two or three hundred feet, and comes down nearly in the same spot. His habit is to feed at dusk and early in the morning, before day, and also through the day, although not as industriously in the day time. If these woodcock did soar in the middle of summer, they must have made a mistake as to the time of the year; if he did not soar in the summer, your correspondent has made a mistake in the time. The mistake lies between the woodcock and the man, but as far as my experience goes, the woodcock has the inside track.

CONSTANT READER.

HAIR ON DEERS' HORNS.—In response to the note of a correspondent in our issue of the 3d instant, regarding a caribou's horns, which was covered with a growth of hair, Dr. J. W. Trader, of Sedalia, sends us the following note, accompanied by a bit of the hair:

"I have in my office a large pair of antlers of our common deer, that has a heavy coat of hair from base to tip. I thought when I first procured the specimen that it was rare, but some old hunters tell me that this is quite common."

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING APRIL 12.—Two herring gulls, *Larus argentatus*; one crow, *Corvus americanus*; one weeper capuchin, *Cebus capucinus*; one woodchuck, *Arctomys minax*; nine small alligators, *Alligator mississippiensis*; two white rats, *Mus rattus*; one red-shouldered hawk, *Buteo lineatus*; one red-headed duck, *Aythya americana*; two rabbits, *Lepus cuniculus*; two bald eagles, *Haliætus leucocephalus*: one indigo bird, *Cyanospiza cyanea*; one nonpariel, *C. ciris*; one weaver bird; one pouched rat, *Geomys bursarius*—all presented. One coati, *Nasua narica*; twenty-seven undulated grass parrakeets, *Melopsittacus undulatus*;

one red-and-yellow macaw, *Ara chloroptera*; one barn owl, *Strix flammea americana*; one broad-winged hawk, *Buteo pennsylvanicus*; one white-fronted parrot, *Chrysotis leucocephalus*, and one blue-fronted parrot, *Chrysotis cyanorhynca*—all purchased. One zebu, *Bos indicus*; one Macaque monkey, *Macacus nemestrinus*—both born in the Garden.

ARTHUR E. BROWN, Superintendent.

The Kennel.

THE NEW YORK DOG SHOW.

THE third annual dog show of the Westminster Kennel Club was brought to a close on Friday evening last. In most respects it was more successful than either of its predecessors. True, there was not the dash and crowding which attended the first, as the novelty had worn off, but the general quality of the dogs exhibited was far superior to that of last year or even the year before. As some one remarked, if all the crack champions together were not there, there was plenty of the stuff of which champions are made. Financially, the success was far ahead of last year and but little behind 1877. The total receipts exceeded $13,000. As we remarked last week, the entries in the sporting classes amounted to a number quite unexpected. Five hundred and sixteen pointers and setters is an immense number to get together, particularly when the quality is considered. Mr. Davidson has again demonstrated his eminent fitness for the position of judge, and everything between his associates and himself was most harmonious. Mr. John S. Wise, of Virginia, gave very great satisfaction. He evidently has given the subject very close attention, and is thoroughly posted on canine matters. He made many friends. Mr. Geo. C. Colburn is well known throughout the country as an owner and breeder of fine dogs. The cowardly and contemptible action of certain sporting papers in printing false reports as to the attendance, quality of the dogs, etc., excited general disgust, and as there were sportsmen from every portion of the country present to carry home proof of the falsity of the statements, they will only convict the utterers of meanness and mendacity.

There was, of course, some grumbling on the part of disappointed exhibitors, as there always is, but less than we remember to have heard before. The Board of Appeals, which was composed of Messrs. Joseph T. Bailey, J. W. Fassitt and B. W. Richards, of the Philadelphia Kennel Club, and Messrs. W. F. Morgan, C. DuBois Wagstaff and H. Walter Webb, of the Westminster Kennel Club, sat on Friday and heard all the cases brought before them. These were mostly appeals from the decisions of the judges, based on the owner having satisfied himself that his dog was better than the winner, or else that his dog had not been looked at or handled quite as much as the other. These were quickly disposed of under the rule which says that "the decision of the judges will be final in all cases except where mistake, fraud, misrepresentation or collusion can be shown. In any such case the Committee of Appeal must decide all questions except those of merit, and the dog may be rejudged." There were, however, four protests that were serious and had to be gone into. These were as follows: "From Mr. H. Hedeman, of Brooklyn, N. Y., in reference to class 55. After hearing Mr. Hedeman and examining the puppy Nell, No. 611 (entered by R. T. Hewitt, South Wethersfield, Conn.), it was unanimously resolved that Nell had been improperly entered as a red and white setter, when she should have been entered as a red Irish setter. That she be ruled out of class 55, and under the rules she cannot now compete in any class, and that the committee recommend that in class 55 the first prize go to entry 610 (H. Hedeman's Flirt), and the second prize to entry 609 (James T. Miller's Kit)." Nell is by Elcho out of Nell, and is a very handsome red Irish puppy, and should clearly have been in that class. The reason for making a red and white class was in order to give dogs bred from red Irish and English setter parents, of which there are an immense number, a chance to compete, which they would not have in the red Irish class when all red is the standard for color. There was so much complaint made last year that the judges would not notice a dog with much white, this class was made. The next protest considered was from Mr. W. E. Mercelliott, of New York, in reference to entry 250, in class 28, and entry 309, in class 29. After hearing Mr. Mercelliott it was moved and carried that the allegations of favoritism on the part of the judges were not sustained. The next was from Mr. John Gill, Orange, N. Y., in reference to the pointer Dash, class 20. Messrs. Gill and Lindsley being heard, it was resolved that entry 169 was made through error, and that Mr. Gill and his agents have completely and entirely exonerated themselves from any charges that may have been made as to fraudulent intention in making such entry, but that inasmuch as the entry was made subject to the rules and regulations of this show, and as these rules required that the dog should have been entered in class 18, the dog was rightly debarred from competing in class 20. In this case a protest was entered against Dash on the ground that he had won first prize in Boston in 1878, and had also competed in last year's champion class here. The last was from Mr. William Watson in reference to class 86, in which Mrs. Haines' Yorkshire terrier Charlie won first. After due consideration it was resolved that the award in the case be approved of and confirmed, as it appears that the dog complained of at the time of entry and three days before the commencement of the show weighed 3 ozs. less than 5 lbs., and no evidence has been offered to show that the dog during the time of judging weighed more than 5 lbs.

The parade of prize winning dogs on the afternoon and evening of the last day, and which was an inspiration of Mr. Lincoln's, was a great success. The prizes were as usual paid from the stand in gold coin on Friday. The best attendance was on Wednesday, when there were over 8,000 people present. The following day it would probably have been greater, but unfortunately it commenced raining hard in the morning and continued all day. One remarkable thing about this show was the harmony which prevailed. Considering the magnitude of the affair, the absence of confusion was remarkable. The attendants were nearly all "dog men" selected in the country, and we heard no complaints of them. Messrs. Parker Bros. made a very handsome display of their celebrated guns. The Girondin disinfectant was used and many remarks made upon the entire absence of any unpleasant odors. The health of the dogs appeared to be very good. Dr. Coleman, V. S., examined the dogs as they came in and rejected a few having mange or symptoms of distemper. Many were washed on their arrival with "Sapanule," which was kindly furnished by the proprietors, who also had a handsome exhibit. Thompson & Sons, leather goods; Messrs. Conroy, Bissett & Malleson, fishing tackle; F. O. DeLuze, Spratt's biscuit—all made a fine display.

THE DOGS.

It so happened that four of the bitches of the Westminster Kennel Club were about due to whelp and one or two others were out of condition, which reduced the number of pointers usually exhibited by the club. Sensation, however, was present and, as usual, much admired. This dog has been shot over at the South during the fall and winter, and is pronounced a splendid field dog. The success of his get at this show was remarkable. Probably such a collection of handsome pointer puppies never was seen before. In champion pointers (over 55 lbs.) Snapshot won over Till, Pete, Bounce and Sleaford. The old dog was looking as fine as a fiddle, and notwithstanding his many years was as frisky as a puppy. We have always had faith in Snapshot, and notwithstanding the efforts of interested parties to injure him, were satisfied that he would be placed where he belonged. He had no more mange about him at the time of the first N. Y. show, when he was so severely slandered, than he had last week. At the suggestion of Mr. Macdona, the writer took Snapshot home (after he had been once to the steamer) to await the result of an offer, which was afterward accepted, to his then owner, Mr. J. Lloyd Price. The dog, who had come from the ship to the show, was immediately washed, and after the tar and tobacco juice had been removed his skin and coat were found to be perfectly healthy. In the heavy bitch class, Psyche, whose chance was looked upon as first-rate, had to succumb to the Columbus Kennel Club's Fan, a magnificent black bitch whose acquaintance we made two years ago at Baltimore. Mr. Orgill's Romp was in this class, but was not quite up to the mark. In fact it struck us that none of Mr. Orgill's dogs were in that condition in which he usually exhibits them, the result, we believe, of sickness in his kennel. The winner in the open class for large dogs was Rex, a black and white dog, owned by Mr. Fisher Howe, and one of the first dogs bred by the Westminster Kennel Club, being by Captain Grafton's Jim out of Whisky. Rex is a good-sized dog, with a great deal of bone, rather one of the old-fashioned sort. He was broken by Gladston, and is said to be an excellent field dog. We liked Mr. Coffin's Rake II. in this class; he was shown with some very handsome puppies. The immediate ancestors of this dog were bought by the late Mr. Taft, of San Francisco, in London, at one of the shows there many years ago. The bitch was Venus, one of Mr. Lang's, we believe, and quite a celebrity. There were but three bitches in this class, all good. The second prize-winner, Flash, belonging to Dave Hartt, of Northport, L. I., is by Sensation out of Lady Francis, the latter a very fine bitch, lately dead, and owned by the Rev. Mr. Hamilton, of Hart's Falls. The four small champion pointer dogs were all good; but Sefton, lately owned by Mr. Addison Smith, and by Sensation out of Lilly, was the best. Rush, however, was not in his usual form. Mr. Orgill was more successful in the next class, as his bitch Rose won. Mr. Weighell (pronounce it Weal, please) won with Bob, whose good qualities must have been superabundant, as he had evidently not been prepared for the show. We confess that we could not see Bob's excellence, not because he wanted soap and water, but because we thought there were one or two better. The dog which took second in this class was disqualified, as having won first in Boston, and having competed in the champion class here last year. This moved Mr. Strong's Ben (one of Pete's get) to second place, and the two "ties" on V. H. C. were judged again for third. It fell to Chiswick, given as eleven months old, and by Flake out of Lilly; but there must be a mistake here. In the bitches there was no question about first having been rightly placed when it went to Duchess (Sensation-Whisky); it would be difficult to find a handsomer pointer bitch. The second prize-winner, however, was not very far behind her. She (Princess) was the handsomest puppy, we thought, we had ever seen when Lincoln had her at the first New York Show, and an infatuated individual, not very far from the writer just now, gave him the rather long price of $110 for her. She is jet black, and by Dilley's Ranger out of Gillespie's Fan (winner in champion class). Another of Sensation's get took third. The pointer puppies, of which there were forty-two over six months old, were a grand lot. Lemon and white seemed to be the prevailing color, and most of them the get of Snapshot, Rake II. (Coffin's), Sensation, Rush, and Flake II. An own brother and sister won in dog and bitch class, they being by Sensation out of Mr. Schieffelin's Juno. Juno is the dam of poor Flake, now dead, and Whisky—so these puppies came honestly by their beauty. The lemon and whites did not have it all their own way, however, as Mr. Strong captured second prize in the bitch class with one of his blacks, by Pete. We shall suggest that next year there be classes for lemon and white pointers by themselves. There was no prettier sight in the show than a litter of lemon and white pointer puppies about three months old, exhibited by Mr. Wagstaff, and by his Till out of Minnie.

The judging of the champion English setters, as may be supposed, attracted a great deal of interest. The question lay between Royal Ben (Carlowitz-Lucy), Lark, and Jersey Duke. There was very little doubt that one of the natives would get it, and the Jerseyman was the one. Our friend, Von Lengerke, will now have the words, "Pure native," inscribed on his banner in letters of gold. Mr. Charles, of Albany, was successful in the bitch class with Rose, a beautiful black and white bitch, winner at Boston last year. The dogs this year were judged inside of a large ring, surrounded by board fencing. Outside of this fence, and going all around, were settees, upon which spectators could sit and watch the judging. When the sixty-six dogs, composing the open English setter dog class, were brought into the ring, the exclamations of admiration were innumerable. Surely, such a number of fine dogs were never congregated together. There seemed so little trash. When Ranger II., who looked fifty per cent. better than he did last year, did not even receive a commendation (which we believe he was entitled to), the quality of the class can be imagined. By the bye, we are credibly informed that the puppies by this dog are turning out very good in the field, as they have also done in England. The judges were a very long time in making a choice, and it finally fell to St. Elmo. Dr. Speir was warmly congratulated on his well-earned victory, and we have no more staunch supporter of both bench shows and field trials. St. Elmo has had a varied career. He was shown first in this city in 1877, when he took first in the puppy class. He has run in the Nashville field trials, and took one of the prizes at Hampton. He is a black, white and tan dog, now in his prime, and is by Pride of the Border out of Herzberg's Jessie. Mr. Charles' Sam, a brother of Nina's, was second, and Mr. Leavett's Sir Launcelot, by Morris' Pete out of Northrup's Dell II., was third. A very beautiful brace of dogs was shown in this class by T. D. Gladstone, of Boonton, N. J., Royal and Saxe, bred the same as Sam and Nina, just mentioned. There were twenty-five bitches in competition, but in quality they were not up to the dogs. Lincoln & Hellyar's Minto (Dash II.-Doll) was first, and Mr. LaMontagne's Abbey (Young Laverack-Dido) took the same position she did last year—second. Meg, the third prize-winner, came from Rhode Island. The puppies over six months were very good, Mr. Charles again winning in both dogs and bitches with two of his black and whites, Pride of the Border puppies being second in both classes. In the puppies under six months, the get of Mr. Morris' Lark won in both classes.

In champion black and tans, Mr. Pond's Trump (Dash-Belle) was first, with only one competitor, and in the bitches, when there were six competing entries, Redman's (late Copeland's) Nellie, last year's winner, was first. This bitch class was a remarkably fine one. In it were: Belle, winner here in 1877; Mr. Godeffroy's Beauty, winner at Boston; Mr. Weighell's Belle, winner at Baltimore; Nell, a St. Louis winner, and others. Weighell's Bell, although now very old, is a beautiful bitch. She is said to have been bred by the Prince of Wales, and was taken to Canada, whence she was brought to this State. Lou was on exhibition, but did not compete. The open dog class was a very fine one, and so was the class for bitches. In the puppy classes over six months, there were some very promising youngsters exhibited. The first prize-winners in both bitch and dog classes were puppies, the get of Marble's Grouse out of Lou. In the dog class, Mr. T. T. Sawyer, Jr., of the Massachusetts Kennel Club, took second with a puppy from the bitch Nellie, one of the two brought to this country by Mr. Scott last year. The puppy was sired by Reuben (Allison's), a famous sire on the other side.

The red Irish setter classes were simply superb. Rory O'Moore proved to be again a champion, and the Aldine Kennel Club, of Chicago, won with Red Rival in the champion bitch class. The ring would scarcely hold the thirty-eight competitors in the open dog class, some of them were so pugnacious. As usual, of the many called but few were chosen, and in the thinning out process it was evident that Derg, a dog imported by the Baltimore Kennel Club, by Going's Bob out of Niall's Fan, was a little the best. Derg is a splendid specimen of a dog. At first sight a little leggy, which really is an appearance caused by the shortness of his coat, which, except where it should and does feather, is almost as close as a pointer's. His head we regard as the true type of an Irish setter's—rather flat on the head, deep stop and rather long, but square-cut jaws. His coat is remarkably even in color; not very dark on his back and light everywhere else, but even throughout. A large price was offered for him by one of the members of the Westminster Kennel Club. The winner of the second prize was Grouse, whose pedigree was not given, owned by Mr. Alfred Biddle, of Philadelphia. Mr. J. White Sprong, of Albany, took third with Smuggler, by Rufus II. out of Colleen. The bitches were a remarkably fine lot, far better than have ever been seen at a show in this country. Out of seventeen ten were noticed. Lincoln & Hellyar furnished the winner in Phantom, only ten months old, by their Dash out of Flora. Nora Elcho-Fire Fly) was second, and Mr. Bassford's Gipsey third. The puppies were a remarkably fine lot, first in dogs over six months going to another Dash-Flora puppy, and the Baltimore Kennel Club winning with an Elcho-Florence puppy.

The red and white setter class naturally filled well. Mr. Donner was first with a very well made dog, cross bred. This dog (Duke) was red, with white blaze, breast and feet. He was objected to by some exhibitors as being a red Irish dog until they were shown in the next kennel but one his litter brother, who was nearly all white. The winner of the second prize, however, as far as breeding goes, really belonged in the Irish class. We allude to Messrs. DeRonge and Inmon's Montague, by Salter's Dash out of Lill III. Mr. Fassitt, of Philadelphia, was third with Dash (Dash-June), and he also walked over for the champion prize with Jim Rickry, one of his beautiful red roans. In the bitch class Mr. Weighell, of Rochester, was again to the front with Bird, whose pedigree was not given, while Mr. Lohman took second with Quail III., by Red Gauntlet out of his recently imported Quail II. Third went to Bonnie, a bitch out of our old friend Bonnie Carrie. The puppies were good, particularly a brace shown by Mr. James Bryce, of Madison, N. J.

There were no Chesapeake Bay dogs entered, and of the Irish water spaniels, Mack and Judy, winners here, we think, last year, were the best, and were placed first and second. There were five Clumber spaniels entered, but two of them were liver and white, and so had no chance. Of the remaining three Mr. Austin's Nap was a splendid specimen but rather too old to beat Trimbush, who was in the pink of condition. Fairy is a pretty little bitch, but rather inclined to be snipey about the nose. The cocker and field spaniels were so mixed up that the judges concluded to divide them (the dogs) into two classes and give additional prizes. This was done, and the result shown in the list below. The spaniel classes are very much mixed. Feathers was the best of the bitches. The fox-hound class brought out one of if not the finest couple of fox-hounds ever seen in this country—Mr. A. Belmont Purdy's Life-Guard and Favorite, recently imported. They are perfect studies, and said by good judges to be way beyond anything seen at our shows. Mr. Gillman, of Detroit, walked off with two prizes for beagles, and the Montclair Hunt with the third. Mr. Wm. L. Bradbury, with commendable enterprise, exhibited six animals in this class, and sent them all the way from Nason, Orange Co., Va. There were eight dachshunde shown, some being very fine specimens. Our space will not permit us to review the non-sporting classes until next week. We print the premium list in full, including those printed last week:

THE AWARDS.

Mastiffs—Dogs—1st, King Olaf, W F Morgan; 2d, Hereward, Miss S C Hewitt; 3d, Cato, I Van Winkle; V h c, Major, F N Owen. Bitches—1st, Leah, H Cooper; 2d, Rab, H Harley; 3d, Juno, F R Appleton; V h c, Carrie, J Morrisey; H c, Dido, C D Arthur. Puppies—1st, Rory, C D Arthur; 2d, Juno, Wm Watson; C, Duke, E Barlow.

Rough-coated St Bernard Dogs—1st, Alp, L Z Collins; 2d, Turk, D P Foster; 3d, Turk, H H Baxter; V h c, Barry, H Clausen.

Smooth-coated St Bernard Dogs—1st, Don, J P Haine; 2d, Harold, same owner; 3d, Bernard, Mrs J Thorne, Jr; Bitches—1st, Judy, J P Haines; 2d, Bernie, same owner. Puppies—1st, Uno, J P Haines; 2d, Ino, same owner; V h c, Martin and Marron, same owner, and Bernard, L Z Collins.

Newfoundlands—Dogs and Bitches—1st, Keeper, O Flock; 2d, Jack, W C Heppenheimer; V h c, Don, T S Hamilton; H c, Floss, Dr E F Drayton; Search, F Keller, and Dred, T D Burke. Puppies—1st, Presto, S Whittemore; H c, Bruno, J F Ferguson; C, Toby, H V Allien.

Siberian or Ulm Dogs or Bitches—1st, Alex, D W Luhring; 2d,

Lily, G Petermann; V h c, Hector, D W Luiring; C, Sultan, J Grau.

Greyhounds—1st, Prince, F W Luyties: 2d, Fida, R J Chatry; V h c, Baron, R L Lee; H c, Charlie, H W Livingston; C, Fosdick, H Steiner.

Deerhounds—1st, Thor, P T Barlow; 2d, Maida, same owner; H c, Stanley, L W White.

Pointers—Champion—Dogs over 55lbs—1st, Snapshot, Lincoln & Hellyar; V h c, Pete, G A Strong; Bounce, J H B Latrobe, Jr, and Sleaford, Irwin & Waddell; H c, Till, C DuBois and E A Wagstaff. Pointers over 50lbs—1st, Fan, Columbus (Ohio) Kennel Club; V h c, Psyche, H N Munn; Fan, G A Strong; H c, Romp, E Orgill.

Pointers—Dogs over 55lbs—1st, Rex, F Howe, Jr; 2d, Rapp, W R Hobart; 3d, Sport, J H Meyer; V h c, Ranger, H Schenherr; H c, Rob, N Cornwell; Range, S S Cobb; Fisk, J J Snellenberg; Rake II, J W Coffin; Patch, Dr C H H Sayer; Dash, J F Harrison; C, Don, B Peer; Royal Don, W A Coster; Tramp, E L Wells. Bitches over 50lbs—1st, Grace, L W White; 2d, Flash, D G Hartt; 3d, Gwendolin, H C Glover.

Pointers—Champion—Dogs under 55lbs—1st, Sefton, E A Willard; V h c, Dick, A M Wright; Button, J J Snellenburg; Rush, E Orgill. Bitches under 50lbs—1st, Rose, E Orgill; V h c, Queen, A E Godeffroy; Topsey, J J Snellenberg.

Pointers—Dogs under 55lbs—1st, Rob, I Weighell; 2d, Ben, G L Strong; 3d, Chiswick, T H Terry; V h c, Blick, M Hellmick; H c, Rob, W E Doane; Black Prince, Baltimore Kennel Club; Ranger, G H Everall. Bitches under 50lbs—1st, Duchess, G Van Wagener; 2d, Princess, G G Barker; 3d, Elf, R Lamb; V h c, Bella, E Orgill; Minnie, C DuBois and E A Wagstaff; H c, Eileen, J W Russell; Gip, H Hedeman; Dora, A E Godeffroy.

Pointers—Puppies over 6 months and under 12 months—Dogs—1st, Ponto, C M Schieffelin; Van, G Roach; V h c, Frank Forrester, Dr H Aten; Raudom, A E Godeffroy; King Charlie, Columbus (Ohio) Kennel Club; ——, E Orgill; H c, Sly, O W Donner; Glenmark, W F Steele; Garrie, G Van Wagenen; Snapshot II, Lincoln & Hellyar; Clive Newcombe, H N Munn; C, Pendennis, H N Munn; Ranger, W R Bodner. Bitches—1st, Beauty, C M Schieffelin; 2d, Rena, G A Strong; V h c, Queen May, Columbus (Ohio) Kennel Club; Fleet, I Weighell; ——, E Orgill; H c, Royal Peggie, W A Coster; Mollie, C A Strong; May, C M Schieffelin; Lady Dufferin, F Howson.

Pointers—Puppies under 6 months—Dogs—1st, Tahluah, C DuBois and E A Wagstaff; V h c, do do; Dash, J W Coffin.

English Setters—Champion Dogs—1st, Jersey Duke, Von Lengerke Bros. Bitches—Rose, D T Charles.

English Setters—Dogs—1st, St Elmo, Dr S F Spier; 2d, Sam, D T Charles; 3d, Sir Lancelot, W E Leavitt; V h c, Royal, T D Gladstone; Stanley, W S Elmendorf; Thunder, J J Snellenberg; Grouse, D P Waters; and Ray, F Orgill; H c, Czar, P H Morris; C, Star, J A Loring. Bitches—1st, Minto, Lincoln & Hellyar; 2d, Abbey, E C La Montagne; 3d, Meg, S Scranton; V h c, Pet, E F Mercelliott; May, H Ehlers; and Phœbe, J J Snellenberg; H c, Nelly II, A E Godeffroy.

Puppies over 6 months—Dogs—1st, Wellington, D T Charles; 2d, Royal Pomp, W H Pierce; V h c, Prince Teck, the Lloyd Kennel; and Satan, O Flock; H c, St Elmo II, Dr S F Spier; C, Pride of the Kauterskills, H E Smith. Bitch Puppies—1st, Tricket, D T Charles; 2d, Polka, the Lloyd Kennel; V h c, Delta, G C Sterling, and Floss II, J H Wharton. Dog Puppies under 6 months—1st, King Dash, P L Watt; V h c, Cremorne, E C La Montague; H c, Boston, D W C Cole. Bitches—1st, Fannie F, T L Watt; V h c, Belle of Cortlandt, C H Dayton; H c, Lester, J O Donner.

Champion Black and Tan Setters—Dogs—1st, Trump, C M Pond. Bitches—1st, Nellie, S W Rodman.

Black and Tan Setters—Dogs—1st, Turk, T F Taylor; 2d, Ben, E L Mills; 3d, Dash, C T Brownell; V h c, Fred, L G Billings; H c, Romeo, Dr S F Spier; Prince, A M Wright, and Conn, F W Manlin. Bitches—1st, Lady Gordon, Aldine Kennel Club; 2d, Nelly F, F Freudenthal; 3d, Bess, L Curtis; V h c, Jacquetta, Dr S F Spier, and Grace, J R Tilley; H c, Fan, H Hunecks; C, Bessie B, H S Kinsley.

Black and Tan Setter Puppies—Dogs over 6 months—1st, Duke, H W Huntington; 2d, Scott, T T Sawyer, Jr; V h c, Grouse II, Dr G W Downey; H c, Shot, Dr G W Carmen, and Jake, I Weighell. Bitches—1st, Brenda, S D Schenck; 2d, Dream, A Powell; V h c, Maggie May, W H Pierce; H c, Lorna Doone, G S Sedgwick.

Black and Tan Setter Puppies under 6 months—Dogs—1st, Brighton, Dr S F Spier; V h c, Powder, G Roach; and an unnamed pup by Colburn's Duke out of Bess, owned by J A Hedden, Newark, N J. Bitches—1st, Nancy Lee, G Roach.

Champion Red Irish Setters—Dogs—Rory O'Moore, W N Callender. Bitches—1st, Red Rival, Aldins Kennel Club.

Red Irish Setters—Dogs—1st, Derg, Baltimore Kennel Club; 2d, Grouse, A Biddle; 3d, Smuggler, J W Sprong; V h c, Chance II, Lincoln & Hellyar, and Scout, D G Hartt; H c, Boss, W R Hobart; and Red Dick, C J Ketchum; C, Pat, W Tallman; Jerr, I Weighell; and Grouse, J Wiley. Bitches—1st, Phantom, Lincoln & Hellyar; 2d, Nora, R A Sampson; 3d, Gypsy, G W Bassford; V h c, Doe, M Wenzel, and Moya, A E Godeffroy; H c, Mag, G Van Wagenen, Peg, W Lambert; Royal Rose, C Ketchum; Rose, Aldine Kennel, and Ruby, L Wallack. Red Irish Setter Puppies over 6 months—Dogs—1st, Biz, W A McIntosh; 2d, Spy, S D Ripley; V h c, Chester, A Bassford, and an unnamed pup by Elcho, out of Nell, owned by Dr G F Hawley; H c, Cardinal, G W Bassford; Dexter, same owner. Bitch Puppies over 6 months—1st, Flounce II, Baltimore Kennel Club; Lady Bird, T Newbold; V h c, Viscountess, same owner; H c, Magenta and Carnation, G W Bassford; C, Muriel, Lincoln & Hellyar.

Red Irish Setter Puppies under 6 months—Dogs—1st, Conn the Shaughraun, P Noel; V h c, Flame and Free, C H Hobart; H c, Brock, G T Leach; C, True, M P Bray. Bitch Puppies under 6 months—1st, Countess, G T Leach; V h c, Trim, M P Bray; C, Pearl and Ruby, same owner.

Champion Red and White Setter Dogs—1st, Jim Reilly, J W Fassitt.

Red and White Setters—Dogs—1st, Duke, J O Donner; 2d, Montague, C De Ronge and J H Inman; 2d, Dash, J W Fassitt; V h c, Jack, M Wenzel; Chips, W Man, and Natty Bumpo, Dr H Gardner; H c, Scott, W Kampfmuller; Shot, F S Chester, and Pet, R Story; C, Red Gauntlet, Dr J W Downey. Puppies over 6 months—Dogs—1st, Shell, C C Worthington; 2d, Shot, same owner; V h c, Rip, J B Wood; H c, Mike, R T Hewitt. Bitches—1st, Flirt, H Hedeman; 2d, Kit, J T Miller. Puppies under 6 months—Dogs—1st, Flash, C F Lund; V h c, Dick, J Bryce, Jr, and Marquis of Lorne, G Langran. Bitches—1st, Elena, W G Murphy; Juno, Mrs Kampfmuller, and Dixie, J Bryce, Jr; H c, Limogie, W Burges.

Irish Water Spaniels—1st, Mack, D D Lawlor; 2d, Judy, same owner; V h c, Frank, G B Paddock; Dash, S Simmons, and Jessie, T Cosgrove.

Clumber Spaniels—1st, Trimbush, W M Tileston; 2d, Nap, F Austin; V h c, Fairy, W M Tileston.

Cocker Spaniel Dogs—1st, Toby, F T Wall; 2d, Charlie, D P Foster; 3d, Witch, F H Hoe; V h c, Prince, J Williams.

Field Spaniel Dogs—1st, Frank, A Watts; 2d, Doctor, P C Winters; 3d, Punch, W Schwind; V h c, Pedro, A D Withers; H c, Waif, E Yard, Jr.

Cocker or Field Spaniel Bitches—1st, Feather, F C Hollins; 2d, Gip, D P Bosworth; 3d, Madge, G M Keasberg; V h c, Clare, D P Bosworth; H c, Madge, F H Hoe, and Madge, G M Keasberg.

Cocker or Field Spaniel Puppies—1st, Oxford, F C Hollins; V h c, Trump, same owner; H c, Flake, Dr J L Morrill, and Fleurt, A E Godeffroy.

Foxhound Couples—1st, Life-guard and Favorite, A B Purdy; 2d, Tyler and Bismarck, H Puvogel; 3d, Buck and Mate, I Weighell.

Beagles—1st, Lottie, E H Gillman; 2d, Charley, same owner; 3d, Rambler, M Hunt; V h c, Crafty and Bell Maid, W L Bradbury, Finder and an unnamed dog, by Towser out of Music, same owner.

Dachshunds—1st, Woldman, C Elsassen; 2d, Zanke, W H Goetting; 3d, Diedrich, C D Arthur; V h c, Cora, Baltimore Kennel Club; H c, Dan, W Scheelye.

Fox Terrier Dogs—1st, Gamester, A Newbold; 2d, Rattler II, T D Burke; V h c, Tyrant, same owner, and Bounce, F R Hitchcock; C, Flash, L M Rutherford, Jr, and Grip, S Simmonds. Bitches—1st, Vixen, T D Burke; 2d, Minnie, same owner; V h c, Suss, F W Fleck; H c, Kate, W B Parsons; and Topsy, J Mortimer; C, Pixie, R C Gornell.

Fox Terrier Dog Puppies—1st, an unnamed pup by Panlo out of Nettie, owned by J & P Lawrence. Bitch Puppies—1st, Fannie, J F Ferguson; V h c, an unnamed pup by Panlo out of Nettie, owned by J & P Lawrence; C, Nellie, Chas Walton.

Collie Dogs—1st, Ray, W H Watts; 2d, Cato, C Lorey; 3d, Rolf, A S Apgar; V h c, Roy, J P Haines; H c, Spot, J G Orton. Bitches—1st, Flora II, W McLellan; 2d, Florio, A S Apgar; 3d, Friday, W McLellan; V h c, Lassie, J P Haines.

Collie Puppies—1st, Tam, N P Schenck; V h c, Di, same owner; H c, White, C W Emburry.

Dalmatian or Coach Dogs—1st, Spot, G Bishop.

Bulldogs—1st, Ben, F Miller; 2d, Puss, E S Auchincloss; V h c, Kitty, F Miller; H c, Crib, J Mortimer.

Bull Terriers—1st, Spider, J G Coster; 2d, American Kate, J N Briggs; V h c, Lilly, J G Coster; H c, King, R J Shay.

Bull Terrier Puppies—1st, Betsy, H Donton; C, Arthur, G W Varian.

Skye Terriers—1st, Tom, R McLellan; 2d, Puffy, L Aspinwall, Jr; 3d, Rough, Miss L Morse; V h c, Albert, T Jeffrey, and Mr Myumbymum, C Montant; H c, Frank, Mrs S Truesdale.

Pug Dogs—1st, Bothina, Miss H Brownell; 2d, Guelph, D Bacon; V h c, Sam, H W Poor; Billy, Mrs H A Gumbleton; Charley, J Davis, and Puck, Miss Penniman; H c, Pickles, Miss Salisbury; Muggins, A A Kingsland, and Toti, W Bartlett; C, Sambo, Miss M D Wagstaff. Bitches—1st, Little Nell, Mrs W H Beadle; 2d, Pudgens, Clara J S Long; V h c, Betty, D P Foster, and Countess, Mrs G C Colburn; H c, Judy, same owner; C, Lena, F S Thompson. Pug Puppies—1st, Rackett, C M Herld.

Scotch Terriers—1st, Fanny Fern, E G Baxter; 2d, Fanny, Mrs N E Gregory.

Black and Tan Terriers over 5lbs—1st, Dick, J S Bacon; 2d, Jack, S Van Dyck; V h c, Nelly, H Haggerty; C, Tommy, Mrs H B Millard, and Nelly, Mrs Senhauser.

Yorkshire Terriers, Blue and Tan, over 5lbs—1st, Ben II, T Kaalaghar; 2d, Young Taylor, W Collins; 3d, Ben, J Marriott; V h c, Harry, Mrs L Kistermann, and Prince, F Wood; H c, Charley, T Kaalaghar; C, Tatters, W Kehoe, and Charley, T Kaalaghar.

Yorkshire Terriers, Blue and Tan, not exceeding 5lbs—1st, Charley, Mrs W A Haines, Jr; 2d, Lucy, A Kistermann; 3d, Cricket, W Watson; V h c, Tiny, same owner; C, Petite, Mrs M D Landon.

Toy Terriers other than Yorkshires—1st, Phil, W Hendrix; 2d, Major, A Kistermann; V h c, Tiny, H Harley; H c, Lady, H Heim, all black and tans.

King Charles Spaniels—1st, Sankey; 2d, Trickster, Clara G S Long; V h c, Prince, A Kistermann; H c, Lady, same owner; C, Prince, H Harley.

Japanese Spaniels—1st, Minnie, Mrs C E Pratt; 2d, Flo, same owner; C, Milley, F Senn.

Italian Greyhounds—1st, Nannie, Mme A T Le Provost; 2d, Byron, same owner; V h c, Arno, Miss A J Bowlby; H c, Daisy, Mrs E A Gray; C, Flora, W H Vandusen.

Miscellaneous—1st, Bevis (Irish wolfhound), L Wallack; 2d, London Charley (Maltese terrier), S S Mulvey; 3d, Schwartz (Canniche poodle), L L Lorillard; extra medals, Flora, same breed and owner; Linda (wild Chihuahua dog from the mountains of Mexico), Mrs H E Terry; Jocko (Japanese dog), J Genzel; Lady (same breed), A Kaltenbach, and Leo (Russian setter), E A Roth; H c, Nigger (nondescript), Robert Smith, and Duke of Magenta (berghund), E R Hearn.

SPECIAL PRIZES.

A—Best Native English Setter Dog or Bitch that Never Won a First Prize—Dr S F Spier's St Elmo.

B—Best Red Irish Setter Dog or Bitch that Never Won a First Prize—The Baltimore Kennel Club's Derg.

C—Best Brace of English Setter Dogs—T D Gladstone's Royal and Saxe.

D—Best Pointer Dog or Bitch that Never Won a First Prize—G Van Wagenen's Duchess.

E—Best Fox Terrier Dog—A N Morris' Gamester.

F—Best Fox Terrier Bitch—T D Burke's Vixen.

G—Best Toy or Pet Dog Exhibited by a Lady—Mrs W A Haines, Jr, Charley, a Yorkshire terrier.

H—Best Black and Tan Setter Dog that Never Won a First Prize—T F Taylor's Turk.

I—Best English Setter Dog—Dr S F Spier's St Elmo.

J—Best Pug Dog or Bitch—Mrs W H Beadle, Little Nell.

K—Best Yorkshire Terrier—T Kaalaghar's Ben II.

L—Best Litter of Pointer or Setter Puppies—A litter belonging to C DuBois and E A Wagstaff's pointer bitch Minnie.

M—Best Pointer Dog Competing in the Open Classes, Shown with Two of his Get—J W Coffin's Rake II.

N—Best Yorkshire Terrier Under 5lbs—Mrs W A Haines, Jr's, Charley.

O—Best Brace Black and Tan Setters, Regardless of Age or Sex—C T Brownell's Duke and Dash.

P—Best Brace of Red Irish Setters, Regardless of Age or Sex—Baltimore Kennel Club's Derg and Florence II.

Q—Best Dog, Bitch or Puppy Sired by Sensation—G Van Wagenen's Duchess.

DANDY DINMONT TERRIERS.—Exhibitors in the Dandy Dinmont Terrier Class have taken exceptions, and not without reason, we think, to the ruling of the judges of non-sporting dogs at the recent bench show held in this city, because they passed as unworthy two prize winners at previous shows. One of these, Fido, was sired by Teaser, a prize taker at Edinburgh, Scotland, from the famous Roxburyshire Kennel. Its dam was Meg, a bitch of Dr. Grant's, Hawick; his father and mother both prize winners, and himself one of the gamiest terriers in the Doctor's pack, which was celebrated throughout the country. He was a prize winner of 1877, Kavanagh, judge, and had a good record in Scotland, having followed the Duke of Bucclough's foxhounds, and been known more than once to run a hare down by following its scent nearly all day, alone. The other dog, named Whiskey, took first prize at the New York Bench Show of 1878.

The judges of the non-sporting dogs, it is protested, decided that the Dandie Dinmont exhibits were not true to breed. Of course, we can conceive the difficulty of securing three judges possessing the requisite qualifications of judging intelligently alike all the very numerous classes coming under their view. The same trouble has always existed in England, and no remedy has yet been applied, if found. It is morally impossible to produce a judge, or even three judges, one of whom shall be well informed of the specific characteristics of *all* kinds of dogs. No one but a life-keeper of a dog-menagerie or museum, where every known variety of dogs was kept constantly under his observation and ward, could be expected to judge the wolfhound with the pug, the Japanese hairless dog with the sturdy Newfoundland, the skye with the spitz, the Russian setter with the Canniche poodle, and so on through all the catalogue of uncertain, obsolete, or traditional breeds of dogs. The only practical method would seem to be, to employ a thoroughly informed person to judge *each specific class*; and this of course is practicably impossible. What then? The dog's record should have its fullest weight of testimony. It is the affidavit before the court. No one is so capable to decide the merits and specific points of a particular class as he who has reared and handled that class all his life. If he is a true fancier he has been careful in selecting his strain, and in ascertaining that the breed was true at the outset. Having the facts before him, it is natural, and pardonable, that he should grumble or protest against decisions obviously erroneous, and such protest should be recorded and filed for reference. It would seem to us that in cases where it might be doubted if the judges ever saw a specimen, or even knew that such a breed existed, (as might certainly apply to some exhibits in the miscellaneous class,) or even in cases like the one now under our consideration, it would be eminently proper to allow the dog's pedigree and record to go before the Bench as evidence, just as in a court of law, and let that evidence weigh with the judgment.

But let us add, in behalf of Bench Show judges in general, that the most noisy and obstreperous grumblers are men who have never seen the scale of points by which dogs are judged men wholly ignorant of the physiological basis upon which that scale of points has been prepared. Their own judgment and opinions are based upon incidental hearsay or traditional analysis, an inordinate amount of prejudice or predilection, and an obstinacy nurtured by pure ignorance. If decisions do not favor them, they assume that the judges are incompetent. As long as dogs bark, and bench shows are held, these chronic grumblers will be conspicuous. Nevertheless, let the Shows go on!

IRISH WOLFHOUNDS AT THE DUBLIN SHOW.

[FROM OUR SPECIAL CORRESPONDENT.]

The Dublin show opened on the 1st of April, and the special feature was the making of a class for these dogs and giving a splendid silver challenge cup, value £15 15s., for the best dog belonging to a member of the Irish Kennel Club in addition to the three prizes. Twelve dogs were entered and eleven put in an appearance. The 1st prize went to a grey dog very light in bone and with rather silky and curly hair—a deerhound pure and simple, as shown by his appearance and pedigree, he being by Swarran out of Linda. Why the judge placed him first it is impossible to say, for he possessed none of the wolfhound attributes which so much distinguished the winner of the 2d prize and the challenge cup and medal, a puppy shown by Mr. Frank Adcock, of Shevington Hall, W. Wigan. This is a very large, dark-grey dog, with grizzled legs and a wolfhound all over, his head is very long and powerful, his body formed on racing lines combined with great power; legs very straight and enormous in bone; coat perfectly straight and very hard and about 8 inches long; tail long and well-clothed with hair, but not bushy; eyes medium sized and very dark in color; ears folding back to the neck but much torn by fighting. This puppy, although about half grown, was very little less in size than the largest in the class (excepting Major General McCansland's Wolf) and much larger than the majority.

The 3d prize dog belongs to Mr. G. A. Graham, of Rednock, Dursley, Gloucestershire. He is a red dog with a good hard coat, a nice ear and altogether a good dog, but lacks size, for although one year and 10 months old, he is only about the same size as Mr. Adcock's puppy. The highly commended dog was Gen'l McCausland's Wolf, a dog bred by Mr. Graham. A great deal was written about this dog last year, and we expected great things when we saw from the catalogue that he was entered, but we were woefully disappointed when we met him in the flesh. He is a great, soft, woolley, curley coated, bad shaped brute, with coarse ears, bad legs and feet, and altogether as unlikely a dog for a wolf as could be found, and why the judge gave him H. C., unless it were for his size, it is difficult to understand. The rest of the class call for no remark. The challenge cup is a very handsome article. It is a massive silver cup in the form of the head of an Irish wolfhound, and fits on to an ebony shield or tablet, inlaid with a silver inscription plate, and the medal which accompanies it is somewhat after the shape of a Maltese cross.

The judging of these dogs was done by Mr. Dalziel, who, if your readers remember, wrote a letter to the *Country* in answer to one by Mr. Frank Adcock upon this breed, who replied that the exhibition of one of his dogs would go further to prove their existence than a paper war. The opportunity sought has arrived, and the award of the challenge cup is, one would think, the best proof of Mr. Dalziel's conversion. There appears to be every reason to believe that through the praiseworthy efforts of the Irish Kennel Club this breed will in a very short time be entirely re-established and become much in request in those countries where large and swift wild animals still exist. J. D.

A TESTIMONIAL TO MR. LINCOLN.

NEW YORK, April 11, 1879.

To Charles Lincoln, Esq., Supt. Westminster Kennel Club Bench Show:

Sir:—We, the undersigned exhibitors at this year's bench show, desire to express and do hereby tender you our sincere thanks for, and hearty appreciation of, the admirable order, careful consideration for the comfort and good keeping of the dogs on exhibition, and for the cleanliness and safety ensured to the many valuable animals under your charge. Yours very truly,

T. F. Taylor, R. E. Drummond, A. Russell Strachan, W. T. Charles, T. J. Conroy, W. P. Asten, E. Lohman, W. Costler, W. K. Williamson, P. H. Morris, S. Fleet Spier, F. J. Sandford, Jr., C. DuBois Wagstaff, Robert H. Cornell, Albert M. Wright, W. H. Pierce, J. Von Lengerke & Bro., Chas. De Ronge, H. Inman, W. R. Hobart, E. M. Gillespie, C. K. C., W. S. Connell, J. J. Snellenburg, C. A. Herzburg, Boyd Kennel, Dr. E. C. Allen, Benjamin M. Richards, Max Wenzel, Milo Seagrass-Lincoln & Hellyar, Timothy D. Gladstone, —— Boonton, G. W. Bass, ford, Alfred Bassford, Alfred Schmdlue,

DOG BREAKING.

SCOTTSYLVANIA, Va., March 23, 1879.

EDITOR FOREST AND STREAM:

Has it never occurred to you that a good deal of nonsense has been written with regard to the breaking of dogs? I write of bird dogs. I am thoroughly satisfied in my own mind if the fourth part of the money expended to have dogs broken was expended by the owners of dogs to have themselves taught what they should require a dog to do and what a dog has a right to require of them, the money would be more judiciously expended. I contend that a well-bred setter or pointer, whether his blood be blue or red, if he has been bred and grown by a man who knows how to hunt a dog, is half broken the first time he is taken into the field. It is not reasonable to expect a dog to obey you if you put yourself on a level with him, and allow him to play with and all over you for, say, ten months, or until he should be taken to birds. If a pup has been treated as above while being grown for the field, it is impossible ever to break him, as he should be broken, without great cruelty. A person can be kind to his dog without at all making him his friend until the animal has earned that distinction by hard work, fidelity and perfect obedience—qualities which are a dog's by nature, but frequently eradicated by injudicious treatment during puppyhood.

To show you that dogs—"even curs of low degree"—are observant and delight to do their master's will whenever they know what his will is, I will cite you a case which a short time since passed under my observation; and this case I will follow by giving you another, which shows plainly, to me, that dogs understand very many things which we are in the habit of thinking they do not understand:

Some little time since my attention was called to voices and the barking of a dog in a piece of original growth timber, owned by me, with now and then a shot to be heard. I rode over to where the parties were, in order to see by what authority they were there. I soon found it was a party of negroes who were out squirrel hunting, but were not across my line. The party consisted of four men and a dog; they were, however, divided, the dog not being with his master. Upon getting to where I heard the dog barking, I found he had treed a gray squirrel, and the negroes who were with him had shot at the squirrel a time or two, and failed to hit it. They were also kicking and beating the dog to keep him from barking, so that he might not lead his master to the game. The dog was a great, lusty brute, of no particular breed, but showed great intelligence, and I found out afterwards where his master was by great courage. The dog was very uneasy, often turning his head from the tree to look for his absent master, and, despite threats, kicks and cuffs, would ever and anon give a deep bark. The owner of this cur seemed to divine what was in the air, and would call out, "Hark I speak for ole mars." Then would come the barks, quick and loud, and then would be repeated the crashing kicks and blows. Again would come from the dog's master, "Whoop I tell ole mars 'bout it," and again would the faithful animal respond, until finally his master came up, when such a change took place, it would have done your heart good to have seen the brute, so abject a moment before. He seemed to have grown two inches taller, every bristle was up, and every muscle swelled to bursting, while his eyes were glassy, green and gold with anger: it only required a word or sign from his master to have sent him with a tiger-like spring at the throats of his former assailants. Even an ill-bred brute like the above only wants to understand what is wanted, to do it. This cur wanted his master to kill that squirrel. The negro had never taught him to call him, more than the other negroes, then why did he look so wistfully for his master?

Not long since I was on a visit to an old relative who lives some ten miles from me, and who, up to the last year of the war, kept and hunted the largest and best pack of dogs I ever rode to. This old gentleman is a deacon in the Presbyterian Church, and therefore is bound to love a good dog. While talking to me about the peculiarities of certain of his old pack, and asking me if I remembered them, he said: "By the way, I have now the finest setter I have owned for forty years; however, I am too fast, he is not mine, but belongs to my daughter, M., who now lives at Rapidan." He went on to say—the dog lying under the table, asleep, the while—"I think Dudley understands all that is at all necessary for a dog to understand, and something it were quite as well he should not understand. Dudley required no breaking in the field, and I never saw him show any disposition to flush birds until told to go on, or to chase or mouth them." My old friend then told me to open the door and windows. He then called, as though some one was approaching the house, "Come on, the dog shan't hurt you," when, in an instant, Dudley was out, and from the vicious barks and snarls which proceeded from him, a person with weak nerves would have been very much put out, notwithstanding the assurance that they "should not be hurt." Who that lives in the country has never seen his setter or pointer spring from his sleep, and rush out of the house when a hen squeaks at a hawk? I have often had my dogs to do so, and nearly get the gentleman before he could rise with his prey.

"O. C. O.," in an article headed "Fire Hunting in Texas" (*vide* recent issue, F. & S.), writing from Brenham, Washington Co., Texas, says that "old J. G. was of the party." Now, I am pleased to know that old J. G. is still permitted by Providence to hunt deer in the Zegua—not Zegna ("spell it with a u, Sammy")—bottom. With Ed. Easley at the Mound in Burleson, and J. G. at or near Brenham, the does cannot brag they raise their two fawns a year; but, friend John Griset, make the youngsters pay the Burleson County folks for that mare and foal they killed. I know, John, it wasn't you; no horse brute's eye could fool you, nor Ed., nor BIRDSHOT.

EPIDEMIC AMONG DOGS.

MOTTVILLE, N. Y., March 29, 1879.

EDITOR FOREST AND STREAM:

Replying to "Jack's" letter from Staunton, Va., in regard to canine epidemic, I would say that my dogs, and also my brother's, were attacked precisely as he says his dogs were, my old dog being nearly blinded, and so sore about the head that he could not bear to be patted. He had severe fits of coughing and sneezing, would take no exercise nor eat anything. I gave him a handful of table salt, which operated within five or ten minutes, both as an emetic and purge, and relieved him greatly; a large clot of phlegm, half the size of my hand, being ejected from his throat. As he would not run or even follow me, I took out my horse, with whom he is very intimate, and drove about a mile, the old dog following to the best of his ability. I put him in a warm, dry room when we returned, and he began to recover at once. I gave a tablespoonful each of sulphur and castor oil, and he is as good as new now. My pointer and my brother's dog were taken the same as the old dog, but the disease had not progressed so far, and salt relieved them at once. F. A. SINCLAIR.

EPIDEMIC DISTEMPER.—*Stanton, Va., April 5.*—A few days after I wrote you my letter of the 14th ult., describing the epidemic among our sporting dogs, my bitch had a relapse (owing to neglect and exposure), and for several days I despaired of her life; but upon receipt of your valuable paper of the 27th, informing me that the Dover's powder and calomel treatment, at first adopted by me, was the correct thing, I immediately resumed it, alternating between calomel and jallap, and Dover's powder and tartar emetic. The result was that, after two doses of each, she was greatly relieved, the inflammation being copiously discharged through the nostrils and eyes by vomiting, and from the bowels. She is now in a fair way to recovery, the only bad symptom remaining being the paralysis of the hinder parts. I only regret that the treatment followed by me was not more generally known before the disease had run its course, as the great bulk of the dogs have gotten through with it or died. I am satisfied that it saved her life; and one other case in which it was tried proved equally efficacious. You can safely recommend it in all such cases. It seemed to be much more violent with setters than pointers, which seems a little singular, as the latter is generally regarded as the more delicate dog. JACK.

AN IMPORTATION.—We had the pleasure of landing on Monday, from the steamer *Republic*, of the White Star Line, the Irish water spaniel Barney, the crack dog of his breed in Great Britain. Barney is imported by W. B. Shattuc, Esq., of Cincinnati. He has won the following prizes: 1st, Birmingham, 1875; 2d, Stoke, 1877; 2d, Crystal Palace, 1878; 2d, North Shropshire, 1878; 2d, Creeve, 1878; 1st, Bristol, 1878; 2d, Sleifnal, 1875; 1st, Birmingham, 1878, and cup as best spaniel in the twelve class, *i. e.*, in the show; 1st, Alexandra Palace. At Crystal Palace Barney was beaten by Limerick, but beat Patsey and others at Birmingham; however he easily turned the tables on Limerick and has beaten all the cracks, Wallace, Sailor, etc., etc. He is now a little over three years old, is 22 inches high, about 55 lbs. weight, upstanding without appearing leggy, legs straight and very heavy feathered, both fore and aft. Coat very good, ears well shaped, hung low and well fringed, but not now at their full length, although they are now about 24 inches long; his top-knot is simply perfection, being the largest and best shaped ever seen on a dog of his breed. His face is perfectly smooth and of good length, his tail is well set on, well carried and good in every way; in fact this is the dog that no mortal man can find a fault with. Mr. Skidmore writes: "I have not sent a dog to America half as good as Barney."

IMPORTATION.—Mr. Wm. Bradbury, of Nason, Va., has recently obtained a magnificent English mastiff bitch, imported from the kennels of Rev. Buckley Jones, who bred Turk, the well-known prize-winner in England. She was brought here by the daughter of the above named gentleman, who is the wife of a son of Sir Robert Brisco, of Cumberland. The bitch has been bred to an imported dog, owned in Richmond, that is a grandson of old Turk.

GOOD STOCK.—We are informed that Mr. Grinnell's Bess has given birth to eight puppies—five dogs and three bitches—by Mr. Jarvis' Champion Elcho. Bess is one of the finest native Irish setters in the country, and is the mother, by Champion Plunkett and Champion York, of a number of very fine field dogs. Bess was bred by the late Mr. Saltus, and is by his Dash, out of Dr. Strachan's Belle. She is noted for her exquisite nose, great staunchness, and ability to work day in and day out through the season. Elcho is too well known as a getter of bench show and field trial winners to need any word of praise.

—Mr. E. S. Wanmaker, of Cool Spring, N. C., claims the following names for a litter of four red Irish puppies, three dogs and one bitch, born Feb. 15, 1879, by imported Blarney (champion Basto-Capt. Lamprier's Sal) out of his Leaf (Plunket-Stella). For dog pups, Style, Halt and Ease; and for bitch, Wreath.

—Mr. Chas. E. Coffin's (of Muirkirk, Md.) pointer bitch Kate, by Sensation out of Dodge's Dolly, whelped, on the 12th inst., seven pups by his pointer dog Bragg. Bragg is half brother on dam's side to the pointer Bounce, who was H. C. at the W. K. C. show. These puppies are: 3 dogs white and lemon, 1 dog lemon ticked, 1 bitch white and lemon and 2 bitches lemon ticked.

—On April 6, the black and tan Gordon setter bitch Wrag (Pat-Kinney's Fan), belonging to N. T. Parker, of New Brunswick, N. J., whelped ten black and tan puppies—six dogs and four bitches—sired by Dr. S. Fleet Speir's black and tan Gordon setter Romeo (Gypsum-Daisy).

—Mr. Wm. L. Bradbury's (Nason, Orange Co., Va.) setter bitch Czarina, by Horace Smith, Esq.'s Czar, out of Dr. Sands', of Rhode Island, imported blue belton, whelped eight pups, March 22, by Scout; bred by Capt. Foster of Leesburg, Va., he by imported Rock, out of Capt. Foster's imported Kirby.

A SUMMER FERN BED.—A lady writing to the weekly *Tribune* gives these directions for a fern bed:

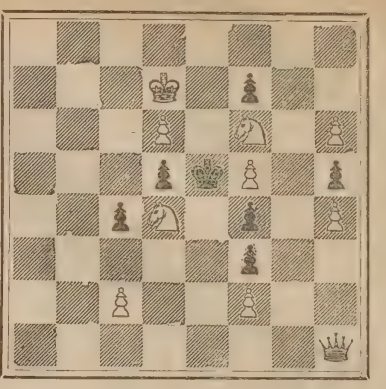
If there is a wet or unsightly place under the tree that never can be made to look well, all the better; choose that spot for your ferns. An airy place, shaded by the house, will do nearly as well. Choose a bundle of stakes two and a half feet long, an inch and a half in diameter, and which still tightly retain the bark; drive these into the ground in a circular or oblong form, as you may wish the bed to be; the stakes may stand from twelve to eighteen inches above the ground; now weave in and out about the stakes, basket fashion, grape vine until the top of the stakes is reached. You then have what appears to be a rustic basket. Fill in the bottom with sod, or earth rubbish of various sorts, but leave room enough in the top for a good layer of forest mould, in which plant the ferns, which may be taken from the woods as soon as the fronds begin to peep above the ground.

It is better to choose the ferns from a plot where they grow thickly, and take them up so that they may be as little divided as possible, and with plenty of soil unbroken about the roots. Fill your basket full of them, and if you water them well in a few weeks you will have a thing of beauty to gladden your eyes for many a week to come. The basket may be further ornamented by slipping seeds of the cypress vine or morning glory between the interstices of the grape vine into the soil. They will sometimes grow right merrily, and if trained about the basket beautify and illuminate it in a very dainty and exquisite fashion. In lieu of the stakes and grape vine (wild grape vine can nearly always be procured in abundance) a basket which has lost its bottom may be used, which, if not already browned by exposure, may be painted any desirable color. If the fern basket is sufficiently protected in the Fall with leaves it may be relied upon for a thrifty crop of ferns the following Summer.

The Game of Chess.

Problem No. 50.

Motto: Manrico.



White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 47.

NOTES.

(a) White has thus far made the best moves according to the *Handbuch*, we believe, but since the publication of that work this opening has, if we are not mistaken, received the attention of analysis, especially Andersson. We are not only without our authorities at hand, but also labor under the disadvantage of playing over this and the D. Graham Baird vs. Mohle match game on a pocket chess board while we rest ourselves now and then beside a brook.

(b) We have a decided preference for White's game. We do not think it a mere appearance of an advantage.

(c) P-K R3 hereabouts, we are inclined to think, is in order.

(d) Kt-K6, it requires but a glance to see, would be disastrous.

(e) If Q-Q4, then Black could reply P-K B4.

(f) Mr. C. rarely relies on an impetuous but unprofitable attack. Kt-K2 appears to be better than moving R to another file. Q P, for the exchange, is not at all safe in this position.

(g) White does not make the most of his passed P, still, the result would have been the same. We can only regret that Mr. C has not played this game in that skillful and brilliant manner common with him.

Game No. 112.—KING'S GAMBIT DECLINED.

Manhattan Chess Club, Cafe Logeling, 49 Bowery; first match game played between Messrs. Chas. Mohle and D. Graham Baird, March 12:

White. Chas. Mohle.	Black. D. G. Baird.	White. Chas. Mohle.	Black. D. G. Baird.

NOTES.

(a) Q the P or B-Q3 we are inclined to give the preference here.

(b) The interposition of the Q here is, it strikes us, preferable.

(c) White has now obtained a superior and attacking position.

(d) This Kt is now in position for active work.

(e) Up hill and down again.

(f) We think that this is a better move than to attempt to win a P in fact, we are quite of the opinion that it is the move.

(g) White cannot safely exchange R for Kt, as he cannot Q either of the passed P's, his K being too distant from the scene of action.

(h) Here White should have played Kt-Q4. If Black captures Kt, then R tks Kt wins. If Kt tks P, then P-Kt7 wins, and if Kt elsewhere is not difficult to see the proper line of play.

(i) This game is by no means a fair specimen even of the skill of these worthy representatives of the Manhattan Chess Club. This match, we doubt not, will be productive of a number of fine games. The players have not, however, warmed up to their work yet.

New Publications.

THE NUTTALL BULLETIN.—The April number of this ever welcome magazine appears on our table the first of the month, and contains, as usual, much that is of interest. The number opens with one of Dr. Coues' delightful sketches, extracted from his work on the "Birds of the Colorado Valley," now in course of publication, entitled "History of the Evening Grosbeak." This is followed by an article from the pen of Mr. William Brewster "On the Habits and Nesting of Certain Rare Birds in Texas," which is based mainly upon the collections of Messrs. Werner and Ricksecker, of Pennsylvania. The paper treats of five species, *Parus carolinensis, Lophophanes atricristatus, Dendræca chrysoparsia, Ceryle americana* var. *cabanisi* and *Buteo zonocercus*, and contains much that is new. The third article in the *Bulletin* is by Mr. W. E. D. Scott on "Late Fall and Winter Notes on Some Birds Observed in the Vicinity of Princeton, N. J." Mr. W. A. Cooper, of Santa Cruz, Cal., gives us in a brief note some pleasant information on the "Breeding Habits of the California Pygmy Owl," and describes its eggs. Dr. Brewer, so well known to all our readers as the champion of the English sparrows, contributes two articles to the present number—one on "The American Brown Creeper," a bird about which, though it is so common, there is really very little known, and another on the "Nest and Eggs of the Golden Crowned Kinglet (*Regulus satrapa*)," both of which will be read with pleasure by ornithologists. Another article by Mr. Scott consists of notes on sixty species of birds observed at Twin Lakes, Lake County, Colorado. The list is an interesting one, and the notes, in many cases, are very full. Mr. Brewster's second article in this number gives a very pleasant account of a bird which, until very recently, has been almost wholly unknown, the black-capped vireo (*Vireo atricapillus*). The account of the habits, nesting and distribution, so far as known, is given with considerable detail, and forms an important addition to our knowledge. In a paper on the "Ipswich Sparrow (*Passerculus princeps*)," Mr. W. A. Jeffries gives his reasons for believing the species under discussion to be nothing more than a larger, lighter-colored, northern race of the ordinary *Passerculus savanna*. A short but interesting paper by Mr. Nathan Clifford Brown gives us "Notes on a Few Birds Occurring in the Vicinity of Portland, Me.," and is important in that it records the breeding of three species of warblers (*Dendræca maculosa, D. blackburniæ*, and *D. pinus*) in the vicinity of that town. "The Strange Story of a California Bird," which is told by Miss Fanny Miller, closes the number. The bird in question was the curious road runner (*Geococcyx californianus*), which appears to have been so jealous of the lady who owned it that it would permit no one to approach her without fiercely attacking the intruding person with its sharp beak. Recent Literature in this number is full and interesting. General Notes, however, to our mind, always form the most interesting and important part of the *Bulletin*, and it is to these that one turns to find out what is the latest news among the ornithologists. We are pleased to see the *Bulletin* becoming more and more attractive, and to believe that, notwithstanding the "hard times," it is receiving the support which it deserves.

THE DOGS OF GREAT BRITAIN, AMERICA AND OTHER COUNTRIES. New York: Orange Judd Company. 1879.

This new work, advertising elsewhere, which the Orange Judd Company have brought out in connection with the bench show this week, is a very beautiful volume. "Stonehenge" is now regarded as the authority in dog matters. Indeed, "Idstone" styles him as "without doubt the first of living authorities," "the most experienced and scientific of writers," etc. The two works on which "Stonehenge's" (J. H. Walsh, Editor London *Field*) present popularity rests are "The Dog in Health and Disease" (1872) and "The Dogs of the British Islands" (1878). But these two books, which together cost $11.25, are too expensive for Americans generally to purchase. This new volume, therefore, has condensed and reproduced them both, omitting merely what matter is only of local interest in England. It also reproduces all the best engravings, adding many more of American dogs. There are, in addition, chapters by, among other American writers, David W. Judd, Henry Stewart and "Warwick." The engravings, numbering considerably over one hundred, are executed by Charles Hinkle, who is well known among dog fanciers. The book contains a complete list of the prize dogs and owners of the bench shows of 1877 and 1878. It is printed on tinted paper, and is unquestionably the handsomest and cheapest dog book yet published

Rational Pastimes.

ANOTHER CHAMPION BELT.—Daniel O'Leary has come to the front with a long distance championship belt and $8,500 prize money. The first six-day's contest for the belt will begin at Gilmore's Garden this city, October 6th. The winner gets the belt and $,5000; the second man, $2,000; the third $1,000, and the fourth $500, provided that each goes 450 miles. No prize will be awarded to any man who does not travel 450 miles. Each man if not a prize-winner who covers 475 miles will receive $300, those who go 465 miles $200, and all who go 450 miles their entrance-money, $100. The number of competitors will be limited to twenty-five. All challenge matches for the belt will be for $500 a side and the belt will be held subject to challenge from any man in the world. Either New York or Chicago must be named for any race, provided that by unanimous consent it may be agreed to hold the race in some other American city.

WALKING.—Forty-one men, styling themselves pedestrians, started on another six-days' go-as-you-please show at Gilmore's Garden Monday morning. By Wednesday morning eleven of them had dropped out. The leading man Tuesday evening was Panchot, a Frenchman, of Buffalo, who scored 183 miles in 45 hours, two miles more than Rowell's score for the same time; but Rowell had rested several hours on his second evening. *Finis, pustulæ, vulni, plagæ, ulcagus opum coronant.*

CRICKET.—The Manhattan Cricket Club will open the season on their ground at Prospect Park on the 19th inst. Wickets to be pitched at 2 P. M. Practice days, Wednesdays and Saturdays.....A cricket club is about to be organized at Orange, N. J. It will be composed of many of the old members of the Mountain Club.....The Newark Cricket Club has secured a ground at the south side of the city, and Fred Hallis, the club's old professional, has been employed to put it in order.....Several teams from across the water have been expected to visit this country during the coming season. It is doubtful, however, if but one eleven comes this way, and that will be an English professional eleven under the captaincy of the famous Nottingham cricketer, Richard Daft. In all probability Mr. Marsh will not bring out an Irish team this year.

LACROSSE.—At the third annual meeting of the Ravenswood Lacrosse Club, held at their rooms, 162 and 164 Broadway, Thursday evening, April 10, the following officers were elected for the ensuing year: H. S. Sanford, President; Jay L. Smith, Vice-President; A. G. Goldsmith, Secretary; George B. Wilson Treasurer; Edward Cluff, Captain; Messrs. A. G. Goldsmith, W. P. Ritchey and J. A. Nichols, Executive Committee. A number of new members were elected, and a series of games was decided upon for the ensuing year.

SCOTTISH-AMERICAN ATHLETIC CLUB.—The spring handicap games of the Scottish-American Athletic Club will be held on their grounds, No. 329 West Fifty-fourth street, on Saturday, 26th inst., at 4 P. M. The events are seventy-five yards and half-mile handicap runs, and a two-mile handicap walk open to all amateurs, and a walk of one mile, open to members only. Entries close with Mr. W. S. Cornell, Secretary, 329 West Fifty-fourth street, on Saturday, 19th inst.

MANHATTAN ATHLETIC CLUB.—The opening handicap games of the Manhattan Athletic Club were held last Saturday. In the 100 yards dash C. S. Phillips, New York, won first medal in the final heat in 11⅛s. T. Nichols, American Athletic Club, second. The final heat and first prize in the mile walk was captured by T. E. Smith, of Jersey City; J. H. Gurney, New York, second; time, 7:54½. W. J. M. Roberts, of the Staten Island Athletic Club, took first medal in the half-mile run, and J. McNulty, New York, second; time, 2:14.

COLLEGE BASE BALL.—The following are the two teams of Harvard and Yale as finally selected: Harvard—Windsor, C.; Folsom, P.; Harding, F. B.; Coolidge, S. B.; Cohen, T. B.; Munn, S. S.; Dalzell, L. F.; Delano, C. F.; Howe, R. F. Yale—Watson, C.; Lamb, P.; Hopkins, F. B.; Walden, S. B.; Parker, T. B.; Hutchinson, S. S.; Camp, L. F.; Clark, C. F.; Ripley, R. F. The first college match takes place at Princeton, May 3, when the Yale nine plays there.

ARCHERY.—*Highland Park, Ill.*—The following archery scores were made by a few members of the Highland Park Archery Club at their first contest of the season, at the "American Round." The only large thing about the score is the chance for improvement:

	60 yds.		50 yds.		40 yds.		Total.	
	Hits.	Score.	Hits.	Score.	Hits.	Score.	Hits.	Score.
E. H. Beebe	10	30	21	104	29	169	60	302
E. B. Weston	18	66	23	109	26	114	67	289
F. B. Green	16	72	20	88	23	109	58	269
W. B. D. Gray	13	59	22	90	24	123	61	272
T. W Kyle	17	49	20	73	30	123	67	250

—The Western Union operators have an athletic meeting at the Manhattan Athletic Club grounds, Fifty-sixth street and Sixth avenue, this afternoon.

—The northern half of New York State is still covered with snow. There were two feet of snow in the Adirondacks on the 15th. Usually the ice goes out of the lakes between the 25th and 29th April.

BIRD'S NEST PUDDING.—The workmen who were pulling down the sparrows' nests in Monumental Park, Cincinnati, the other day, found in one nest a $5 bill neatly woven in, and in another a lady's fine gold chain. There was a quiet division of the spoils, and such thorough work as followed was never seen among park men before. Now, every man go out and climb a tree.

—The Port Jervis *Gazette* states that all the lumber mills in the vicinity of the Delaware River are busy sawing rafting material to be floated down the river the coming season. So much lumber has not been got out in several years as during the past winter. This is in consequence of the facts that snow has been favorable and that lumbermen are tired of waiting for an advance in prices.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

R. T. C. S., Cardville, Pa.—Consult our last issue.

PUG.—The Cunard steamers will not take dogs under any conditions.

SCHOOL BOY.—Write to the *Army and Navy Journal*, 243 Broadway.

G. E. C.—Hope to publish sketch of sharpie and rig. Has been crowded out hitherto.

G. H. M., Camp Thomas, A. T.—For lapidary work address Farjeon, 77 Nassau st., New York.

M. T. M.—Is the Blissitt rifle of English manufacture, and is it known in this country or used here? Ans. Not known in this market.

SUBSCRIBER, Matawan, N. J.—The term "weight" in describing bows is used to designate the pounds of pull. We are not up in dominoes.

C. G., Syracuse, N. Y.—Wash the sores thoroughly with old Castile soap, and then anoint them with carbolic salve. Continue the vegetable diet, and give plenty of exercise.

G. C. P., New York.—Please mention the name and color of the cloth best adapted for an upland hunting suit? Ans. Canvas. Grass green in the early autumn, and dead grass color in the fall.

J. W. J., Opelousas, La.—What is the price of "Stonehenge's" new edition of "Dogs of the British Islands," and where can it be obtained? Ans. Orange Judd Co., 245 Broadway, New York. Price $2.

A. M. S.—The patent law distinctly provides for the right of any individual to make for his own use any patented article without paying royalty, so long as he does not make the article for trade or profit.

C. A. D., Sing Sing, N. Y.—Give me the name and address of some one in or near N. Y. who can dock a dog's tail properly? Ans. Do it yourself with a sharp chisel, pushing back the hair and cutting diagonally at the required length.

F. C. W., Washington, D. C.—Your puppy's fits are probably caused by his teeth, and will pass away. The appearance of his coat, breath, stools, etc., should determine whether he has worms or not. Their presence would account for the fits.

M. B. C., Americus, Ga.—Is there a musk or any substance that will drive beavers away from a place? Ans. Import a colony of muskrats. They will drive away the beavers, eat up the fish, and possibly prove worse than the present annoyance.

J. M. D., Jr.—For books on canoeing see "Canoeing in Kanuckia," "Canoe and Flying Pros," 25c., Harper Bros., N. Y.; and, best of all, "Log of Canoe Cruise," by Baden Powell. Can procure latter book from England upon receipt of price, $2.40.

B. A., Boston.—Are there any laws regulating the collecting of wild birds and eggs for scientific purposes in New Brunswick, and if so, what are they? Ans. You can shoot for scientific purposes by obtaining a certificate from some Natural History Society.

W. H. P.—1. Where can a copy be procured of "The Pleasures of Angling," by Mr. Dawson, of Albany? 2. Is there any one in this city who will give lessons in tying salmon and trout flies? Ans. 1. Sheldon & Co., New York. 2. Apply to Abbey & Imbrie, 48 Maiden Lane.

G. H. W., Titusville, Pa.—If a person pays city, county or State tax on a dog he can recover damages for its loss if it is killed. For glass eyes for animals write to Wallace, taxidermist, William st., New York. The guns are still manufactured and are advertised in our columns.

W. W. S., Schenectady, N. Y.—Demand regulates supply; if there is a call for FOREST AND STREAM, your newsdealers will keep them on hand. Subscribers find it much more satisfactory, however, to receive their papers directly by mail. Capt. Bogardus' book is sent post paid for $2.

C. J. M., Appleton City, Mo.—Do you consider the common meadow lark (*Sturnella magna*) suitable for table use, and if not, what are they good for? Ans. Meadow larks are not considered very good eating, though frequently put in the pot. Perhaps they are more esteemed for their song.

H. S., Canton, Ohio.—Can you inform me where I can get an apparatus for inflating small rubber toy balloons? I wish to purchase the rubber and whatever is necessary to generate the gases, etc., so as to manufacture them for shooting practice. Ans. Turn in the gas from your gas burner.

H. H. K., Johnston, Pa.—For archery rules purchase Maurice Thompson's "Witchery of Archery" (Scribners), or send for manuals of archery, lawn tennis, croquet, etc., to Conroy, Bissett & Malleson Fulton st., N. Y.; Peck & Snyder, Nassau st., N. Y., or E. I. Horsman, William st., N. Y.

OTTAWA, Canada.—For 16ft. catamaran place the mast 6ft. 9in. from bow. Rig as jib and mainsail. Hoist, 10ft. 9in.; foot, 15ft.; head, 8ft., and leech, 18ft. Jib 12ft. on foot, 16ft. luff, and 11ft. leech. No book published containing anything on catamarans except "Canoe and Flying Pros," 25c., Harper Brothers, N. Y. That book is, however, not technical in character.

Q. R., Buffalo.—Will you please decide this bet for some of your readers here? A bets B that C will kill more birds than D; they each kill 5; who wins? Ans. We are always ready to help people out of a dilemma when we can, but this question is simply too idiotic to merit an answer. If A, B, C and D cannot solve this, they should seek some sequestered cell in an insane asylum.

P. W. K.—No book published on shell-boat building. Nothing like experimenting in that line. Try and copy the boats, or build on the flat bottom plan. Cut out midship section, flat across bottom; spring ⅞in. sides around same, riveting to stem and post; nail on bottom, and fit up in imitation of real shells. We have made several boats on this plan with great success. Total cost, about $10.

G. F. K., Syracuse.—1. Can a hound take a prize at any bench show without pedigree being given? 2. Will you define the difference between a foxhound and a deerhound? Ans. 1. A pedigree is not required. 2. The foxhound is the dog used for fox hunting, while the deerhound is the long-coated dog, resembling a greyhound in form, used mainly in the Highlands of Scotland for chasing wounded deer.

LINGA, Philadelphia.—Will you kindly oblige me regarding indications of internal canker of the ear and treatment of same? Ans. Indications: The dog frequently shaking his head and rubbing his paw over his ear; pull the latter and he whines. Remedy: Goulard's extract and wine of opium, of each ½ oz.; sulphate of zinc, ½ dr.; water, 8 oz.; mix, and pour a little in the ear twice daily, holding the head sideways for some minutes.

H. A. R.—For cruising with short crews the yawl is very well adapted for a 30ft. yacht. She would lose slightly in speed in mild weather compared with the sloop, but would be faster than a schooner. Give your boat about the same area as a yawl she would carry as a sloop. Have forwarded plans for hinged mast. In the yawl you gain equal, if not greater, handiness than in the schooner, excepting in large craft, while speed is superior.

T. G. C., Toronto.—A member of our club has put away some shrimp for bass fishing. He has them in alcohol to toughen them. He has them colored—pink, green, crimson and the natural color. How do you think they will do? Ans. Your friend's plan is new to us. We have never seen shrimp colored artificially, except by boiling. Should think the method a good one. A mixture of equal parts of salt and saltpetre has been known to preserve shrimp for a whole year.

J. S. F., Philadelphia.—1. Is there a book published treating on breeding of setters exclusively, and how close to breed among one stock? If so, what is the name and price? 2. Has a setter pup, five months old, worms or needs medicine that is fed on corn meal, bread and table scraps, and is very thin, with looseness of bowels, and with a great appetite for pieces of strings and rags, and horse manure, and a voracious eater? Ans. 1. Yes, "The Setter," by Laverack, price $3; can send from this office. 2. The puppy has worms, and should be given areca nut.

G. S. G.—The different measurements and tonnages of the schooner *Idler* you mention arise from the fact that she was altered a number of times, and that the rules for measurement vary in different clubs to some degree—thus, by some length is taken from rabbet forward to rabbet aft; others take it from forward side of stem to after side of post. Such differences account for the smaller variations noticed. The large ones are due to alterations as well as to carrying over old measurements from year to year, omitting to make correction in club book. *Idler's* tonnage at present, according to N. Y. Y. C. rule, is 191.55 tons. Her "new measurement" is 84.68 tons. The whole subject of tonnage is still in a very mixed and crude state, and the term tonnage signifies little unless the manner of taking it is mentioned.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 17, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Saturday, April 19.—New York Athletic Club Spring Handicap Meeting at Mott Haven. Base Ball: Princeton vs. Defiance, at Princeton Yale vs. Worcester, at New Haven; Albany vs. Utica, at Albany; National vs. Holyoke, at Washington; Atlantic vs. Field, at Brooklyn; Nameless vs. Field, at Prospect Park; Polytechnic vs. Field, at Prospect Park. Cricket: Manhattan Club Opening Day at Prospect Park.

OBITUARY.—Mr. Alfred W. Craven, long connected with the Croton Aqueduct Department, was buried at Greenwood last Tuesday. Mr. Craven was an enthusiastic sportsman and fisherman, and derived much pleasure from frequent excursions, both in this country and abroad, in pursuit of large game. His principal hunting-ground was Virginia for deer, although many a noble buck, elk and buffalo bull succumbed to his rifle on the plains and mountains. In England, Scotland and Ireland he also fished and hunted. Among other of his reminiscences, he dwelt with great satisfaction on his visit to the Duke of Sutherland's estate in Scotland, where he earned the approval of Donald the "Gillie" by his success with the salmon and also in deer-stalking. Mr. Craven's funeral at Grace Church was largely attended by members of the American Society of Engineers, Century Club, and prominent citizens and former employees of the Croton Aqueduct Department.

OBITUARY.—By receipt of a single mail last week we were simultaneously advised of the death of Chief of Police, T. W. S. Fenton, of Montreal, J. L. De Camp, of Bates & Co. of this city, and Joseph L. Barker of Ann Arbor, Michigan, all prominent persons and long time subscribers of FOREST AND STREAM.

We regret also to learn of the death of a four-year-old daughter of Dr. Elliott Coues, on the 8th of April.

Our friends may feel assured of our sympathy.

—Among many distinguished visitors at our office since last issue was Col. G. W. Schofield, U. S. A., who, we regret to state, is suffering from an injury received from a fall of his horse on January 4th. He was en route for West Point.

DOGS IN THE MANGER AND DOGS ON THE BENCH.

A REPORT of the third annual Bench Show of the Westminster Kennel Club, held in this city, will be found in the Kennel Department of this paper. The management have every reason to congratulate themselves upon their success, financially and æsthetically. Not only was the collection of dogs superior in all its numerous classes, and full in its numbers and representation, but the social standing of the exhibitors and visitors was notably eminent. At no public event in this city has there ever before been gathered so many representatives of its old and honored families, as well as of visitors from other parts, near and remote. Never has there been seen so large a congregation of private carriages and conspicuous liveries. The reports of the daily press have attested to these facts, and with singular unanimity have accorded to the exhibition an award of highest merit. Each paper seemed to vie with the other in preparing the fullest reports and emphasising the most salient features of the show, dispensing its praise or criticism with impartial candor, and evincing a conscious pleasure in the bestowal of approval. Doubtless a large measure of the show's success was due to their efforts in placing its attractions before the public. For this reason, and recognizing the press as a most potent factor in influencing results, for good or evil, we are fain to express, at this opportunity, our regret that the management had not been more liberal in its distribution of tickets to reporters, and in giving them facilities to observe and work. We hope the hint will be carefully put aside for future use.

In marked contrast with the conscientious and truthful presentation of facts by the daily journals, are the petty malversations of two envious sporting papers, which have taken every pains to belittle the show and its promoters, and with marked coincidence of purpose and expression, to battledore their gross perversions from east to west, and resound the echo from Chicago to New York. These twin dissentients, like those who pointed to Nazareth in days of yore, can see "nothing good" in anything outside of the Dog Ring. They say the exhibit was meagre, and the attendance small; that the sporting classes were inferior in number and quality; that it was intrinsically a toy and parlor dog show, and financially a failure; that the decisions were unjust and based on favoritism; that the Bench was incompetent—one of the judges incapable, the second an "aristocrat," and the third an affable figure-head! They credit to the demerit account the fact that one-third of all the pointers and setters were decorated with a V. H. C., instead of accepting the ribbons as indicative of the average excellent quality of the dogs. They not only sneeringly term white ribbons consolation prizes, but openly aver that they are "an insult to exhibitors when every other dog is so decorated."

Of course the 20,000 people at the show are thoroughly qualified to pass upon these charges and criticisms, and determine their value and truthfulness. If misrepresentations have wilfully been made, they must inevitably react upon their fabricators. If they have been prompted by motives of envy or disappointment at schemes defeated, the facts will appear; and the verdict will be rendered accarding to the facts. The public at least is clear sighted, fair-minded and honest in its expression of opinion. It is deplorable that honest efforts to improve the breeds of dogs, and promote intelligence among fanciers, cannot be permitted to stand upon their merits. There seems to be an underhanded, unscrupulous attempt to antoganize interests which should be harmonious. The only rivalry which ought to exist among sportsmen should be an honorable emulation to work for the common good; to produce the best dogs for the work required, and to compare notes and experiences, that all may profit by the interchange. But what incentive or ambition to work has an association or an individual, when all his honest endeavors are to be disparaged in order to serve sinister purposes, or to gratify pique or jealously? How long will the tree produce if it is to be constantly stripped and girdled? Sportsmen are natural born friends. Their interests have always been mutual and their courtesies reciprocal from east to west, and we deem it a sin to attempt to set them at loggerheads. We wish no sectional feeling anymore. The sentiment is unholy and unpopular; and we therefore appeal for the support of all friends of amity and good fellowship to preserve the *entente cordial*, and to permit no unscrupulous mischief makers to create schisms and class prejudices among the Fraternity. As conscientious chroniclers of events of the field, and disinterested works for the general good, we deplore both their motives and their endeavors. Let every attempt to belittle honest efforts or to detract from benefits which might accrue therefrom, be decried. Moreover, let no expression of belief in the integrity of any person eligible for the office of judge be misconstrued to create a *casus belli*, or to form a nucleus around which to rally hostile factions.

Judges are not infallible; they are not omniscient. There can be no bench decisions without some appeals, and no awards without grumbling from the disappointed. But what is to determine the qualifications of a judge, or of a bench of judges? The scale of points which constitute the formula of judging is principally based upon the most careful study of canine anatomy and the specific characteristics of the various breeds. In applying this scale of points to practical use, successful judges must not only be familiar themselves with the dog's anatomy, but they must be gifted with a natural insight to perceive, and a tact to determine quickly. Physiological analysis is a gift possessed but by few physicians or surgeons, be they ever so learned or studious; so when a judge at a show of dogs has once exhibited the requisite qualifications, exhibitors should prize him as a phenomenon, and not carelessly run off to untried men. It is easier to dismiss an incumbent than to find an efficient substitute. Hence we have no patience with habitual grumblers, of whom nine-tenths have never read the rules for judging, or formed any conception of what constitutes a scale of points. It is not for these to utter loud-mouthed protests, because technical decisions do not agree with their preconceived notions of what constitutes a good dog; and by a good dog, we mean one which is not only faultless in his anatomy, condition, and constitution, but one which has proved the mettle of his breeding in the field. Just as doctors differ, so do judges and juries. Therefore we shall always be suspicious of the motives of those who cry "fraud," and sound an onset when decisions provoke their displeasure.

We hope for continued good fellowship throughout all the land. We wish all Bench Shows the most eminent success, and shall always be ready to aid and promote them whenever and wherever instituted. We are the friends of sporting and non-sporting dogs alike: for the miscellaneous classes always add very much to the attractions of an exhibition. But there is one brute which we would ignominiously disqualify and expel from all future Benches, and that is, the "Dog in the Manger." He is a pest of the vilest character.

THE HYSLOP-ARCHER SYSTEM.

THOUGH little or nothing has been done by us in America in the way of furthering naval science during the past twenty years, our maritime decay having apparently turned all thought and investigation, as well as our inventive faculties, into other channels, we are not quite willing to see ourselves stripped of such credit in relation to progress in naval science as America is legitimately entitled to. We therefore desire to place prominently upon record the researches and final results of the latest application of Scott Russell's wave-line, made at least simultaneously if not antecedent to similar experiments and deductions brought to light recently in England. It is not detracting from the acknowledged services which Mr. Collin Archer rendered through the publication of his experiments and determinations leading up to the discovery of the real value and true application of the wave-line to systematic construction when we here claim for an American a co-equal amount of credit in their development.

We have had an opportunity of examining closely the means taken for many years past by Mr. John Hyslop, of New York, for applying to the needs of practical naval design a system based upon the original "wave-line" as first announced in England in 1837 by Mr. Scott Russell. The models, as well as the numerous drawings shown us, and testimeny adduced from witnesses to the experiments of Mr. Hyslop, place the fact beyond question that he has for many years been applying the "wave-line area" system to the design of yachts and vessels, and that the results of such application were of a character sufficiently striking and meritorious to induce him to grant to the system his implicit confidence and support long before the first article upon the subject by Mr. Collin Archer appeared in the London *Field*, a little over one year ago.

It has been commonly supposed that the series of papers from the pen of Mr. Hyslop, which were published in the New York *Country* last spring, were only an American adaptation of what had already been written on the subject in England. This is far from being the case, however. Mr. Hyslop had deferred the publication of his researches owing to other business engagements, but upon being informed by a friend of the appearance in the London *Field* of something relating to wave-lines, immediately suspected that his own thunder had been forestalled by another, and thereupon sent his papers to the *Country*. Whatever credit has been meted out to Mr. Archer must, in the face of the evidence we have gathered, be shared with Mr. Hyslop. As far back as the spring of 1874, Mr. Hyslop launched his yacht *Petrel*, the first vessel of any kind built designedly upon the wave-line area system, and ample evidence of the justice of our claim that he should receive a liberal share in the fame due to the instigations of progress in naval architecture.

It is pitiable evidence of the decay of our maritime affairs that so significant a development in the theory of naval design should have been allowed so long to remain in obscurity for the want of a proper channel through which to make it public. There is not to-day a single journal in the United States, FOREST AND STREAM excepted, which is capable of dealing as a critic with modern nautical science. It is indeed a sad commentary upon the intelligence of our maritime classes when we reflect that the only journal nominally devoted to their interests is of a kind and character educated Americans should feel heartily ashamed of. It is one which to the limited number of its readers forms a regular weekly budget of fun, and which could not, to save its precarious existence, extract a square-root or tell a compound engine from a rolling mill. An interest or a community must indeed be in a bad way when not equal to the support of something better than a light-weight journal which, in its weekly issues of antideluvian and Quixotic snarls over the question of Iron vs. Wood—something settled in favor of iron twenty-five years ago—violates in the most flagrant manner the commonest laws of statics, and prattles about "pressure resistance," "two kinds of stability," "flotative capacity," and the like, in blissfu

ignorance of all the discoveries and the very existence of a scientific world beyond its own narrow and befogged horizon! And such benighted incapacity sets itself up as the mentor of graduates from the U. S. Naval Academy, any one of whom knows more in a single watch than this woodchoppers' organ does in a lifetime, and to whom their would-be mentor is an example of perverse stupidity and supercilious ignorance which would be laughable were it not painful to behold. Under these circumstances it is left for us to follow the recent productions of the scientific world, and to place upon record in these columns what others should have done long ago were they not just awakening from a Rip Van Winkle sleep of half a century, and engaged in airing their fossilized crudities *ad nauseam*.

That the Hyslop-Archer system—for by this name we will hereafter designate construction by cycloidal arcas—is destined to become the leading feature of naval design of the future is placed beyond question by the invariably successful results which have attended its use, as well as by the remarkable closeness to its precepts reached by all the best examples of naval construction in which speed in connection with economy in propulsive force is aimed at. It is evident, therefore, that a full understanding of the invaluable characteristics of the Hyslop-Archer system will be of the highest importance to all yacht designers and modelers in general, as well as to the constantly increasing circle of amateurs who are drawn in the vortex of naval science by the irresistible attraction of its currents, first experienced while comparing the performances of yachts of different classes. We propose, therefore, at no distant day to recur to this system more in detail, and to point out its advantages in such a way that the ever-present crew of doubting Thomases may find more difficulty in throwing overboard as worthless the close and inductive reasoning of science with that levity too often born of witless vanity or of untrained minds seeking to pass upon what is beyond their ken.

—Commander L. A. Beardslee, U. S. N., known to our readers as "Pisco," takes charge of the sloop-of-war *Jamestown*, now fitting out for Alaska, and will sail about May 1st. *Bon voyage!*

—The walking business is on its last legs.

GAME PROTECTION.

No Spring Shooting.—We chanced the other day to overhear a discussion between four Brooklyn gentlemen, well known officials and long-time sportsmen, viz., alderman Stewart, Capt. Wm. B. Steers, Geo. C. Bennett, Esq., and Loftis Wood, Esq. The subject under consideration was the desirability of abolishing all spring shooting, and all concurred in an affirmative opinion. The coincidence was the more suggestive because the gentlemen had met accidentally. Their decision not only indicates that these matters are subjects of grave thought, but that active progress is being made in a conservative direction. By and bye we shall have neither spring nor summer shooting, thus narrowing the period of open time, and thereby approximating the desirable period of uniformity in close seasons.

Migratory Quail Importation.—The orders for migratory quail sent to Mr. Horace P. Toby, of Boston, and transmitted by him to Mr. Braun, at Messina, are as follows: In Pennsylvania, 100 each to Washington, West Chester, Lehighton, Sunbury, Danville, Towanda, Pittsburg, McKeesport and Waynesburg; in New York, 400 to Brooklyn and 100 each to Schenectady and New York; 100 each to Stafford Springs, Conn.; Essex, Conn.; Belvidere, N. J.; West Lebanon, N. H.; Brookfield, Mass.; and Strathroy, Canada; 621 to Baltimore, Md.; 125 to Rockland, Me.; and 200 to Wareham, Mass. This is an aggregate of 3,046, which ("the acts of God, enemies, pirates, letters of marque or reprisals, robbers, thieves, restraint of governments, fire at sea or in port, from any cause whatever, accident to or from machinery, boilers and steam, collisions and dangers of the seas, rivers, and steam navigation, of what nature or kind soever, excepted") will in due time be safely delivered in this country. Mr. Toby has placed our friends under obligation for so courteously assuming the trouble he has in taking charge of the work; the orders have probably been larger than anticipated. Two or three years more, if the importation continues on a similar scale, will demonstrate the utility or failure of the work.

Migratory Quail.—*Editor Forest and Stream:* I have watched with much interest the reports that from time to time have appeared in your paper bearing upon the question whether this bird will be ultimately naturalized in this country, and I notice, Mr. Editor, that you pronounce the prospect "most encouraging." But I have observed nothing authentic or decisive on the subject, except the procuring of three or four specimens (probably more or less dissbled) at points not very remote from their breeding grounds in Vermont, and a statement from Judge Everts, expressed as I thought in rather doubtful terms, that some native birds had reappeared where they were hatched, but at a period simultaneous with the liberation of others of fresh importation, from which I infer that a mistake in identity is quite possible; and the question still remains unanswered whether the parent birds with their vivid recollection of their last flight across the Mediterranean but a few days before they were trapped, together with the instincts implanted by annual migrations for ages, do not lead their followers at length over the broad waters of the Atlantic, until they drop exhausted into its bosom. What I wish, Mr. Editor, is to suggest to those gentlemen who, with the hearty good wishes of every sportsman as well as every lover of nature, are engaged in bringing these interesting birds in increased numbers to our shores this spring, that they should distribute a portion of their importation at least in our lower Gulf States, where at the approaching season the conditions of temperature as well as their own instincts would lead them to take their first migratory flight North, from whence, after the duties of the breeding season were over, they would be much more likely to limit their Southern flight within the borders of our own continent.

Will not some of those naturalists whose articles enrich your columns, and whose studies will enable them to speak with authority, let us hear from them on this subject? B.

Dedham, Mass., March, 1879.

Our correspondent is too impatient if he hopes to have an experiment in acclimatation, like the present one, settled in one or twoycars. We must wait some time yet before we can expect definite results.

Caring for the Birds—*Allentown, April* 10—*Editor Forest and Stream:* As soon as the shooting season was at an end in Pennsylvania—Jan. 1—we had very cold weather and large amount of snow. We pitied these poor creatures and resolved to protect them. We at once set to work by urging the farmers in this and other counties, through our weekly paper, to help us to catch the birds with traps and feed them over winter, or to bring them to our city and sell them to us. In this way about twelve or thirteen hundred birds were saved in our county. As a reward, we have plenty of birds, and next fall can enjoy ourselves to our heart's content. Would all sportsmen follow our example next year Pennsylvania would always have plenty of game. We let seventy-three pairs fly last Tuesday, and all the farmers on whose lands we put some were well pleased with our agreement (to protect each other), except one, and that one changed his mind during the night, and on Wednesday morning early came to town and received five pairs.

Chas. Bitting.

The Rifle.

Massachusetts—*Boston, Walnut Hill Range.*—The opening contests in the long range match on the 9th showed the men somewhat out of form. An extremely high wind affected the flight of the bullets in a way exceedingly annoying to the marksmen, and the disarrangement of the wind dial, which is undergoing repairs, by no means added to the accuracy of calculations. Mr. Sumner's performance in securing 206 at the three distances, may be regarded as meritorious. Messrs. Brown, Webster and Howard follow:

J S Sumner.

800	4	5	5	5	5	5	5	4	5	5	5	5	5	4	5	—72
900	5	4	5	5	5	5	3	5	4	5	4	5	5	5	3	—68
1,000	4	5	5	4	3	5	5	4	4	4	5	4	4	5	5	—66—206

	800 yds.	900 yds.	1,000 yds.	Total.
J F Brown	64	66	64	194

Second Class.

W G Tousey	4	4	4	5	5	5	4	4	4	—43
E Wyman	4	5	4	4	4	4	5	4	4	—42
E Wyman (re-entry)	4	4	3	4	5	4	5	4	5	—42
J Grady	5	4	4	4	3	5	5	5	3	—42
F R Garden	4	4	4	5	3	4	4	4	5	—41

Boston, April 12.—The regular monthly prize shoot at the Mammoth Gallery shows some very fine shooting for April. Though no one has yet been successful in getting the extra prize of $20 for eight consecutive bulls, the standing of the several competitors to date is as follows; 150 feet, rounds 8, possible 40:

Wm Bradford	39	E P Dickerman	36
Geo Laub	39	A E Robbins	36
U A Pollard	38	H L Brown	36
C Edwards	33	L W Farrar	36
D B Raymond	33	J H Storer	35
Frank Hollis	33	M L Pratt	35
Edwin W Archer	37	P E Daly	35
A P Holman	37	F H Hartshorn	35
A W Robinson	36	J J D Dunne	35
Prescott Ely	36	H F Borden	35
Geo E Everett	36		

—The New Bedford Rifle Asssociation had their first target practice April 3, at Clark's Cove; 200 yards, each member firing 30 shots at the regulation target. In the possible 150:

G R Stetson	119	S P Richmond	98
S Eggers	113	F A Bradford	97
T R Almy	113	D D Briggs	92
R M Ashley	112	W E Macomber	85
F Butcher	109	G C Sylvia	84
H P Babcock	103	G W Parker	81

Connecticut.—The following officers of the Bridgeport Rifle Club were elected last Thursday; President, George F. Hull; Vice-President, H. S. Warner; Secretary, R. S. Bassett; Treasurer, George D. Phillips; Executive Committee, Horace L. Eames, Harry Nichols, Wallace Gunn, S. C. Kingman, Charles E. Beers.

Connecticut—*Collinsville, April* 11.—The Canton Rod and Gun Club held a prize shoot to-day which was open to all comers. The following are the leading scores made on a 24-inch ring target, with rings one inch apart, in three shots, out of a possible 36, off-hand, 200 yards, 3lbs. pull; re-entrees allowed:

J D Marks	10 11 11—32	H Chapin	26
O B Hall	10 11 8—29	H Konold	25
J Hamilton	28	J D Andrews	24
G F Lewis	27		

The winner of the first prize made the following eleven consecutive shots. Creedmoor: 5 5 5 4 4 5 5 5 5 5 5—53 out of a possible 55.

Hartford, April 10.—At the International Rifle Range Mr. J. C. Lester offers prizes for the best six scores made every two weeks with ten shots at the 200 yards Creedmoor target reduced for the 100 feet distance. The following are the scores for the last set of prizes:

	Massachusetts.	Creedmoor.
Henry Andrus	116	50
E H Williams	115	49
W W Tucker	112	48
R O Whitney	111	48
Henry Gyare	110	48
G S Merritt	104	45

A previous first prize was also taken by Capt. Andrus with a fine target of 113 Mass., 49 Creed. Mr. E. H. Williams has opened the new contest with a fine target of 116.

P. X.

—The New Haven Rifle Association did some good shooting at the Quinnipiac range, notwithstanding the cold. The scores stood:

7 Shots, 200 Yards—Military Rifle.

A M Johnson	33	J P Landers	25
H Nichols	31	E J Morse	24
F W Whitlock	30	H D Phillips	24
W Gunn	29	S C Kingman	24
J Tinkey	29	F J Colvin	24
O'Brien	29	F A Otis	23
James Reynolds	28	W C Dole, Jr.	23
J E Stetson	28	E C Spencer	22
W F Murphy	28	A Allen	21
R M Walker	28	T K Dunn	21
P O'Connor	27	E Nichols	20
W L Warner	26		

200 Yards—All-comers—Any Rifle.

H Nichols	32	E W Whitlock	23
J E Stetson	31	S C Kingman	23
H B Moore	31	S G Hall	21
S Y Nichols	30	P O'Connor	25
W F Story	30	E Nichols	25
S H Rubbard	30	O S Goodell	24
G C Canfield	30	G Vobbardt	24
F J Colvin	30	A Allen	23

500 Yards—Military Rifles.

R M Walker	31	S C Kingman	23

A Allen	26	L F O'Brien	20

500 Yards—All-comers.

J E Stetson	34	F J Colvin	28
W C Dole, Jr.	33	S Y Nichols	21
E W Whitlock	31	S G Hall	16
E Nichols	30		

New York Rifle Club.—A very close and interesting series of competitors among the members of the N. Y. Rifle Club for the Alder badge was brought to a close on Saturday evening, April 5. The badge, which was presented by Mr. Fred Alder, is an elegant piece of workmanship. It was shot for under the following conditions: To be won three times before becoming the final property of the winner; ten shots; rifle, .32 cal.; trigger, 3 lb. pull; position, off-hand at a 300 yard Wimbledon targe, reduced for the gallery range; rules of the N. R. A. to govern. Mr. N. O. Donnell was the successful man, and his shooting throughout the match is an indication of the fact that the badge went to the right man: W. H. Dunlap, Nov. 25, 47; T. Fitz, Dec. 2, 46; A. J. Howlett, Dec. 9, 47; T. Conlin, Dec. 16, 48; T. Conlin, Dec. 30, 48; N. O. Donnell, Jan 6, 47; J. S. Conlin, Jan 13, 45; N. O. Donnell, Feb. 12, 45; H. D. Blydenburgh, Feb. 8, 48; J. S. Conlin, March 22, 46; N. O. Donnell, April 5, 47.

Word and Time Shooting.—A "word and time" shooting tournament will begin at Conlin's Gallery, April 23. Two gold badges are offered for the best scores in each trial.

Zettler Rifle Club.—A match will be shot at Zettler's Gallery this evening between the first and second teams of the club. The (Calamities) second team dispute the title of championship which has been awarded to the first team in the late tournament. Lovers of fine shooting will see the Calamities at their best to-night.

New Rifle Club.—Greener's West Side Rifle Team was recently organized at 744 Ninth avenue, and the following officers elected: President, John Reitweisner 2d; Vice-President, Stephen R. Campbell; Secretary, James C. Craig; Treasurer, George Greener; Captain, Martin Senger; Sergeant at Arms, Henry Reitweisner. The score last week was:

J Reitweisner, 1st	47	P Albert	43
J Och	46	G Greener	42
C Welker	45	A Dory	42
W Heppner	45	J Roesner	42
S R Campbell	45	A Klee	41
J Rossner	44	J Reitweisner, 2d	41
J C Craig	43	J Nathan	41
E Holzmann	43		

The target used is 200 yards reduced; possible 50; range, 85ft. J. C. C.

Empire Rifle Club—*New York, April* 15.—At an all-comers' match of the Empire Rifle Club, at Hartung Park, on Wednesday last, the following scores were made:

A J Howlett	4	5	4	4	5	5	5	5	4	5—46
F Alder	5	5	4	4	5	5	5	4	4	5—46
N O Donnell	5	4	4	4	5	4	5	5	5	5—45
C E Blydenburg	5	4	4	4	5	5	5	4	4	5—45
M M Maltby	4	5	5	4	4	4	4	5	4	5—44
Barker	5	4	4	4	5	5	4	4	4	5—44
D F Davids	4	5	5	4	4	5	4	4	5	4—44
F Donaldson	4	4	5	4	5	5	3	4	4	5—42
A S Case	4	4	4	4	4	4	5	4	5	4—41
J W Todd	3	3	5	4	4	4	5	4	4	4—41

M. M. M.

Zettler Rifle Club.—Weekly shoot at 207 Bowery; Creedmoor targets reduced to gallery distance; ten shots per man, possible 50:

D Miller	49	C Judson	45
G A Scherman	48	N D Ward	45
M L Riggs	47	R Zimmerman	45
L S Beatse	47	D Culhane	44
Wm Klein	47	E Runzinger	44
A E Moore	46	H Och	44
M B Kogel	43	H Brown	43
C G Zettler	45	F Levy	43
H Zettler	46	L Treubel	43
H Fisher	46	C Recht	42

—A weekly contest for a fine trophy was finally ended at Hellwig's Rifle Gallery, 221 Sixth avenue, Lieut. Leon Backer, of Company F, Twenty-second Regiment, being the winner under conditions requiring shooting off-hand, globe and peep sight, three-pound pull at 500 yards; target reduced for gallery distance; open for all members of Company F, Twenty-second Regiment Rifle Club, and to become the property of the one winning it three times. The winning scores were as follows: 46, 47, 47 out of a possible 50.

NEW JERSEY—*Newark, April 2.*—The range of the Newark Amateur Rifle Club has been lengthened 23 feet, making a total length of 93 feet. The following is the weekly score:

Wm Hayes	4	5	5	4	4	4	5	5	5	4—45
W P McLeod	4	5	5	5	4	4	5	5	4	4—45
T Felsburg	5	4	5	4	3	5	5	5	5	4—45
V Hesse, Jr	4	4	5	5	4	4	5	5	4	4—44
J Bayer	5	5	5	5	5	4	3	4	4	5—43
J T Hill	5	3	4	4	5	4	5	4	4	5—43
F Harrison	4	5	4	5	4	5	4	5	3	4—43

J. L. TOBIN, Sec.

Newark, April 9.—The following is the weekly score of the Newark Amateur Rifle Club at 200 yards off-hand:

Wm Hayes	5 5 4 4 5 5 5 5 5	5—48	
W G Gardner	5 5 5 5 4 5 5 5 5	4—47	
G Freche	4 4 5 4 5 5 5 4 4	5—45	
J F Hill	41	John Bayer	39
W P McLeod	43	V Hesse, Jr	37
F Harrison	43	John Long	37
T Felsburg	40		

MARYLAND.—On Saturday, the 13th inst., a team of the Columbia Rifle Association, consisting of Col. J. O. P. Burnside and Messrs. Partello, Chambers, Launtzen and J. B. Burnside, had a friendly contest at Sandy Spring, Md., with the Montgomery County Rifle Club, represented by the Scott Brothers, and Messrs. Brooks, Bullock and Witherall. Distance, 200 yards; Creedmoor rules. The Columbias shot less poorly than the Montgomery, scoring 277 to 266. Neither party shot at all up to their averages, as the wind was so strong that it was impossible to hold on, and snap shots were in order. At practice ten days before, in a driving rain, the Columbias made 291. It is probable that a very early breakfast and a twenty-miles ride reduced the Columbias' scores.

WASHINGTON—*April* 15.—A friendly practice match at Benning's Range, near Washington, on Tuesday, the 18th inst., developed the powers of a new accession to the Columbia Rifle Association, Mr. Benjamim Chambers. At 200 yards, off-hand, any rifle within the rules, the following scores were made, no sighting shots being taken:

B Chambers	5	5	5	4	3	4	4	4	4	4	5	4	5	4	5	—65
J O P Burnside	5	3	4	4	4	4	5	3	4	4	4	4	3	4	5	—60

Another string of fifteen shots was then fired, without sighting shots as before, with the following result:

B Chambers	4	5	4	5	5	5	5	5	5	4	5	4	4	4	5	—69
J O P Burnside	5	3	5	5	4	5	5	4	4	4	3	4	3	4	4	—62

Mr. Chambers thus made a continuous score of 134 out of a possible 150 points in thirty consecutive shots, which is good shooting, to say the least from a new man, who has only shot four times with a target rifle. The day was warm and damp, the clouds gathering and light failing toward sundown when the last shots were fired.

GEORGIA—*Savannah.*—The shooting match at 200 yards between Mr. W. N. Nichols and Mr. D. M. McAlpin, members of the Savannah Rifle Association, and two of the most noted shots in that city, took place last Saturday afternoon at the Schuetzen Park. The attendance at the park was large. Each fired alternately five shots, when a few seconds of rest were alowed. Mr. McAlpin, who has been always regarded as one of the old reliables of the Georgia Hussars team and of the association, did not come up to his usual scores, and hence the victory of his friendly competitor was a Waterloo, so to speak. General R. H. Anderson, President of the Rifle Association, by request acted as umpire, and Dr. J. T. McFarland, W. M. Mills, Esq., J. K. Munnerlyn, Esq., and O. S. Nichols, Esq., as scorers. W. N. Nichols made 22 bull's-eyes, 3 inners, and all the others centres, giving a total of 420 in the possible 500, firing at the Creedmoor target. D. M. McAlpin had 3 misses and a total of 388.

OHIO—*Cincinnati, April* 6.—The Cincinnati Shooting and Fishing Club had their sixth competition for club prizes today; distance, 200 yards; position, off-hand; scores:

First Class.

T J Baum	41	M Langdon	41
W Hall	41		

Second Class.

A Koehler	43	J Whetatone	41
W Campbell	41	C.	

—The Milwaukee Rifle Club fired on April 4, over the 200-yard range. Should the weather admit or permit the club will practice over the long ranges next Friday. The club will be stronger the coming year than heretofore. The following is the score, 15 shots, possible 75, off-hand:

Murray	65	Berry	59
Drake	64	Williams	55
Markham	61	Hill	55
Robertson	61	Johnson	55

The club have accepted a challenge from the Denver, Col., Club, for a match at 200 and 500 yards, each club to shoot on its own range.

—The East Saginaw Amateur Rifle Club made the following score on the 5th at their twenty-second regular weekly practice; 200 yards target reduced, possible 50:

Capt W J Shaw	4	4	4	5	5	4	5	4	4	6—41
R F Corbyn	5	4	4	5	5	4	5	5	4	4—45
C C Yawkey	4	5	4	5	4	4	4	5	4	4—44
F R Osborn	3	4	5	5	4	4	5	4	4	4—42
H G Hamilton	4	4	5	4	3	4	5	4	4	5—41
J H Howry	4	4	4	4	4	4	4	4	4	4—40

COMING RIFLE EVENTS.

—Major Henry Fulton has reported to the Columbia Rifle Association a prize list to be shot for by friends at the West End Range on the 26th inst. There are five competitions, the entrance fee being $1 to each. The first is at 100 yards and consists of three prizes; the second, 200 yards, six prizes; the third, 200 yards, six prizes, including a valuable magazine gun; the fourth, 500 yards, seven prizes, including a life membership; the fifth, 1,000 yards, a silver cup.

—The spring meeting of the Massachusetts Rifle Association will be held during the second week in May. A special programme will be issued shortly.

—The Secretary of the N. J. State Rifle Association announces matches for April as follows, all at 3:30 P. M.: April 4, fourth competition for Remington Creedmoor rifle; all comers; 200 yards; any rifle; standing position; 10 rounds. April 19, Ballard match—Fourth contest for Ballard rifle; all comers; any rifle except muzzle-loaders; 20 shots without cleaning; 200 yards; standing. April 23, Whitney match, second competition; all comers; 10 reunds; any rifle. April 25, Sharps match; all comers; 10 shots; 200 yards; any rifle. April 29, Winchester match; 200 yards; 10 shots; any rifle. At the annual meeting of the New Jersey State Rifle Association, held in February, the following gentlemen were elected to fill vacancies: Col. Edward H. Wright, Hon. B. A. Vail, Maj. F. Frelinghuysen, Messrs. W. H. Inslee, Charles B. Squire and Frank Hyde. The board re-organized by the election of Col. E. H. Wright, President; Capt. W. H. DeHart, Vice-President; H. F. Anderson, Treasurer; P. Bonnett, Secretary.

—The Massachusetts Rifle Association has issued the programme for the classified long-range match at Walnut Hill for the year 1879. It is for 15 shots at 800, 900, and 1,000 yards; no sighting shots; match to open April 9 and continue on successive Wednesdays. There will be 20 competitions. Contestants will be divided into three classes. In the first class there are seven prizes valued at $171; in the second class seven prizes aggregating $100.50 in value, and the six prizes of the third class are valued at $82. The amateur series and the Winchester rifle match will be shot on Saturday.

—At Creedmoor Major Jones announces the following matches for April:

Wednesday, 16th—*Turf Field and Farm* Challenge Badge—Fifteenth competition at 3 P. M.; open to all members N. R. A., except final winners of the two previous badges; 200 yards; any breech-loading rifle; rounds, 10.

Winchester Rifle Match—Fourth competition at the running deer target; 100 yards; any rifle, and but one shot to be allowed in each run.

Saturday, 19th—Remington Match—Sixth competition at 11:15 A. M.; prize of $300 in gold; all comers; any Remington breech-loader; must be loaded at the breech with cartridges as furnished from the factory; 900 and 1,000 yards; rounds, 20 at each distance; position, any.

Champion Marksman's Badge of 1879—First competition at 3 P. M.; open to all members N. R. A. and all members of the N. G. S. N. Y. in uniform; 200 and 500 yards; 5 shots at each distance; rifle, N. Y. State model; position, standing at 200; any, with head toward the target, at 500 yards.

Wednesday, 23d—Handicap Match—First competition at 3 P. M.; prize, $50 trophy, offered by Major James H. Jones, Secretary N. R. A. To be shot for monthly, and to become the property of that competitor winning it the greatest number of times during the season of 1879. All comers; distance, 200 yards; position, standing; rounds, 10; any rifle.

Handicap—1. Rifles other than regular military, 3 points; 2. Winners of first prizes in any monthly or other match of the National Rifle Association shot at Creedmoor, 2 points; no competitor will be handicapped more than 3 points at any competition.

Skirmishers' Badge Match—Eleventh competition; open to all members of the N. R. A. and members of the National Guard of any State in uniform; military rifle; 500 to 200 yards; second class targets.

Saturday, 26th—Secretary's Match—First competition; $50 trophy offered by Major Jones. To be shot for monthly; distance, 200 and 500 yards; position, standing at 200; any at 500 yards; weapon, any military rifle (excluding specials); 5 rounds at each distance.

—The Jamaica, L. I., Rod and Rifle Association went into the minstrel business on Monday evening last.

—The Seventh Regiment Rifle Club has issued its scheme of matches for the season of 1879. According to it matches will be shot as follows: Diamond Badge, April 12, June 14, August 13. Rifles, July 2, September 13, October 18. Shells, April 12, May 17, June 11, July 12, August 9, September 3, October 11, November 15. N. R. A. Medal, November 8. Omnibus Match, May 10. The "1879" Match, May 24, June 21, July 26, August 23, September 27, October 25, November 27. Each match will commence at 3 P. M., and each man to use his rifle as issued, and no previous practice allowed within one hour of the match.

SCHUETZENBUND NOTES.

—The Northwestern Schuetzenbund consists of the following associations: Chicago Shooting Association, 120 members; Bloomington, Ill., S. A.; Dubuque Rifle Club, 14 members; Southwest Chicago S. A., 68 members; Alma S. A., 36 members; Detroit Schuetzenbund, 65 members; Aurora S. A.; Helvetia Shooting Club, Highland, Ill., 36 members; Excelsior Rifle Club, Rock Island, Ill., 12 members; Joliet S. A., 40 members; Manhattan Rifle Club, N. Y., 24 members; Stillwater, Minnesota, Rifle Club; Monroe, Wis., S. A., 18 members; Princeton, Ill., S. A., 23 members; Sheboygan, Wis., S. A., 24 members; Missouri S. A.; St. Louis and the Milwaukee S. A.

—The shooting festival of the Northwestern Schuetzenbund will take place June 22 to 27. There will be: 1. Target of Honor; 25 rings of ¾ inches; 50 prizes to the amount of $400; 1st to be $100; open only to members. 2. Stich Target; bull's-eye of 6 inches in a false centre of 12 inches; 50 prizes to the amount of $400. The entrance fee of the above two targets together is $6. No doubling allowed. 3. King Target; 25 rings of ¾ of an inch each; only for members; tickets $4, for 15 shots; the man making the most rings will be crowned king, and receives a medal of $35 and $15 cash. 4. Man Target; ½ inch lines counting from 1 to 20; number of tickets unlimited; 15 per cent. of the proceeds will be deducted for expenses, and the remaining divided into prizes, the 1st to be $30; open to all. 5. People's Ring Target; 25 rings of ¾ of an inch; open to all. 6. Team Target opens June 26. Each association belonging to the Bund furnishes a team of 10 shooters. Associations of less than 10 members can combine. Entrance fee, $25. The best shooter of each team receives a team medal. After deducting 10 per cent. for expenses the entrance fees will be divided. 7. Bull's-eye Targets; 4-inch bull's-eyes in a false centre of 12 inches; the bull's-eye counts 3, the inner 2 and the outer 1 point; for 100 points, one silver festive medal; for 200 a diploma, and for 300 a gold festive medal of $5 value; for each bull's-eye of 4 inches, 20 cents; for the most bull's-eyes during the festival, $25, 2d $20, and so on to the 15th, which will receive $2.

—The Joliet, Ill., Shooting Association has elected the following officers: Alex. Gross, President; Henry Eder, Vice-President; Joseph Stroos, Treasurer; Max Brann, Secretary; Joseph Brann, Leopold Neuer, Shooting Masters.

—The Milwaukee, Wis., Shooting Association has elected the following officers: John Mennier, President; Adolph Fienhold, Vice-President; John G. Liver and Emil Kretschmar, Secretaries; Philip Altpeter, Treasurer; Chs. Roediger and Hermann Wesle, Shooting Masters.

—The official opening of the shooting park at Union Hill, N. J., will be celebrated by a grand shooting the 29th and 30th of May.

—A prize shooting will take place at the Schuetzen Park of Newark on the 2d and 3d of June next.

—Second practice shooting of the N. Y. Schuetzen Corps, Captain D. G. Yuengling, at Union Hill Schuetzen Park, N. J., Friday, April 4, third series of 10 shots each were shot off with the following is the first; Ex-Captain Geo. Aery, 156 rings; J. H. Lippe, 170 rings; Jh. Klein, 177 rings; B. Zettler, 174 rings; J. Brummerhop, 170 rings; Geo. Baier, 157 rings; Wm. Hahn, 193 rings; Wm. Klein, 180 rings; A. W. Lemcke, 154 rings; average, 155. In the last series of only five shots, Wm. Hahn and Wm. Klein each received a silver medal, the former making 104 and the latter 95 rings.

For Forest and Stream and Rod and Gun.

ARMS AND AMMUNITION FOR LARGE GAME.

EDITOR FOREST AND STREAM:

Absence in Montana and more agreeable occupation than writing has prevented my sooner answering the communication of "Viator," in a July or August number of your paper. "Viator" seems to take as personal to himself some expression of mine contained in an article on the value of a good dog in hunting large game. Now I disclaim by such expressions to call in question the statements of "Viator," or any other writer, based on their own personal knowledge, but I do consider that all opinions based upon the opinions and prejudiced statements of others, and that might be influenced by a prejudice or predilection for this or that arm (for almost every one thinks his rifle the best) is a fair subject for criticism. "Viator's" article impressed me at the time that his opinion of the Express was founded more upon the opinion of Indian sportsmen than upon his own experience, and that he himself had not much experience with it on large game. "Viator" advances the opinion that of deer struck by a light Express ball, with 120 gr. powder, "not one in twenty requires a second shot." Leaving out of view the usual percentage of hits in the limbs and scalping shots, this estimate, at the time, appeared extravagant, and my knowledge of the working of just such a double Express last fall still convinces me that the opinion cannot be sustained. The same writer speaks of the Express ball expanding "twelve times its size" (meaning twelve calibre, it is presumed). This is an impossibility considering the tenacity of lead. Taking a light ball, say of 275 grains, figure out the expanded size and the thickness necessary to make the required weight, the expanded diameter for the .45 calibre would be five and four-tenths (5.4) inches or 22¾ square inches; the thickness necessary for 275 grains would be only forty two ten-thousandths of an inch (.0042 inch). Of course the lead "splinters off" much before it reaches that microscopical attenuity. I doubt if the but of the ball is ever found in an animal of greater diameter than an inch. The higher the velocity the greater the tendency of the sides to "splinter off."

As the grizzly killed in Utah (mentioned in one of the articles) by the English hunters, so easily, was struck in the head, it is not easy to see how this can be claimed as a trophy for the Express, especially as a solid ball is confessedly as much, or more destructive, when put through the head or encounters solid bone. With as much justice can it be claimed that the little .40-calibre Maynard is the arm for the tiger, because a ball from that rifle, penetrating the eye of a tiger, finished him.

Of all writing on this subject, Mr. John Rigby is one of the few who treats it dispassionately. He writes like a "veteran rifleman," and weighs carefully what he writes. He does not contend that a light Express bullet will manage a grizzly, but wants "nothing less" than a .500-cal., 135-400 grs. cartridge. I doubt not his article of January 29, 1878, in FOREST AND STREAM can be safely taken as a "text book" on the Express rifle. I doubt the advantage gained by increasing the proportion of powder to ball further than he has adopted.

Since writing the article commenting on the Express rifle, I have myself used a light, hollow ball, 275 grs., with 96 grs. powder, in one of the American breech-loaders, on large game. Have also witnessed to some extent, the working of an Engish double Express, using a 120-260 gr. cartridge, by a hunting companion. Have also learned, through others, of the working of two other approved double Express in Montana, a year since. I confess to a modification of my views in regard to the light Express projectile on such game as deer, antelope, etc., and think such a projectile more destructive than the solid ball, but not to the extent "Viator" thinks, "not one in 20 requiring a second shot." I think "one in six" about the true estimate. I speak, of course, when the hunter "takes some chances." There is the usual amount of paunch shots (about one-third of total hits). If pains is taken to hit behind the shoulder each time a solid ball is preferable, and about as reliable.

My experience two years since, when using a solid ball, was, where forty-three deer were hit, eleven required a second shot, or one in four.

I do not modify my views as to the necessity of having a good hunting dog for wounded game, as, for a percentage of bad hits of one in six, or one in twenty, even, there is still plenty of work for him. Now the services of such a dog were needed for bear last fall! For bear, elk, or buffalo, I am equally convinced the solid ball is more destructive than a light, hollow ball, and is safer to use in close quarters. A light, shallow ball, put in behind the shoulder, will penetrate and kill, if too large a bone is not encountered. Shot into the neck near the jugular, it is also more apt by its splash to cut that vein than a solid ball. But for such game no hollow ball less than 350 to 400 grains, properly sent, has any advantage over the solid ball, and then it must be put through behind the shoulders to drop these animals in their tracks. I feel sure Captain Williamson, from his experience in Wyoming last fall, will endorse these views. "A Celebrated Indian Sportsman" (Greener on modern breech-loaders, last edition, page 250), has substantially the same views. I will not enter into a controversy with "Viator" as to whether England or America has the best rifles or the most expert riflemen. Each country, whether right or wrong in their opinion, will continue to think it has the most suitable arm for their own game and the most expert hunters to use them, and both opinions may be correct. I do not doubt Americans can be found who will contend that "our grizzly" can whip any "Bengal tiger" that lurks in the jungles, and it may be make "short work" with the British lion. We think we can successfully claim to have carried off the honors in target shooting and probably target arms. I feel also sure that whatever merit there is in the Express principle can be successfully adapted to any of the American breech-loaders that use multi-grooved system of rifling, and without impairing their usefulness as long-range or target arms. It will, in my opinion, be a long time ere the breech-loading double-rifle is adopted in this country. Though having the advantage of a quicker delivery of fire for the first two shots, it has none over the single

rifle [illegible] capacity to deliver five or ten or more shots in a given time. It can only be used for large game and never for target practice. The single-rifle can be adapted at will for target shooting, and, in my opinion, one-half the pleasure in the use of the rifle is found in that pastime. I have never yet seen a double-rifle but was badly balanced and handled awkwardly, and with me that is quite an objection. I heartily indorse "Viator's" thrust at "Western Hunter" for his huge hunting stories. The few successful hunters never tell big stories, not being tempted, though their true stories sometimes seem romantic. The hundreds of unsuccessful ones do, to appear even with the successful ones. This propensity for hunting stories prevails not only with the "Western hunter," but with the duck hunter, the snipe hunter, the quail hunter and the grouse hunter of the Mississippi Valley and the Atlantic Coast. I had not supposed before, Mr. Editor, this propensity was peculiar to one continent, but was common to every nation and clime, "from Greenland's icy mountains to India's coral strand." I had imagined, even, that Nimrod, "the mighty hunter" of old, the father of the chase, must have been affected with this peculiarity and it had been handed down from one generation to another of those who followed the chase.

"Viator" seems to think there are exceptions to the general rule, and that there are favored regions where this peculiarity is unknown. I have never been to India, nor has "Viator," I believe. It is such a vast country it must have many sportsmen; and as human nature is the same the world over, doubtless there are some good, some bad and some indifferent. I doubt not there are some sportsmen there who can even tell a first class tiger story, and yet, like the "Western hunter," believe it implicitly. It would be very unusual, and almost a miracle, if there were none such. At any rate, Mr. Editor, it has been my lot to meet hunters "from across the water" who, by the number and variety of their hunting stories, equalled, if they did not surpass, any "Western hunter" that walks the prairie, and yet, like the latter, they believed every word they uttered. "Viator" does not think a gentleman will exaggerate. He certainly should not. Yet, I have met sportsmen, both from "the other side of the water" and this side, who passed for gentlemen, and yet could tell a good "hunting story." Doubtless, Mr. Editor has met such.

In his first letter on the "Express," "Viator" thinks no American sporting rifle is suitable for that system—first, on account of the unsuitableness of the rifling, and also on account of an insufficient charge of powder. In his last he modifies this opinion, and thinks "the only reason" is that the American shell does not hold sufficient powder, and that not less than 110 grains will answer. In this opinion Mr. John Rigby, of Dublin, does not agree with him, who uses for 360-bore, 2 drams ($54\frac{2}{3}$grs.), and for 400-bore, 3 drams, or 82 grains, using the American $2\frac{1}{4}$-inch shell. To develop the "Express" effect, he merely prescribes a proportion of powder to ball of 1 to 3. (See letter of Jan. 29, 1878.) That the relative proportion of powder to ball is the true measure of the velocity of the ball, is a well-known law of projectiles—*cæteris paribus.* In his last circular Mr. Rigby uses in 450-bores a proportion of from 1 to 2.73, to 1 to 3.18; and in 500-bores, from 1 to 2.92, to 1 to 3.20. The longest .44 cal. American shell, using a long-loading tube, will hold 105 grains Curtis & Harvey No. 6, with sufficient room for a lubricant; the longest .45 calibre shell, about 107 grains, thus enabling the use of a 275 to 320gr. ball.

I lately witnessed the shooting of an American rifle, .40 calibre, at 200 yards range, with 80gr. powder and 102gr. hollow-pointed bullet—a proportion of 1 to 2.38. Although the rifleman was not in practice, and this was the first trial of the ball at that range, he grouped 18 consecutive balls (all that were fired) within a 13-inch circle. Thirteen of them were grouped within an 8-inch circle. I was convinced that a rifle properly held would group ten consecutive shots within an 8-inch circle on a calm day.

The above and my own experience with another rifle make me think that whatever merit may be in the "Express" principle, can be successfully utilized by most of the American rifles, both in regard to accuracy, trajectory and destructiveness.
BEAR PAW.

Montana, March 5, 1879.

HUNTING RIFLES.—*Baton Rouge, Louisiana.*—Some very instructive and interesting articles on hunting with the rifle have appeared in your valuable paper, signed Mr. Van Dyke. As I am very fond of big game hunting, and have had some years of experience in the Rocky Mountains and on the plains, I would like to write a few lines on big game rifles, and also wish to ask Mr. Van Dyke a few questions. I agree with the before-mentioned gentleman most heartily in his advocacy of large calibres; they are certainly necessary for killing game clean. The great fault of our American breech-loading rifle makers has been that the hunting qualities of their rifles have been entirely sacrificed to the military and target qualities of their rifles. A target or army rifle requires long range, and as much accuracy as possible at long range. The military rifle, moreover, needs penetration. Our makers have sought for accuracy and penetration at long range, forgetting that both may be easily combined in a rifle every way worthless for killing game. This desire of their's, first encouraged by the civil war and since nursed by Creedmoor, has made them adopt very small calibres and long bullets, which give great penetration and range, but are for many reasons totally unfit for a hunting rifle. An officer of the British army, thirteen years ago, in a *resume* of practical experience on big game in India, says: "The prime object of a shot fired at any animal is to kill or disable it on the spot." Penetration being sufficient, that projectile which has the largest striking surface is the best for hunting. Better than all the magnificent modern inventions—better, that is for game-killing purposes—is the plain poly-grooved rifle, used with the old-fashioned globular ball. Dimensions of syherical ball, breech-loading rifle, 12-gauge (.73 of an inch cal.); twist, one turn in 10ft. 3in.; powder, $4\frac{1}{2}$ drs.; 16-gauge (.66 cal); twist one turn in 8ft. 8in.; powder, 4 drs.; 18-gauge (cal. .63); twist, one turn in 7ft. 2in.; powder, $3\frac{1}{2}$ drs. Now our fashionable rifle makers here in America make nothing but target and military rifles. They cannot disguise this fact. They may try and do so, as all of them do, by calling certain of their rifles "sporting," "hunting" rifles, but they are not. What they are is simply this: military rifles with fine sights, well made stocks, etc. None of them will drop big game, as a rule, unless the game is hit in either the head, heart or back-bone. By dropping I mean knocking over in his tracks the elk or big-horn, not having him run from 100 yards to five miles, as has often happened with me when shooting game with a .44 cal. It is a very few number of sportsmen who can generally hit the game in a vital part, especially when shooting "on the run." Mr Batty, in your paper, writes in favor of the American small calibre, long bullet rifle for hunting in the Far West. If he will go back a few years he will find an article written by himself in the *American Sportsman* for July 4, 1871, in which he says: "A .44 ball, shot from a Sharps sporting rifle, went through the base of the horn and part of the top or solid portion of the skull of a Rocky Mountain sheep, and failed to have any effect on an adult ram." If Mr. Batty had used a rifle with a round ball, from 16 to 12 shot-gun gauge, I think that shot would have gotten him his game. I would like to ask Mr. Van Dyke the following questions, and I feel sure, should he answer them in your esteemed paper, his answers would be very interesting to many of your readers, who, like myself, are fond of using a rifle, not on a target, but in hunting. First—Why does he use an Express rifle (cal. .65) instead of using a rifle of same calibre, but with a round ball? Second—At what he considers hunting ranges, *i. e.*, less than 250 yards, his rifle, if made with a very slow twist and with the right charge of powder, and with a round ball, would give as flat (flatter, I think, on account of the much greater in. vel. of the sphere over any other projectile) trajectory, less recoil and a much greater shock to the game than his long bullet. Why, then, does he not use a spherical bullet? Third—There can be no comparison between the accuracy of the sphere, at hunting ranges, and the Express bullet. Why, then, does Mr. Van Dyke use the long bolt? The reasons that the sphere is no longer used for military and target rifles is because of its short range, its weight being so light in proportion to the surface it presents to the air that it cannot compete with the small calibre, long bolt of the modern rifles. But the sphere is very much better for hunting, having an exceedingly flat trajectory, great initial velocity, and great killing power. We don't shoot deer at 1.000 yards, and what I consider the great need of hunters in the United States is to have a rifle that will drop the game in its tracks, even if not shot in a vital place, and not to have to follow wounded game over many a weary mile, perhaps to see it at last get away merely to be the food of gray wolves, coyotes and ravens.
SUNNY SOUTH.

EXPRESS BULLETS.—In reading over the communication headed "Express Bullet Experiments" I find my language is stronger than was the intention in regard to the comparative accuracy of a 275 grain hollow ball and a 450 or 529 grain solid ball with a heavy charge of powder. My meaning was that it was good average shooting to group ten consecutive shots within an 8-inch ring with the heavier balls, and that under favorable circumstances the same shooting could be done with the light ball with a large charge. I have no doubt the heavier ball, with fine, close shooting, can be grouped within a smaller circle, even the same as was accomplished by Mr. Rabbett, though that is an exceptionally good score. Since then, on a favorable day, I grouped ten consecutive shots within an 8-inch circle, a steady wind blowing. On two other days, under not so favorable circumstances as to wind, firing twelve consecutive shots, ten were grouped within an 8-inch ring, though I can't say they were consecutive shots. The twelve shots were grouped in a $11\frac{1}{2}$-inch ring. The other trial grouped ten consecutive shots within a 10-inch ring. All these trials at 200 yards range, 105 gr. powder and 275 gr. ball, in each experiment aiming at the centre of the same bull's-eye. As the vitals of a deer are covered by a 12-inch circle, the above shows sufficient accuracy for hunting at that distance. Killing a deer at 200 yards, with the usual drawbacks to accuracy in hunting, is an extra good shot. In the same article the typos make me say "for hunting a powder is required that will give the highest velocity with very little resistance in the barrel." It should have been residue, at least that was my meaning.

YACHTING NEWS.

THE NEW FIVE-TONNER.—The little Corinthian cutter building by Piepgras, of Greenpoint, to which reference has been made in these columns, is fast approaching completion. The model of this boat is necessarily full, for it would be next to impossible to expect sharp or hollow lines in a ship of 24ft. water line, 8ft. beam and 4ft. 3in. hold. But if full to the eye, the draft shows her lines to be fair and easy, with "sweet" looking section lines fore and aft, and, we think, that unless driven hard, the cutter will surprise most of her critics by exhibiting a fair amount of speed. As she is built for a cruiser, however, her racing qualities may be left out of consideration. It is enough to know that she has the room in her of an ordinary sloop half as large again, and that she is sure to "stay by you" in any kind of wind and sea, for she draws 4ft. Apart from the question of design, this cutter is an example of strength and solidity of construction worthy of the highest commendation, and therefore deserves this public notice. It is to be hoped that she will not be simply an isolated case of honest build, but that the good example set by her builder and owner will be more generally adopted, and that selected material, ample scantling and clinch fastening may supersede the kindling-wood and tenpenny-nail style of work which has so long been a byword and reproach to our fleet.

The frames of this little 5-tonner are of hackmatack 2x3in.; double floors of natural crook, running up to turn of bilge, and single futtocks above; keel, stem and post of oak. The former sided about 4in. and moulded 17in., one foot of which is below the rabbet, the floors being scored down flush with the top of the keel. Room and space, 14in.; stem and post sided 4in.; bottom plank clear, selected cypress $1\frac{1}{2}$in. thick; ceiling of white pine $\frac{7}{8}$in. thick; deck beams of oak and short beams of yellow pine, spaced 18in. and $2\frac{3}{4}$x$2\frac{1}{2}$in. They are all let down into oak clamps $1\frac{5}{8}$in. sided and 8in. moulded, being securely bolted to the clamps, and the latter through fastened and worked in two lengths fore and aft with a lock scarph, 20in. long near amidships. Keelson of yellow pine, 5x4in., through bolted between every frame; deck-knee forward of oak, 2in. thick and 9in. at throat, through bolted; deck of white pine, 2x$1\frac{1}{4}$in.; covering board of oak, 8x$1\frac{1}{2}$in., the hood ends of deck planking butting against jogs left on the covering board or waterways for that purpose, giving a good chance to calk; cabin and cockpit waterways, $3\frac{1}{2}$x$3\frac{1}{2}$, yellow pine, three bolts in every scarph at the quarter turns; fore hatch combings of oak, 5x$1\frac{1}{2}$in.; mast partners of white pine jogged up between two oak beams, with $\frac{5}{8}$in. bolts run through fore and aft each side. Stem head at deck, 4in. moulded and $3\frac{3}{4}$in. sided; bitts of oak, 4x4in. at deck; rail, 6in. high, of teak, with locust staunchions every 18in. and an extra one abreast of rigging; staunchions, $1\frac{3}{4}$x1in. The teak makes a beautiful finish to the deck fittings. There is unfortunately none of it to be found in the market here, Piepgras having consummated a lucky bargain with an English skipper who was looking after a new spar while in port here and exchanged for a stick of teak. Staunchions for the counter are formed of raking knees, riveted through the arch-board of the English cutter stern; rudder, 20in. across widest part, with a stock $3\frac{1}{2}$in. diam. at its head; house, 9in. high with 4in. crown.

Total displacement, 6 tons; ballast, 4 tons iron, cast to fit the garboards. No metal on keel. Mr. Piepgras makes his own drafts and calculations, and goes about his work in an intelligent manner. If any one doubts the cutter's stability, he quietly points to her metacentric height on the draft; if the model is criticised as too full, he shows his mentors her lines on paper in indication of his design. Nothing is left in doubt or in vague and unscientific generalities; but the boat and her peculiarities are reduced to figures that will not lie, and that often stand witness to the deceptive impressions received from a mere glance at the boat under the shed.

The rig will be that of a full-fledged cutter, as any small yacht claiming a sailor for her owner ought to have. Mast deck to lower cap, 17ft. 6in.; masthead, 3ft.; topmast, 18ft. heel to head; bowsprit, 11ft. outboard, fitted at side of stem and to reef; boom, 20ft.; gaff, 14ft.; topsail yard, 8ft.; mast, 5in. diam. at heel, 6in. at centre and a 4in. square masthead, with a slight taper; topmast at cap, $3\frac{3}{4}$in.; gaff in centre, $3\frac{1}{2}$in., and boom, $4\frac{1}{4}$in. in centre; bowsprit, $4\frac{1}{2}$in. at 2ft. outside of stem and $4\frac{1}{2}$in. square at stem-head; slightly flat on bottom to facilitate hauling in. The total cost of boat, ballast and rig is only as much as that of a cheaply built, flimsily rigged sloop with one-half the accommodations below or on deck. Doubting Thomases, go and see for yourselves. Here is a little bit of thing, no longer than most of our abominable "open boats," and costing little more, yet able to stow away two in the cabin and berth the crew forward in ample comfort, cruise where they list, and enjoy solid sport, seamanship, navigation and adventure to their heart's content; and yet there are those who seriously defend our open boats as excellent craft and suitable to the work they are built for! The trouble is, they are built for the wrong kind of work, and the same amount of money invested in something more akin to the cutter under review would lead yachtsmen at a bound from the one-sided sport of tooling racing machines to the higher and more enjoyable phase of yachting to be found only in the sea-going ship. The new five-tonner is the property of Mr. Wm. G. Diedrickson, a resident of New York, and since no name has been decided upon for the little cutter, we suggest *Corsair* as a fitting choice.

A DEEP SLOOP.—The *Mermaid*, sloop, is being almost entirely rebuilt at Pottery Beach, Greenpoint, by J. J. Driscoll She is one of the deep type, has a long body, and is very roomy below and above. She has been lengthened 6ft. by the bows, making her now 51ft. on deck, 14ft. 6in. beam and 6ft. 3in. depth of hold. Mr. F. C. Firman, her owner, has cruising only in view, but we learn that while out last year, the *Mermaid* always managed to hold her own fairly with the rest of the sloops, though carrying only a moderate rig. Her new suit of muslin will be 38ft. hoist, 42ft. 6in. on boom, 22ft. on head, and a 34ft. jib. Greatest draft aft, 5ft. 9in., with about 12 tons of iron underneath the floor; centreboard, 14ft. long; keel, 10x12in. oak; stem and post sided 10in. at scarphs; keelson, yellow pine, 9x10in., tapering to 5in. forward and aft; frames of hackmatack, $2\frac{1}{2}$x4in. double; beams, yellow pine, $3\frac{1}{2}$x$3\frac{1}{2}$in.; carlins, $2\frac{1}{2}$x$2\frac{1}{2}$in.; bilge strakes, $1\frac{3}{4}$in. pine; siding of centreboard box, 2in. pine; head pieces, $2\frac{3}{4}$ in.; trunk logs, pine, 4x12in.; ceiling, $1\frac{1}{4}$in.; planking, yellow pine, with oak top-streaks and garboards, $1\frac{3}{4}$in. thick; knees, 7in. throat and 18in. arms; clamps fastened with 5-16 in. bolts; covering board, 12in. wide, of oak; deck, 2in. square, white pine, hood ends butting against a pine waterway; rail of oak, 12in. high forward and 8in. aft, locust staunchions; house, 20in. high at side aft. The keel projects 5in. below rabbet.

Mr. Driscoll has built a number of boats of excellent reputation, among them the *Lizzie L.*, recently sold to Narragansett waters, the *Eolite*, *Martha Munn*, *P. O'Brien* and others. He builds from a draft, and has ample facilities and a fine beach for turning out any kind of work.

SOUTHERN YACHT CLUB.—The annual meeting of the Southern Yacht Club was held at Hawkins' Club Room on Thursday evening, the 3d instant. The following officers were elected to serve for the ensuing year: Emile J. O'Brien, Commodore (re-elected); H. Rareshide, First Vice-Commodore (re-elected); E. I. Israel, Second Vice-Commodore; O. F. Jemison, Secretary (re-elected); J. B. McConnell, Treasurer. The following committees were appointed by the Chair: Finance, A. A. McCutchon, F. B. Green, T. I. Airey; Regatta, J. H. Behan, W. J. Hare, John F. Pollock; House Committee, J. B. Lallande, H. D. Hopkins, Edwin Harris, T. R. Richardson, A. A. Maginnis; Measurement, J. D. Hughes, Robert Brewster, G. V. McNeil; Prizes, E. P. Rareshide, A. Frellson, R. Herrick. Monday, May 12, is fixed for the annual regatta, when boats will be sailed by members and amateur crews, and Wednesday, the 14th, for a free-for-all. The club-house is now finished, and is the most complete building of the kind in the United States. It will be turned over to the House Committee in about ten days, when it is proposed to give a hop and general house-warming.
***.

BOSTON YACHT CLUB.—The matches of the club have been settled upon for June 21 and September 6.

QUINCY (MASS.) YACHT CLUB.—At the annual meeting the following officers were elected, most of them having already served a term or more: Commodore, H. A. Keith; Vice-Commodore, W. H. Nicholson; Fleet Captain, Joshua Binney; Secretary and Treasurer, George W. Morton; Measurer, P. B. Turner; Regatta Committee, the Commodore (ex-officio), Edward R. Souther, James T. Penniman, George W. Morton and B. F. Bass. Keel boats are to sail in a separate class, measurement to be taken on water-line and one-third overhang added. The second class was fixed from

18 to 22ft. Smaller yachts may enter larger classes by assuming minimum measurement of such class. only working sails allowed. The club is in a very prosperous condition.

EAST BOSTON YACHT CLUB.—This club was organized May 5, 1874, with thirty members; chartered July 12, 1877, and now has on its books over eighty members. Officers for the year: Commodore, S. S. Goodwin; Vice-Commodore, John P. Morrison; Flag Officer, F. T. Clayton; Treasurer, Thos. H. Stone; Financial Secretary, E. Burnham; Recording Secretary, P. W. Golliff; Directors, Charles West, James Marr, Richard Hinchcliff; Measurers, George F. McCausland, Thomas H. Stone; Steward, William H. Miscner; Regatta Committee, S. S. Goodwin, F. T. Clayton, E. Burnham. Club house located on Border street. The fleet consists of three schooners and seventeen sloops, among the latter the famous little *Sunbeam*, owned by Mr. W. S. Nickerson. Five new yachts have been added this season. Club signal, horizontal blue and red bars, with white star in centre. The club will hold a union regatta in mid-summer, besides the regular club events. As a specimen of the craft most fancied at present, we may mention the new sloop *Alice*, 38½ft. over all, 13ft. beam, 6ft. hold, and 7ft. water. She was built by Mr. Thomas H. Stone and Daniel J. Green.

JEFFRIES (BOSTON) YACHT CLUB.—Organized May, 1877, and chartered December, 1878. This club is composed of some of the most progressive Eastern yachtsmen, having many strong names on its roll and a rapidly increasing fleet. Members now number about seventy-five, owning two steamers, ten sloops, and four cats. Mr. McCormick's *Gael*, a smart little craft of large displacement, and a fast one in the hands of her skipper, Mr. Lovejoy; Mr. F. H. Peabody's new screw steamer, 50ft. long, the 26 ton *Vision*, and other well-known yachts, belong to this club. Burgee, a blue swallow-tail with white Maltese cross. Corinthian Rules in force. The first review of the fleet takes place May 30. Club-house located at Jeffries' Point.

BUNKER HILL YACHT CLUB.—This club has its house at Keys' Wharf, Medford street, Charlestown, Mass., and now numbers sixty members, with a fleet of eight schooners, ten sloops, and seven cats. Club burgee, red ground, with white Maltese cross in centre. Officers for the year have appeared in a previous number.

CHEERING NEWS.—It is more than probable that a crack 100-ton cutter will be built in this neighborhood for a prominent yachtsman of New York. And still they come!

A SAMPLE.—The sloop *Pacer*, of Boston, has been changed from a centre-board to a keel. She is a sample of what is being done with most Eastern craft.

EASTERN ITEMS.—The famous cat *Josie* is coming out with a hollow mast and will be raced with spirit. A rival for her is supposed to be the new craft built this winter by Mr. Smith, of City Point, Boston. The latter is 20ft. on waterline and 9ft. 8in. beam, and is said to be more powerful than *Josie*. . . .The *True Blue*, built by Cleaveland Trott, of Kennebunkport, Me., for R. B. Walker, of Boston, is 20ft. 6in. water-line, 8ft. beam and 4ft. hold; oak frame, cedar plank, walnut and ash rail. She has an iron keel, like any sensible craft ought to have. Cabin handsomely finished in hard wood and upholstered. Refrigerators, lockers and modern conveniences. She will be used for cruising about the coast. Such a boat with 4ft. hold and no centre-board box is manifestly so much superior as an "all round" vessel to the open racing machines or centre-board sloops in New York waters that this class of yacht is certain to make its appearance among the Corinthians "this side of the Cape".....Caldwell & Keen, of Washington, near Boston, have also built a keel sloop for Mr. F. A. Daniels. Length over all, 29ft.; water-line, 22ft.; beam, 10ft. 8in.; draught, 3ft. 10in.; oak frame and cedar planking. She has an iron keel of 1,000 lbs. as a steadier. House, 12ft. long, hard wood finish. Model by P. McDonald.....We have selected these samples of Eastern construction to show the tendency of the times in and about Boston, and we may add that there have been built during the winter a dozen cabin yachts at least for every one that has been laid down in New York and neighborhood. We cannot but think that this prosperity in the East is owing to the wise course pursued by the yacht clubs and builders in tabooing shifting ballast altogether, and in encouraging seagoing qualities and outside cruising. There is quite an emulation in the East to secure the best seagoing yacht, while in New York the very idea of such a thing as a small seaworthy craft is ridiculed, and we go on turning out the merest sandbag racing machines, build a mansard over them, fit them with a "hand-me-down" rig, drift up and down the rivers, and by a stretch of courtesy dignify them by the name of yachts. No wonder yacht building here is almost at a stand still and some of the most prominent clubs threatened with dissolution for the want of sailing members. The sailing machines have disgusted a large class of men who might with a better boat at their command have become yachtsmen of ability and followed up the sport with animation.

NAHASSET YACHT CLUB.—This club is a sailing club; there is no superfluous dead weight about it, for it shows an average of one yacht to each member. At their recent meeting the following officers were elected: Commodore, P. Grant, Jr.; Vice-Commodore, C. G. Weld; Secretary and Treasurer, J. P. Hawes, Jr.; Measurer, D. M. Little; Regatta Committee, J. P. Hawes, Jr., T. Daland, P. Grant, Jr., S. W. Burgess and Henry G. Hall; Committee on Membership, J. P. Hawes, Jr., L. C. Fenno and Phillip Little. This board of officers is exceedingly strong and well qualified to fulfill the duties assigned it. The consequence of placing leading yachtsmen at the head of the club instead of "claw-hammer-heroes" will be to draw to the Nahassets much of the Corinthian element that is to be found among the small fry of Boston waters. Mr. Phillip Little presented the club with a silk pennant for cat rigs, to be sailed for off Swampscott during July. No classification, no shifting ballast and only members allowed on board. The club decided to allow a change in ballast previous to a race, but no trimming by dead weight after the starting gun.

NEWBURYPORT YACHT CLUB.—Headquarters on Market Square, Newburyport, Mass. Annual match June 17. Officers for the year: Commodore, William C. Thompson; Vice-Commodore, Benjamin G. Davis; Fleet Captain, David Peirce; Treasurer, Henry Moody; Secretary, Tristram Talbot; Treasurer, Thomas MacKinney; Finance Committee, A. W. Greenleaf, Lawrence W. Piper, Edward A. Williams; Regatta Committee, William A. Davis, C. W. Cook, C. Moody. The fleet comprises five sloops, six cats, and a number of new yachts now building, with a variety of irregular craft.

LYNN YACHT CLUB.—Organized 1870. Officers for the year have appeared in a previous number. Club-house, foot of Beach street, Lynn. Fleet, two schooners and twenty-three sloops and cats. West Lynn talks of forming a club, but we hope the prospective members will join the regular Lynn organization, as it is not so much multiplicity of clubs that we need as sound strength in those already existing.

BOSTON MOSQUITO FLEET.—The postponed opening match is set down for May 3. Entries close day before.

BLACKMAILER ABOUT.—Beware of a shyster who claims to have a patent on all "sliding rigs," and is now making a circuit of the yachting yards and attempting to bleed owners. His patent is for a slide on the gaff and a leech-rope diagonally across mainsail, so as to reef by hauling up the head.

SALE OF THE ANNIE.—The sloop *Annie*, once a well-known flyer, and "Bob" Fish in 1861 for Mr. Livingston, of the N. Y. Y. C., has been sold to Mr. Jabez Howes, of San Francisco, Cal. She will be sent out on the deck of the ship *Three Brothers*. The *Annie* is 50ft. on deck, 45ft. 6in. water line, 17ft. 6in. beam, and 4ft. hold, with 3ft. 9in. draft.

DRIFT.—The schooner *Idler* has been sold to Mr. Archie Fisher and others through Capt. John Prindiville, of Chicago .....Schooner *Alarm*, N. Y. Y. C., will not fit out, the same can be said of *Ambassadress*, *Columbia*, *Dauntless*, *Dreadnaught*, *Eva*, *Restless*, *Vesta*, and of the sloops *Active*, *Vindex*. As all these vessels belong to the New York Yacht Club, their laying up will interfere with the entries for club matches among the big ones.....*Palmer*, Mr. Rutherford Stuyvesant, will cruise to the lakes; *Edith*, of Boston, is for sale; *Ermengarde* and *Faustine* are both laid up at Cowes, England. Neither of them showed any speed alongside the English vessels, and it is said that while the American schooners carried two reefs and no foresail, the British cutters went along under whole sail.....*Intrepid* is still cruising in West India waters, also the *Resolute*, chartered by Dr. Hare, of Philadelphia..... It is rumored that *Sappho* may run across from Italy and enter some of the races here.....*Tidal Wave* will come to the line this year. She does well enough in light winds, but owing to her long bow, gripes dangerously when laid over, and carries too much helm to get the speed out of her in a breeze.....The schooner *Viking*, formerly belonging to Mahlon Sands, has been sold to Mr. F. H. Stott, of Greenport. She is one of the late Van Dusen's "improved scow" models, and has done nothing while abroad in English waters.....Famous *Magic* is cruising in the Chesapeake with Mr. Francis M. Weld on board. She will hoist racing colors this season.....*Meta* is fitting out for a Southern cruise.....*Gracie* will cruise and do some mild racing only.....*Vision* will pursue her racing career, but as there is hardly anything of her class agoing, it will be pretty one-sided sport.....*Clio* has received a flush deck, such as every yacht ought to have. These improvements toward seaworthieness we note with much satisfaction.....*Clytie*, Mr. Wm. M. Brooks, of Stamford, will fit out for racing, and it will take something smarter than we know of to beat her..... *Comet* has had some 7in. canvas made especially for her. This will increase the weight of her sails somewhat. She will probably not race. Racing seems to be going out of fashion.....*Estelle* is having her stern spun out at Greenport, L. I.....The nondescript *Nereid* will race and lose as usual .....S. S. *Mystic* has been sold to Mr. W. Scott, of Erie, Pa., another important addition to the Lake fleet.....Mr. Oswald Jackson is building a 40ft. sloop at Mystic, Conn.....The famous sloop *Undine*, Mr. H. Bryant, is being rebuilt by Lennox, So. Brooklyn; flush deck and more hoist will be given her.....Lennox has also laid the keel of an 80ft. S. S. yacht for Rev. Mr. Aspinwall, of Bay Ridge, L. I., likewise a small boat for export.....Sloop *Winsome*, Rear Com. Norton, A. Y. C., will race this season. She is probably the handsomest sloop in America, having more grace about her than most yachts of the dumpy model now in vogue.....*Orion*, another wind jammer, is receiving a new stern and more muslin.....Dr. Johnson's new sloop, built by Mumm, has been afloat some time. She looks over sparred.....Thos. Armstrong has nearly finished a schooner 40ft. long, at East Boston.....D. J. Lawlor, of Chelsea, has in hand a steam yacht 53ft. long, with 42in. screw and a pair of 7in. cylinders, for Mr. F. H. Peabody, Boston Y. C., also a steamer for the City of Haverhill.....Cutter *Enterprise* is to have a sloop jib for racing; we do not believe there is any advantage in a single jib for a craft of her size, but on the contrary would prefer her present rig for speed.....There is a large amount of building in the way of small boats going on in and about Boston .....Pierce Bros., of East Boston, have finished two boats, one keel and the other with a board, for Mr. Burgess, of Boston.....W. B. Smith will build a schooner for Mr. John Ward, of the Boston Theatre.....Housing topmasts are coming into vogue in the East. Good.....Seven new boats will be added to the Haverhill Y. C., Mass.....Almost everything Down East is keel, the board has fortunately become the exception.....Sloop *Wayward*, of Boston, is for sale; particulars at this office.....The two "round the world boats," built by Smith and by Hutchins & Pryor, are about finished, and their venturesome skippers are arranging for a match before starting on their lonely voyages

KEEL YACHTS.

"We sail, we sail the ocean blue."—*H. M. S. Pinafore.*

(Centreboard man, loq.: "If it don't blew too much.")

EDITOR FOREST AND STREAM:

The chief cause of the prejudice against keel boats in this country is the fact that almost all our small keel yachts are unsuccessful centreboard boats which have had spars cut down and a stick of timber spiked under them in the hope that, peradventure, they might do better in the keel class, and, of course, they are much inferior to the centreboarders. Another source of trouble is the timidity of the few men who build what they call "cutters," who, being convinced of the superiority of the type, are yet afraid to build up to its requirements, and so produce "water bruisers" having the depth of the cutter and the beam of the sloop. What wonder is it that with such samples as these before them, our yachtsmen fight shy of keel boats? It is only natural that we should judge by what is rather than reason out what might be. Let us look into this matter of Keel vs. Centreboard in an unprejudiced manner, and carefully weigh the merits of each. It will be conceded by the most inveterate even of centreboard men that if two boats are precisely similar in all other respects—that is to say, having the same initial stability, immersed surface, sail area and displacement—the one having the greater beam will meet with more resistance, and hence be a slower boat than the other. The same gentleman will probably also admit that even the most perfect centreboard boat will have her stability greatly increased if her ballast, instead of being above the garboards, were placed at the bottom of a keel, as the centre of gravity of the entire vessel would be lowered thereby; and no one who has spent any time at the exhilarating and healthful exercise of figuring out stability curves will deny the potency of an inch or so in that direction. Now, suppose we put this keel under a centreboard yacht, and all her ballast at the bottom of it. It is evident that she would have either too much stability for her rig, or too small a rig for her stability. But if the boat is a good, honest type of sloop, it is probable that she was stiff enough before the addition of a keel, and hence the surplus stability is unnecessary. Now, if we chop off her beam—replacing the displacement lost near the water-line by filling out her garboards, making an easy curve at the keel—until her stability is reduced to its former amount, the boat will have much finer lines, owing to the decrease in beam, the same stability and displacement, and as she will still be able to carry the same sails, she will, on account of her sharper lines, be capable of higher speed. I think this is a fair deduction, for when I say "higher speed" I mean the actual maximum and not relative speed; for it is probable that as the addition of a keel will increase the immersed surface, the boat as altered will be slower in light winds than formerly. On the other hand she will be a much easier sea boat, and with the same freeboard can heel to a greater angle without immersing her deck; moreover, her curve of stability will have a much longer "back." And now after these alterations what have we but a cutter, for it is only a question of how much beam to cut off, and how deep a keel to employ, and further investigation will only tend toward a still greater decrease in beam. Methinks I hear the chorus of centreboard men shouting with one accord, "New Haven harbor, mud flats and distraction." Gentlemen, I can only say that I am sorry that you, as yachtsmen, should be in any way restricted as to the extent of your beloved element. However, we must of course conform to the environment; if we reside on the banks of a canal let us by all means have a canal-boat.

MARTIN GALE.

Until a more equitable as well as reasonable rule of measurement is adopted than the length measurements now generally in use, we do not look for any improvement in model excepting in vessels devoted purely to cruising, as with them there is no cause to stultify their length. In racing vessels under present systems of measuring, the only choice left the designer is to produce as large and powerful a vessel as he can within a given length. This compels him to resort to excessive beam with the concurrent heavy spars and great spread of canvas, unhandiness, unseaworthiness, wear and tear. As long as such a primitive and one-sided rule as length measurement remains in force, it will be an up-hill fight to introduce a type of boat differing from the dumpy sloop. But why was length ever adopted as the standard? Why not beam, or height of cabin house, or length of swab, one and all of which will serve with equal logic as that of length of hull?

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout—*Salmo fontinalis*. Land-locked Salmon—*Salmo glover*; White Perch.

TROUT FLIES FOR APRIL.

The following are imitations of natural insects which first appear on head springs, and later in the season are found on ponds and rivers:

BLACK GNAT OR MIDGE.—Body and feet, black; wings, sub-hyaline.

DARK CLARET GNAT.—Body, dark claret; feet, black; wings, sub-hyaline.

BRIGHT CLARET GNAT.—Body, bright claret, mixed with yellowish gray; feet, ginger; wings of one sex, hyaline, of the other, ocherous.

OLIVE GNAT.—Body, dark olive; feet, ginger; wings, hyaline.

GRAY GNAT.—Body, dark fox fur, mixed with dark claret; feet, gray; wings, hyaline.

DARK FOX.—Body and feet, dark fox fur, mixed with lemon-colored mohair; wings, sub-hyaline; tail, three fibres of dark gray hackle.

BLUE BLOW.—Same as dark fox, but of blue shade.

POOR MAN'S FLY.—Body and feet, hare's ear and yellow mixed; wings, slightly mottled gray.

BRIGHT FOX.—Body and feet, brightest part of fox fur, mixed with yellow; wings, brightest hyaline; tail, pale yellow.

FISH IN MARKET—RETAIL PRICES.—Bass, 25 cents; smelts, 15; blue fish, 12½; salmon, 35; mackerel, 18; shad, per pound, 18 cents; white perch, 15 cents; green turtle, 15 cents; frostfish, cents; haibut, 18 cents; haddock, 6 cents; codfish, 6 cents; herring, 6 cents; flounders, 10 cents; eels, 18 cents; lobsters, 10 cents; scallops, per quart, 35 cents; soft clams; 20 to 75 cents; pickerel, per pound, 15 cents; sunfish, 10 cents; perch, yellow, 10 cents; brook trout, Canada, 35 cents; brook trout, Long Island, $1; pompano, 60 cents; prawns, per quart, 25 cents; shrimps, 35 cents.

—Fresh mackerel arrived Tuesday, caught off Cape Henry. Five schooners all arrived within one hour, each one striving to get to market first, in order to get the highest price. These fish were exceptional for their brilliant sheen, which it is the despair of artists to catch. No one ever yet perfectly succeeded in transferring to the canvas the irridescence of these salt sea denizens. The largest shad this season so far is one weighing 7¼ pounds, caught in Delaware River, off Bay Shore, Cumberland County, New Jersey.

—As early as April 1 the gulls and gannets appeared at Gaspé, on the Gulf of St. Lawrence; the weather was mild, fogs frequent, snow fast disappearing, a large extent of bare ground in the fields, very little ice to be seen, and everything indicating an early spring. This will be good news for the fishermen.

—We have received from the Pensacola Ice Company, through Eugene Blackford, of Fulton Market, two elegant

pompano said to be the finest ever received here. They came in condition as fresh and fine as if just lifted from the sea. There is no fish that swims which is more highly esteemed. Baked, it is unrivalled. When broiled, it seems to combine the flavors of a shad and a broiled oyster, "as it were." With new refrigerators and facilities for transportation, our tables can be supplied with all the marine luxuries of sub-tropical seas at minimum rates. The immediate donor of the fish was Mr. Silas Stearns, of the Pensacola Navy Yard, to whom the editor returns his personal thanks.

MR. KILBOURNE'S FISH PICTURES.—At Mr. Blackford's trout opening there was exhibited in his private office a collection of fish paintings by Mr. S. A. Kilbourne. Trout, black bass, pickerel, grayling and salmon were among the pictures displayed, but the most noticcable was the life-size painting of a salmon lying in shadow on the bank of the stream from whose limpid waters it had just been caught. It was admired by naturalists, anglers and art connoisseurs, and pronounced to be one of the best efforts of Mr. Kilbourne; it was sold as soon as it was hung upon the walls at a handsome price to a well-known business man of this city. We understand that the artist has a salmon picture now on exhibition at the National Academy of Design.

THE GREAT FISHING GROUNDS OF MICHIGAN.—The Grand Rapids and Indiana Railroad Company has issued another most attractive pamphlet describing the best known fishing grounds of that State. Many illustrations and several maps indicate the principal points of interest to the angler and the routes reaching to them. Quite as valuable information is additionally afforded by the advertisements of hotels, steam lines and outfitting depots. Several years ago we designated Michigan as the future hunting and fishing ground of the middle tier of States, and repeated personal visits to its wilds and waters have confirmed our opinion, and given emphasis to the prediction. There is no region where we have rambled which affords so much and varied pleasure at so little tax on one's purse and personal comfort. The hotels are invariably neat and inviting; civility and hospitality greet and attend the traveler whether roving or at rest. Before the construction of the Grand Rapids and Indiana R. R. few eastern men visited Michigan for sport. Last year "the woods were full of them." The State itself, and the strangers who seek pleasure within its borders, alike owe a full measure of obligation to its enterprise and efforts to develop both its industrial resources and its natural attractions, and make them accessible. Mr. A. B. Leet, the active general passenger agent of the road, deserves much credit for the attractive form in which he has presented this pamphlet.

THE CATSKILL ROD.—Messrs. Mills & Son, of No. 7 Warren street, New York, have shown us their beautiful "Catskill rod," so styled; a little toy of a thing eight feet in length, and weighing only five ounces, made by the celebrated Leonard. Though very light indeed, it is a capital working tool well adapted for ordinary weights either in pond or running water; and even for heavy work in skillful hands; for, in handling a great fish, just as in driving a horse, it is not sheer strength which controls and conquers, but the keeping the subject well in hand, the delicate feeling of his mouth, the humoring, the giving and the taking, and the perfect correspondence between all the parts in play. Size of rod and weight of fish are not necessarily relative. We believe it was Seth Green who once offered to "play" Walter Brackett on a salmon rig, with the hook fast to the lappel of his coat, provided Walter would not use his hands to break away. He allowed that he would be "fagged" before the end of a half hour. Mr. Brackett is himself a noted angler, and did not accept the proposition. There is some good logic in uncle Seth's peculiar *argumentum ad hominem*. We don't know how much strain the Catskill rod will stand. Anglers do not usually choose to put their rods to the full test. It is a six-strip bamboo, with extra finish of ferrules and fittings which ensure strength of the joints, and altogether an instrument well calculated to delight the angler and captivate the fish.

SENSIBLE STUDY OF NATURAL HISTORY.—Notable advances have been made of late years in educational methods, especially in the prosecution of scientific studies, where there is less of book "cramming," as the college boys have it, and more of object teaching. The student may hear a most elaborate description of organizations and anatomical structures, and still be all at sea; but show him the specimen, put it into his hands, and give him the privilege of cutting it up and investigating for himself, and the result is a thorough understanding of the lesson taught. An example of this advance in scientific studies came incidentally to our notice the other day, when Mr. Blackford received from Professor Alpheus Hyatt, of the Boston Society of Natural History, orders for 600 live scallops, 600 live crabs, 600 live lobsters, 600 yellow perch, 600 frogs, 600 lampreys, and 600 live rats. These are to be used in the classes of 600 students, before whom Professor Hyatt lectures, each student dissecting a specimen as the lecturer proceeds. The resource of Mr. Blackford's stand was fully equal to everything except the rats; just how they were provided we have not learned. Happy Boston, if she must send to Manhattan for her rats! But where is Mr. Bergh?

NEW HAMPSHIRE—*Nashua, April* 12.—Pickerel fishing was closed April 1 by two fishermen, who brought in seventy six fish, weighing sixty-six pounds. The weather has been too cold for trouting. WEBB.

OQUOSSOC ANGLING ASSOCIATION.—The regular spring meeting of the trustees of the Oquossoc Angling Association, of Rangeley, Maine, was held on Tuesday, April 1, at the office of Geo. Shepard Page, No. 10 Warren st. There were present Messrs. Lewis B. Reed, Vice-President; James A. Williamson, Treasurer; Geo. A. Robbins, Rev. R. R. Booth, D. D., Fessenden N. Otis, M. D., and Geo. S. Page. The treasurer's report, exhibiting a satisfactory financial condition, was read and accepted. A communication from the President, J. H. Kimball, of Bath, Me., was received. It contained the gratifying intelligence that the Maine Legislature had passed a law making the open season for trout trout fishing in the Rangeley Lakes from May 1 to Oct. 1. Also that the new building at Camp Kennebago, Indian Rock, 30x60ft., two stories, with twenty rooms and piazza on three sides, was nearly completed. The eggs in the hatching house were in good condition. The loss had been but three per cent. Nearly a half million young brook trout of the Rangeley stock, the majority from trout weighing from five to eight pounds, would be turned into the waters in April. These were taken last October and cared for during the winter at a cost of $250, only 50 cents per thousand. This unprecedentedly low figure is due to the economical management of the experienced Fish Commissioner of Maine, Hon. Henry O. Stanley. Mr. Stanley is to place 55,000 young land-locked salmon in these waters in May. It was unanimously voted that the pay of guides should not exceed $1.50 per day and board. Chandler Robbins, Esq., was elected a member. A few vacancies still exist. The shares of stock are $100 each. This is one of our oldest and best managed associations. While the principal recreation is angling for the famous Rangeley trout, yet the spacious and unique Camp Kennebago is located in one of the best regions in America for moose, cariboo, deer, duck and partridge. Its membership is unexceptionable in every respect.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported since our last issue has been 18, viz., 8 from the Banks and 10 from Georges. Several good Bank fares have been reported, the schooner *N. H. Phillips* landing 90,000 lbs. The Bank receipts for the week have been 375,000 lbs. halibut and 75,000 lbs. (one fare) codfish. Receipts from Georges, 230,000 lbs. codfish and 6,000 lbs. halibut.—*Cape Ann Advertiser, April* 11.

NEW YORK—*Eldred, April* 14.—Trout season has commenced; snow and ice mostly gone; some very fine trout caught in Halfway Brook and in the Beaver Brook last week.
J. M. BRADLEY.

—The Jamaica Rod and Rifle Association, of Jamaica, R. I., appeared in the new role of minstrel purveyors at the Town Hall of that village, last Monday evening. The affair was a most enjoyable one.

TENNESSEE—*Nashville, April* 11.—The fishing season is now fairly opened, and from all quarters come reports of large tubs of fish. The supply in the market is the finest I have ever seen displayed; magnificent lake salmon, trout, perch, and from the Gulf red-snapper. The Cumberland Club start on their first cruise in the *Hattie Bliss* some time next week.
J. D. H.

—Within the last six months a fishing club has been formed, which has leased a stream some five or six miles from Sandusky, flowing from two large Artesian springs, which is pronounced by S. Green and other experts, so to speak, one of the most wonderful pieces of water in the country. Trout spawn put into it five years ago were caught last summer weighing over four pounds. Last fall we put 50,000 California salmon spawn in. The results of this experiment, with a description of stream fishing, etc., may be of interest generally. It would probably be quite novel for most trouting men to read of fishing in a good-sized stream, something over five miles in length, where, after May 1, you could do most of your work in slippers, and easily take from 50 to 75 lbs. per diem.

ILLINOIS—*Rapids City, April* 11.—Good fishing now in the Mississippi. D. J. W.

LAKE MINNETONKA.—ST. PAUL, Minn., March 28, 1879.
MR. EDITOR: In the last FOREST AND STREAM I was surprised to see an extract from an article of mine in the *Pioneer Press*, relating to the fishing in Lake Minnetonka during the winter. I wrote the article not long before drafting a bill for the Legislature, relating to this wholesale murder of fish; succeeded in getting it through safely, and it is now law. It is brief and plain; forbids fishing in Lake Minnetonka at any time and in any manner except with hook and line; makes the penalty from $10 to $50 for each fish caught in violation of the act, together with costs of prosecution, and imprisonment until such fine and costs are paid; one-half of all fines to be paid to the party making the complaint. This will settle the question, and all people living at the Lake who are at all interested in summer travel are strongly in favor of enforcing the law strictly. It will also stop the spring spearing by torch-light, so destructive to black bass. I have known of two men making a catch of three hundred pounds of these fish in one evening, all heavy with spawn. Now that the Lake Minnetonka Park Association is improving its 240 acres, the Lake will become even a greater summer resort than before.

OREGON—*Portland, March* 28.—Weather here, now and for the past two weeks, stormy and disagreeable; no shooting or fishing. The "salmon law" expires on the 31st proximo, and we then will have the markets full of the unrivalled "Chinook" or Columbia River salmon. The Indians are bringing lake trout in small quantities to the market, but fishing will not be very good until about the middle of next month. WM. L.

SCOOP NET FISHERMEN.—*Port Huron, Mich., April* 8.—*Editor Forest and Stream:* I saw in your issue of March 26 an item about trout fishing in the Ocqueve River in this State, copied from the Rogers City *Advance*. I was up there in August last and received a full description of that catch from Mr. Sims, the lighthouse-keeper at Presque Isle, who saw and had some of the fish. His statement of the fishing is that the party of five went to the Ocqueve River; two fished with lines and the others used scoop nets, and took everything clean. The river was so shoal that they drove the fish into pools and took them out of the pools with nets. Mr. Sims further stated that during the first of the season fishing was very good, but before the season was out the stream was completely stripped of fish, and that all that would be left for this season would be those that were too small for last season's catch. H. BOTSFORD.

Comment superfluous.

SHAD BLOW.—*Utica, N. Y., April* 7.—Regarding the shad blow, or June berry wood for fly rods, we would say, we have used it with good success for buts and seasoned joints. Think a rod made with shad blow but and 2d joint and split bamboo tips cannot be bettered except by an all split bamboo. Great care should be taken in getting that which is straight-grained and well seasoned, and, as Mr. Orvis says in last week's issue, it is almost impossible to get it straight-grained. We were very fortunate in getting a good supply from an admirer of shad blow, and it is first class.
BUCKINGHAM & PERRIE.

THAT LOST SWITCH KEY.—About a month ago the *Express* published an account of a switch key, which was being used as a sinker at the time, was lost in the bay at Elizabeth, a fish taking it from the line and carrying it off. The key was subsequently found in the stomach of a fish captured in the Connecticut River, near New London. A gentleman at High Bridge sends us the following relative to it: "The long-promised switch key lost by W. P. Hibler, conductor on the Central Railroad of New Jersey, arrived from the East last night, and was immediately put on exhibition at High Bridge until 7:47 this morning, when it was forwarded by train No. 17 to Jersey City to be exhibited to the numerous friends of Mr. Hibler. *En route* through the principal cities it was displayed from the side of the rear car, attracting crowds. A handsome set of resolutions were elegantly engrossed on the key. This much traveled key will probably find its last resting place at the Smithsonian Institution.—*Easton (Pa.) Express, April* 8.

It is to be regretted that the species of fish was not designated, as the value of the information to science is lost by the omission. The facts given might shed some new light upon the migrations of fish which it would be desirable to know.

HABITS OF SALMON IN NOVA SCOTIA RIVERS.—The following paper, furnished at our solicitation by Dr. Bernard Gilpin, of Halifax, is one of the most valuable and important papers ever contributed concerning the habits of salmon. It will be observed, upon perusal, that there is a most singular coincidence respecting the habits of these salmon and those of their congeners of the Pacific, although they have been supposed to differ materially. Dr. Gilpin proves almost conclusively that salmon are moving up or down Nova Scotia rivers during every month of the year, December being the only month of which sufficient testimony is lacking. The same is true of the Pacific salmon. They are probably ascending or descending the rivers in every month of the year, though positive testimony seems lacking as to a brief period near the close of winter and the beginning of spring.

Just now there is an effort being made in Nova Scotia to secure from the Parliament a new code of laws based upon the observations of the fishermen, so that fish can be taken when they seem to be most plenty; but we shall prefer to trust persons who are not so directly interested pecuniarily as the fishermen, whose interests, as Dr. Gilpin says in his closing sentence, are "always immediate, and never prospective." Dr. Gilpin writes:

Halifax, March 10.—*Mr. Editor:* I have come to the conclusion that Nova Scotia salmon run from the sea into the lakes every month in the year; January and February very few; more in March and April, but the great run is in May and June. In July the ocean fish, before it goes up river, has its spawn much increased and has lost its flavor and pink flesh, and has become soft. Toward the end of August the fish breeders set their traps just above tide for their spawning fish, and take them till November. In November they spawn, but while these are spawning there is a small, as regards numbers, ocean run of fish—(spawn undeveloped, which finds its way into the Halifax market in good condition). Our nets are usually removed at the end of November, but there can scarcely be a doubt of a few running in December. Excepting the smolts coming down in May and June, I have no proof of salmon returning to the sea except in March and April, when there is a perfect exodus of spent salmon coming down with the broken ice in such vast numbers as to account for all which have gone up, and in such miserable condition—so lean and so voracious—as to account for their prolonged stay in fresh water. Last year the Truro and Eastern press opened upon the takers of these fish, and most justly, and I am expecting this year again to hear it. At the same time our S. W. rivers—Medway and Yarmouth—are having fine ocean run fish running up, which must cross this descending crowd. Those in January and February are very few, so few as to make only exceptions to the general law. Unless you saw yourself Saul, the Indian, taking the fish, I should say he did it once or twice, and then said he always did it. I myself knew of an ocean fish taken on New Year's Day through the ice in a mill dam of the Lequille (Annapolis County), scarcely a mile from tide, by an Indian fishing for trout. "What did you do with him?" I said. "Put him in de pot, eat him," was his squaw's quick reply. "Then, sister, I beg to congratulate you upon being the best dined lady in the county, if not in the province, as few New Year's dinners cost twenty dollars," which would willingly have been paid for him for export to Boston. That many smolts remain up for two years and more I have personal proof from gentlemen of accuracy, who have seen them in attendance upon the female, seven inches long only. This accords with English authorities. I never have obtained a salmon in the parr form. They generally disappear as pinks during autumn and reappear as smolts in May, the changes taking place under the ice, and they taking no bait or coming to the little brooklets. The opposite to this are the parrs of *S. gloverii*, which abound near the tide and in the small runs, and are of great beauty. Notwithstanding such names as Girrard, Putman, Suckley in America, and Gunther, Leith Addams, in England, your naturalists will not allow this poor fish a distinct species, simply because they have never seen one, but are pounding away upon land-locked salmon, which, I believe, are only spent salmon returning to the sea, and are confounding them with *S. sebago, S. St. Croix*, and *S. schoodic*, which I believe are all *Gloverii* in its silvery form. I have not our fishing laws by me, but from the debates of our commons at Ottawa upon fisheries this spring, the boundless and reckless assertions, made without any attempt of proof or knowledge, make me think we are too young a nation yet to have laws founded in science, and that at present the Government in power cannot afford to do or to change any law that would tend to lessen their hold upon the votes of the fishermen, who are influenced by their own interests—always immediate, and never prospective. BERNARD GILPIN.

PICKEREL IN LAKE UMBAGOG.

MR. EDITOR: BETHEL, Me., April 2, 1879.

In 1870 there had never been known a pickerel in any of the Umbagog range of lakes, and the *Saxifinus fontinalis* had free access through all the tributaries of Androscoggin. A man by the name of Stone was prosecuted for violating the close time laws by live bait fishing that winter, and he had threatened to put in pickerel. We did not believe that he or any one else would do such a villainous thing, and many of us said that if a man should do that he should be shot without time to say his prayers. Pickerel were plenty in the Androscoggin River outlet of Umbagog Lakes, and had been for years, but the heavy falls of Berlin, Penthook and Monolidgewalk had kept them from the lakes. In 1872 they made their appearance in Umbagog, and in 1875 the lake was full of them, and they were large and fat, and hundreds of pounds were fished out, summer and winter, by the inhabitants about the lakes and by sportsmen from all parts of the country, and still they increased rapidly, so that in 1877 the lake was fairly alive with them. This lake is a shallow lake, with muddy and grassy shores over a great part of it, and chubs and shiners and suckers abounded throughout the lake, as well as frogs by the million—making in the spring of the year such a squeaking, croaking and roaring that they were familiarly called the Umbagog Band—so forming the best possible feeding-ground for pickerel. But in the spring of 1877 an unknown mortality had seized the fish, and the shores were lined with dead pickerel of all sizes, from eight or ten pounds down. The fish appeared to be in splendid condition, so they did not starve to death, and no known cause can be surmised. The present winter lake fishermen have told me that the ice on a great part of the lower end of the lake is frozen to the bottom, or that the weight of snow on the lake has crushed the ice on to the ground, and we wait impatiently the breaking up of the ice to see if we have not found out the mystery of the dead pickerel of 1877. We very much fear that this is not the end of this pickerel business, for the cook at the Angler's Retreat told me that they had caught a pickerel about one pound weight at the foot of Mollychunkemunk, next above Umbagog. If so, how long before the whole range, from Umbagog to Rangeley, will be filled with these fish? J. G. RICH.

A PLEA FOR POOR FISHERMEN.

EDITOR FOREST AND STREAM:

Would it not be well to pass a law regulating the size or weight of all fish that may be caught on a rod and line, that may be exposed for sale on fish stands in any city or town of the State. In passing through Fulton Market the other day I noticed a large number of very small pickerel and striped bass, many that would not weigh more than a few ounces. At this rate where are we to get our large fish in a few years? Certainly if we catch all the young of any species it must, as a natural sequence, rapidly die out. Of what use are close seasons and laws regulating the months in which certain fish may be caught if, during those months, the size or the weight be not taken into account? If fish are not allowed to live long enough to spawn it becomes only a question of time when there will be one continuous close season, as far as the catch is concerned.

It is not so many years ago when a poor man could get quite a mess of fish from the docks of New York city with a drop line; but now, only those who have fine tackle and can afford the luxury of a boat can hope to do much fishing; and even with those advantages in their favor, they are much more likely to go home with an empty basket than a good string of fish. I would include the fresh water fish with the salt, as the rule holds good to the poor fisherman in the city or country.

Now, Mr. Editor, while salmon and trout are being protected and propagated for the pleasure of the rich man, how much more necessary that the actual food fishes of the poor be protected by suitable laws so that in a few years fish may be plenty, and in a stagnant season of trade the poor man may be able to provide food for his family by resorting to the nearest pier in his vicinity. Stop all sales of striped bass-babies and fishing through the ice, and regulate the weight and size at which all kinds of fish may be exposed for sale, prosecuting offenders vigorously, and in a few years there will be a handsome increase in the yield that will pay all round. W. E. H.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild ducks, geese, brant, etc.

BROOKLYN GUN CLUB.—A month ago, or more, Mr Chas. Hallock, the editor of FOREST AND STREAM was made an honorary member of this estimable club of gentlemen. In acknowledging the courtesy at the time this paper inadvertently substituted the name of the Long Island Gun Club, an equally worthy organization; but it was only a day or two since that our attention was called to the error by Dr. Aten, the President of the Brooklyn Gun Club, and we hasten with reasonable alacrity to make the correction, and get from between the two fires.

NO PIGEON SHOOTING IN MASSACHUSETTS.—Massachusetts legislators, at the instigation of the Society for the Prevention of Cruelty to Animals, has passed a law prohibiting shooting pigeons at the trap. The difference in degrees of cruelty between shooting a bird which flies up from the trap and shooting a bird which flies up from a copse is so slight—if, indeed, it exists at all—that we may soon expect another law prohibiting all shooting of game. Then the S. P. C. A. will turn its attention to the suffering Walnut Hill rifle targets.

A MAGNIFICENT PRIZE FOR THE STATE SHOOT.—Messrs. Tatham & Bros. offer a French marble clock "black and rose," with a first quality visible escapement movement, surmounted by a group of game in bronze, and accompanied by a pair of bronze side pieces about 16 inches high, representing sportsmen with their dogs, guns, and accoutrements, at work in the field. These three valuable pieces were imported by Taylor & Bro., 676 Broadway, and together constitute one of the most artistic and appropriate prizes ever offered to our large and rapidly growing State Association. The State Convention and Shoot occur in June (?).

CAMPING PARTY FOR THE ROCKY MOUNTAINS.—Those desiring to make a hunting excursion to the Rocky Mountains have an opportunity of joining a company of experienced tourists by addressing Mahlon Gore, Kansas City, Missouri.

MAINE—*Colebrook, April* 7.—The backbone of our winter remains intact; snow four feet in the woods. Some deer have been killed near Dixville Notch, and the parties paid the fine, evidently influenced by our Sheriff to make a liberal donation to the county funds. EDW. NORTON.

RIVERSIDE GUN CLUB—*Topsham, Me., April* 7.—At the annual meeting on Thursday, April 3, the following officers were elected for the ensuing year: C. M. Baker, Pres.; W. A. Stinson, Sec'y; C. L. York, Treas. A. Q. Goud and Sam Knight, Jr., together with the first named officers, constitute the Executive Committee, being the same board of officers as last year. The club is in good condition, and propose to have a field day on the 17th inst. W. A. S., Sec'y.

NEW HAMPSHIRE—*Nashua, April* 12.—Ducks and geese are quite numerous in the Merrimack. The new game law prohibits duck shooting in the spring, and is rather unpopular with some. Last week a gander was shot in the Merrimack, which was said to weigh twenty pounds. Bluebirds, redbreasts, blackbirds, and swallows have arrived, but find cold comfort. Parties in adjoining towns are extensively engaged in catching hawks; two men in Hudson took in one day eleven large hen-hawks; in one week they trapped over fifty of all sizes. There is a bounty of twenty cents per head on them. They get a decoy hawk, tie him to a peg, and set steel traps around and beyond him, and bait with meat. It is the most successful way of catching hawks. The sportsmen had a lively time Fast Day shooting at glass balls, Chase, Burnham, Brigham and Whitmarsh, of the club, proving themselves excellent snap shots. WEBB.

MASSACHUSETTS—*Salem, April* 14.—Bitterns, purple finches, swallows, geese, March hawks, fox-sparrows numerous; pigeons and sharp-shinned hawks along. Season very late; much snow yet left in places. One snipe shot last week; woodcock about for some time; rusty, crow, and red-wing blackbirds very numerous in places. Snipe grounds in prime order, but some frost yet; ice makes nights, but hope soon for better weather. Stevens, of West Newbury, shot five male hooded-mergansers last week. Meadow-larks about. Miles River pretty wet; Newburyport grounds fine for snipe. R. L. N.

CONNECTICUT—*Clinton, April* 12.—Quail have not wintered well here; woodcock very plenty; very few snipe have made their appearance as yet. S.

Hartford, April 9.—I shot two snipe yesterday, April 8, which is as early a date as I have ever seen them in this neighborhood. W. M. H.

NEW YORK—*Eldred, March* 14.—Wild pigeons have appeared in the grain stubbles.

NEW YORK STATE SHOOT.—The prizes thus far secured for the next tournament of the New York State Sportsmen's Association are as follows: John A. Nichols, Syracuse, gun, value $250; W. A. Baker & Co., Syracuse, gun, value $250; Parker Bros., Meriden, Conn., gun, value $250; Forest and Stream Publishing Co., New York, badge, $150; Tatham & Bros., shot, New York, marble clock with bronze ornaments, $150; LeRoy Shot Co., New York, 100lbs. shot, $100; C. J. Hayden & Co., Rochester, easy chair, $65; J. H. Rushton, Canton, N. Y., sporting boat, $50; Buckingham & Perrie, Utica, N. Y., rod, $50; J. B. McHarg, Rome, N. Y., rod, $50; U. M. Cartridge Co., Bridgeport, Conn., cartridges and wads, $25; James Ratcliff, Rochester, case of powder, $30; Hazard Powder Co., James Palmer, Rochester, agent, case of powder, $20; Dupont Powder Co., J. O. Robinson, Buffalo, agent, case of powder, $20; W. H. Cruttenden, Canenovia, N. Y., revolving glass ball trap, $15; A. H. Bogardus, Elkhart, Ill., glass balls and trap, $15; M. S. Hutchings, Dover, N. H., pair of moccasins, $10; Batavia Manufacturing Co., Batavia, Ill., glass ball trap, $10; James Backus, Rochester, N. Y., drinking cup, $10; John H. Mann, Syracuse, half dozen trolling spoons.

NEW JERSEY—*Red Bank, April* 8.—Snipe are making their appearance in small numbers. WILD.

TENNESSEE—*Nashville, April* 11.—The snipe shooting is about over. Mr. David McGarock and Captain Ben Hurd went out after Reynard this week upon Mr. McGarock's beautiful estate. They had a fine run. Col. W. H. Johnson says his dogs are in the very finest condition, and that he runs them about three times a week, almost always bringing home a scalp and brush. J. D. H.

MICHIGAN—*Detroit, March* 29.—Mr. J. H Canniff, of Detroit, arrived home yesterday from a three days' ducking trip at St. Clair Flats. He bagged 78; Mr. A.C. Hobbs, Bridgeport, Conn., in three days at the Flats bagged 65. He intended to have stayed there a number of days, but unfortunately met with an accident by falling through the ice and injuring himself. "My old friend Hobbs, how did you like your ducking?" DRUID.

Detroit, April 12.—Messrs. W. C. Colburn and E. H. Gillman returned home Saturday evening from two days' shooting near Rockwood, with 117 ducks. At a meeting of the Lake St. Clair Fishing and Shooting Club, held last evening, the following officers were elected for the ensuing year: President, William O. Colburn; First Vice-President, M. S. Smith; Second Vice-President, A. C. McGraw; Secretary, A. M. Van Duzer; Treasurer, Jared A. Sexton; Board of Directors, A. McPherson, Thomas S. McGraw, E. O. Durfee, Charles B. Hull, George L. Field, John M. Hinchman, James L. Fisher

Rapids City, April 11.—Hunting about gone; weather getting warm, and no rain to raise river. D. J. W.

ILLINOIS—*Carthage, April* 7.—The season for duck shooting is now almost gone, although the close season does not begin until May. The shooting in this vicinity for the past few weeks has been very fair, and fully up to the average. Some of our sportsmen have taken trips to the celebrated hunting grounds of the Illinois River this season, with more or less success. In a two days' hunt there lately Messrs. Ed. and Alf. Cherrill and Jack Lee, of this city, secured over a hundred ducks, and about twenty or thirty geese and brant. They were a week too late, however. The Wilson, or jack, snipe have arrived in good numbers, but are extremely wild. Quail have suffered considerably from the late severe winter, but they are not all frozen yet by any means. GAY.

OHIO—*Painesville, April* 11.—Our duck shooting this spring has been better than usual. I have made some good bags of broadbills, but not a mallard. The law was cut the 1st, and we have had more ducks here since that time than has been known for some years. One of our sportsmen shot a Wilson snipe a month ago; none have been seen since, until yesterday, when the same gentleman killed three.

INDIANA—*Valparaiso, April* 6.—Snipe shooting is now at its best. This Kankakee region is so extensive that there is room for all. The Hardscrabble Club, consisting of H. H. Shufeldt, George A. Shufeldt, and Thomas Lynch, of Chicago, and the subscriber, have leased 320 acres of the finest marsh in this county. We have a neat club-house, with accommodations for six. The duck shooting is excellent, and snipe by the million. I believe our prospects for pinnated grouse were never better, and enough quail have lived through to give us a little of that sport. Our woodcock grounds are excellent; none better west of Ohio. I often hear of the rarity of setters or pointers that excel on snipe. I have three setters and two pointers that are hard to beat on snipe. Plunket, Jr. (Plunket ex-Kitty), which I recently bought of Dr. Goldsmith, of Rutland, Vt., is an elegant snipe dog, and is as fine on woodcock. I have also Mack, a two-year-old pointer; Dilly's Ranger-Queen, a remarkable good dog on snipe, and not at all afraid of water. I recently purchased Chum, a brother of Ranger, from S. M. Emery, of Lake City, Minn., a most beautiful dog, twenty-eight months old. My kennel now consists of imported Plunket and Palmerston, Jr., red Irish; imported Rapp and Nell, Gordons; imported Carrie-Laverock, Irish; Lady Plunket, Plunket, Jr., Blue Daisy II. and three whelps, by champion Joe, Jr.-Minnie Hauk; a Vis-count-Dolly pointer bitch, a perfect beauty; besides three fine cocker spaniels, six Chesapeake duck dog puppies, three Lewellin puppies, and eight or ten more of various fancy strains. Any Eastern sportsman journeying West will receive a hearty welcome, and will be given all the sport the season permits. W. H. HOLABIRD.

MISSOURI—*Sedalia, April* 8.—Weather here has been very dry; very few duck or snipe have as yet been seen or killed; plover are now coming in in great abundance. OCCIDENT.

RIFLE AND GLASS BALLS.—The best way for a man to prove that he can do a thing is to do it. Some persons having averred that Mr. Ira Paine's alleged feats with rifle and glass balls were fraudulent, because charges of shot were used instead of bullets, that gentleman last Saturday silenced his critics by a performance whose conditions left no room for suspicion of unfair play. Several gentlemen of the press, having constituted themselves a committee, procured from the Winchesters a supply of sealed ammunition, loaded the rifles themselves, and scored the results. Among other things, Mr. Paine broke with the shotgun 25 of 28 single balls thrown by hand into the air. These balls were thrown by an expert, with great force and in different directions. With the repeating rifle, shooting on time, 15 of 17 balls were broken in 30 seconds. In shooting at balls thrown at his head, the score was nearly a clean one. Of 14 balls, thrown two at a time from the hand, 13 were broken, the first four pairs not scoring a miss. The exhibition closed with the feat of putting 17 balls into a barrel-head at 50 measured yards in 20 seconds. That is quick work—a feat of rapid firing we believe unequaled.

MONACO.—The closing event took place on March 26 and 27 under the title of the Grand Prix de Cloture. As this prize is second in importance to the Grand Prix, won by Mr. E. S. G. Hopwood, we will only state at present that it has also been carried off by the same gentleman. The first, second and fourth prizes were earned by the Dougal gun.

AN AMERICAN HAMMERLESS GUN.—A correspondent writes of the hammerless gun, made by D. Lefever (late Nichols & Lefever), of Syracuse:

The action of the gun is the same as the Nichols & Lefever. The cocking of the locks is done by means of a lever on the left side, the same as the side snap action, and by pushing down on the lever both barrels are instantly ready for discharging; and by means of the same lever both locks, or one, may be let down, thus doing away with the snapping, as is necessary in the English method. Near the locks is a plate of glass, through which one can look and see at a glance whether one or both locks are ready for firing.

THE BATCH OF QUESTIONS ANSWERED.—*Enfield, N. C., March* 29.—*Editor Forest and Stream:* I am saving some abler man's modesty by replying to Mr. McInturff's questions in last number of FOREST AND STREAM, who asks: First about size of shot. Says he has been using No. 4, that F. and S. says No. 8 instead, and that he uses Nos. 2 and 1 for turkeys, and that F. and S. says No. 5. The gentleman's ideas are apparently based upon the use of cylinder-bored guns, and, applied to them, he is not far from right. Choke-boring, whether the barrel be "long or short," controls the pattern or spread of shot. It allows a large increase of the powder charge without an increase of shot, thereby greatly increasing the killing power of the shot; in other words, giving penetration without a corresponding loss in pattern, as would not be the case were such charging applied to the cylinder-bores. For instance, the 14-bore, 30-in., of the olden times, used 2½ drs. of powder and 1¼ oz. shot, and to make such charging effective on quail during the winter months No. 6 or at least No. 7 shot were necessary; but with a modern bored gun of same weight and dimensions, with a charge of 3½ drs. powder and 1 oz. No. 9 or 8 shot there would be as much killing power, with a great advantage in the increased number of pellets. Second, Length of Barrels—Should be sufficient for the consumption of a proper charge of powder, as far as permits an easy balance of the gun. Any greater length not only makes the gun difficult to handle, but is attended with so much friction as to impair penetration. It seems to us that the gunmakers have it down very fine in 28 to 32 inches. Third, Size of Bore—We think a 10-bore of corresponding weight and charge more effective on large game, because it carries a larger charge than a smaller gun, and will probably make better pattern and penetration with large shot. Fourth, Choked Muzzle-Loaders—Use an elastic wad, a size or two larger than the muzzle, inconveniently, of course. If half your shooting is deer, turkeys, or ducks and grouse, buy a 9 lb. 30-in. No. 10 choke-bored breech-loader from a good maker, load it according to directions you will find in "Hallock's Sportsman's Gazetteer." If more than half small game, let it be 8-lb., 12-bore, 30-in. Hold correctly, and when you miss blame yourself. E. S. H.

COOL SPRING, N. C., April 7, 1879.

EDITOR FOREST AND STREAM:

In your issue of 27th March, under the heading of "A Batch of Questions," is a communication from Mr. Jos. B. McInturff, who seeks information on size of shot, length of barrel of gun and size of bore best adapted for shooting large game at long distances, as well as for general use. Though not a "veteran" in years, still my experience may be good for something, and, such as it is, he shall have it with your permision.

First, size of shot. For wild turkeys at long range (and they are always far enough off when you get a chance to shoot at them) use buckshot or B's in wire cartridge form. No. 5 shot will do well enough at 30 yards, when you can shoot them in the head, and at that distance Nos. 10 are surer; but it is rare in this section of the country that you can get nearer than from 60 to 100 yards of Mr. Turk. For squirrels in tall trees. No. 2 shot is the best, provided you have a close shooting gun; if not, use No. 4. There must be sufficient weight in the shot to throw the squirrel off his feet when hit; small shot won't do it. For ducks use No. 6, for grouse No. 7, quail No. 10, and for woodcock No. 12. These sizes to be used regardless of season, whether early or late.

Second, length of gun barrel. A barrel 36 to 40 inches long will hold its shot together (shoot evener and closer) at long range than a barrel 28 to 32, same gauge, load, etc.

Third, size of bore. A small bore—say 16—will put more shot (large) in small circle at long range than a larger one, using proportionate charges to each.

Fourth, choke-bore muzzle-loaders. The wads yield to the force and metal, and do not interfere in the least with their use.

Fifth, "guns for general shooting." A good gun for the above is an 8lbs. one, 14-gauge, 32-inch barrel, if wing-shooting is to be included; if not, same weight, or 11b. heavier, 17-gauge, 36-inch barrel would be better. A rifle is properly the weapon with which to slay the "old gobblers," and I strongly recommend J. B. McI. to use it instead, as he then, generally, will either miss or kill, and he will not have the mortification to see the turkey go off badly wounded or the painful reflection that it will suffer and die in agony at last, food only for the buzzards. On the whole, I think Mr. McI. is "posted" sensibly and a change would not prove satisfactory.

E. S. WANMAKER.

THOSE GRIZZLIES.

MONTANA, March 15, 1879.

EDITOR FOREST AND STREAM:

Calling attention to a statement made in your paper of Feb. 20, 1879, page 53, by "Viator" (Mr. C. Messiter), that he, last year, in the Rocky Mountains, killed six grizzlies, besides elk, deer, etc., in large numbers, and in two cases killed a bear with a single shot, I have a few words to say:

Now, Mr. Editor, I do not belong to that class of "mighty hunters" who do not prize a grizzly's scalp as a hunting trophy, for I do, and it is on this account that, having equally shared the pleasures, vicissitudes, expenses, and mayhap dangers of that hunt, I most respectfully and urgently put in a claim for a large interest, in at least four of those six grizzlies. As the before-mentioned statement is the tenor of several newspaper articles, the following statement of facts and score is given, premising that, in so doing, nothing said is intended to reflect on "Viator's" rifle or his prowess as a "bear-hunter," but simply "that the truth of history may be vindicated."

The first bear killed on 14th September was very large, and the fiercest one of the six. It is in this fellow that I claim an especial interest, as he charged twice on me fiercely from the thicket. The first time I missed him at close quarters, the bear almost catching my horse before he could be spurred out of his reach. The next charge he was knocked down at close quarters by a ball in the breast, ranging back (as afterwards found out). Thinking he was settled, I was in no hurry to re-load, but he rose and came again before I was ready, and myself and horse only escaped his clutches by a few feet, in spite of the most vigorous pounding on my part. Subsequently, during the "scrimmage," I put another ball through behind the shoulder. An examination of his carcass the next morning (for the last part of the fight was during a severe snow-storm, and, as lunch-time had arrived, it was concluded to let him alone until morning, for we felt perfectly sure he was stark dead) disclosed three wounds, two in the chest, ranging back, and a third behind the shoulder, and lodging against point of shoulder on opposite side, neither ball touching the heart, though all passing near it.

The second bear was killed on the 4th of October by myself, when alone, on an open bottom. Having the wind of him, I crept upon him from behind on foot to within forty yards, and by three rapidly-fired shots settled him before he knew from whence the danger came.

The next two bears were killed over a bait, established in a cañon, with a beautiful overhanging cliff, solid limestone, too, Mr. Editor, by which the hunter could look down with impunity upon the bear, within twenty yards; a most beautiful location for the hunter, barring the cutting mountain winds that swept down the cañon.

The third bear was killed by "Viator" and one of the men on October 17, the former's Express ball striking the heart, the latter's ball, from a Winchester, penetrating near the heart.

The next night I myself and the guide kept watch, and about midnight the crackling of brush announced the bear's stealthy approach. After cautiously reconnoitering, he boldly approached, and was soon at work on that juicy venison. The moon, peeping out just then, a 334 hollow ball from my rifle was placed behind the shoulders and down through about the heart (effectually settling him, as I believed then and still do), followed in quick succession by the guide's double-barreled shotgun, loaded with five drachms of powder and buckshot. Heavens! how those mountain echoes were awakened that dark and stormy night. Were there hostile Bannocks or hostile Sioux within twenty miles of that locality they must have incontinently fled.

The fifth bear was killed by "Viator" alone on October 18—the largest bear of the lot. One, and probably two, Express balls behind the shoulder and a final settling shot in the head.

The sixth and last bear was killed by "Viator" and myself on October 27, firing simultaneously, at about fifty yards, one ball hitting in the breast and the other through hind leg. As we were in a hurry, the balls were not cut out, nor was it settled which was which.

I approached alone another bear, delivered a shot about the shoulders at fifty yards, and knocked him over; but before a second shot could be placed he had scrambled off and into a large thicket near by. Though confident he was my meat, he could never be raised again, though the thicket was well searched.

On two other occasions "Viator" and myself watched at night an elk bait. The bears came, but that overhanging cliff being wanting, they were too smart to allow any but a running shot.

Now, Mr. Editor, I submit that the above facts do not justify the statement that "Viator" either in two cases killed a bear with a single shot, or that he killed the whole number of those six grizzlies.

Between sixty and seventy deer and antelope were killed by the party—twenty-seven by myself, sixteen by "Viator," and the balance by the guide. There may be an error of a few deer in "Viator's" score; but I think not, as the count is made as was reported each day.

I would add that no especial effort was made to kill deer, as they were so numerous that one hundred might have been easily killed in the same time. The aim was to kill only such as could be utilized by the mess or for bear baits, or given to such Bannock or Crow Indians as came around, or to such whites as visited camp.

Two elk were killed, one by "Viator" and the other by the guide.

This finishes the score, except a lynx, killed by myself, and ten or twelve buffalo, killed by the guide and myself before "Viator" joined the party.

Regretting trespassing on so much of your valuable space about matters that probably interest only two of your readers, I remain, very truly, BEAR-PAW.

—See Bogardus' advertisement.

PIGEON MATCHES.

CONNECTICUT—*Saugatuck, April* 12.—Glass ball match; Bogardus trap with screen; 18 yards rise; Bagardus rules; wind blowing strong from northwest:

Jas K Polk	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	—23
Sterne Wheeler	1	1	1	0	0	1	1	1	1	1	1	1	1	1	1	1	0	1	1	1	0	1	1	1	—21

MINER ROD AND GUN CLUB.—A shoot by some of the members took place on Thursday, April 3, of their club grounds, at Springfield, L. I. The badge, which at the previous shoot was carried off by Capt. James T. Davis, was on this occasion won by Michael Englert, Esq., after a tie struggle with Mr. Wm. Steers, the silent member of the club. The following is the result at 25 yards rise:

Miner	0	1	1	1	1	0	0	1	1	0	—6														
Englert	1	1	1	1	1	1	1	1	1	1	—9														
Davis	0	0	1	0	1	1	1	0	0	0	—4														
Wood	0	1	1	1	0	0	1	1	1	1	—7														
Aery	1	1	1	1	1	0	0	1	1	0	—7														
Steers	1	0	1	1	1	1	1	1	1	1	—9														
Pfaender	1	1	0	1	1	0	1	1	1	0	—7														
Paine	1	0	1	1	1	1	1	0	1	1	—8														

Shoot off—Engiert, 1; Steers, 0.

Brooklyn, April 8.—Score of pigeon match shot on 7th inst., at Brooklyn Driving Park, between Messrs. C. Schworer and J. Watts; 25 yards rise, 80 yards boundary, H and T ground traps, old Long Island rules, 15 birds each:

C Schworer	1	1	1	*	1	1	1	1	0	1	1	1	1	1	1	—12									
J Watts	1	1	0	1	0	1	1	1	1	1	0	1	0	0	1	— 8									

FOUNTAIN GUN CLUB—*Brooklyn Driving Park, April* 9.—Twelfth monthly meeting in contest for final competition for the club championship badge, shoot for at seven birds each, handicap rise, 80 yards boundary, club rules:

A Carlin	21 yds																								
																	1	1	1	1	1	1	1	—7

A return match will probably be shot soon. UNCAS.

LOUISVILLE SHOOTING TOURNAMENT.—A shooting tournament under the auspices of the Louisville Gun Club will be held at Louisville, Ky., May 13, 14, 15, 16 and 17. The aggregate of the 16 very liberal purses offered is $3,500. There will be four matches upon each of the first four days, class shooting throughout. Saturday, the 17th, will be devoted to the inter-State match between Kentucky and Tennessee, teams of fifteen from each State, for a purse of $5,000. All prizes in the class shooting will be divided into 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. Four "free-for-all" matches are open to professionals. The well-known hospitality of the Louisville Club assures the best of treatment for visiting sportsmen, and we shall expect to chronicle a brilliant field meeting next month. Circulars and all information may be obtained from the secretary, Mr. L. W. Noel, 165 Main street, Louisville, Ky.

ABERDEEN GUN CLUB TOURNAMENT.—The shooting tournament, given under the auspices of the Aberdeen (Miss.) Gun Club, April 4 and 5, was participated in by a large number of sportsmen from abroad. The scores made were very creditable, as will be observed from the following summary:

First match, five single birds.					
G W Tunstall, Mobile	1	1	1	1	—5
G V Young, Waverly	0	1	1	0	—3
C A Johnston, Columbus	1	1	1	0	—4
Jas Saunders, Monroe County	1	1	1	1	—5
H P Vass, Mobile	1	1	1	1	—5
Mr Pritchard, Mobile	0	1	1	1	—4
W L Young, Waverly	1	0	1	1	—3
Dr Vaughan, Columbus	0	1	1	0	—2
W E Love, Aberdeen	0	1	0	1	—3
Louis Nance, Columbus	0	1	1	0	—2
F M Leigh, Columbus	1	1	1	1	—5
W P Haughton, Monroe County	1	0	1	1	—4
Dr Scales, Mobile	0	1	1	1	—4
W E Howard, Aberdeen	0	1	1	1	—4
T B Franklin, Columbus	1	0	1	1	—4
Ben Gresgin, Aberdeen	1	1	1	0	—4
D Scott, Selma, Ala	1	1	0	0	—3
John Gilmer, Columbus	0	0	1	0	—1
Jas Hearon, Lowndes Co	1	1	1	1	—4
James Bush, Mobile	1	1	1	1	—4
J E Leigh, Columbus	1	1	1	0	—3
F W Pope, Columbus	1	1	1	1	—5
Wm Kellerman, Aberdeen	1	1	0	1	—4
Mr. Dunham, St. Louis	1	0	1	1	—4

Ties of three won by Mr. Tunstall, of Mobile, after five trials.

Second match, ten single glass balls.											
Tunstall	1	1	1	0	1	1	1	1	1	1	—9
G V Young	0	1	1	1	0	0	0	0	0	1	—3
Johnston	1	1	1	1	1	1	1	1	1	1	—10
Saunders	1	0	0	1	1	1	1	1	1	0	—7
Vass	1	1	1	1	1	1	1	1	0	1	—9
Pritchard	0	1	1	1	1	1	0	1	1	1	—7
W L Young	1	1	1	1	1	1	1	1	1	1	—10
Vaughan	1	1	1	0	1	0	1	1	1	1	—8
Love	1	0	1	0	1	1	0	0	1	1	—6
Nance	0	1	0	1	1	0	0	1	1	1	—6
F M Leigh	1	0	1	1	1	0	0	1	1	1	—6
Scales	1	0	1	1	0	1	1	1	1	1	—8
Howard	1	0	1	1	1	1	1	0	1	1	—8
Franklin	1	0	1	1	1	1	0	0	0	1	—5
Gillespie	1	1	1	1	1	1	0	0	0	1	—6
Scott	0	0	0	1	0	0	0	0	0	0	—1
Gilmer	0	0	0	1	0	0	1	0	0	1	—4
Hearon	0	1	1	0	0	0	1	1	1	1	—7
Vaughan	0	1	0	1	0	1	w				
Howard	1	1	1	1	1	1	1	1	1	0	—9
Love	1	0	1	0	1	0	1	0	1	0	—5
Saunders	1	0	1	0	1	0	1	0	1	0	—5
Hearon	1	0	1	0	1	0	1	0	1	0	—5
Nance	1	0	1	0	1	0	1	0	1	0	—5

The tie between Messrs. Johnston and Howard resulted in favor of Capt. Johnston.

Fourth match, ten single birds.											
Bush	1	1	1	1	1	1	1	1	1	0	—10
Dunham	0	1	0	0	0	1	0	0	0	0	—2
Franklin	0	1	1	0	0	1	1	1	1	1	—7
Gilmer	1	1	1	0	0	1	0	1	1	0	—6
Gillespie	0	0	1	0	0	1	1	1	1	0	—5
Greene	1	1	1	1	1	1	1	1	1	1	—7
Hearon	1	0	1	1	1	0	1	0	1	0	—6
Howard	1	0	1	1	1	1	0	1	0	0	—6
Johnston	1	1	1	1	1	1	1	1	1	1	—10
Howard	0	1	1	1	1	1	1	1	1	0	—8
J E Leigh	0	1	0	1	1	1	1	1	1	0	—7
F M Leigh	1	1	1	1	0	0	1	0	1	0	—6
Nance	0	0	1	1	1	1	0	1	0	0	—5
Pritchard	1	1	1	1	0	0	1	0	1	0	—7
Pope	1	1	1	1	0	0	1	1	0	0	—6
Saunders	0	1	1	1	1	1	1	1	0	0	—8
Scales	1	1	1	1	1	1	1	1	0	0	—9
Scott	0	0	1	1	1	0	0	0	0	0	—3
Tunstall	1	0	1	1	1	1	1	1	1	1	—9
Vaughan	1	0	0	0	0	0	1	0	0	0	—2
W L Young	1	1	1	1	1	1	1	1	1	1	—10
G V Young	1	0	1	1	0	1	1	0	0	0	—6
Vass	1	1	1	1	0	0	1	1	1	0	—8
Love	0	1	0	1	0	0	1	0	1	0	—6

The tie between Messrs. Bush, of Mobile, and W. L. Young, of Waverly, was decided in a three-bird match in favor of Mr. Young.

Fifth match, 5 single birds, 26 yards rise.											
Bush	1	1	1	1	1	—5	Nance	1	1	0	1	1	—4
Dunham	0	0	1	0	0	—1	Pritchard	1	0	1	1	1	—3
Gillespie	1	1	1	0	1	—4	Pope	1	0	1	1	1	—4
Gilmer	1	1	1	1	1	—5	Saunders	1	0	1	1	1	—4
Franklin	1	1	1	1	1	—5	Scales	1	1	1	1	1	—5
Greene	0	1	1	1	1	—4	Scott	0	1	0	1	0	—2
Hearon	1	1	1	1	1	—5	Tunstall	1	1	1	1	1	—5
Howard	1	1	1	1	1	—5	Vaughan	0	0	0	0	1	—1
Johnston	1	1	1	1	1	—5	W L Young	1	0	0	1	1	—3
Kellerman	1	0	0	1	1	—3	F M Leigh	1	1	1	1	1	—5
J E Leigh	1	1	1	1	0	—4	Vass	1	1	1	1	1	—5
G V Young	1	0	1	1	1	—4	Love	1	0	0	1	1	—3

Messrs. Bush, Johnston and Tunstall, having tied on twelve successive birds at 31 yards, or seventeen including the match, the ties was shot off with the following score: Bush, 1 1 0—in all 19 successive birds; Johnston, 1 1 1; Tunstall, 1 1 1. The deciding score was: Johnston, 1 1 1, 1 1 1—in all 29 successive birds; Tunstall, 1 1 1, 1 1 3, 1 1 0—in all 25 successive birds.

Sixth match, 10 glass balls, 21 yards rise.											
Bush	0	1	0	1	0	1	0	1	1	1	—6
Dunham	0	1	0	0	0	0	0	1	0	1	—3

The shooting off of the tie resulted as follows:

Johnson	1 1 1 0 1 1—5	Pritchard	1 0 1 0 —2

Ohio—Chillicothe, April 6.—Glass ball match between Hopetown and Piketon clubs, four men each; 20 balls apiece:

Hopetown Club—G. W. Haynes, 13; Jas. Haynes, 13; John Stiltz, 15; W. Lilford, 14; total 65.											
Piketon Club—M. Rader, 18; J. Burger, 16; J. Corwin, 14; J. Valery, 14; total 62.											
Rader, Lilford and Doggett shot again at five birds:											
Rader	1	1	1	0	1—4	Lilford	1	1	1	1	—4
Doggett	0	0	1	0	1—2						

Doggett took second money. Rader and Lilford in shooting off the both killed two birds, and had to draw from scarcity of pigeons.

SAPANULE!

TO SPORTSMEN—"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

LAZELL, MARSH & GARDINER,
WHOLESALE AGENTS, NEW YORK.

SAMUEL CERRY & CO., Proprietors, Providence. R. I.

A TERRIBLE BATTLE.—When I first noticed the fray it could only have just commenced, for round Mound Colony, though in a fearfully excited state, the principal portion of the black ants were still congregated. Far away at the base of the yellow ant hill I noticed a few black ants phenomenally still, for an ant not incessantly moving may be generally looked upon, so far as this life goes, as having been disfranchised. Between the citadel of the yellow ants were apparently enjoying a friendly wrestling match. Any one watching the athletes, however, would have noticed that whenever one was thrown he, like the black ants at the bottom of the yellow ants' hill, made no attempt to move again and manifested that wonderful indifference to subsequent proceedings which doctors call death. As I watched, the angry movements round the Mound continued. From the Mound and out of the hill in which the yellow ants lived the wrestlers in the plain between the two were, I noticed, constantly receiving fresh accessions of strength. Detachments of black ants were then formed at intervals and met by opposing detachments of yellow ants ordered out of their ant-hill. Had a General commanded the forces the fighting could not have been more scientific. The skirmish extended into an engagement, the engagement into a heavy battle and at last the battle into an assault on the yellow ants' hill itself. As I watched the supporters of the black ants were thrown forward more rapidly and in greater numbers. Out of the yellow ants' hill deployed heavier columns. The charge and shock of the opposing masses became more fierce, and the litter of the dead more numerous. The tide of battle, surging now to Mound Colony and now to the yellow ants' hill, took narrow flowings to the former, and more repeatedly neared the latter; for the yellow ants were slowly giving way, and their black assailants were forcing themselves nearer and nearer the ant-hill. Had it been possible to have separated the combatants now I would have done it. Small as they were there was a sanguinary ferocity about the black ants which alienated sympathy, while the bravery of the yellow ants, coupled with the fact that they were nearly a third smaller than their foes, compelled something like admiration. To add to the horror of the scene the butchery was executed in deadest silence. The visible rush and excitement of the storming parties could be plainly seen. The heat and action of attack and defence were as apparent as if the hill I sat watching had been one of the heights of the Schipka, and the combatants Turks and Russians. It was plainer, for no smoke of battle hid slayers and slain. All was done in clear, broad genial sunshine, and was as vividly observable as the tortures which are being inflicted on the Elamite prisoners in some of the Assyrian tablets at the British Museum. But as those hapless wretches, pegged down to the ground and slowly skinned alive by the implacable figures standing knife in hand over them, have been voicelessly suffering the most excrutiating agony any time these thousand years, so the unfortunate yellow ants were dismembered without the faintest sound reaching me. There may have been cries and screams and the sobbings of unutterable physical anguish. If there were my senses were too gross to perceive them. I could see limb torn from limb. I could watch the body of some miserable prisoner lengthening under the awful strain, as two bands of its captors tugged it in two. Then it snapped asunder, and its bloodthirsty assailants captured another foe.—*Belgravia.*

THE SELF-COCKING REVOLVER.—At a wedding in South Carolina last month, an incident occured aptly illustrating social life in the United States. The bridegroom, who belonged to the "first southern families," took exception to the phraseology of the officiating clergyman and remarked, "You shouldn't say those uns whom the Lord had jined together, but them uns." The preacher who prided himself on the "high-toned" quality of his language quietly dropped his hand into his pocket of his surplice and interpolated: "You jist paddle your own canoe, yound feller, or your trouble'll begin sune enuff. I'm runnin' this tea party, I am—as I said afore—my beloved hearers—those uns as the Lord"——Just then the bridegroom made a motion toward his hip, but before he could draw the minister fired from his pocket and the young man fell dead at his feet. Instantly the whole church was filled with blazing pistols. In less than five seconds the only person left alive was the bride, who had ducked behind the pulpit early in the action. The half married female gazed musingly around and remarked as she started for home: "These self-cocking revolvers is playing the mischief round here, and that's a fact?"—*San Francisco Post.*

KEEPING A HOTEL.—An estimate has been made, by a competent authority, of the amount of food consumed in the fifteen largest hotels of New York City for the year 1878. On an average 60,600 lbs. of meat were used every week to supply these fifteen hotels; and of this quantity 48,000 lbs were beef. Of fish 700,000 lbs. were consumed in the year; 19,000,000 oysters, 5,500,000 eggs, 1,800,000 chickens and poultry, 11,000 barrels of flour, 20,000 barrels of potatoes, 100,000 lbs. of coffee, 32,000 cans of milk, 170,000 quarts of cream, 480,000 lbs, of butter, and 30,000 lbs. of grapes. In addition to these items it was ascertained that about 20,000,000 of pieces had been laundried in those fifteen hotels during the year; that their gas bills had exceeded $165,000; that they had consumed 25,000 tons of coal and 12,000 tons of ice; while the wastage and garbage exceeded 10,000,000 lbs.

PHOTOGRAPHY IN BANKING.—The London *News* reports that the Bank of France has for some time past employed a photographic detective to examine suspicious documents; and more recently has placed an invisible studio in a gallery behind the cashiers. Hidden behind some heavy curtain the camera stands ready for work; and at a signal from any of the cashiers the photographers secured the likeness of any suspected customer. It is also reported that in the principle banking establishment in Paris several frauds have lately been detected by the camera, which under some circumstances exercises a sharper vision than the human eye. Where an erasure has been made, for instance, the camera detects it at once, let the spot be ever so smoothly rubbed over, while a word or figure, that to the eye has been perfectly scratched out, is clearly reproduced in a photograph of the document.

A LACUSTRINE DISCOVERY.—The Geneva correspondent of the *Times* writes under date March 14:—"M. A. Borel, of Chaux-de-Fonds, has just had the good fortune to find, in the lake Neuchatel, between Bazuge and Chatelard, a pre-historic canoe, probably the finest specimen of the sort that has yet come to light in Switzerland. Hollowed out of a single piece of oak, the vessel is eight metres long, ninety centimetres wide, and sixty five centimetres high. It is well finished, and in a perfect state of preservation. The sturn carries a spur, and the prow is curved in the form of a hook, probably for the purpose of attaching it by a rope to a landing-place. The canoe is sufficiently large to carry twelve persons. There is no appearance of row-locks, but the supports on which the thwarts formerly rested are still plainly to be seen. M. Borel proposes to present this interesting 'find' to the Museum of Chaux-de Fonds."

—An army officer from the Yellowstone Valley tells how a herd of Buffalo were engulfed as they were migrating southward. The numbered 2,5000, and when they reached the river ventured upon it with their customary confidence, coming upon it with a solid front and beginning the crossing with closed ranks. When the front file, which was stretched out a quarter of a mile in length, had nearly gained the opposite shore, the ice suddenly gave way under them, and four or five hundred animals tumbled into the opening all in a heap and sunk out of sight in a twinkling. By this time the rotten ice was breaking under the still advancing herd, and in less than a minute all were submerged. They were wedged in so thickly that they could do nothing but struggle for a second and then disappear beneath the cakes of ice of the swift current. Not a beast in all that mighty herd escaped.

—"A Book on Lightning Conductors" is a manual on the subject of lightning rods and electrical insulators. It does not, as some might infer, have any relation to bar-tenders, nor lightning express train conductors.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

J. Stevens & Co.:
DEAR SIRS—I wish to say a word in regard to the gun I purchased of you some time ago. In the short time I have had the gun it has been acknowledged to be the best shooting gun in this town. There are guns both American and English which cost from $50 to $125, but I can safely say that not one of them can equal mine in shooting quality. I have specimens of targes shooting which would be almost impossible to excel. In fact, I believe that Stevens' single-barrel shot-gun is the *lightest, cheapest* and *best* gun for all kinds of shooting in the world.
Most respectfully yours,

WM. E. WEBSTER,
East Bloomfield, N. Y.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, Patentee & MFR'S. 717 Sansom Street, PHILADELHIA, Pa. Sole Agt. for U. S. & Canada.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. Grand outfit, including Circulars, terms and a beautiful 10x14 Engraving of the SMITHOGRAPH, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's AGENTS' HERALD, all for 10 CENTS. YEARLY SUBSCRIPTION, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

TRADE—"BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

NEW YORK.

THE LATEST! FRAGRANT VANITY FAIR SMOKING.

In placing this New Tobacco before the public, we do not propose to disclose our special claims and improvements, for the reason that in every instance where we have introduced new articles it has been the custom of manufacturers of inferior productions to adopt our precise claims to obtain notoriety. We will, however, make one broad assertion—that no tobacco has ever before been produced possessing so many valuable requisites.

"THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass FISHERIES,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the Grand Traverse region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. Brook Trout abound in the streams, and the famous American Grayling is found only in those waters.

The Trout Season begins May 1 and ends Sept. 1. The Grayling Season opens June 1 and ends Nov. 1. Black Bass, Pike, Pickerel and Muscalonge also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points. Take your family with you; the scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with hay fever and asthmatic affections. The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing. During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at Owner's Risk.

It is our aim to make sportsmen feel "at home on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,

Alford's Practice Target.

PURDY'S PATENT, DEC 1878.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shotgun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.

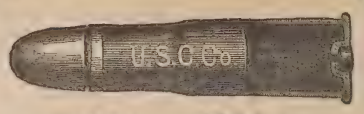
United States Cartridge Company,



LOWELL, MASS.,

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS, AND CARTRIDGES.

Adapted to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES and several Foreign Governments. Rim-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

Send for Illustrated Catalogue.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: New York, Jan. 18, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot me 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

THE PATENT
NONPAREIL YACHT

Has all the good qualities of a Sharpie, with none of her faults. Is a very fast boat either under sail or steam. Draws but a few inches of water. Does not pound or spank, and is a splendid sea boat.

Finely finished cabin yachts, 40ft. over all, built and outfitted, ready for cruising, $450 to $600. All sizes at equally low rates. Also light draught **steam Yachts,** and full working drawings for Sharpies at short notice.

Specimen yachts always on hand.

THOMAS CLAPHAM, Roslyn, L. I., N. Y.

THE COMING BOAT.

The light draught "sharpie-built" boat is precisely the thing for shooting, fishing and pleasure sailing, and for speed, safety and comfort is not excelled.

Send for circular. D. O. TWITCHELL, 16 Arthur street, New Haven, Conn. jan30

J. J. DRISCOLL
YACHT BUILDER,
Cor. Franklin and Clay streets, Greenpoint, L. I.

Yachts and boats of all descriptions constantly on hand and built to order at lowest market rates.

Alterations and repairs promptly attended to. Prices and specifications furnished.

SAMUEL HOLMES
120 & 122 Front Street, New York.

Designer of Fast Steam Yachts. Plans and specifications prepared at reasonable rates. Builder of fast iron steam yachts *Continental, Firefly, Mistake*, etc. Iron steam yacht for sale, 57 feet long. mar6

FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year / Ten Cents a Copy. / 6 months, $2; 3 months, $1.

NEW YORK, THURSDAY, APRIL 24, 1879.

Volume 12—No. 12. / No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

THE AMERICAN EAGLE.

MONARCH of the realms supernal,
Ranging over land and sea;
Symbol of the great Republic,
Who so noble and so free!
Thine the boundless fields of ether,
Heaven's abyss unfathom'd thine,
Far beyond our feeble vision,
On thy bars its sunbeams shine!
Borne on iron-banded pinion,
On from pole to pole you sweep;
O'er sea islands, craggy mountains,
O'er the hoarse-resounding deep.
Now, thy fanning plumes o'ershadow
Northern cliff and ice-berg grim;
Now, o'er southern, soft savannahs,
With undagging circuits skim.

He that feeds the tender raven
And the sea bird of the rock,
Tempers the inclement breezes
To the shorn and bleating flock,
Leads thee o'er the wastes of ocean,
Guides o'er savage flood and wood,
And from bounteous nature's store house
Feeds thy clamoring, hungry brood.

O'er the mountains of Caucasus;
Over Appenine and Alp;
Over Rocky Mounts, Cordilleras;
O'er the Andes' herbless scalp;
High above those snowy summits,
Where no living thing abides,
He, that notes the falling sparrow,
Feeds thee, fosters thee, and guides.
* * * *
Thou wingest where a tropic sky
Bends o'er thee its celestial dome;
Where sparkling waters greet the eye,
And gentlest breezes fan the foam;
Where spicy breath from groves of palm,
Laden with aromatic balm,
Blows ever, mingled with perfume
Of luscious fruit and honeyed bloom;
Green shores, adorned with drooping woods;
Gay grottoes, island solitudes;
Savannahs, where palmettoes screen
The Indian's hut with living green,
Behold thy pinions as they sweep,
Careering in the upper deep.

ISAAC MCLELLAN.

Tropical Wanderings of Fred Beverly.

THE BOILING LAKE OF DOMINICA.

A WILD CAT—TREE FERNS—MOUNTAIN PALMS—A RARE HUMMING BIRD—THE VALLEY OF DESOLATION—MISLED BY A BOTTLE—BOILING SPRINGS—HOT STREAMS—SULPHUR BATHS—THE SOLFATARA—BUILDING THE AJOUPA—COOKING BREAKFAST IN A BOILING SPRING.

A TROPIC island in a tropic sea; a mountain forest and a mountain valley opening to the west, descending toward the Caribbean Sea—the island and the forest in which I made my first West Indian camp, and the scene of the following adventures:

An extract from my journal:

"LAUDAT, Dominica, March 14, 1877.

"Temperature—Morning, 67 deg.; noon, 72 deg.; night, 69 deg.; showers at intervals; last night clear and cold; the heavens bright with stars, sparkling as in a Northern October night, but with more liquid glow."

And this might be the record of a month—showery, cool and delightful. On the coast the weather was dry and ten degrees hotter; but in this elevated valley, 2,000 feet above the sea, the eastern peaks caught the flying clouds from the "trades" and precipitated their burden of moisture.

For two weeks I had been awaiting a change of the moon that was expected to bring drier weather, and on that night my friend Jean Baptiste—half Indian, half mulatto—came to my hut with the welcome news—"To-morrow make weddah." As he predicted, the weather cleared. There came to me the sons and nephews of Jean Baptiste (four in number), who were laden, and departed one after the other. Francois had a large Carib pannier filled with yams, coffee and eggs, a blanket, his never-absent cutlass and a gun; Michael took my camera, a bag of provisions, cutlass and gun; Joseph, my dark-box with photographic chemicals, cutlass and gun; Seeyohl, a large sack of yams and plantains, cutlass and gun. They are mighty eaters, these mountaineers. With my game-basket and humming-bird gun, I followed immediately after my guides. We crossed the three streams, hurrying from the mountain lake to the precipice, where they are compressed into two magnificent waterfalls, and climbed the hills beyond up over a path of interlaced roots, from among which the earth had been washed, leaving a perfect ladder, which serves us both in ascending and descending. Past one of the little "provision grounds," where, far among fallen and decaying trees, were growing lusty plantains, bananas, yams and tanniers; across another stream and up further to the crown of the ridge, where the path led through cool and open "high woods," where the sun "don't come," and where *perdrix*, or mountain doves, sprang up from all about us, and *ramiers*, or wood pigeons, dashed in and out of the tall tree-crowns. At eleven o'cock we reached "La Rivière Déjeûner," where we breakfasted upon boiled eggs, and yams, with clear cold water for drink.

Our dogs (we had four) curs trained to hunt the *agouti*, left us in the middle of our meal and darted into the forest with loud yelps. Francois followed them, encouraging them with peculiar cries; for these mountaineers have a sympathetic understanding with all animate objects about them, and can guide, hie on and recall their dogs simply by varying their voice. Francois urged them on, but in a few minutes they came to a stand-still, and their excited yelps assured us that whatever they were pursuing was brought to bay. We thought they had an *agouti*—a small animal in size between a rabbit and a woodchuck—but the execrations of Francois a little later, which preceded his appearance from the deep shade, prepared us for the unwonted sight, in these wilds, of a wild cat. It was not a wild cat in the true sense of the word—not a *Lynx rufus*—being only a "chat maron"—a cat of the domesticated species run wild. It was gray in color, striped with black, and larger and more strongly made than the cats of the coast, who do not have to forage for a living, showing how, in time, a new species might be possibly the result of this change of life. It lives in the deep woods, preying upon small birds, lizards and crabs, and is as savage and untamable as any specimen of the genus to be found in American back-woods. My men skinned it at my request and wrapped the skin in a plantain leaf, to be hung up until our return. The most weird thing about this animal was the eye; the iris yellow, changing to green, but seen glowering from darkness it was red—blood-red—red as fire; that glaring, glassy red which I have seen in the panther, and which makes the wild *felidæ* so terrible to face in their lairs. My guides also brought me a small frog, like a rain frog, that in the night makes the air tremulous with a wailing cry.

We had here to climb the sides of a steep gorge, the walls of which were almost perpendicular, where slippery roots and hanging lianas only enabled us to accomplish the ascent. One portion of our route was through a bowl-shaped depression containing a few acres, in which seemed concentrated all the glorious vegetation indigenous to these tropical forests. Hundreds and thousands of plants of strange and beautiful shape were massed together in prodical confusion. Conspicuous among them was the grand tree-fern. Those who have seen in glass-house or garden of acclimatization only the stunted specimens of this plant, can form hardly a conception of the grandeur of these arborescent ferns in their native homes. They are rarely found in perfect development at a lesser altitude than one thousand feet above the sea, and it is in the "high woods" belt alone that they attain their greatest height and perfect symmetry. They love cool and moist situations, revel in shade and delight in solitude. "If," says Humboldt, "they descend toward the sea coast, it is only under cover of thick shade." I have seen them in these mountains, in the vegetable zone most favorable for their growth—that between 1,500 and 2,500 feet above the sea—of a height of thirty or thirty-five feet. Then, truly, were they impressive in their combination of delicately-traced leaves and slender stems, essentially children of the tropics. There is sublimity in their expression. I may have already alluded to it, but cannot refrain repeating that there is a suggestiveness of a benediction in those lace-like leaves, which are spread above the head of the observer like outstretched hands, and which only move gently and tremulously, ever pulsating to the slightest breath of air.

The light that filters through the cocoa-palm leaves is wonderfully lambent and golden, but cannot compare with the chastened sunbeams that reach one standing beneath this queen of the mountain solitudes; perchance the sun can penetrate to it. There are several species, one of which, with unusually prickly stem (the *Cyathea Imrayana*), is named for Doctor Imray, a resident botanist of the island. Though the ferns replace in a measure the palms in the ascent from coast to mountain-top, yet there is one species that climbs to as high an altitude as the fern, and is found everywhere on the mountain side until the sub-alpine vegetation is reached. This is the mountain palm, the "palmiste montagne," the "mountain cabbage"—*Euterpe montana*. Euterpe, goddess of lyric poetry; no tree of the forest more fitly symbolizes the realm of song over which she presides. In every curve and movement is grace and feeling, whether the long leaves wave gently to the mid-day breeze, or whether they beat wildly their sustaining trunks in the violence of the hurricane. It is not tall for a palm, but is slender and has a lovely crown, and ministers to the wants of the mountaineers in many ways, as will be seen further on. Inhabiting the same region with the tree-fern and loving the same cool, solitary shades, it accompanies it in its march up the mountains and ceases with it at the upper edge of the high-woods belt. Two such creations were enough to give these forests world-wide fame; but there are a thousand others which I cannot describe for want of knowledge, nor if I could, for lack of space.

We passed streams every half mile large enough to turn a mill in the rainy season, but which were now low. Up their rocky beds the trail pursued its way; rough, slippery work it was, with many watery escapades and some falls—waterfalls. Through dense groups of callas and other water plants I do not know we were obliged to force our way. At a jam of trees which I was painfully climbing I saw a humming-bird poised above a flower. I had been sufficiently long in these mountains, I thought, to procure every species; but this was different from any I had shot, and consequently I at once added him to my other victims, and he was picked up below me by one of my guides as he floated like a golden leaf upon the turbulent stream. It proved to be a rare species, found heretofore only at the mouth of the Amazon, and rare even there (the *Thalurania wagleri*), and it now rests in Washington, one of the many types of West Indian birds I had the pleasure of sending to our National Museum.

Leaving the stream, we climbed another steep hill-side and traveled along a ridge, on either side of which are valleys leading to the sea and ocean. *Perdrix* and *grives*, or thrushes, start up at intervals. The "sifleur montagne" (the "mountain whistler") sends up liquid melody from every ravine; warblers are few, and humming-birds the only ones abundant. These, and even insects, grow rare and finally cease entirely as the lake valley is reached, and the sulphur fumes, ever increasing in volume, are borne to us in dense clouds. We joined the stream again, make a *détour* and again take the stream, now lessened to a trickling run, where everything is decaying, reeking with moisture, and slippery with confervoid growth. No snakes appear now, not even a lizard; animal life is absent in this approach to the infernal regions. The trail is barricaded by fallen trees, detached rocks, tangled lianas; flowers are few, the crimson cups of the wild plantain are alone conspicuous. After three hours of hard scrambling we were rewarded by a view of the first sulphur valley containing the "petite souffrière," from which steam ascended in clouds. It is a basin several hundred feet deep, one side of which is broken down, ringed round by steep hills, the valley walls of which are mostly denuded by land-slides, covered elsewhere by a sparse growth of vegetation. Seeing an opening in the trees, I prepared to descend, though the trail was faint and appeared old. But, being in advance and impatient to get at the wonder below, I ventured alone, and had proceeded but a few rods when I was assured by the sight of a familiar object—a bottle on a stick. I am not sure it was not a sight of it that caused me to depart from the beaten path; at any rate, I was diverted, though the bottle was in-verted. A shout from above halted me just as I had reached the brink of a precipitous bank, the earth of which was beginning to crumble beneath my feet. Dejectedly I retraced my steps, my faith in the goodness of mankind somewhat shaken. Months later, while conversing with a good friend—Dr. Nicholls, of Roseau—it came out that he was the culprit; that he had placed the bottle there in the kindness of his heart, which is a big one, as the good Indian is said to have set up a stake in every bog he got bemired in, as a warning to others. A warning! In this thirsty land a bottle is as necessary to one's existence as a loaf of bread; and I have met with those who held it more directly essential to the preservation of life than the generally recognized "staff." The Doctor added that, had he known of my projected excursion, he would have cachéd a dozen of "Bass' best" in the spot where I was to camp. And that he would have done so I am certain, for he was the greatest-hearted man I met in these islands, where an excessive development of that organ is a peculiarity of the white residents.

Nearly half an hour's careful work was necessary to descend that steep wall, clinging to roots and stems of small trees, at the end of which we reached a gentle slope covered with trees of goodly size, facing south. Here were the remains of an old encampment, empty bottles and sulphur specimens. A stream trickled near by, which we followed to the sulphur basin, whence sulphuretted fumes ascended that would choke out the stench of a thousand rotten eggs. This was but the beginning of the valley of wonders, the portal to the enchanted land of mysteries. The basin was covered with rocks and earth, white and yellow, perforated like the bottom of a colander with holes, whence issued steam and vapor and sulphur fumes, hot air and fetid gases. There was a full head of steam on, puffing through these vents with the noise of a dozen engines. There were spouting springs of hot water; some were boiling over the surface, some sending up a hot spray, some puffing like high-pressure steamers. Clouds of steam drifted across this small valley, now obscuring every rock and hole, now lifting a

few feet, only to settle again. The silver in my pockets and the brass mountings of my camera were soon discolored to a blue-black hue. Several streams ran out and down, uniting in a common torrent; streams hot, impregnated with sulphur; streams cold, clear and sparkling, only a yard apart; water of all colors, from blue and green to yellow and milk-white.

The heat of a West Indian noon was made ten-fold oppressive by the hot, moisture-laden atmosphere. My foot slipped, as we groped our way through the clouds of vapor, and got slightly scalded by breaking through the thin crust that covered the boiling caldron beneath. We descended between huge white rocks and bleached and dying trees to a stream of marvelous beauty, picking our way among volcanic boulders. At once the scene changed; we entered a ravine through which flowed the streams from above, now mingled in one tepid torrent, along whose banks grew, rank and luxuriant, plants of such tropic loveliness as made me hold my breath in delight and surprise. Everywhere plashed and tinkled musical waterfalls and cascades, from all sides little streams came pouring in their tribute; here a cold and sparkling stream, there another boiling hot, its track betokened by a wreath of steam. There were tree ferns, wild plantains, palms, orchids and wild pines, tropical vines, lianas, strange flowers, gay epiphytes. Up and down and across stretched the lianas, forming a net-work which my guides were obliged to sever repeatedly with their great cutlasses. Along the bank of this stream and through the water we walked in delight—at least I did—for it seemed a very tropical Eden. And yet on all sides of us was barrenness and desolation; these beautiful forms were all created by the action of hot water upon the scanty soil. Climbing, slipping, scrambling, we at last reached a steep hill-side, where trees of different kinds were growing; and here we rested, for here was the spot selected for our camp. But there yet remained the Lake, to which all these strange sights were but preparatory scenes. It was but a twenty minute's walk, or climb, to the basin. We could hear it roaring behind the hill. Leaving superfluous luggage and two men to make camp, I started on again with nothing but gun and photographic apparatus. We reached another river, which was tumbling noisily over blanched tree-trunks and sulphur-encrusted rocks, and came out of a large mound of scoriæ and pumice, white as snow. Its water was milk-white from the quantity of magnesia held in solution, and steaming hot. Into it poured minor streams of every shade, from white to ochreous, and one black as ink.

Up over large rocks, covered with soft sphagnum, green and white in color; up, over and through rapids and around falls, passing feeding streamlets of hot, cold, mineral and pure water by turns, into a basin (at the immediate base of a high mountain), filled with heaps of sulphur-stones scattered over a smooth floor of bitumen, with a jet of steam escaping here and there from a hole or fissure in its quaking crust; up the banks of a little stream of sulphur water, subterranean at times, leaving the rivers behind us, and having a steep bank before us, which we quickly scaled, and revealed to our gaze lay the Lake.

My first feeling was that of disappointment, for the surface of the lake, usually so turbulent, was placid, save in the centre, a slight movement—more from the escape of gas than from ebullition—disturbed it, and sent ever-expanding wavelets to the shore. It is sunk in a huge basin, which it has hollowed out for itself. Undoubtedly, it was once a spring, or geyser, which, by the volume and violence of its flow, increased and deepened the aperture through which it escaped, until of its present dimensions.

The present height of the surrounding walls I estimate at from eighty to one hundred feet, and its diameter at from three hundred to four hundred. As there have been no accurate measurements—indeed the total number of white men who have looked upon it is not a score—its area will long be a matter of speculation only.

The banks are of terruginous earth, with stones and rocks imbedded, as nearly perpendicular as their consistency will allow, and constantly caving and falling in.

Two streams of cold water fall into the lake on the north, above which rise high hills. Down the bed of one of these we found a place to leap. My apparatus was passed down, and I at once proceeded to secure a picture of the lake. It was then four o'clock, and the sun had dropped very near the margin of the western hills, and just lingered sufficiently to allow me to secure the first photograph ever made in these mountains. Well for me that the lake was in a state of quiescence. Well for the success of my picture that the water was not in a wild fury of ebullition, and that its basin was not filled with steam, as it had ever been found before.

Directly opposite the stream in which I stood was the rent in the wall through which flowed the overflow from the lake, when it was at its work, through which at such times poured a stream of sulphur water that formed at times a torrent and descended to the coast below. Through this gap I could look away south, across and over green mountains to the shores of Martinique, gleaming through the mist in the waning sunlight twenty miles away, yet seemingly within an hour's row of yonder ridge—the same eastern shores of Martinique that I looked upon three months previously when I first saw these islands of the Caribbean Sea.

This rent is from thirty to forty feet in width at the top, and perhaps fifty in depth.

I descended to the lake margin. The rim of recent subsidence was clearly defined; a belt of black, yellow and gray deposit, some three feet wide. It was narrower on the second day, and the ebullition had much increased, showing that, though I was the first to discover it in repose, it must be intermittent in character, and was then preparing to boil forth again. For this effect I waited long, much desiring to see it in that state, but was not gratified, though the disturbance and noises continued to increase and the water to rise. The temperature of the water, as far out as I could reach my thermometer, was 96 degrees; of the air at the same time, 67 degrees; of the streams falling into the lake, 65 degrees, Fahr. Some months previously, my friend, Dr. Nicholls, one of the original exploring party who discovered this lake, found it at a temperature of 196 degrees Fahr; and Mr. Prestoe, of the Botanic Gardens of Trinidad, recorded from 180 to 190 degrees Fahr. They also found it fiercely boiling, the whole crater filled steam, and could obtain only occasionally a glimpse of the water and surrounding walls. They found no bottom with a line 195 feet long, ten feet from the water's edge.

With Mr. Prestoe, I conclude that this solfatara, by widening and deepening its outlet, will eventually lose its lake character and become merely a geyser.

From the high bank above the lake, near the gap through which the waters find egress, is a fine view of the whole northern wall, with the streams falling down from the background of mountain, the hollows and miniature valleys and peaks beyond. The river-bed below is dry and yellow; but huge rocks, tons in weight, that the waters have moved from their beds, attest the force of the current when the lake is at its height. From the north, coming down into another desolate valley, are small streams—yellow, white, green, blue. A spring boils up through a hole three feet across, overtopping the surface eight inches or more. The main volume of hot water comes from higher up the mountains, and there is, I think, another source as large as this, which at present is unknown. The mountains around are green with low shrubs, and from the bank above the lake I secured a giant lycopodium, which is not found elsewhere in any abundance.

We retraced our steps about an hour before sunset, and found on the hillside a comfortable camp, constructed by Francois and Joseph during our absence. The *ajoupa*, or camp, constructed in haste, is a peculiarity of these forests. Regarding the etymology of the word, I am in doubt. Humboldt speaks of the *ajoupas*, or kings' houses, among the Caribs of South America, which were used as houses of entertainment for travelers. Whatever the origin of the term, it is now fixed in the *patois* of the mountaineers to designate a hut thrown up hastily for temporary occupation—what we, in America, would call a "camp." My men first constructed a framework of light poles, tied together with roots and vines, and covered it with the broad leaves of the *balisier*, or wild plantain (*Heliconia behia*). This plant, which grows everywhere in shade and moisture, is one of the attractive features of the vegetation here. Its leaf is like an elongated banana leaf, but not so wide, and with greater strength and toughness. It grows in great groups and masses, which are further made conspicuous by the long spikes of flowers, like yellow and crimson cups, boat-shaped. Like the palm, this plant serves a great variety of uses. Its root is boiled and fed to hogs, I believe; the mid-rib of the leaf is stripped and split and woven into baskets; the leaves are used for the thatching of huts, as substitutes for table cloths and plates, in the woods as envelopes in which to wrap anything of soft nature, as butter or honey,—in fact, as wrapping for everything portable, the tissue is so fine and flexible. The young leaves are our substitute for drinking-cups, and it is more convenient to twist off an overhanging leaf, and throw it away when done, than to bear about with you a clumsy cup. Its utility then is second only to that of the cocoa palm.

They had brought up huge bundles of the leaves from the river below. Slicing the under side of the mid-rib half-way through with a diagonal cut, leaving a barb by which to attach it to the cross-pole, Francois would hand the leaves to Joseph, who rapidly placed them in position, attached to the pole and kept in place by the projecting point, one row overlapping the other. In a short time they had made a thick roof, completely impervious to water, which was good for a week, so long as the leaves remained green and were not split and shrunken by the sun.

A raised platform of poles, all cut with the cutlass, was covered with a good layer of leaves, and upon this I spread my blanket and reposed quietly all night, my faithful boys sleeping upon the ground, lulled to sleep by the rushing of the waterfalls.

"La Belle," the firefly, illumined our camp in the evening, and an odorous fire of the gum of the flambeaux tree gave both light and fragrant incense.

Over this, Joseph, in his broken French *patois* and English, told the story of the discovery of the lake by Mr. Watt, the one who first surmised its existence, in 1875. This gentleman, a magistrate in the colony, was prone to wander in the mountains in search of adventure. One day he had penetrated farther than usual, by following a valley that led up into the interior, and noticed in the air distinct and powerful sulphur fumes. At a late period he set out to ascertain the cause, taking with him two negroes as guides; but, through the pusillanimity of his men, who abandoned him, was lost in the forest for several days. Let Joseph tell the story:

"Monsieur Watt he walk, walk, walk pour tree day; he lose hees clo's, hees pant out off, he make nozing pour manger but root; no knife, no nozing; hees guide was neegah" (the mountaineers, though negroes themselves, have great contempt for town negroes); "zey was town neegah, and leab him and lost him. He come to black man's house in ze wood, and ze black man zink he *jombie*, and he run; when he come back wiz some mo' men, for look for *jombie*, Monsieur Watt he make coople of sign (he have to lost hees voice and was not speak), and zey deescover heem."

At daybreak we were stirring. I descended the bank and waded up the stream to take my morning bath. There were two streams, one hot, one cold, which ran in near channels, meeting below. Following the warm one, stepping from pool to pool, I reached a waterfall, coming from a course at right angles to the main stream, falling over the bank with much force. It was about twelve feet in height, and surrounded by a wealth of tropical plants, from the depths of which it suddenly appeared. And it was hot—or just as hot as skin could bear—as I sidled under it, first a hand, then an arm, then a shoulder, until the whole volume of warm water fell squarely upon my head. Ah! it was the perfection of luxurious sensations. I essayed to shout aloud in my delight, but the falling water drowned my voice; and I paddled in the pool in silent ecstasy, drawing in long breaths, and allowing the rushing of the water, the delicious warmth of the bath, the flying spray, to lull me to repose. I think I should have fallen asleep had I not been warned, by slipping from the rock on which I sat, that I was becoming unconscious. It was too blissful to leave, too soothing, and I stepped from under the warm douche only to return again and again. Reaching out my hand, I placed it in a stream of cold water, while I sat in this tepid bath; it was sulphur water at that—*l'eau minerale*.

What benefits might be derived by those unfortunates afflicted with rheumatism and kindred complaints from a dip in these healing waters! They would need a balloon, though, as means of conveyance, for only travel-toughened backs and sturdy limbs can accomplish this journey at present.

My guides boiled coffee, and that imbibed, we shouldered our traps and marched back on the homeward trail.

We reached the first Souffrière—the valley of desolation—and halted, to allow me to take a few photographs, and to cook our breakfast. The sulphur fumes were so strong as to form a coating of sulphide of silver on my negatives; but not to an extent to injure them.

The largest boiling spring is five feet across. As some of these seemingly-boiling springs are not in complete ebullition, but have their waters agitated from escape of gases, I took care to plunge my thermometer into all. Several registered 208 degrees—the lake is above 2,000 feet above sea-level—and many 140 and 160 degrees.

One unfortunate experimenter, later in the season, plunged a "store" thermometer into one of these springs, and burst it, as its capacity was not equal to such high temperature.

Perforating the broad fields of calcined stones are little holes, whence issue steam and hot air; very few are inactive. Some, on the hillside, are large as an open grate, and have that shape. Into these you can look deep down into black holes, sulphur crystals in beautiful golden needles lining throat and flue. It seemed as though I could look down into the arcana of Nature, into her laboratory.

It required great care not to break through the crust in many places; my guide was constantly warning me: "Have attention where you make your feets!"

While I was preparing chemicals and collecting minerals, my boys were busily cooking our breakfast; and they prepared it without fire, too, and so expeditiously as to cause me wonder. In the forest they had found some wild yams ("*Yam sauvage*"); Francois had shot a few "grives," or giant thrushes; there were a few eggs remaining of what we had brought with us.

Curious, I watched them at their work, tying the yams in a bit of cloth, and tying that to the end of a stick. Joseph thrust them into the large boiling spring. A few minutes later—I do not know just how many—he drew them out completely boiled. The eggs were treated in like manner, and lastly the birds. Then we withdrew to the shade of a near clump of balisiers, on the bank of a clear spring, plucked a few leaves for plates, for cups, for napkins, for protection from the damp earth as we sat down; sprinkled our curiously cooked food with pepper and salt, and feasted merrily, though half strangled by the sulphur fumes. In watching this cooking process, I could not but think of our own wonderful geysers in the Yellowstone, where explorers caught trout in a stream and cooked them in a boiling spring, without removing the fish from the hook or changing their own positions.

Then we turned our backs upon this valley of wonders—this collection of craters within a crater long ago inactive; my guides placed their loads upon their heads, and we climbed the hills, keeping time to the rythmic pulsations of a steam-vent, which ejected its vapor with regular puffs, the din of which rang through the forest. I cannot but feel how poor and meagre is this description of mine of that wonderful Boiling Lake, hid in the bosom of those solitary mountains in that tropical island. The time may come—and better for Americans if it were speedily to come—when the great attractions of these islands will be better known, and I may not be able to say—as I say now with truth—I am the only American who has seen Dominica's Boiling Lake. We reached the Rivière Déjeûner just at dark. I was ahead. And here let me explain how I acquired a reputation as a pedestrian, and why, if you speak of the writer to one of these mountaineers, he will shrug his shoulders and exclaim: "Ah! Monsieur Fred, he walk like ze debbil!" Here is a statement of the reason, and I leave it to any sane person if he would not have done the same under the same circumstances: Each member of our party had a gun—my four men and myself. In going up and down those cliffs, the guns carried by my guides were sure to point at me, no matter how I would try to dodge them. If I lagged behind I was confronted by a black muzzle; if I went ahead, two or more pointed at my exposed rear.

Now, I have carried a gun ever since I could well use one, and for the last two years have had one constantly by my side; but I never allow one to be pointed at me if I am aware of it. Going homeward, I stretched my legs to their utmost and kept ahead. I scrambled over rocks and tree trunks, swung myself down steep banks by the roots of trees. My trowsers were torn into shreds, and I walked through those dark and silent woods with legs gleaming white and ghost-like. The perspiration started, legs shook and arms trembled, but I was determined to keep out of range of those dreaded guns; and I did, arriving at my cabin full half an hour ahead of my guides, who had supposed me lost and had detailed two of their number to look me up.

Jean Baptiste, my host and forager for food, stood in the doorway with a candle, and inside there stood a welcome table with a good supper—yams and eggs and tender mountain cabbage. Speaking of my hot bath to Jean Baptiste, that jewel instantly exclaimed that he had forgotten to show me the best in the island, situated only a gunshot from my hut. Next day we visited it. Beneath tall gommier trees stretching down lianas forty feet long, shaded by broad-leaved plantains, was a pool twenty feet across, made by damming a little brooklet with volcanic rock. Its bottom was stone and gravel. A tree's trunk had fallen across the stream, on which I threw my clothes. The runlet was tepid, the pool a little warmer. Suddenly my foot grew hot as though stung by a scorpion, and I became aware that the pool was heated from below by small jets of hot water forced up through crevices in the rocky crust. How thick was that crust? Down the hillside, into the bath, trickled warm water. A grotto had been hollowed out by the action of these streams, and from this water was spouted in hot spray and jets, heating the bath for a square yard around. This grotto was lined with crystals of sulphur, lime and magnesia, and in places was green like chalcedony—a most beautiful miniature of some cave I have seen, where stalagmites of every shape were colored by salts of iron.

Floating in this healing pool, in an element delightfully warm, I resigned myself to the unalloyed delight that the dripping water, tropical plants and trees and balmy atmosphere all contribute to induce. Floating thus in dreamy sensuousness, I wondered vaguely why this free life of the forest, untrammeled by care or desire of gain, could not always exist for me. It was too irksome to even think an answer—impossible to give it utterance—and it remains unanswered to this day.

FRED BEVERLY.

DOWN THE BIG RIVER.—2d Paper.

(Continued from April 10.)

WE had not been out more than four days when I began to realize that I had made a sad mistake in the choice of a companion. There is no place where uncongenial companionship is more galling than on an expedition like this, nor are there any conditions under which disagreeable eccentricities of character will be more prominently displayed. I had not then read Col. Butler's "Wild North Land," and hence could not quote his words that "a good dog makes a better companion than an indifferent man," but before our journey had lasted a week I was heartily echoing a similar sentiment,

My young companion, I found, knew nothing of science, art, literature, politics or religion. That there was any value in objects of natural history, or any charm in observation of such objects, which to me forms the pleasure of outdoor life, was utterly beyond his comprehension, and almost every step I took he interfered either by grumbling, or by refusing to assist me. * * On the third day out we encamped at a spot where numerous eddies in the river suggested the possibility of successful fishing. I had brought along with me a large box of earth worms for bait, but the only fish I could persuade to bite was the spoon-bill sturgeon, a good enough fish to eat if one has the patience to dress him for the small amount of flesh on his bones, but not very tempting in appearance. I had caught quite a number of them, none of them less than twenty inches to two feet in length, when some professional fishermen told me if I wanted to catch catfish to bait my hook either with crawfish or fresh meat. I had no time to catch crawfish, and so looked around for some small bird to shoot. The only thing that presented itself at the moment was a parent yellow hammer which was busily engaged in carrying food to its young in the hole of a decayed tree. My companion had gone off into the woods with his gun, and for half an hour I sat and watched the interesting manœuvres, forgetting all about catfish or fishing; for I know of nothing more engaging to an appreciative mind than the domestic economy of animals. Finally C. came back empty-handed, and finding I had obtained no flesh for bait, he threw his gun to his shoulder, and before I could interfere, shot the yellow-hammer in the very act of bringing another worm for its chicks. I was so indignant that I remonstrated in unequivocal terms, but he only returned a derisive guffaw, with a fling at my "weakness," and aimed his gun at the mate, which was now seen flying to the tree with additional provision for the larder. Exasperated beyond thoughts of consequences, I levelled my own gun at the ruffian and swore to shoot him if he fired at the bird; and had he not respected my earnestness, I feel sure I would have been as good as my word.

It was several days before I could efface the disagreeable feelings aroused by this incident; it may be imagined that the pleasure of the journey was not enhanced by it. I have mentioned the squirrels to be found in the woods along this river. They were of the large red species known as fox-squirrels. They are considerably larger than the gray species, a foxy red on the back and sides, and white underneath. Stewed or roasted they are very good eating, and we usually managed to secure an abundance of them each day. It was while hunting a brace of these one day that I met with the first really exciting adventure of our expedition. We had caught sight of one of the little rodents among the branches of a large elm, and had gone ashore to get a better shot at him. C. at once blazed away, but without success. I followed suit with my revolver, with the same result. C. then reloaded and fired again, but the squirrel was hugging the top of a large branch so closely that only the ridge of his back was visible, and though the shot struck all around him, he did not show that he was in the least alarmed. I then took my carbine, carrying an ounce ball and tried to hit the branch under the squirrel so as to shake or stun him off. The second shot struck the branch fair and startled him out. He ran to a higher and larger branch so quickly that C. could not catch an aim, and lay down so flat that we could not see him at all. We tried to dislodge him by shots and sticks thrown up among the branches, but he refused to stir. At last I climbed another tree close by, taking with me my revolver, in hope of getting above him; but he anticipated me, and dodging around, hid himself in a crotch. As the branch I was on was not more than a rod or twenty feet away, I tried a new plan. I took out my jack knife and cut off a long, slim branch, trimmed it, and then reached out and struck sharply where the squirrel was hid. The trick was successful. The creature ran up higher, exposing himself to C.'s aim as he did so, and in an instant the shot came rattling through the leaves. The squirrel was wounded, but managed to reach a branch several feet above. I then climbed up to where I could see him, and drew my pistol and fired. The bullet sped true and the little animal was knocked clean off the branch. At the same instant the branch I was standing on gave way, and I found myself dropping earthward in a style that would have delighted the squirrel had it only occurred before I had given him the finishing shot. The limb was a small one, and half rotten at that, and it had broken off close to the trunk without giving even a crack as warning.

I was full thirty feet from the ground, with a clear space under me, and not a limb to break the fall. A prospective drop of ten yards is not a pleasant incident to force itself suddenly on a man's attention. The only branch that might have interfered was the small one which I had cut off to stir up the squirrel with. The stump of this protruded about a foot from the trunk of the tree. I had scarcely time to take in the situation when I felt myself suddenly brought to with a jerk, and a sharp pull across my waist, which nearly cut me in twain—suspended by my leather belt in mid air!

This arrest was providential, albeit the most reckless of gamblers would not have risked a nickel on the chances. I was standing with my back to the tree, and slipping straight downward close to the trunk, the end of the branch I had cut off had slipped in between my belt and my back. The belt was a strong one; it broke my fall so completely that it nearly broke me in two. I am not very heavy, but even the lightest weight hung by a belt around his waist will feel every pound he weighs.

I thought, of course, as soon as the pain of the shock allowed me to think at all, that I was very fortunate indeed; but on trying to extricate myself I found that to be a very difficult task. With arms and legs both pointing outward and downward, there seemed no way of lifting myself up or letting myself down gently. I could put my arms above and back of my head and reach around the tree trunk, but I could not lift myself up an inch by such a hold. I could not twist around sideways, for the belt was too tight to allow it, and if I unbuckled the belt I would, of course, at once drop to the ground. I twisted and strained myself until the belt seemed cutting into the flesh; but all efforts were futile. I then called to C. to come up and assist me, but he refused. He was not much of a climber, he said, and besides there was a quantity of poison ivy around the tree and he was not going to poison himself. He said he would throw me a rope if it would do me any good, but he would not come up there. As I could not see how I could use a rope, I told him to go hang himself with it. He then suggested cutting down the tree, but the brilliant idea did not meet my approbation. If he would have come up and placed himself above me he could easily have lifted me off my hook; but this he contumaciously refused to do.

At last, when my position was getting hardly bearable, I thought of a way of releasing myself, which, though somewhat risky, was better than continued suspense. While struggling and twisting in my endeavors to turn around and get hold of the tree, I chanced to swing my legs backward, and found that I could reach with them around the trunk and lock my ankles on the opposite side, and this suggested the idea of getting as good a hold as possible with my legs, and then unbuckling my belt and swinging downward. There was a good chance of knocking my head against the trunk as I swung downward, and a chance equally good of the shock unloosening my feet and letting me down head first to the ground. Nevertheless, I determined to run the risk. I had hoped to let myself down gently by holding on to the ends of the belt, but one of the ends slipped through my fingers and let me down with all the force Newton's Apple-law is capable of putting into a body of one hundred and fifty pounds. My head described the arc of a semi-circle, and brought up, or rather down, against the tree trunk with a thump that started the blood from my nose like a fountain, and caused a constellation of stars of the first magnitude to dance before my eyes. Fortunately my legs held on, and I was enabled to let myself down to the ground, where the first thing I did was to give Caywood a good drubbing for his cowardice. That night I took particular pleasure in eating of the squirrel whose obstinacy was the cause of this mishap.*

There is not much that is new to be seen on a trip like this, but now and then I noticed things which were at least interesting. I remember one day getting a glimpse of a novel phase of bird character. We had stopped for lunch at a place where the trees had been cleared away, save only a few old dead trunks. One of those standing close by projected a solitary branch horizontally, like a withered giant arm pointing down the ages. On this branch I noticed a pair of king-birds, male and female. They sat about a foot apart and appeared to be deeply interested in conversation, to judge from the chattering they kept up. At brief intervals the male would fly off and circle around at a distance of several rods, and then return. This was repeated several times before I discovered the object of it, which I finally did with the aid of a small spy-glass. The bird was imitating the actions of a kitten playing with a half dead mouse. In its bill it held a large moth, which it would let escape and get away a rod or two, when it would dart after it and bring it back to the tree, both birds seeming to enjoy the fun. When they tired of the sport, which they soon did, the male bird edged up to the female and held out his bill with the moth in it. The old lady took it politely, and the male then flew away out of sight. I may say that I have several times since beheld similar actions on the part of different birds and animals.

There was one spot passed during our first week's journey, which had for me an especial interest. The Illinois River joins the Mississippi at a place called Grafton, not many miles above the mouth of the turbid Missouri. The low cape forming the northern corner of the mouth of the Illinois will probably be mistaken by the *voyageur*, as it was by us, for one of the willow-covered islands with which the main river is interspersed, and the Illinois itself for a large slough. On the southern side there is a high bluff of yellowish-red stone, yielding what is known along this valley as the Grafton stone. The quarries for extracting this stone were in full operation as we passed them. South of these red bluffs extend along the Mississippi a line of steep cliffs of a different formation—the fossiliferous limestone. They rise vertically, save the shelving debris at their base, to a height of sixty or seventy feet, and extend for several miles. The facade of this line of cliffs has been worn by the water courses trickling down from the summit during the long ages, until it resembles a long row of half-decayed columns, or of time-worn pillars cut in relief.

In these bluffs is one of the richest deposits of minor fossils to be found in the entire limestone formation of America. That entire mountain—for it almost rises to the dignity of a mountain—is one solid mass of petrified organisms; of millions of plants and mollusks, which centuries ago lived and moved around this spot. No one having the slightest knowledge of geology can contemplate such a deposit without profoundest interest; for, long before the voice of God was first heard along the banks of the Euphrates, what is now the bank of one of the mightiest of rivers was the bottom of one of the mightiest of seas. Bounded by the Laurentian chain on the north, by the stupendous Rockies and their outlying spurs on the west and south, and by the Appalachian on the east, over the entire basin of the North American continent ebbed and flowed the briny waters of the most wonderful of geologic oceans. For countless ages it covered the face of the central United States, leaving only a few isolated mountain peaks to tower in solitary grandeur above its waves, and then in obedience to some unknown law, or impelled by some mighty cataclysm, it slowly subsided southward, until to-day only the Mexican Gulf remains as a puny relic of its original vastness. How long ago this ocean existed, or why or when it finally disappeared, we only know through the misty hypothesis of scientific speculators; but the handwriting of God on Balshazzar's walls was not more plain than the evidence that at some time in the remote past such a sea actually existed. The proofs are everywhere. The limestone base of the broad prairies is its manufacture. The wonderful fertility of the same prairies comes from the sediment of the same vast body of water. The beautiful diversification of the inner foot-hills of the boundary mountains was fashioned by the washing of its finally subsiding waves, and over foot-hill and prairie lie scattered those strange hieroglyphics which the geological Champollions have learned to translate with such marvelous correctness. I have picked up such evidences in the shape of shells and other marine fossils on the prairies of Texas, more than three thousand feet above the present level of the sea. I have met with them again on the prairies of Minnesota, and here again I met with still more abundant evidences in the river margins of Central Illinois.

While this ocean was rolling in silent grandeur over the site of a mighty nation, various mineral salts were deposited here, which, through the strange process of nature, slowly hardened into limestone rock. As this rock was forming, the seeds of various aquatic plants were lodged on a stray patch of sediment, and took root and germinated and sprung up and lived their little day, as other plants have lived, and then died, but not for decay. By that most curious of nature's secret processes—the process of petrefaction—they were transformed into the rock which surrounded them. Along with them various species of mollusks, drawing their last breaths on this growing rock, were endowed with the immortality of the eternal hills. And now, after all these ages, the chisel of the geologist and the hatchet of the curiosity-seeker are prying open their rock-bound mausoleums, and exposing to public view their curiously sculptured forms. Is it not a thought to inspire the dullest?

We encamped in a little ravine opening into these bluffs, and it was while gathering sticks for a fire that my attention was attracted by a piece of fossiliferous rock, which led me to examine the cliff itself. I found many specimens, both of plants of various species (mostly crinoids) and of shells. The loose debris forming the base of the cliff contained many, but generally inferior in size and preservation. I found that as I proceeded up toward the head of the cliff, the plants grew less abundant and the large shells more numerous. I knocked off as many and as large pieces as I could with the small hatchet which served me as a geological hammer until I had secured fifty pounds or more. Among other pieces was one nearly as large as my head, through which ran a streak of petrified wood. I also found a fragment of a small geode and a large piece of volcanic rock, and several pieces covered with a curious incrustation, resembling the saline deposits of Great Salt Lake. The place was a perfect mine of geological treasures.

GUY RIVERS.

* Our contributor has thrown away an opportunity for a first-class sensation camp yarn by not letting Caywood shoot away that stub of a branch with a rifle ball, and so releasing the unhappy prisoner.

Fish Culture.

TRANSPORTATION OF ALEWIFE EGGS

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, D. C., April 9, 1879.

Dear Sir—The authorities of the *Deutsche Fischerei-Verein* are much interested in a suggestion of the great economical value of the American alewife, or fresh-water herring, and the possibility of its introduction into Germany. As the experiments with the shad have shown that it is almost or entirely impossible to carry the young fish of the *Clupeidæ* across the ocean, it will be necessary to depend upon the transportation of the eggs. But as these, under ordinary circumstances, will hatch out before half the voyage is accomplished, the experiment of lowering the temperature of the medium in which they are transported has been suggested.

Dr. Meyer, of Kiel, has made many experiments on the retarding of development in the sea herring, and has succeeded in arresting any material change for several weeks, and then in hatching out the fish without injury. He thinks a similar treatment will answer in the case of the alewife, and he, as well as the authorities of the *Verein*, is anxious that American fish culturists should try the experiment, and if successful the *Verein* is prepared to take further action in the matter.

The inclosed in a translation of a communication recently received from Dr. Meyer, which I shall be glad to have you publish in your paper. Yours truly,

SPENCER F. BAIRD, Commissioner.

Chas. Hallock, Esq., Editor Forest and Stream, N. Y.

[Translation.]

NOTE IN REFERENCE TO THE RETARDATION OF DEVELOPMENT OF EGGS OF THE AMERICAN ALEWIFE.

The German *Fischerei Verein* is very desirous of transporting eggs of the American alewife, *Pomolobus pseudo-harengus*, from the United States to Europe, in order to introduce this fish into German waters.

I have no doubt that this can be done, and I would have proposed the experiment this very spring if it did not appear safer to make use of the assistance offered by our American friends in determining in advance whether the mode of transporting these eggs, as suggested by me, will be as well adapted to them as it is to the eggs of our *brakwasser* (brackish-water) herring.

It has been ascertained by repeated accurate experiments that eggs of our herring, *Clupea vulgaris*, develop slowly in very cold water without losing their vitality.

If—as very probable—the eggs of the alewife behave in a manner similar to those of our brackish-water herring, they could be kept in good health for more than thirty days after impregnation in water of a temperature of 36 to 38 degrees Fah. They would thus easily endure the passage to Hamburg or Breman, and not hatch before arrival in Germany.

Doubts have been expressed by American fish culturists whether the eggs of their fresh-water herring may not behave differently from those of our herring, and these doubts would be well founded if the two did not apparently closely resemble each other in many conditions of life.

Our herring, like the alewife, seeks the fresh water in spring and ascends for many miles; in fact, as far as it can go. It spawns there, and especially at such places where calm, shallow water is found with scarcely any salt in it and of a temperature of 70 deg. at the end of the spawning season. In such water, and at such a temperature, the eggs hatch in five or six days. It is with such eggs I have made my experiments. I kept part of the eggs taken from the same fish in cold water and part in warm, and it was more difficult to prevent spoiling in warm water than in cold. Any damage by cold only occurred at a temperature below 33 deg. F., and a change into warmer water from cold was not injurious, merely hastening the development, which means from the warm into the cold. It would be of great interest to the German Fischerei Verein to know whether, in spite of the great similarity of spawning-times and places, as well as of the physical properties of its waters, like experiments with the eggs of the alewife would give different results. If this were not the case, to a considerable degree, nothing would prevent the transportation of these eggs, and, in all probability, also the eggs of other summer fish might easily endure long journeys without harm.

For greater convenience I will give a more detailed account of my experiments; but before doing so I would mention that all the eggs spoiled when exposed to cold were only covered with moist cloth or wet cotton. I obtained, however, favorable results whenever the eggs were kept under water. For artificial fecundation I only took entirely ripe fish or such as discharged their sexual products under the lightest pressure; these I mixed by stirring briskly together in a large, shallow wooden bucket, which I kept ready in the boat while the net was drawn. At the bottom of the bucket were placed panes of thick window-glass, upon which the impregnated eggs descended and firmly adhered.

N. B.—It is of greatest importance to introduce only a few eggs at a time into the bucket, in order to have only a thin layer upon the glass plates. If the eggs accumulate at some places they must be scraped off with a pliable knife to avoid putrefaction, when clustering in large heaps.

One-quarter of an hour after the impregnation the glass plates are taken from the bucket and placed into smaller flat earthern dishes, where they are kept under water and at such a temperature as is considered sufficiently low to retard the

development. For this purpose I used a box, the sides of which were made bad conductors of heat by means of sheets of felt, and which was large enough to contain, in addition to the dishes, a vessel with ice. It is of advantage to place the glass plates in the dishes, so that the eggs are on the under side without touching the bottom of the dishes, as they are kept cleaner. Care must be taken to keep the temperature in the box as even as possible, although the cover may be lifted daily to introduce fresh ice and water. While changing the water the eggs may be taken out for some minutes without injury. It will certainly be best to keep the eggs in such water as is most similar to that at the spawning-places. I have, however, ascertained from experiments that even a great difference in the percentage of salt is without injurious influence upon the herring eggs. The experiments with alewife eggs (for which we ask in our interest), will, in all probability, require no other apparatus than such as are everywhere in use, and we hope they will give no especial trouble. In order to learn the limits of temperature I would propose the trial with first, 50 deg. F.; second, 45 deg. F.; third, 35 deg. F. For the sea transportation an apparatus will have to be constructed especially adapted to resist the rocking of the ship and to contain the greatest number of eggs without injury. I would like to know whether any spawning grounds of the alewives occur in brackish water, and whether such water should be used in transportation, as it can be easily mixed at sea and better kept fresh. A fourth experiment with brackish water of 1,014 spec. gravity and 45 deg. F. would therefore be very desirable. If not too laborious, it would at least be of interest to science. DR. N. A. MEYER.

Rell, March, 1876.

—Mr. Geo. H. Dickerman, a wealthy gentleman of New Hampton, State of New Hampshire, has succeeded in securing the riparian title to a large number of ponds and streams in his section, and if encouraged by experimental efforts, proposes to engage in trout culture on a large scale. We have tasted some of the fish from his preserves, and found the flesh very firm and of fine flavor. The enterprise ought to succeed in New Hampshire if anywhere. Granite formation is especially favorable to trout; on the contrary, trout are comparatively scarce in limestone countries. This fact trout breeders will do well always to bear in mind.

MAINE.—The *Marine Farmer* gives this plan of operations for the present year: The commissioners have purchased of the Dobsis Club 105,000 land-locked salmon eggs, 52,500 of which have been sent to the Rangeley Lake to be hatched and distributed, and the remaining 52,500 has been sent to the hatching house at Bucksport. Prof. Baird has also presented them with 50,000 land-locked salmon eggs, to be forwarded to Bucksport. As soon as hatched the young salmon will be distributed as follows: Cobosseecontee, Belgrade, Webbs, Auburn, Hartland, Unity, Brownville, Moosehead, Enfield, Pushaw, Phillips and Waterville. Besides these fish there are 20,000 Rangeley Lake trout and 10,000 blue back trout at Bucksport for distribution this season. The eggs received at Bucksport from Grand Lake have been very healthy and in good condition, and out of one lot of 50,000 there were but 750 bad eggs. The difference in the temperature of the water between Dobsis and Grand Lake Stream is so great that eggs have been received from Dobsis and hatched this season, while at the latter place the eggs are only sufficiently developed to be delivered at Bucksport. The eggs are moved in boxes, being carefully placed in moss.

NEW HAMPSHIRE.—*Editor Forest and Stream:* Accept my thanks for your labors in getting up the admirable list of fish commissioners in your number of the 17th. It will greatly aid me in the preparation of my report the 1st of May. Commissioner Powers, in charge of the hatchery, informs me of the safe arrival of the second installment of 68,000 land-locked salmon eggs from Mr. Atkins, and of the successful hatching of our Rangeley, blue-backed, and ordinary brook trout. We shall now have 118,000 land-locked salmon to distribute in May and June in our trout lakes, which will give us a chance to try them pretty thoroughly, and as we shall only put them into waters now inhabited by trout, we hope to be scuccessful, and have some fine fishing to boast of when the five years prohibition expires. SAMUEL WEBBER.

Office of the Fish Commissioners, Manchester, April 20.

MICHIGAN.—The Forester Club, of Cadillac, expect 18,000 salmon trout at once, which will be deposited in the Clam Lakes at this place. They also propose to import a large amount of lake and black bass from the northern lakes.

—Mr. A. F. Young, of Escanaba, Delta County, Michigan, has a trout farm with 25,000 fry, of which 3,000 are now feeding. The Escanaba region is a most excellent one for fish.

Natural History.

A HYBRID DUCK.—Mr. C. Teller, of Monroe, Mich., sends us a trophy of the hunt, which is quite a curiosity in its way, being nothing else than an apparent hybrid between the wood-duck and the red-head. The specimen was shot in the Monroe marshes. It has the hooked claw and the mottled plumage of the wood-duck, with the head and breast and other markings of the red-head. The skin has been sent to the taxidermist for preservation.

HERMAPHRODITE FISHES.—Prof. Spencer F. Baird has transmitted to us the following interesting paper on hermaphrodite fish, recently translated from a foreign journal:

It is well known that the combination of two sexes in the same individual is not rare among the lower animals, although far less common than was supposed before the careful and accurate use of the microscope, as, for instance, in the case of many mollusca and echinoderms, which, formerly thought to be hermaphrodite, are now known to be so.

Aristotle announced that the fishes of the genus *Serranus*, a family of percoids, were always hermaphrodite, and this fact has been established by more recent investigations of Cavolini in 1787, and Dufosse in 1850. In a paper published by Dr. J. Brock in Gegenbaur's *Morphologisches Jahrbuck*, it is shown that in each of the several species of *Serranus*, occurring in the Mediterranean, there are certain modifications in the differentiation of the sexual organs with testicles and ovaries, as also the occurrence of a special oviduct in the one and the want of it in the two other species. More recently, in 1876, Syrski has shown that the gilt-head (*Chrysophrys aurata*) is also hermaphrodite. And here, according to Brock, the respective organization of the two organs is again distinct. In general, both in the *Chrysophrys* and the *Serranus*, the testicle lies in the walls of the ovary; but while in the latter the testicle appears only as an appendage of the ovary projecting inward, in the *Chrysophrys* it is much more highly developed, so that, on the other hand, the ovary is to be considered as an attachment introduced in the duct of the testicle. Thus in the one genus it is the ovary and in the other the testicle that is more highly developed.

In addition to this, Brock states that in a very young specimen of *Serranus* no trace of testicle could be found at all. Continued and repeated investigations on a large number of specimens are desirable.

Dr. E. V. Martens, in referring to these facts, is of opinion that the predominance of the male or of the female organs, hitherto considered as a generic characteristic, may, after all, be only an individual feature, and vary in the same genus and species, according to the age or condition of the fish under examination, and that the first stage in the separation of the sexes occurs in a manner similar to what has been observed in many mollusca.

A periodic separation of the function, at least in the *Serranus*, has been established by Brock, two specimens investigated by him in September having numerous ripe spermazoids in the testicle, and *vas deferens*. But one has no eggs at all in the ovary, and the other only very young, unripe ones. The fertilization of one individual by another, on account of the unequal functions of the two organs, appeared to be the rule, as is the case with many hermaphrodite flowers from the some cause.

Some fishes are only occasionally hermaphroditic; that is to say, among distinctly bi-sexual fishes hermaphrodites are occasionally observed. Among these belong the mackerel and the carp—*Der Naturforscher, March* 22, 116—7.

THE "MUD HEN" OF THE WEST.

EDITOR FOREST AND STREAM: LACON, Ills.

While confined to the house this winter, I whiled away the hours by adding to my knowledge of ornithology by reading carefully "Coues' Key to North American Birds," and then afterward looking up and finding the proper classical names of our more curious birds of this region. The one which gave me the most trouble was the one known everywhere in the West as "mud hen," which swarms in such countless numbers in the autumn around our shallow ponds, along our rivers, and especially along our swamp-margined Illinois River. I could not at first find it in the key, and for a time gave it up; but the reading of "G. A. B.'s" most enjoyable "Sketches from a Miner's Camp," in FOREST AND STREAM of Dec. 19, started my inquiry again. "G. A. B." gives in this sketch what he supposes to be the proper names (classical) of the water fowl of the lakes and rivers of the Rocky Mountain region, and the "mud hen" of that region is the same bird we know here by this name; and as he mentions Prof. Hayden in connection, I thought *Rallus crepitans* must be the right name, but on looking over the key I could not find *R. crepitans*. As a last resort I took down "Webster's Unabridged," and, turning to "mud hen," I had the definition—"Ornith.; (*a*), a bluish-black wading bird (*Fulica americana*), common in the United States; (*b*), the *Rallus crepitans* of the South." In this I had another start; but our "mud hen" a close observer would never think of calling a wading bird; it is more strictly natatorial in habit than any bird we have, with perhaps one exception, to wit: the pied billed grebe (*Podilymbus podiceps*), "Dab-chick, dipper," generally known on the Illinois River as heldiver (another very queer bird), for it never wades nor flies when it can swim. But *Fulica* passed me out of the rails into the sub-family *Gallinulinæ*, and it into the sub-family *Fulicinæ*, and that into genus *Fulica*, coots, and there I found our bird, *Fulica americana*, the only species of the sub-family and genus in the States.

Well, what of it? Simply this: It shows how little reliance can be placed on the common names of things. "Mud hen" of the coast and Eastern States means clapper rail (*Rallus longirostris*). They are desirable game, and when the man of the West writes of the great numbers of "mud hens" on Western waters, the Eastern sportsman is led astray, and wishes, perhaps, to be among them with his gun. We see, too, how scientific names, when not used correctly, lead to mistakes. We find by the key that the proper English name for our bird is coot, and this leads me to ask what fowl is it that you call coot on the coast? Our bird, the coot proper of the key, is a very curious animal. Though placed by naturalists in the great family of waders, it may be said, so far as my observation goes, to seldom or never wade; and though not placed among the *Natatores* or swimmers, no bird in this sub-class swims more continuously than it does; in fact, it is very seldom seen except swimming or dying. But its favorite place is in water shallow enough for it to reach the mud with its strong lobed feet, which terminate its rather long, very muscular legs. Although it is a strong flyer, making long migrations, it is very loth to take wing, and can usually be approached openly within shot-gun range before it will take wing. It rises from the water with great difficulty at all times, and can hardly do so at all, except against the wind. Its peculiarity in this gives the sportsman the best of practice for fowl shooting and fine sport. It is had in this way: Two sportsmen wishing practice for duck shooting, take a light hunting boat, with a pair of sculls, to a pond much frequented by coots, on a bright day when quite a breeze is blowing, and charge down the pond (with the wind) after the coots at full speed, one rowing and the other in the boat's stern ready to shoot. The birds first try to keep out of the way by swimming, but are now forced to wing, and as they will not rise when there is a wind except against it, they are forced to turn tail and fly toward, but diagonally from, the boat, but generally within shot-gun range. Each one, however, has a different range, and so gives the sportsman very complicated shooting, and an expert wing shot will generally be greatly surprised at the results of his first shots at the coots under these conditions. At easy range his bird as a rule doesn't tumble; but if there happens to be another coot about six feet directly behind the one intended to be killed, he is very likely to get badly hurt. The trouble is that the swift movement of the boat is not taken into account, and the charge passes harmlessly several feet behind the bird. In company with another self-conceited "pard" I emptied a great many shells in this way one day last fall without a feather, until a shot at a low flyer at fifty yards showed my shot striking the water eight feet behind the coot. After that I could "drap" them every time, sometimes. I found that to kill a coot flying directly by at forty yards I had to shoot four feet ahead when the boat was at rest; but with the boat at its highest speed, twelve feet, or apparently twelve feet, was none too much allowance.

As before remarked, our coot is a very strange animal. It is a bird of strictly gallinaceous bill, gizzard and habits of food, with the bristle-like feathers and skin of the grebes, and a combination of the structure of these and the rails, ducks and geese! It cannot be plucked, but must be skinned as a hare (its feathers appear to pass through the skin and be riveted on the inner side). It is continually in the mud and water, but its flesh has no muddy taste or smell. Ask a river sportsman or pot-hunter what it feeds upon, and he will unhesitatingly answer, fish and other animal food, yet a careful examination of the contents of a great many of their gizzards (though in the fall of the year only) has never shown the least particle of animal substances in any of them! And generally nothing but water grasses, sedges, mosses and algæ. Ask the same river man if our bird is good to eat. He will undoubtedly say, "Yes, about as good as a crow or a buzzard;" yet if properly dressed and cooked, it would be hard for one to decide, who did not know what he was eating, which was best, it or blue-wing teal in like condition. In fact, I know of one instance where this bird passed muster in a hotel at a game resort for weeks as broiled teal! It is generally very fat in autumn, and this fat should be carefully removed when dressing it. This fat or oil is as peculiar as the bird, and very different from that of any bird I know of. It is very white, and when "tried out" or separated from its cells by heat and cooled, it separates into two distinct fats—one remaining translucent and liquid at quite a low temperature, and floating on top of the other, which is buttery and opaque. The lighter of the two appears to be one of the finest of animal oils, without smell, taste or color. I am told by our river men that our coots breed in great numbers in the vast sedge swamps of the upper Illinois River, nesting on a rude pile of dry sedge. It is such a queer abnormal thing that it would not be safe to say that it lays eggs like other birds, unless one had actually caught it in the act.

I write this of our coot in the interest of our market duck shooters. I know from experience that when they are camped for weeks in the swamps that they get tired of eating ducks and "sow belly." Let them try coots. If they are not relished at first, then let them confine themselves strictly for a week to a diet of crow. After that the coot will be relished, and many a fat duck saved for market and purse.

BYRNE.

The bird called coot in the Eastern States is a duck. The term is applied indiscriminately to the species included in the genus *Œdemia*.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING APRIL 19.—One whistling swan, *Cygnus americana*; one pair of ostriches, *Struthio camelus*; one oryx, *Oryx leucoryx*, purchased; one Patas monkey, *Cercopithecus ruber*; one green monkey, *C callitrichus*; one weeper capuchin, *Cebus capucinus*; two garter snakes, *Eutænia sirtalis*; one snake, *Coluber vulpinus*, all presented.

The Kennel.

[Report Continued from Last Issue.]

THE NEW YORK DOG SHOW.

OUR space last week did not permit us to review the display of non-sporting dogs at the above show. It is somewhat remarkable that, notwithstanding the greatly increased number of entries, the list of non-sporting dogs should have been smaller than on previous years. Yet of large dogs there was no lack, the falling off being confined to the toys. Of the twenty mastiffs exhibited, Mr. Morgan's King Olaf was undoubtedly the best specimen. This dog was placed second to Mr. Brown's Vandal in 1877, and last year, although not entered for competition, was taken into the ring and awarded first prize before the mistake was discovered. We regretted to see so few puppies, as it is an indication that mastiffs are not bred in this country to the extent they should be. The St. Bernards outnumbered the mastiffs, Mr. LeRoy Z. Collins winning in the rough-coated dogs with Alp, a magnificent specimen of the breed, who has been overlooked at previous shows on account of his lack of dew claws. "Stonehenge's" "points," which were closely adhered to, allowing only five points for dew claws, with a corresponding negative for the lack of them, he was enabled to beat his nearest competitor, Turk. Alp was bred by Mr. Macdona. In the smooth-coated class Mr. John P. Haines made a splendid exhibit of (including puppies) six animals, and was awarded all the prizes but third in this class, the latter going to Bernard, a very handsome son of Mr. Pearsall's Fido, a dog whose absence was regretted, he having been much admired at previous shows. Newfoundlands were only a fair class, but it was noticeable that the standard required was much more closely adhered to than usual, there being few or none of the mongrel breed exhibited in this class. Major Gilson, of the Westminster Hotel, had a very fine dog entered, which was unfortunately stolen before the show opened and recovered only after the judging was over. Eleven Siberian bloodhounds competed, but beyond the bitch Lily with her litter of puppies there was nothing worthy of remark about them. The greyhound class filled well and brought out one animal of a character not often seen on this side of the water. We allude to the 1st prize winner, Mr. Luyties' Prince, whose pedigree was not given. One glance at Prince was sufficient to show his superiority; his clean cut head, long, fine jaw and racing build stamping him at once as possessing unusual merit. Of deerhounds there were, as usual, but few specimens, and Mr. P. T. Barlow's Thor and Maida had almost a walk-over. This finished the large dogs, and we might here remark that they were placed first on the catalogue among the competing dogs for the sake of convenience, that all the large stalls might come together and not be scattered about.

As we predicted they would, fox-terriers made a very large class, there being 46 entered. In dogs, Gamester, last year's winner, although very much out of condition, was placed first, Rattler II. being a close second. There were a number of fine dogs in this class, the whole being a marked improvement on previous years. In the bitch class both first and second prize winners were very fair specimens, although to us nearly all appeared to lack length of jaw, such as is seen in the best types in England. A very good bitch, but only H. C., was Mr. Parson's Kate, possibly a relative of Gamester, as both were sired by Tyke, if the same dog, a celebrated English champion. The Messrs. Laurence, of Groton, showed some very fine dogs, and won in the dog puppy class with one of the progeny of their Nettle. Mr. Fred Goodridge showed a very handsome litter of puppies out of his Daisy and sired by one of Mr. Griswold's dogs. In collies we were disappointed, not but that there were some very fine specimens exhibited, but

in the numbers. The judges appeared to favor the old-fashioned working collie in preference to the manufactured animal of the present day. Of those entered some showed very evidently their admixture of Gordon setter blood, and although very beautiful animals, had not the rough and ready, wear and tear characteristics of the genuine shepherd dog. The first prize dog must have won as much by coat as anything else.

The bull dog class was small and contained but few specimens. Ben, last year's winner, was again first, and is probably hard to beat this side of the water. Mr. Grant's Viscount is a good one, well marked and with an excellent head, and if entered for competition would probably have pushed the winner close, if not have beaten him. The second prize winner, Puss, although very small, is one of the true type. Bull terriers were a surprise, there being some thirty odd of them, but there were very few that came up to the standard, but four being noticed at all. We thought they were more worthy of commendation, but bad markings and undershot jaws were only too prevalent. Again last year's winner came to the front, Mr. Coster's Spider winning, and his Lilly receiving the only V. H. C. Skye terriers were a very great improvement on provious years, and exhibitors are evidently beginning to find out that Skyes and Yorkshires are very different descriptions of dogs. The invincible Tom was again first, but there were at least half a dozen really good ones in the class, notably Miss Morse's Rough (3d), and Mr. Montant's remarkably named Myumn-myumn. Pugs also showed considerable improvement, nearly every animal receiving commendation of some kind. In the bitch class last year's winner in the puppy class was first. Scotch terriers, a class that should have been omitted, were as usual very much mixed. Black and tans over 5 lbs. were fair. In the Dandie Dinmont class the prizes were withheld for want of merit, although why last year's winner should have been passed over we cannot imagine. Yorkshire terriers, both over and under 5 pounds were, as usual, very fine, several noted English dogs having been imported expressly for the show. In the toy class, other than Yorkshire, the prizes went to diminutive black and tans, two of them being immediately sold for very long prices. In King Charles spaniels, unless black and tan is the only color allowed, we cannot at all agree with the judges' decisions, and consider that Mr. Harley's Prince should have been first. He is a white and black dog, however, and Stonehenge gives no standard for color. There were some very pretty Japanese spaniels shown, and Madam Le Prevost always wins with her Italian greyhounds.

After the show had closed on Friday evening a supper was given at the Hotel Brunswick by the Westminster Kennel Club to Mr. John Davidson and the other judges, at which some forty gentlemen were present. Mr. Davidson was also entertained at "the Lambs" club, where his health was proposed by Mr. Harry Becket.

THE PHILADELPHIA DOG SHOW.

THE first annual dog show of the Philadelphia Kennel Club was opened at the Industrial Art Building, in that city, at noon Monday. The catalogue embraces the names of 538 dogs, divided as follows (a catalogue mailed to us did not come to hand in time for us to print the entire list): Champion pointers, 13; champion English setters, 9; champion Irish setters, 7; champion black and tan setters, 5. In the open classes there are: Pointers, 31; imported English setters, 50; native English setters, 71; red Irish setters, 28; red and white Irish setters, 22; black and tan setters, 23; cocker spaniels, 19; spaniels exceeding 30lbs., 6; Irish water spaniels, 3; Chesapeake Bay retrievers, 2; poodles, 1; deerhounds, 1; greyhounds, 7; foxhounds, 69; beagles, 23; dachshunde, 3; colleys, 21; Newfoundlands (all black), 7; ditto (white and black), 5; St. Bernards, 7; mastiffs, 5; Siberians, 9; bull dogs, 5; bull terriers, 8; fox terriers, 7; wire-haired terriers, 2; broken-haired terriers, 6; Skye terriers, 15; Yorkshire terriers, 5; pugs, 5; Italian greyhounds, 8; King Charles and Blenheim spaniels, 1; black and tan terriers, 7; broken-haired terriers not exceeding 10lbs., 1; miscellaneous, 13; puppies under 8 months and suckling bitches, 16.

The arrangements of the show are admirable, the boxes for the dogs neat and of comfortable size, the building ample and thoroughly ventilated. The judging is done in private, neither exhibitors nor representatives of the press being permitted to be present. The attendance so far has been fair, and indications are that the show will be in every way successful. The feature of the show is the exhibit of foxhounds, the class, with the exception of native English setters, being the largest represented. There are four packs of from 12 to 15 dogs each comfortably placed in large, detatched, square kennels, with wire sides and raised benches. The beds for the dogs are of meadow hay. The fine young pointer Van, belonging to Mr. Garrett Roach, of New York, and winner of second prize at the late New York show, died very suddenly this morning, and an analysis is to be made of his stomach, to ascertain, if possible, the cause. The dogs from the kennels of Messrs. L. H. Smith and Arnold Burges and the St. Louis Kennel Club, although entered, are absent. The Massachusetts Kennel Club is represented by the red Irish setters Berkley and Duck, and Mr. T. T. Sawyer, Jr., the treasurer of the club, is here. The Toledo Kennel Club and the Nassau Kennel Club are represented, as is also the Harvard Kennel Club. The awards, up to the time of sending the dispatch, are as follows:

Champion Pointers—Dogs—1st, Rush, E Orgill, N Y. Bitches—1st, Rose, E Orgill, N Y.

Champion English Setters—Dogs—1st, Royal Duke, H S and S C Magraw, Colora, Md. Bitches—1st, Petrel, J C Higgins, Delaware City.

Champion Irish Setters—Dogs—1st, Berkley, Massachusetts Kennel Club. Bitches—1st, Fire Fly, H W Ganse, Wilmington, Del.

Champion Black and Tan Setters—Dogs—1st, Grouse, Toledo Kennel Club. Bitches—1st, Nell, Nassau Kennel Club, St Louis, Mo.

OPEN CLASSES.

Pointers Over Fifty-five Pounds—Dogs—1st, Duke, C S Pancoast, Philadelphia; 2d, Rock, J T Bailey, Philadelphia; 3d, Ned, J Gatley, Philadelphia. Bitches—1st, Lady, G K Cragin, Philadelphia.

Pointers not Exceeding Fifty-five Pounds—Dogs—1st, Dash, T Dunbar, Jr, Philadelphia; 2d, Lord Dufferin, C DuBois Wagstaff, Babylon, L I; 3d, Dash, H C Potter, Philadelphia. Bitches—1st, E Orgill, N Y; 2d, Crystal, H S Magraw, Colora, Md; 3d, Dutchess, G Van Wagenen, N Y. Puppies—1st, Crystal, H S Magraw, Colora, Md; 2d, Chiswick, T H Terry, N Y.

Imported English Setters—Dogs—1st, Dash III., Harvard Kennel Club; 2d, Thunder, J J Sueldenburg, New Brighton, Pa; 3d, Pontiac, J C Higgins, Delaware City, Md. V h c—Roybel, W N Lee, Delaware City, Del; Roger, A Higgins, Wilmington; Warwick, H W Ganse, Delaware City; Lincoln, J C Higgins, Delaware City; Hamlet, Harvard Kennel Club. H c—Pride, J C Higgins. C—Mack, Geo A Clark, Delaware City. Bitches—1st, Frost, W N Strother, Lynchburg, Va; 2d, Countess II., Harvard Kennel Club; 3d, Countess Petrel, J C Higgins. V h c—Cornelia, L Shuster, Jr, Philadelphia; Grace, H Bohrman, Philadelphia; Queen Anne, Dr W W White, Baltimore; Ollie, H W Ganse, Wilmington. H c—Daisy Lincoln, J C Higgins; Victoress, J A Porter, Camden, N J. C—June, John McMullin, Philadelphia—puppies.

Greyhounds—1st, Royal Done, J F Keen, Jr, Philadelphia; 2d, Rose, M Horton, Morton, Pa. H c—Flora, M Daizell, Germantown.

Beagles—1st, Bell, Dodge & Baker, Detroit; 2d, Beauty, G Pownall, Christiana, Pa. V h c—Fly, J Whittaker, Philadelphia.

Beagles in Couples—1st, Charmer and Chanter, J A Stovell, Philadelphia; 2d, Gess and Fan, A Lange, Baltimore.

Dachshunde—1st, Unser Fritz, L H Twaddell, Philadelphia; 2d, Zankerle, same owner.

BOSTON DOG SHOW.

BOSTON, April 10, 1879.

EDITOR FOREST AND STREAM:

The committee have decided to extend the time for taking entries up to the 28th instant. This has been found necessary on account of so many applications for blanks being received too late to be returned in time. This will also give exhibitors at the Philadelphia Show an opportunity to make their entries.

There is no doubt we shall have a very fine show, as most of the best dogs in the country will be here.

CHAS. LINCOLN.

A PRIZE FROM MR. LLEWELLIN.

MASSACHUSETTS KENNEL CLUB, BOSTON, April 21, 1879.

EDITOR FOREST AND STREAM:

Sir—Inclosed I send you copy of a letter received from Mr. G. T. Teasdale Buckell. The club have accepted the offer, and entries will be received for it up to twelve o'clock at noon, the first day of the show. Entries free.

Yours truly,

CHAS. LINCOLN.

[COPY.]

SOUTH ORMSBY HALL, OXFORD, 7th April, 1879.

Dear Sir—Mr. Llewellin has at my request, made at your instance, consented to give something for the best setter at several of your largest shows. I propose a silver collar, to bear the words, "The Llewellin Medal," but will wait, before getting them made here, your opinion as to the object and inscription. If you like the idea, you can offer the "Llewellin Medal" for the first time at Boston Show.

The conditions at Boston, and wherever the prize is offered, will be as follows:

Open to any setter of any breed or sex who has won a first prize in an all-aged single stake in America, or been winner of a first prize in a brace stake, or eighteen months old puppy stake of more than six entries.

And to any setter, four out of the six of whose parents and grand-parents have won a first in a single stake in England or America, and to any setter who has won a first or second prize in any stake at Shrewsbury, or Vaynol, or in the Field Trial Derby, or Horseheath Stakes, or in the Champion Stakes or Brace Stakes, or eighteen months old puppy stake at Memphis and Nashville. Yours truly,

(Signed) G. T. TEASDALE BUCKELL.

To CHARLES LINCOLN, Esq., Massachusetts Kennel Club, P. O. Box 3,008, Boston, U. S. America.

Of all the absurdities in the way of prize-offering this beats anything we have ever heard of. In the present condition of field trials in this country the prize in itself is absurd enough, but when it is so palpably offered for a so-called Llewellin setter, it becomes simply ridiculous. Besides, the last clause is so worded that it might be won by the verriest breed, providing his ancestors were Llewellin dogs. We question very much whether Mr. Llewillin authorized the offering of such a prize on such terms.

For Forest and Stream and Rod and Gun.

"AFTER THE OLD RED."

WITH the exception of Saturday morning, March 25, there has not been a good red fox hunting in the present year. I availed myself of this, and at early dawn was off in search of the mate of the female who has a litter of whelps on my island. This, by the bye, she has done for several years, and has afforded me much sport in pursuit of her lovers as well as her young. Of the former no less than seven have fallen victims, and of the latter, all she raises. I take special precaution to prevent their disturbance when too young to escape, and one spring had the mother as well as her young so gentle that my presence on horseback had but little effect upon them. I stipulate with tenants not to carry a dog into the island, and not to disturb the foxes. At this season of the year the old male never stays in the island, but lies in the adjacent hills during the day, visiting the female only at night. There is consequently no danger of starting the female. Knowing these facts, early on Saturday morning, the 15th of March, I traversed the Roanoke hills from the lower end of my plantation up to near Eaton's Ferry, some seven miles, without a strike. Just there I came abruptly upon an old red fox, who for many years had been in the habit of occasionally visiting that section, and who had on several occasions run there when pursued by my friend Mr. Broadnax, of Brunswick County, Va. His run is well known to the huntsmen who reside in the vicinity of St. Tammany and hunt as low down as Morrison town. The wind on this morning was gentle but down the Roanoke, the ground in good order, and everything fair and equal for hounds and fox. Unfortunately, however, only eight dogs got off together, and the speed was such that the rest of the pack never got up. I had made every preparation for a day's work after my old red. I had a fine young colt of Lord Elgin's, bridled and saddled, as a reserve, and rode the old horse for the heavy work. This arrangement I made in anticipation of starting him in my plantation; he could not be run out of his range, which was not over two miles, up and down the Roanoke, taking my plantation as its centre. I was well provisioned, and when old red broke cover was in the right mood for sport. Off he dashed, right for his home in Mecklenburg County, Va., and in close pursuit followed the pack. The speed was tremendous for the first five miles to Robinson's Ferry. There I saw a negro at work, who stated that "the fox run right by me here and the dogs were close up," and that he "reckon dey git him before he die." "What sort of a fox was he, old fellow?" I asked, to test his veracity, though I knew from the tracks that he was telling the truth. "Well, sir, he was too red for a gray, and too black for a red, and too large for either." This little delay carried the sound of the pack out of my hearing. Nothing daunted, however, off I dashed, not doubting but in time I would be up, but the wind increased and blew too hard for pursuit, even it right up. But I nevertheless pressed on, and succeeded in overtaking the pack at Poplar Creek. I then kept with them, still going up the Roanoke toward St. Tammany, and not far distant, when the wind so favored the fox that he escaped. This run, for dash and straightness, exceeds all, with one exception, I ever had, and brought out more metal in huntsman and hounds. I shall lay on my oars for a southern wind and damp morning to run my own old red, whose size and color distinguishes him from his race. This is his second season in this section, though, from general appearance, he must be very old. In riding on my farm a week or two since I passed near and happened to stop. He crept up in full view and did not turn his head toward me until he was over a hundred yards. I bid him be quiet, and at the proper time he should hear from me. This he shall do.

Gaston, N. C., April 4, 1879. T. G. T.

OUR LONDON LETTER.

EDITOR FOREST AND STREAM:

"Verily, verily, dogs have their uses." These were the exact words with which I closed my last letter to you somewhat over a month ago. It was with reference to an amusing conversation I had listened to on the Bath Road between two cracksmen. Well sir, just three weeks ago I was awakened from my slumbers by an unusual noise in the kennels. This was about a quarter to two o'clock. Old Brewer, a Newfoundland, was uttering low, vicious growls and making strenuous efforts to tear down the wooden wall of the house in which he lives. Conduct like this on his part necessitated investigation. A few spare oaths delivered from the bedroom window not mending matters, a journey kennelward became necessary, clad only in the garments of night. But it was only in the morning that I discovered that the house immediately adjoining mine had been jimmied and cracked, the timely interference of the dog alone saving the plate. And not this house alone, but nine others had been broken into in the same night. Out of the nine, three or four were saved by dogs. But we did not know before that Brewer made burglars a specialty.

Away north in Scotland the land is still locked in the icy grasp of winter. Down here in Bonnie Berks, the weather is simply charming; primroses and snow-drops are blooming; crocuses spreading wide their petals to catch the sunbeams, and bees are at work in the yellow jasamin, only popping in at the window occasionally to see what I'm writing about. If this weather continues long we shall have the annual mad dog with us, and a magisterial order to cham up, muzzle and lead every canine in the country-side for the space of three calendar months. *Entre nous*, sir, this mad dog is a myth, but he comes in very handy in spring time, just when the birds are pairing; and most of the magistrates are landed proprietors, and thus they lord it over the canine community in this land of freedom.

The dog stealers in London continue to thrive; our thieves here, you know, have a connection on the continent, and thus drive a roaring trade, although every now and then one of them is bowled out by some intelligent member of our police force. The advertising tricks that these scoundrels—not the police, I mean the other scoundrels—are up to are quite astonishing; it is still more astonishing that some of our best papers should receive these advertisements, knowing well whence they emanate. Pedigree forging is well studied, and the names of well known champions made excellent use of.

I'll tell you how a solicitor from Bristol was sold the other day, and I suppose the trick is a very common one. There is one thing to be said in favor of this limb of the law, he does not think shame to tell the story. Mr. F.—we may call him Mr. F.—has a sheep's eye for a well-bred pug, and he was in town last summer taking a stroll round Leadenhill dirty market. He had no business there. Never mind. He was standing in front of a shop—if such dens as you find in this region can be called shops—wistfully eyeing one of his pets, when he was tapped on the arm by a—gentleman, we'll say, and a conversation like the following ensued:

"You'll 'skuse me, sir, won't ye, sir?"

"Certainly," said the lawyer.

"I've got a pug for sell as handsome as print."

"Describe him," said the astute Mr. F.

The gentleman rattled off his points: "Weight, 12 lbs.; age 3 years; nice fawn color; black, thin ears, lying close to head; beautiful mask no higher than the brow; dark kissing spot on brow; well wrukled forehead; dark—not too dark—line down back; ground color a sweet fawn; good loins and body; baton legs, as straight as darts; large bulging eyes—"

He got no further. "Where, oh! where can I see him?"

"Clean in the house; fond of children; swims—"

"Enough, enough!" cried Mr. F.

"Now," said the gentleman, "you'll 'skuse me again, won't you? But you comes from the country, don't you!"

"I come from Somerset, but if you think I'm green—"

"It ain't that a bit," said the gent. "It's like this, the pug wants country air, the town don't agree with him. D'ye twig?"

The lawyer did twig. The pug was a stolen one, and if lawyers had consciences the transaction would have ended here. But lawyers have so many other good qualities inside them that they haven't space for consciences. The pug was produced in a public house and proved nearly as good as described, cheap at the price asked, namely, £10. Well, Mr. F. reached Paddington, and being a very honest man, he did not attempt to swindle the company, but with the dog in his arms proceeded to get a ticket. Another "gentleman" here took notice of the pug and patted it on the head, the pug

meanwhile making strenuous efforts to wriggle out of its wrinkled skin. This individual left hurriedly, and as soon as Mr. F. reached the platform confronted him with a policeman.

"You'll 'skuse me, won't you, sir, but that's my dog, and I means to give you in charge for stealing it."

Here was a nice kettle of fish for an honest man to have the cooking of. But Mr. F. pulled the policeman and the stranger gentleman into a corner and talked parson to them. "Come," he said, "let us reason together." The reasoning had this effect: When Mr. F. got back to Bristol he was minus the pug, minus the original ten pounds, and minus five more with which he had squared the bogus bobby.

How do the railway companies treat you in America? Ours do not propose to be "common carriers of dogs," they carry them in the filthiest of mangy dens, and oftentimes lose them. A friend of mine just writes me to say he has lost a valuable prize dachshund from inflammation. The dog was 30 hours upon a journey, which should only have occupied ten. It surely is a case for the society that forbids cock-fighting.

By the way, some of those fellows who write to you about spaying bitches, stopping dogs from barking and other atrocities, ought to visit me at my Berkshire home. My kennel man stands six feet four in his stockings, and is a Scot to boot. I have a pump handy, and water tanks, and wouldn't I souse them.

Here comes postie, and as usual on a Wednesday, your broad and welcome sheet. We like it very much in England, and I wish it were better known; there is altogether a higher tone about it than there is in most Yankee papers. 'Skuse me, sir, as the gentleman said to Mr. F., but you Americans seem to us Britishers to give yourself too much rope occasionally, a long-headed lot though your are. Perhaps it's the longitude of your heads that makes you take such latitude.

With reference to J. R. H.'s method of removing a film from a dog's eye, I think the plan good. Here is mine in chronic cases, a little finely powdered quinine blown into the eye of a morning. Time very often cures these things. For the last three months I have been using chaulmoofre oil internally and externally for the cure of skin disease, and have every reason to be pleased with the result. It is extolled as a remedy for rheumatism in the human being, and I'm going to try it for canine rheumatism; meanwhile I wish some of your readers would experiment a bit and give us the result. By the bye, the oil as ointment should be diluted with four times its weight of lard or sulpher ointment. I fear you will think this letter immeasureably dull, but at present there is really nothing to speak about.

Bide a wee. GORDON STABLES, Ch. M., M. D., R. N.

SHOULD OUR SPORTING DOGS BE MADE RETRIEVERS?

COOL SPRING, N. C., April 10, 1879.

EDITOR FOREST AND STREAM:

Much has been written and said, at great length, frequently and recently, in all our sporting papers on this subject, and by good, sound, practical sportsmen, too; each side of the question considered and argued by them; yet they are not satisfied with themselves nor each other, and call on the breakers to give expression to their views, gained by experience and observation, hoping thereby to settle it.

Now, if the public would accept as final the conclusions arrived at by a majority of, say, seven competent, practical, intelligent and honest trainers—the latter to publicly promulgate their beliefs—this vexed question might be buried, for our day and generation at least. I will name seven gentlemen whose opinions, I think, would prove acceptable. They are Dew, Campbell, Whitford, Winford, Sanborn, Morgan and Waddell—or, if the latter cannot be styled a professional, take Bolus.

Will these gentlemen "rise up and explain," so that dogdom may be rightly educated—and their masters as well?

I'll set the pen in motion, gentlemen, and hope to see you grasp and wield it in turn. Though not an expert, I may still say something for you to corroborate or condemn; and, in either case, you, having spoken, my end is gained, and thanks are yours.

I claim that a pointer or setter should never be made to retrieve; more, he should never be *allowed* to.

1. Because, as a rule, it unsteadies him.

2. It excites, and therefore unnecessarily wastes, the strength of the nervous system.

3. It causes him to be on the watch for falling bird, and so eager to get it, after seeing it fall, as to often heedlessly flush remaining birds in order to gratify his desire.

4. It impairs the exquisite delicacy of their scenting powers to a greater degree than is generally conceded.

5. It tends to make him less staunch, liable to flush at pleasure if the owner be not near, and in many cases makes of a first-class young dog, ere he reaches his fourth year, a shot breaker, chaser, and a worthless cur.

6. When ordered to "Fetch," it is expected of him; and no matter how many other birds he may flush, nor how long or far he may go to get the bird; whether it be "tipped," and runs and flutters or not, he must catch and fetch it. For has he not been ordered, and must he not obey?

7. It invariably, in time, lessens that caution which should ever characterize the dog, particularly when the birds are shy and wary, and extreme caution be necessary to allow the dog to approach near enough to scent them and establish his point.

How many retrieving dogs are there on this continent that can be truthfully called good and reliable in finding and pointing single, scattered quail? I have yet to see one who can compare with a number of non-retrievers that I have known in doing honest, faithful, satisfactory work among a scattered bevy of close lying quail. The dogs who did not retrieve were not really superior in nose to the others, but they depended on it for their enjoyment, and not on the eye, mouth and palate, as does the retriever.

The advocates of retrieving present as their argument—in addition to its not injuring the dog, which I deny—that it saves them—the sportsmen—much labor, time, scratches, wettings, etc., besides the birds shot down; that they would lose many birds did their dogs not retrieve, and consequently would not make as large a bag as they now do. This is about as weak an argument as it is false. The non-retriever can find the dead or crippled bird just as well as the other; will point and locate it, and it's a poor specimen of Young America who cannot secure it. A winged bird runs and hides, and any dog of experience knows the difference between such a one and a dead or unhurt one, and will generally road faster and come up to it. But they say, "Yes, but you often lose these cripples, whereas, did your dog retrieve and understand his business, he would catch it for you." So he would, often; but don't you lose "cripples" occasionally with your retrievers also? And when the bird gets out of your dog's sight, and lies concealed, buried beneath the leaves or grassy tufts, where is your dog then? Running wildly about, snuffing here and sniffing there, but keeping pretty close to the spot where he last saw the bird, and the chances are 99 to 1 against his finding it. The other goes to work quietly and systematically, and once getting wind of it, nearly always finds it. Again, the size of the bag depends as much on the man as on the dog, and how many men are there who, seeing their dogs excited, wild, and flushing birds, do not themselves catch the contagion? Very few.

Now, a well-behaved dog—not a retriever—receives his encouragement, kindnesses and caresses when he finds and points his game. That is his time for being rewarded. The retriever usually gets his when he has performed the "fetching" part, and more demonstratively after he has had a difficult chase after a winged bird. Which is the more sensible? The excuse, or plea, that one can't get into a briar patch or bad piece of ground to get his bird won't do either. Did you ever see or know a genuine sportsman who, eager to make a bag, refused to go in just such a place to obtain the shot? And are not many birds fired at in bad places when they could just as easily have been, had the sportsman only held his fire a moment longer, when the bird would have cleared the difficult place?

In quail shooting the largest bags are made over dogs who have the ability to pick up, one by one, the scattered birds of the bevies, and is it not natural that the dog who only hunts to find and point, will do his work better than one who has an added duty—and a bad one—to perform?

Fashion rules the hour! We Americans won't follow it, though, by adopting Johnny Bull's ideas—they don't believe in retrieving—but our own, which is better. "But we'll buy their dogs, and show them how a dog should be trained sensibly, blarst them." And now that all the field trials adopt retrieving as one of the essential virtues, and reward it accordingly, I suppose it will be more fashionable than before.

But, should our sporting dogs be made to retrieve?

E. S. WANMAKER.

EXTORTIONATE R. R. CHARGES.

TROY, N. Y., April 19, 1879.

EDITOR FOREST AND STREAM:

For tricks that are vain, the men connected with the baggage department of the New York Central and Hudson River Railroad, to say the least, are peculiar. Capt. M. L. Norton, having charge of Mr. Callender's Rory O'More and my Irish setter Nora, after the bench show in New York, concluded to take the dogs home by way of the above railroad; but, upon applying to the baggage-men for transportation for the dogs, was informed that he would have to pay the moderate sum of $8. That was more than the gallant Captain could stand, and forth with he gave vent to his feelings. Although they offered to make a reduction, the Captain was on his metal, and concluded that he was not in such a great hurry after all, and that the Albany evening boat would answer his purpose just as well. In the meantime he would see New York by daylight, and give the dogs some necessary exercise; and thus, strolling leisurely along through the parks, the blue and red ribbons on the dogs attracted the attention of the passers-by, and soon the Captain and the dogs were surrounded, until he was glad to move on. But enough of this. I did not intend to say anything in particular about the dogs, but especially to call your attention—you who are ever ready to champion the cause of the under dog in the fight—to this imposition upon those who are compelled to travel with a dog. The bench show drew hundreds to the city, and hence the railroads were more or less benefited, and one would think that a large corporation like the New York Central and Hudson River Railroad could afford to be just, if not generous. The officers and managers of every road owe it to themselves that the traveling public shall be protected from being robbed by their employees. No one would refuse to pay a fair price for transportation, and I think if this subject were properly agitated by the sportsmen that some good would come from it, and that the railroads would see that it was for their interest to establish proper rates for such transportation. I imagine that this imposition is of common occurrence and of long standing, and sportsmen have too long silently submitted to it. Fraternally yours, A. A. THOMPSON.

Eight dollars for the transportation of two dogs to Albany was rather steep, even for the corporation mentioned. We believe that the N. Y. C. & H. R. R. is the only one entering New York that has no regulations regarding the transportation of dogs. Fortunately, there are boats from Albany, and we know of many instances where owners along the line have crossed over and taken the Erie.

THE KENNEL REGISTER.—The Stud Book, published by the National American Kennel Club, is now out, and can be had from John W. Munson, St. Louis, Secretary of the club.

THE SPRINGFIELD KENNEL CLUB.—This is a new organization, with headquarters at Springfield, Mass. The officers are: President, Dr. C. P. Lyman; Vice-President, E. H. Lathrop; Secretary and Treasurer, Wm. M. Williams—all, we believe, members of the Rod and Gun Club. One of the specialties of the club is to board sporting dogs in the close or any season, pet dogs when owners are away; to give special attention to breeding bitches with pup. The hospital treatment will be first class in both medical and surgical branches, and a special feature made thereof, a competent veterinary surgeon (graduate of the Royal College of Edinburgh, Scotland,) having constant control and supervision of the animals, together with a competent keeper and breaker. Ladies going abroad, or to the mountains or sea shore, can send their pets to the club and be assured of kind treatment furnished them.

The members of the club are, without exception, practical sportsmen and owners of sporting dogs, and personally interested in all matters tending to advance the material interests of legitimate sportsmanship and the breeding and care of dogs. The club is not established as a speculation, or as a business for the members of the club or any one of them, each and all only desiring that it be made self-supporting and pay a reasonable return upon the sum invested.

Full particulars can be obtained upon application to the secretary, Mr. W. M. Williams, Springfield, Mass.

REMARKABLE INSTANCE OF SAGACITY.—*New York, April 15.*—I write to tell a good dog story. Some years ago I found under our veranda at Long Branch a Newfoundland bitch with a litter of pups. On her collar was: 'I am Tom Oliphant's dog.' Who Tom Oliphant was or where the bitch came from I never could find out. About a month ago, having more dogs than I could keep, I gave the bitch to Mr. W. H. Henriques, who has a stock farm in Somerville, N. J., and Dutchess was duly sent to him by express. This morning what was my surprise to find her back in our barn-yard at Long Branch. I have just seen Mr. H. at the Stock Exchange, and he tells me the bitch left his place ten days ago. ARTHUR L. SEWELL.

REMEDY FOR DISTEMPER.—*Madison, Ind., April 10.*—*Editor Forest and Stream:* I send you a cure for distemper. It draws on the credulity at a fearful rate, but after seeing its effect I can vouch for its infallibility. Take a dog with a case, no matter how marked or mild, place him on a bench or table, and, with the forefinger and thumb placed on opposite sides of the rectum, press gently at first and draw them together, as if you were trying to press something out. If the dog has the distemper you will rupture a little sack situated near the spinal column that contains as much as a tablespoonful of the most offensive matter ever met with, and your dog will begin to recover at once; for it seems to afford instant relief. It is better to provide a close-fitting kid glove before the operation begins. The dog, if gently dealt with, will not offer the least resistance. After an experience of more than forty years in the management of dogs, this is the most complete specific that ever I met with. There is not one shadow of danger about it so far as the dog is concerned. INDIANA.

COCKER SPANIELS.—*Buffalo, N. Y., April 11.*—If "G. M. D.," of Toronto, Ont. (who describes his fine cocker bitch Brownie in your issue of April 3), will call upon me at 20 East Seneca street, I will be pleased to show him some fine cockers, from imported and prize-winning stock: one all liver (dark) dog, with small white star on breast; one liver and white-ticked Norfolk bitch, a beauty, and one all-brilliant black dog, of about twenty-five pounds weight, of fine form and coat, which possibly might suit him to breed Brownie to; and if not sold, can also show him some black and tan King Charles (so called), from Canada. A letter addressed to my initials at above number and street will reach me all right. J. B. H.

EASTERN DOGS ON WESTERN GAME.—*Editor Forest and Stream:* "Ivanhoe" seems to have created a wonderful sensation among some of the Eastern sportsmen in relating his experience with his quail-trained dogs on the prairie. There is almost as much difference between the quail-trained dog and one that has been trained on prairie chickens as there is between one not trained at all and one thoroughly educated—on the prairie. There are some exceptions, no doubt; but they are exceptions. The prairie dog will range more miles in one day than the quail dog in five. Besides, the quail dog almost invariably draws too close on the chickens. After an experience of more than thirty years in shooting chickens, this is my conclusion: The only way to have satisfactory shooting on the prairie was to keep two sets of dogs. I remember once returning from a shooting excursion, and on the train meeting two gentlemen from Louisville, Ky. They had with them two of the most beautiful English setter dogs that ever I saw. I asked them how they got along with their dogs. "Bad enough, bad enough," said one. "When we started out, we thought we had two of the finest-trained dogs in Kentucky; but we have come to the conclusion that they are not trained at all, although we have spent many days in educating them." INDIANA.

—Mr. John Williams, Coralville, Iowa, writes us that his Irish-English setter bitch Queen (by L. Clearman's Shot out of D. Moriarty's Cassie), whelped three dog and three gyp pups Feb. 23. They were sired by the red Irish setter Bob, owned by Mr. John Stevenson of Iowa City. Bob is descended from stock brought to this country by the Prince of Wales. The pups are very fine ones.

—The liver and white pointer bitch Victoria (by Sensation), belonging to T. E. Dillon, of Bloomsburg, Pa., was bred on the 13th inst. to Mr. R. M. Lindsay's dog Viscount.

—The champion pointer bitch Grace, belonging to Mr. L. W. White, of Bridgeport, Conn., was bred to Sensation on the 10th inst. Grace is said to be an excellent field dog.

—Mr. Chas. Dennison has bred his imported red Irish setter bitch Stella (Rev. J. G. Leigh's Flash-Stella) to champion Elcho.

National Pastimes.

PECK & SNYDER'S CATALOGUE.—MESSRS. Peck & Snyder, of Nassau street, N. Y., publish a catalogue of their very extensive stock of all kinds of sporting materials. They furnish full outfits for boating, base ball, cricket, archery, amateur sleight-of-hand, etc.

LONG-RANGE ARCHERY.—*Editor Forest and Stream:* The interest in archery, which within a few years has been created in this country, and perhaps in a great measure by the magazine articles written by the Hon. Maurice Thompson, of Crawfordsville, Ind., spread to a large number of towns, both East and West, last season. And, if we read aright the signs of the times, this grand sport and exercise will extend still more widely during the season now opening. Those archers who have acquired any degree of skill are already practicing diligently; and although it is beyond question true, that "once an archer always an archer," it is also true that the activity thus early displayed has been stimulated by the organization of the National Archery Association, and by the grand annual meeting which the association will hold in Chicago next August. At this meeting many large money prizes and valuable specials will be given. Championship medals will also be given for both ladies and gentlemen. The competition for these medals will involve shooting at longer ranges than most practiced at last season, viz.: For ladies, at 30, 40, and 50 yards; and at 60, 80, and 100 yards by the gentlemen. Now, the following question arises in many minds: "What course shall we pursue in order to become skilled at these longer ranges? Shall we continue shooting at the shorter ranges, from 30 to 60 yards, until we attain a degree of proficiency, and increase the distance as our skill increases, or shall we begin at once to shoot only at the long ranges?" This question is one about which the theory and practice of equally good and enthusiastic archers differ. Those advocating only long-range practice say, "He who can shoot well at long distances can shoot well at short," and advocate shooting at long-range even to become a good short-range shot, and shooting only at long-range for this purpose. Granting it is true that, in most cases, he who can do good far-shooting can do good near, the question is, What course shall be pursued in order to do good far-shooting? Maurice Thompson, in his publications, advocates shooting at very short distances until an almost perfect score

can be made Aldred, the celebrated London bow-maker, advocates the same course; and it seems to us this is the true one. It is of our American natures to be impatient, and strive to accomplish the most difficult things at once, without first resolutely engaging in the necessary preliminaries. But let us "make haste slowly," and surely. Long-range shooting is beautiful; there is strong temptation for the young archer (young in archery, if not in years) to indulge in it too soon. Our advice to ony one wishing to shoot well at the "York Round," and at the shorter ranges next August, would be about this: Shoot at 40 yards, thirty arrows, until a score of 200 can be regularly made: at 50 yards, until 175 can be averaged; then at 60 yards, until you can be depended on for 125. Let us hear from others on this subject. N. K. D.
Highland Park, Ill., April 10.

New Archery Club—*Watertown, Mass., April* 18.—A club christened Pequosette Archers has been organized here, with twenty-six ladies and gentlemen as charter members, who have adopted a constitution and by-laws, and elected officers as follows: President, A. S. Brownell; Vice-President, E. R. Dwight; Secretary and Treasurer, S. P. Abbott; also an executive committee. The club starts off under favorable auspices, and the membership is increasing. We hope to hear from other clubs in this vicinity during the season. I wish to ask if the feathers of an arrow shouldn't be placed so as to twist the arrow as a bullet is twisted by a rifle. The arrows which I find for sale in Boston are feathered straight. Has any one tried arrows rifled? A. B.

The rifling of arrows we have never seen. The principal of the rifle ball ought to apply to arrows. Let us hear from some of our archers on this subject.

Archery—*Highland Park, Ill.*—Mr. H. O. Carver, Corresponding Secretary of the National Archery Association, offered a valuable prize to be contended for by the Highland Park Archery Club, Friday, April 18. Distance, 60 yards; 90 arrows per man; target, 4 feet. We are not aware that Mr. Gray's score has been surpassed, or equaled, in any public contest in the State. Score:

	1st 30 arrows.		2d 30 arrows.		3d 30 arrows.		Total.	
	Hits.	Score.	Hits.	Score.	Hits.	Score.	Hits.	Score
W. B. D. Gray....	25	111	21	103	22	104	68	318
F. B. Green.......	16	50	12	56	18	88	46	200
O. W Kyle.......	15	67	14	61	19	67	48	198
E. B. Weston.....	16	82	16	74	11	37	43	193
E. H. Beebe......	9	23	13	41	13	49	35	113

New York Athletic Club.—The New York Athletic Club held their opening spring handicap games at Mott Haven last Saturday. The trial heats of the 120 yards run opened the sport. P. St. George Bissel, Manhattan A. C., thirteen yards start, won the first heat in 13⅜s.; Joseph King, New York, seven yards, walked over in the second; M. J. Gilligan, Clinton, A. C., twelve yards, captured the third in 12⅗s.; R. H. Dudgeon, New York A. C., nine yards, the fourth in 13⅘s.; J. W. Carter, New York A. C., eleven yards, the fifth heat; L. A. Stuart, New York, ten yards, walked over in the sixth heat; W. G. Morse, New York A. C., captured the seventh heat in 13s., and T. F. Brenton, Glenwood A. C., five yards, walked over in the eighth heat. First and second in the first trials were allowed to run in the second trials. After the disposition of the latter it was ascertained that Bissel, Dudgeon, Stuart and Morse were qualified for the final heat. Stuart won by two feet. Time, 12¾s.

In the two-mile walk, fifteen entries, T. H. Noonen, Seventy-first regiment, one minute allowance, who started under protest, won a fine race in 17m. 3s., actual time.

The first heat of the run of 400 yards had four starters. L. H. Warren, Glenwood A. C., 18 yards, won in 38⅘s. The second heat, six competitors, A. T. Greenough, New York, 21 yards, won in 36⅘s. In the final heat Greenough won by two feet in 36½s.

The run of 600 yards had six starters. G. H. Taylor, Columbia College, 21 yards, won in 1m. 28s.

The Six Days' Walk.—Of the forty-one men who started on the six days' tramp at Gilmore's ten were on the track at the finish. These were: Panchot, who walked 480 miles; Merritt, 475 miles; Krohne, 455 miles; O'Brien, 431 miles; Byrne, 427 miles; Noden, 425 miles; Brodie, Willis, Stanley and Day. It will thus be seen that Merritt equaled the performance of Ennis in the late international walk, while Panchot, the winner, scored five miles more, Krohne equaling the performance of Harriman. There are plenty of men in this country who will do good work on the track; they only need some one to hire a hall and give them a chance to display their leg powers. Now that pedestrianism is taking its place among the recognized occupations of civilized life, these geniuses, it is to be hoped, will be allowed to bloom.

Rackets.—The championship matches, played at the New York Racket Club Court, Sixth avenue and Twenty-sixth street, last Saturday, after closely contested work, resulted as follows:

FIRST GAME.

	1st.	2d.	3d.	4th.	Total.
Mr. Lydig....................	15	15	16	15	61
Mr. Dixon....................	10	6	18	8	42

SECOND GAME.

	1st.	2d.	3d.	Total.
Mr. LaMontagne....................	15	15	15	45
Mr. Souther..........................	10	10	11	31

Now Let our Law-givers Pass the Act.—The two lazy men of one of the New York clubs made a match last night, "go as you please" from Fifth Avenue Hotel to Harlem Bridge. They started promptly at 8 A. M., Mr. J. crossing Madison Square toward Third avenue and Mr. P. up Fifth avenue. Later.—The judges stationed at Harlem Bridge report Mr. J. as having arrived at 8:36 and Mr. P. at 9:14, both with their ulsters on. P. came up in a cab and J. by the L road.

Polo.—The Philadelphia Polo Club defeated the International Club, four games to three, at Philadelphia last Wednesday. The players were: Philadelphians—Messrs. Fitzgerald (captain), Rucker, Peterson, Thomas, Adams, Mayer, Ash and Sank; Internationals—Messrs. McKee (captain), Barber, Harmer, Block, Grubb, Powell, Richardson and Wagner.

—The Staten Island Cricket Club's new professional, George Lane, has just arrived from England. He is unquestionably a very fine bowler, and a good all-round player. The club's grounds are in excellent condition, and almost ready for play. At the last meeting sixteen new members were elected, and the list of members shows over 250 active, and 75 junior players. Taking everything into consideration, the Island Club never began a season with better prospects. The following officers were elected for the current year: President, Wm. Krebs; Vice-President, W. H. Clark; Secretary, W. H. Daridge, 62 Wall street, New York; Treasurer, Wm. Betts; Board of Directors, R. B Whittemore, George S. Scofield, Jr., L. P. Bayard, E. W. Stevens and W. M. Donald.

Arms vs. Legs.—In July, 1845, this match, which from its novel character attracted an immense number of spectators, was played on the cricket ground of the Railway Tavern at Reading, Eng. The players on one side consisted of eleven, with only one arm each; while on the other side each had but one leg—saving a wooden one. One of the umpires had lost both arms, and the other had "not a leg to stand upon." A referee was also selected who had neither arms nor legs! At the commencement of the play the "odds" were in favor of the One-arms, notwithstanding the Single-legs had many backers. During the first innings, in consequence of the soft nature of the ground from the late rains, no less than three legs were broken; but these were soon "set" without the aid of a medical man, a neighborhood carpenter skillfully performing the "operation." At the termination of the game the score stood thus: Single-legs, first innings, 25; second innings, 46; total, 71. One-arms, first innings, 50; second innings, 60; total, 110. Subsequently other matches of a like nature have been played. F. S.

—The sixth annual athletic meeting of the Stevens Institute Athletic Association will be held at their grounds at Hoboken, May 3. The following events are now open for all amateurs; Dash of 100 yards and one mile walk, both handicaps. Entries close on the 28th inst.

—The Union Athletic Club, of Boston, will hold athletic games some time in the last of May. The club propose to lay a track on the Boston base-ball grounds. New uniforms of scarlet and gray have been adopted and the purchase of permanent athletic grounds will probably be consummated before very long.

—A ten-mile trial of speed and endurance will take place at Eagle Hall, Hoboken, N. J., Saturday evening, April 26, at 7:30 o'clock, under the auspices of H. K. & F. B. Thurber & Co.'s employees.

—Forest and Stream, in its current issue of April 17, contains a full list of all the awards to dogs in the sporting classes at the late exhibition, and next week will print the awards in the non-sporting classes. In its editorial comments it makes some suggestions respecting future decisions and qualifications of Judges which are well worth consideration. This very conscientious journal has maintained its position as the representative of the higher class of sportsmen ever since its inception six years ago, and under its present able management it will always continue to command respect and success. The London *Field* and kindred journals abroad have never hesitated to extol its merits and encourage it to keep the enviable position which it now occupies in the front rank of sporting journalism in America. All its departments are under special editors, and we know not which to give most credit to—its Fish Culture, Rifle, Natural History, Yachting, or Chess Departments. For families it is most unexceptionable in character, and many of its patrons and contributors are ladies.—*Commercial Advertiser, April* 18.

—The annual meeting of the stockholders of the Forest and Stream Publishing Company, for the election of a Board of Trustees, and for such other business as may be introduced, will be held at the office of the Company, No. 111 Fulton street, in the City of New York, on Thursday, the Eighth day of May, 1879, at two o'clock in the afternoon of that day. Thaddeus C. Banks, Secretary.
Dated New York City, April 21, 1879.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

E. H. H.—You may find shell boat at Roaher's, foot 135th st., Harlem.

S. B., Cleveland, Ohio.—Fifty pounds weight of bow means 50 pounds pull.

J. P. P., Boston.—The State Bureau of Immigration of Texas is located at Austin.

M. E. W., Morris, Minn.—The best dog for duck shooting is a Chesapeake Bay dog.

W. H. W.—Wild fowl shooting in New York State prohibited after the first of May.

B. D. W., Boston.—The name you desire we cannot give, nor can we find the articles referred to.

R. H., Pleasant Mount, Pa.—The interpeculum of a fish is the flap that covers the gill—the cheek.

J. W. P., Chillicothe, O.—The rust preventives advertised in our columns are all good and reliable.

Subscriber, Columbus, O.—For fancy pigeons write to Chas. Reiche & Bros., Chatham st., New York.

J. P. H., Oneida, N. Y.—For animal glass eyes send to Wallace, taxidermist, North William st., New York.

L. H. S., Saratoga, N. Y.—Wild rice is advertised in our columns. We know of none for sale in New York.

J. O. S., North Lansing, N. Y.—We publish all news about wild pigeons in our news columns as soon as it reaches us.

H. A., Chambly, Canada.—The Boudren hunting and fishing lamps are made by the White Manufacturing Company, Bridgeport, Conn.

H. N. L.—Write to Geo. W. Read & Co., 200 Lewis St., New York, for shell boat material. Possibly you may get the stock in your neighborhood.

S. L. A., San Francisco.—Is that "petroleum jelly" recommended as being a good thing for guns? Is this the same article as "vaseline?" Ans. Yes.

Wm. E. H., New York.—Greenwood Lake is as convenient to New York city as any fishing ground for black bass. You will find pickerel in Schroon Lake.

Canada, Penn.—You will find much information of the Ontario country in back numbers of this paper. Consult, also, "Hallock's Sportsman's Gazetteer."

H. B.—English sparrows are not fastidious about where they roost at night. The condition of the stoop in the morning would indicate that they have a partiality for cornices.

W. W. J., New York.—For good gunning and fishing next August you may go with your family to any of the villages on the South Side of Long Island, or to Barnegat. Kinsey's is a good place.

A. H. W., San Francisco.—How and where may I obtain the game laws of the U. S. in full? Also, the name of some good and cheap book on sporting. Ans. Send us your real address and we will supply you.

J. L., Shawneetown, Ill.—One day recently while hunting I burst my gun. I can assign no reason for the cause. Can you? Ans. No; but if you take the bursted barrels to a gunsmith he should be able to tell you.

S. T. L., Applebachsville, Pa.—1. For Batty's book on trapping send to Orange Judd Co., New York. 2. The rifle is safe. 3. The best part of Michigan for trapping is the Upper Peninsula. 4. Wash your dog with kerosene oil.

J. M. W., Boston.—Can you recommend me some good book on duck decoy making, if there is such a work? Ans. See "Sportsmen's Gazetteer" and John E. Long's "Wild Fowl Shooting." For sale by Orange Judd & Co., 245 Broadway.

W. L. C.—For general chart from Charleston, S. C., to Jacksonville, Fla., write to Merrill's Sons, 179 Water st., New York. Price 50 cents, or $1 if included in two sections. They also have detail charts and Harber charts of same coast.

H. A. R., Weymouth.—Please send address to office. Have letter for you. Cast iron weighs .261lbs. to the cubic inch, and lead .411lbs. Dimension: 26ft. over all, 21ft. water line, 7ft. beam and 4ft. draft will make an excellent cutter. See last issue.

Doctor, Tarboro, N. C.—Where can I get a book on preparing and stuffing birds, and what will it cost? Ans. "Coues' Manual of Ornithology," $2.50; or "Maynard's Naturalist's Guide," $2. Order from Orange Judd Company, 245 Broadway, New York.

B. H., Frederick, Md.—How long before the Kennel Register will be out? I would like to have two Irish setters entered. What will be the cost, and whom shall I apply to? Ans. Kennel Register just out. To be obtained only of J. W. Munson, Secretary, N. Kennel Club.

F. N., Lockport, N. Y.—Where can I get copies of the game laws for this State for the use of the club at this place, and at what cost? Ans. For Game Laws State of New York address Senator Alfred Wagstaff, Chairman Game Committee, House of Representatives, Albany.

B., Meriden, Conn.—Where can I obtain the best book containing information respecting the points used in judging dogs? Ans. "Stonehenge's 'Dogs of the British Islands'" contains the information, but we have the points for judging in pamphlet form which we can send you for 50 cents.

Subscriber, Buffalo.—Please inform me in next issue what is understood by a "Burdette" cocker. Ans. They take their name from Mr. F. Burdette, Secretary of the Birmingham show, who possessed a breed of black cockers which at his death were scattered. They were very handsome, and splendid workers, and won wherever shown.

R. M. L., Scranton, Pa.—What treatment do you recommend in case of red mange, where the disease has been in existence, in a mild form, for the greater part of a year? Ans. From six to ten drops Fowler's Solution of arsenic twice a day and the following preparation, applied externally: sulphur 8 ozs., whale oil 8 ozs., oil of tar ½oz., ung. Hydrag ½oz.; rub well in and wash off and repeat in three days.

A. J. J.—1. Is there any yellow fever in Florida? 2. Which is the best place to go? 3. How much capital could a man get along with? 4. How is the game? Ans. 1. Not at present. 2. That depends upon what you go for. 3. That depends upon the capacity of the young man and the way he proposes to use his capital. 4. In some parts of the State there is abundant game of all kinds. In other parts you will find hardly anything.

J. H. B., Mt. Airy, N. C.—Do you know anything of the Baker three-barrel breech-loading gun? Are they liked by the sporting fraternity for small game? What size, weight and length, etc., would you recommend? Ans. There is no Parker 3-barrel gun. You undoubtedly refer to the Baker 3-barrel, a cut and description of which will be found in the advertising department of Forest and Stream. They are much liked by many sportsmen. For small game a 12-gauge 28 inch barrel.

E. S. H., Goshen, Mass.—1. Can you tell me the price of "Sporting Sketches" by Francis Francis? 2. Have the relative merits of conical base vs. ordinary brass shells ever been discussed in your journal? If so, what was the general opinion? 3. Is the ordinary brand of Dittmar powder quick enough for snipe shooting? Ans. 1. Fifteen shillings and sixpence. Send to the London *Field*, London, Eng. 2. Yes, the conical base shells came out ahead. 3. See the discussion of this q on which has been carried on in our columns.

W. E. L., Cincinnati.—1. Please state whether a thoroughbred dog's get will be affected after once lining a cur bitch? 2. Also, whether a thoroughbred bitch's get will be affected after once being lined by a cur dog? 3. Please let me know which is the best book on non-sporting dogs, especially terriers? Ans. 1. Your question is rather obscure. Do you mean, will the dog's future get be affected? if so, we answer no. 2. They sometimes throw back (if you mean the bitch and not the get), but our theory is that the influence applies more to color than to characteristics. 3. "Stonehenge's 'Dogs of the British Islands.'"

F. E. J, New York.—Can you inform me where I can obtain a copy of the game laws of this State? 2. What are the best trout streams in the Adirondacks? Ans. 1. Apply to Col. Alfred Wagstaff, Chairman of Committee on Game Laws, State Legislature, Albany, New York 2. It is hard to answer your question categorically, You would do well to refer to Wallace's "Adirondack Guide," a capital volume of some 400 pages, with maps and copious illustrations, giving all the principal lakes, streams, mountains, routes, distances, hotels, names of guides, and all manner of instructions. Price $1.75. We can furnish it.

W. B. R., St. Joseph, Mich.—1. Is there are any kind of spring grab hook that will take fish by the tail when they strike the fly or bait to throw it into their mouth? 2. In your number of March 47 "Monmouth" in describing game of the "Cœur D'Alene" county mentions among other game "Capercailzie," or cock of the mountains. Is it the same bird of that name in Norway and Sweden? I am pretty well posted in ornithology, but I was not aware of any Capercailzie on the American continent. Is it a fact? Ans. 1. See barbless hook advertised by Aul & Co., Bloomsburg, Pa. 2. "Monmouth" probably refers to the blue grouse *canace obscura*

W. L. A., Phila.—Is Labrador a good place to collect specimens of sea birds in the months of July and August? Also what way is there to get there? I think there were one or two large pleasure parties up there last summer. Do you know of any this year that I could join? Ans. Prof. Coues has collected 169 varieties of land and sea birds in Labrador. See his monograph to Philadelphia Academy of Science, 1861. You can collect best in months of July and August, though there are about three months of summer. You can reach Labrador by an occasional trading vessel from Canada early in June. Expeditions are often made and previously advertised. Address Prof. Charles Linden, Academy of Sciences, Buffalo, N. Y., for probable chances the coming summer.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 24, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR FOR THE WEEK.

Friday, April 25.—Philadelphia Kennel Club Bench Show, Phila.
Saturday, April 26.—Base Ball: Yale vs. Holyoke, at Holyoke, Mass.; Albany vs. Capitol City, at Albany, N. Y.

THAT "DOG IN THE MANGER."—Some persons seem to have misapprehended the tenor or intent of an editorial allusion in the last issue of this paper. The "Dog in the Manger" is only a proverbial dog of ill repute, and our reference thereto was purely metaphorical, intended to apply in a general way to that class of chronic grumblers and envious persons who take pleasure in dissensions, and delight in creating them; to those, in fact, who grudge to others what they cannot obtain and secure for themselves.

HOW TO LOAD FOR GAME.—In the Rifle Department of our last issue of the FOREST AND STREAM one of our most intelligent and experienced mountain men gave our readers an instructive article on arms and ammunition for large game—referring of course to the use of the Rifle In our Gun Department also two well known sportsmen kindly gave their ideas as to the proper weapons and loads to use for divers kinds of birds and small animals. Not the least interesting feature of their expression was their very wide difference of opinion.

Now, gentlemen readers who know it all, here is an opportunity to ventilate your private views and experiences. Let us hear from as many of you as will, what you have to say on this subject. It is a problem long studied, and well worthy of a full and accurate solution. The instruction which you jointly and severally may be able to impart will much benefit the fraternity of sportsmen. What is really needed is a formula or key by which the novice may utilize the knowledge which the expert has acquired by repeated crucial experiments. Mechanical ingenuity has devised measures for powder and lead which secure uniformity of charges, and manufacturers have applied them to fixed ammunition, so that nice calculations as to weights and quantities are rendered unnecessary. The next advance is to secure a differential scale by which to apply designated charges to varying distances and the kinds of game to be shot. Sizes of pellets are indicated by numbers. What we desire especially to know is the effective power of these respective sizes at long or shorter ranges, contingent upon the length and calibre of barrel and the amount of choke. The published results of experimental tests will enable us to decide. Gentlemen: the question is open for discussion.

THE AMERICAN YACHT FLEET.

STATISTICS relating to the earlier days of yachting in America are exceedingly meagre and difficult to get at. Even at the present time, owing to the want of a central organization, such as the National Association of Amateur Oarsmen is to the rowing public, the National Association to the turf, or the International to the game of base ball, statistics and accurate information of any kind are still in a more or less chaotic condition. The various systems of measurement of different clubs preclude a close estimate of tonnage, the vagueness of the definition of "depth" being especially troublesome in this respect. The class and character of the boats are too often left in doubt to any one not acquainted with them individually. When we arrive at that stage of development which will justify, if not necessitate, the establishment of some central association, with ample powers delegated from the leading clubs, such as the Yacht Racing Association of Great Britain, we will no doubt have less complaint to make about the irregularities and want of harmony among the many clubs now scattered along the coasts and upon the Great Lakes. If the advance of yachting in the future keeps pace with that of the decade just passed, another ten or fifteen years will actually see us surpass the British fleet in numbers, though it will be a long while yet before we can out-ton the average of their vessels. With almost every club book published at our command, and a multitude of material to draw upon, the following may be taken as a pretty close approximation to the truth, and will serve to show the great strides sailing has made among the masses in spite of maritime decay and long years of commercial depression. At the close of the war, 1865, there were ten organized clubs in America with hardly 800 members. In 1879 we find one hundred organized clubs with a membership of over 7,500, and a number of new clubs in process of formation. The American fleet at the opening of the year consisted of 150 schooners, average fifty two tons; 308 sloops, average fourteen tons; forty steamers, average thirty five tons; six yawls, average twenty tons; and ten cutters, average twenty five tons. For the purposes of comparison it may be interesting to turn to our issue of December 26, 1878 where similar figures will be found concerning the British yacht fleet. The general average tonnage of the latter runs up as high as forty seven, that of our fleet about twenty seven tons. We have besides about 300 "open boats" rigged as cats and jib-and-mainsails, the above figures including only cabin yachts. There are also a dozen nondescripts and catamarans, which may be classed with the open boats.

THE ASSASSIN'S UNCERTAIN AIM.

A CURIOUS study in the doctrine of chances is afforded in the immunity of sovereigns who are subjected to the deliberate and repeated assault of the conspirator's weapon. The aim of the assassin, whether with dagger-thrust or pistol ball, is a noticeably uncertain one. The records of shots at royalty contain a preponderance of those misses which riflemen are accustomed to term "unaccountables." The long list of names whose owners have won for themselves lasting veneration or obloquy by the assassination of rulers is far outnumbered by another list of would-be assassins whose designs some trivial circumstance, or an unnerved aim has frustrated.

While Czar Alexander II was taking his customary morning walk in St. Petersburg the other morning a Nihilist assailant approaches within a few feet of the sovereign, takes deliberate aim, and fires four shots at him. Wonderful to relate, the Emperor remains uninjured. And this is his third apparently miraculous escape from death! Within a twelvemonth other attempts, alike futile, have been made upon King William of Germany, King Alphonso of Spain and King Humbert of Italy. With the exception of the wounds sustained by King William these sovereigns escaped untouched. Still more remarkable are the statistics of the last three decades. During this period there have been more than thirty attempted assassinations of rulers, of which only seven, or less than one-fourth, have been successful. If any men do lead charmed lives we may accord the distinction to sovereigns. Now, whence this immunity? Is it a gift of the gods? Is it inherent in royalty? Before such feats of forefending bullet shots and sabre strokes, the sleight-of-hand and powder tricks of Blitz and Heller pale their fires, and the shades of the defunct magicians step to the rear abashed.

Invulnerability to the onslaught of foes has ever been a favorite attribute of the heroes of myth and romance. Achilles, dipped by his mother Thetis in the magic waters of the Styx, withstood unharmed the weapons of gods and men. Troubled by ill omens Frigga exacted from all created things a promise not to harm her son Baldur the Beautiful, the most beloved of the gods of Odin's race; and the great, bluff, good-natured deities of the Norseman used to amuse themselves by hurling their huge war maces at Baldur as a target. Among all nations that have left us a literature we find recurring, in one form or another, this idea of immunity from the laws and penalties of natural forces, the dream of a mortal clothed with the fate-forefending attributes of an immortal.

In these latter times we are more logical. We reject the supernatural, and attribute miraculous effects to natural causes. The Czar, to be sure, in his speech last week gave his very simple explanation of those four straying shots when he said, "This is the third time God has saved me." For an emperor who wears his crown by divine right and for the people who are his subjects, also by divine right, nothing could be more natural than this notion of a divine interposition to unnerve the arm of the would-be regicide, or to turn aside the deadly bullet in its flight. This *Deus ex machina* system is both convenient and edifying, and eminently adapted to suit the ends of royalty. It satisfies the Emperor if it does not the Nihilists. But scientific reasoners and non-believers in the *Dei gratia* claims of royalty may assign more prosaic reasons why a marksman shooting at royalty should miss his mark. For instance, may not these "unaccountables," as they are termed in target practice, which sovereigns so readily ascribe to Providential interference be directly attributable to the flustration of the marksmen, or to what our simple backwoodsmen would term aggravated "buck fever?" It takes a wonderfully cool head and steady hand to shoot with any exactness under the tremendous excitement which must possess a regicide in the supreme moment of his crime. It is not enough to be a wonderful marksmen under ordinary conditions, the demand upon the whole mental and nervous organization of the man engaged in such an undertaking is so extraordinary that it effectually nullifies all things else. There is no necessity for otherwise seeking to account for the wild shots of fanatics and socialistic reformers. It is perfectly in accordance with natural laws that the most skillful expertness under ordinary conditions should go for naught when brought to such a test. Had the mythical Tell had occasion to use the arrow reserved for Gessler, the chances would have been overwhelmingly in favor of that tyrant's safety.

A HORSE-BACK HOMILY.

IN our Kennel columns to-day will be found a sketch of North Carolina fox hunting, over the familiar signature of "T. G. T." Few persons who have read these spirited papers contributed from time to time to the FOREST AND STREAM would imagine that they were written by a septuagenarian; and we trust that our esteemed correspondent, Mr. Thos. Goode Tucker, of Gaston, North Carolina, will not deem it an unwarrantable editorial license when we inform our readers (as he himself tells us in a private note) that he last week celebrated his seventy-second birthday. This is an instance of hale old manhood and well preserved physical vigor well worthy of note. "The days of our years are three-score years and ten, and if by reason of strength they be four-score years, yet," the Hebrew leader asserts, "is their strength labor and sorrow." But here is a man who, having passed beyond the allotted threescore years and ten, thinks nothing of being in the saddle before daybreak; who follows the music of the hounds from sunrise to sunset, and into the night if necessary; who tires out his relays of horses, and, while younger comrades of the chase have fallen into the rear, rarely owns up to fatigue himself. We confess that it is not so much the result as the cause at which we marvel, when our correspondent further adds that at the time of writing after a two days' hunt he was confined to the house with a resultant attack essentially like that which disabled "Pious Jems" (Col. Gordon, of Mississippi), some years ago. After a ten-days' rough-and-tumble in the saddle "Pious Jems" found himself on crutches for three years, until at last falling into a personal encounter with an old enemy, he excitedly flung the sticks away and never after found any use for them. Truly an enemy in need is a friend indeed.

We can heartily sympathize with the hero of a thousand hunts, shut up in the house and thinking about "that old red" he saw on his way home the other day and planned taking his brush. A man may be ailing all his life and yet be in a way contented; but one who has had seventy odd years of health does not immediately accept bodily inactivity with good temper. When the physicians, in Wilkie Collins' "Shocking Story," warned the old general, "at his age and keeping in mind his weakened leg, to ride no more restive horses, but get a quiet cob," the old man, sorely mortified and offended, testily replied: "If I am fit for nothing but a quiet cob I will ride no more." And he kept his word; no one ever saw the general on horseback again.

It were a pleasing speculation to conjecture what an inexhaustible fund of sporting reminiscences such a long experience with men and things and a devotion to exhilarating sport must have stored up in one's memory. The typical Southern sportsman of the old school is a man deeply versed in woodland lore; who has a rare knowledge of all that pertains to the horse, the dog and the gun, possesses a wide acquaintance with men of kindred tastes, and unites, with a keen appreciation of what is worthy of remembrance, the rare faculty of drawing from the past such stories—humerous, stirring and pathetic—as were never written in books. Who that has gathered with the huntsmen around the great open fire-place, or has stretched himself before the camp-fire in the soft Southern night, to listen hour after hour as story follows story, reminiscence recalls reminiscence, and the scenes of other days are depicted clear and vivid in the flickering glow of the pine-knots, has not felt at least a momentary regret that these memories must be lost with their recalling, and the pictures must fade with the uncertain reflection of the fire-light upon the forest trees. And yet the charm is much in the telling. Spoken words, when accompanied with all the subtle influences of the hearer's mood, the *rapport* of the surroundings and the personality of the speaker, possess a strange fascination which the printed page fails to preserve.

There is much prating about the fraternal feelings of sportsmen, and much of it is hollow cant, best unsaid. That there may in truth exist such a sentiment, and that its kindly in-

fluences are not purely imaginary he may know who with younger eyes and younger ears has seen and heard these silver-haired companions of half a century's hunting experiences thus reviewing the incidents of the years. And then perhaps he may learn that mutual esteem and good will result not simply from the kindred tastes which unite them as sportsmen, but in the qualities as well which make them true men.

Our real intent in this personal allusion to Col. Tucker and his ilk is to insist upon the moral which scores and scores of American business and professional men may draw from the picture. We are not idly and foolishly exalting sport and carping at earnest work. Life is serious, as all of us who are not clams nor butterflies discover before we are through with it; the responsibilities imposed by its relations are grave enough for every one; and he who shirks is not a man. But no more is it manly to set at defiance all physical laws; to blindly ignore the most common principles of cause and effect, to barter health for gold and physical manhood for place. Our streets are filled with throngs of men who are gray and bent before their time; the death notices of our newspapers are overcrowded with names which appear there thirty and fifty years sooner than they ought to; the obituary column may not rarely be condensed to a simple story of unrecognized suicide. The lesson of moderation is a lesson which in American society to-day cannot be too repeatedly nor too emphatically insisted upon; it is a lesson which in a thousand instances is learned only when its usefulness must give way to regret. It does not of necessity follow that every man shall mount his horse and set out across country after a fox's brush, nor make his bull's-eye at Creedmoor, nor bring down the quail in its flight, nor cast his fly for the trout; we cannot all command yachts nor go to the ends of the earth in quest of amusement. But there are offered to every man abundant opportunities of one kind or another for relaxation and invigoration. The neglect to improve these is as much of a sin as some of those offences which happened to receive mention in the Decalogue. We know a minister whose sermons would be tenfold more edifying and himself a thousand times more of a Christian man could he only be induced to indulge in so simple a thing as an after-dinner game of croquet; to handle a rifle would make an entirely new being of him.

We believe in muscular Christianity.

—We recently received a call from Mr. Wm. L. Bradbury, of Nason, Va., one of the editors of the *Southern Planter and Farmer*. This journal published at Richmond, is the leading agricultural journal of the South.

GAME PROTECTION.

New Hampshire.—Six men in Manchester were recently convicted and fined $10 each for having in possession and selling wild ducks out of season, and two parties were fined in the same manner from Ma 1 to June 15. I don't know how it is in other streams in the State, but the law puts a stop to our bass fishing in Grand River, as good a stream f r bass as flows into Lake Erie. For the law says no fishing at the only time we can catch them. The river as a rule does not run down enough to make good fishing before May 1, at which time we enjoy the best of fishing until about the 15th of June, when the bass begin spawning, and we have no more fishing. In mid-summer one may see the bass—great two and three-pound fellows—within a foot of the shore, watching their spawning-beds; and I would like to see the angler smart enough to take one of them. Occasionally one may be caught with a fly, but it is seldom they will notice any bait. The bass fishermen here are very much provoked. The law might increase the bass tenfold, and it would benefit no one but the Lake men, who have their pounds set from one end of the Lake to the other. If the Legislature had, instead of this law, passed more stringent laws in regard to Lake fishing they would have done a much more sensible thing. Tons of small fish are brought in, and, for want of use, thrown into vats and the oil b iled out of them, or perhaps sold for a mere nothing for some other purpose. Why cannot these m n be compelled to dump these fish back into the Lake? Nanit.

Painsville, O., April 11.

The Rifle.

—In the very remarkable scores chronicled in our last issue as having been made at the Columbia Rifle Range, Washington, D. C., by Messrs. Ben. Chambers and Col. J. O. P. Burnside, we should have been pleased if our correspondent had told us at the time of writing that the Remington rifle was used, as we have since been informed was the fact. We believe that Mr. Chambers' score of 134 out of a possible 150 is the largest score on record by any rifle in thirty consecutive shots. There were no sighting shots.

Massachusetts—*Gardner, April* 12.—The following are the newly elected officers of the Gardner Rifle Club: President, H. C. Knowlton; Vice-President, C. O. Bent; Secretary and Treasurer, Alec Knowlton; Executive Committee, A. Coleman, S. B. Hildreth. At the annual meeting held at Cataract Hall, in the South Village, the club voted to enlarge their building at the range, and make such other improvements upon the grounds as are needed. It was voted to hold meetings at Hackmatack range every Wednesday for practice. After examining the different targets now in use, the club has come to the conclusion that there are none that give so good an idea of the scores made at short range as the ring target, and this has been adopted. The following are the scores this week, 200 yards, off-hand. The day was fine and all that could be desired for this class of sporting:

	R.	C.	R.	C.	Totals.	
G F Ellsworth	38	46	57	47	175	93
F E Nichols	32	45	53	44	125	89
G R Pratt	71	43	76	44	147	87
I N Dodge	55	44	71	44	136	88
Wm Austin	66	44	54	40	120	84
O Ditson	55	40	58	42	111	82

Massachusetts—*Worcester, April* 10.—Mr. Wm. Perry, of this city, and a well-known local shot, has developed a novel trial of skill. He rests a glass ball on a slight knoll or other elevation, about 50 feet away, and with a Winchester repeating rifle fires at the ground under it. The glass ball is thrown into the air by the shock of the rifle ball striking the ground, and he reloads the rifle and shoots the glass ball while it is in the air. He succeeded at the first trial, and his practice indicates that he will be able to achieve the feat often.

Walnut Hill.—A fish-tail, 12 o'clock wind, forced the scores down in the second match of the long-range classified series. The shooters declared that a more thoroughly aggravating wind never blew over the range. Quite a number of spectators were present at the range:

J P Brown.

500	5	4	5	5	5	5	5	5	4	4	5	4	5	5	2—68
900	5	5	2	4	3	5	5	5	4	5	5	4	5	5	6—67
1,000	5	2	4	5	5	5	4	3	4	5	5	5	4	5	4—65—200

	800 yds.	900 yds.	1,000 yds.	Total.
D Webster	68	68	57	193
J S Sumner	70	60	59	189
A Hebbard	59	59	51	151
M L Bradford	58	55	55	168
W W Morse	59	38	40	137
O Edwards	56	39	11	106
F Taylor	60	29	withdrew	
J H Wilkinson	68	62	withdrew	
W C Howard	62	59	withdrew	

On Saturday, at 200 yards, the scores were better, but the bad weather kept away many of the spectators. The moist weather made the guns work well, however, Jewell and Frye, in the "Winchester Rifle" match, using Maynard's of .35 and .40 calibre, equaled the remarkable performance of Mr. Farrow in the same competition in March last as to the number of points made (71), though his score outranked theirs, in winding up with four "bulls." The Winchester match had 25 entries, the best scores following:

O M Jewell	5	5	5	4	5	4	5	5	5	4	5	5	4	5	5—71
J N Frye	5	4	5	4	5	5	5	5	5	5	5	4	4	5	5—71
W Charles	5	4	4	5	5	5	5	4	5	5	4	4	5	5	4—69
H Mortimer	5	4	4	5	5	5	4	4	5	4	3	4	4	4	3—63
H Tyler	5	4	4	4	5	4	3	4	4	4	4	5	4	4	4—62
C R Grilling	3	5	5	4	4	4	4	3	4	4	4	4	4	4	4—69

Mammoth Rifle Gallery—*Boston, April* 19.—The shooting this week at this gallery has been, we think, the finest shooting at 50 yards that has ever occurred in this country. Mr. Frank Hollis, on Wednesday last, succeeded in getting eight consecutive bull's-eyes, a feat never before done in this gallery in its three years' life. Mr. Hollis takes the extra prize of $20, offered by the management, and they are ready to pay the same amount to as many as can equal Mr. Hollis' very brilliant shooting. The competition is still very strong, and several aspirants for clean scores follow very closely in Mr. Hollis' steps. No doubt before another week the management will be obliged to announce more clean scores. Messrs. Bradford and Lamb have both made 39 twice this last week. The following is the summary of the best scores, 150 feet, rounds 8, possible 40:

Frank Bollis	5	5	5	5	5	5	5	5—40
Wm Bradford	5	5	4	5	5	5	5	5—39
George Lamb	5	5	5	4	5	5	5	5—39
U A Pollard	5	4	5	4	5	5	5	5—38
C Edwards	5	5	4	4	5	5	5	5—38
W B Raymond	5	5	4	5	5	4	5	5—38
E S Tousey, Jr.	4	5	5	5	5	3	4	5—38
Edwin W Archer	4	5	4	4	5	5	5	5—37
Wm H Restarick	4	4	5	5	4	5	5	5—37
A P Holman	4	5	4	5	5	4	5	5—37

Medford—The renewed competition in the classified match (April series) took place at Bellevue Range, April 16, and resulted in following scores:

First Class.

H Withington	4	4	4	5	4	5	5	4	5—45
C H Rassell	4	5	4	5	4	5	4	5	5—45

Second Class.

W G Tousey	4	6	5	4	5	5	4	4	4—45
E W Archer	5	5	4	4	4	4	4	4	5—43
R Sawyer	5	4	4	4	5	4	5	4	4—43

Third Class.

H L Harris	5	4	4	4	5	4	5	4	4—43
A B Archer	4	4	4	4	4	4	4	4	4—40
E F Kenrick	4	3	3	4	3	3	4	4	3—35
F A Tucker	3	3	4	3	3	4	4	3	2—55

Connecticut—*Collinsville, April* 17.—At a regular meeting of the Canton Rod and Gun Club, held to-day, the following scores were made off-hand, 200 yards:

	Mass.	Creed.		Mass.	Creed
O B Hull	104	41	J D Andrews	52	38
J Hamilton	103	43			

The following is the score of this week's shooting at Hackmatack Range, Gardner, by the Gardner Rifle Club, 200 yds., off-hand:

	M.	C.	M.	C.	M.	C.
A E Robbins	80	44	83	45	163	89
H C Knolton	75	43	77	43	152	86
C O Bent	76	42	72	45	148	87
G R Pratt	81	43	66	43	147	86
F E Nichols	51	43	84	46	141	89
I N Dodge	67	43	72	45	139	88
G F Ellsworth	63	42	74	44	137	86
Charles Hinds	46	43	49	45	95	86
O Ditson	42	40	47	38	89	78

New York City.—Greener's West Side Rifle Team weekly score, 200 yards, target reduced; possible 50:

John Roesner	47	A Dory	42
G Greener	45	C Welker	42
J Reitweisner	41	J Och	42
S R Campbell	44	M Homanner	41
E Holzmann	43		

An Echo of the Tournament.—There is a pleasant flavor about the following note from one of the defeated teams in the Forest and Stream Tournament. It but formulates the feelings of all connected with the contest:

Catholic Institute, Newark, N. J., April 17, 1879.

Editor Forest and Stream:

Gentlemen—I have the pleasure to inform you that at the regular monthly meeting of the Catholic Institute Amateur Rifle Club, held the 10th inst., the thanks of the club were tendered to you for your efforts to make the late tournament in New York successful, and for your generous encouragement of a pleasant and useful recreation. We also feel bound to give expression to our pleasure at the courtesy extended to us by the gentlemen whom we met on that occasion, Dr. Dudley, of the Empire Rifle Club, whose team shot on the same evening as ours, and Mr. Conlin, of the gallery, especially being very agreeable and attentive.

Respectfully yours, T. J. Ryan, Sec. *pro tem.*

Creedmoor.—The sixth annual opening of the ranges of the National Rifle Association took place on the 16th. The weather being fine, a good company went down with their rifles, some for long and others for short range work. At the long ranges practice scores only were made, the 900 and 1,000 yards targets showing the white disk very frequently. The long rangers will soon have a new experience since it is proposed to move the belt of trees lying at the west of the range. This will of course affect the gusts of wind and possibly show a result on the scores. The match of the day was for the *Turf Field and Farm* Badge. In this there were twenty-seven entries, and very good scores by each and every one, 33 being the lowest record shown. W. M. Farrow was the winner, and for the third time, which gave him the badge as his personal property. The conditions required 10 shots at 200 yards with any breech-loader; position, standing; open to all members of the N. R. A., except winners of the former *Turf Field and Farm* badges. The record of the day stood:

W M Farrow	47	A J Howlett	40
N O'Donnell	44	F J Donaldson	39
C E Blydenburgh	44	T J Dolan	39
F H Holton	43	W F Higgins	39
J W Todd	43	C H Eagle	39
Dr M M Maltby	42	A Anderson	39
D F Davids	42	J A Batry	38
J L Paulding	42	W A Robinson	38
A M Miller	42	W L Fisk	37
N D Ward	41	R Ficken	36
J W Mangam	40	Homer Fisher	36
J R Grohman	40	F H Baker	35
J C Mallery	40	A Smart	33
J L Miller	40		

The several contests for this badge have been won as follows:

1877—June 30, W. R Livermore, Spg., 42. July 28, J. F. Rathyen, Bal. S., 44. August 25, A. Anderson, R. M., 42. September 29, Lewis Case, R. M., 43. October 20, A. F. Finiels, S. C., 42. November 17, W. M. Farrow, Bal., 43. 1878—April 13, J. R. Grohman, R. S., 40. May 4, F. H. Holton, Bal., 42. June 8, C. E. Blydenburgh, Bal., 45. July 20, J. L. Paulding, S. C., 45. August 24, F. H. Holton, Bal. 44. September 7, G. L. Morse, Bal., 45. October 5, J. L. Paulding, S. C., 46. November 23, W. M. Farrow, Bal., 45. April 16, W. M. Farrow (final winner), Bal., 47.

The succeeding day of the season was the 19th, when the first contest for the champion marksman's badge of 1879 took place. The weather was very bad, but the match went on at 200 and 300 yards with State model rifles (Remington 50). The new badge is a fac-simile of the State badge, surrounded with a laurel wreath of gold, stained green, in Etruscan style. Pointed rays shoot from it, and it is attached to a gold clasp, on which are engraved the words, "Champion Marksman, 1879." Rain and snow fell on the range up to 3 P. M. It then cleared and was cold, with a strong head wind during the shooting. There were twenty-six entries, and the best scores were as follows:

C H Eagle	42	J L Paulding	37
T S Dolan	41	G F Merchant	36
W J Underwood, Jr.	41	S H Denton, Jr.	35
C F Robbins	39	U Wood	35
J R Grohman	38	E L Dows	32
N D Ward	37	J H Jones	26

—C. E. Blydenburgh was in town last week from his far-away Western home. He appeared at Creedmoor, and was about the galleries telling some tall tales of Western marksmanship.

—The Seppenfeldt and South Brooklyn teams met again for a gallery contest on the evening of the 16th. The men fired at 200-yard targets reduced, and had a very close battle of it, the full scores standing:

Seppenfeldt Rifle Team—Isaac Garretson, Capt.

John W Adams	5	5	5	5	5	4	5	5	4—43
Wm Seppenfeldt	5	4	5	5	5	4	4	5	4—46
Albert Keller	5	5	4	5	5	4	5	5	4—46
P Brennan	5	4	5	5	4	4	4	5	5—45
H Juehne	4	4	5	4	4	5	5	4	5—44
G G Wells	5	4	4	5	5	4	3	5	5—44
Isaac Garrison	3	4	4	4	5	5	5	5	5—43
Max Kern	4	3	4	4	4	5	4	4	5—42
O Fitzpatrick	4	3	5	4	4	4	4	4	5—41
John Rem	4	4	4	4	4	0	4	4	5	4—36—428

South Brooklyn Rifle Team—Capt T. H. Roche.

T H Roche	5	4	4	5	5	5	4	5	5—47
F A Stratton	5	3	4	5	5	4	5	4	5—46
W McKune	4	5	5	5	5	5	4	5	4—44
A H Anderson	4	5	4	4	4	5	5	5	5—46
Dr G W Welly	5	4	4	5	5	3	4	5	4—44
D Tratter	4	4	4	5	4	5	4	3	5—43
J Burns	4	4	4	4	4	4	4	5	5—42
J N Naugaton	4	4	5	4	4	5	4	5	4—42
J B Bingleton, Jr.	4	4	4	4	4	5	4	3	4	5—41
Chi Ziegler	4	3	4	3	4	4	5	4	4—39—434

New Jersey—*Brinton Range.*—The grounds of the N. J. State Rifle Association were opened for the season on the 15th with the fourth contest for a Remington rifle; all comers; 200 yards; any rifle; position, standing; ten scoring shots; sixteen entries. The following were the leading scores: Frank Hyde, 44; W. M. Farrow, 43; W. A. Mulford, 43; A. J. Howlitt, 43; C. E. Blydenburgh, 42; J. L. Paulding, 42; J. S. Conlin, 41; F. J. Donaldson, 41; Dr. M. M. Maltby, 41; C. G. Zettler, 40; J. W. Mangam, 40; F. Alder, 39. Saturday, the 19th, the fourth match for a Ballard rifle was held. Open to all comers; any breech-loader; distance, 200 yards; rounds, 20; off-hand, and without cleaning. The scores were excellent, the following being the best: W. M. Farrow, 89; R. K. Buckman, 86; J. F. Hill, 86; W. A. Mulford, 84; H. Fisher, 83; S. T. B. Collins, 83; F. H. Halton, 82; J. W. Todd, 82; I. R. Denman, 81; F. Brown, 79; T. Fitz, 78; L. H. Greve, 84; C. M. Stimis, 71.

—A match at 200 yards, between teams of ten men from the Bergen Point, N. J., Rifle Club and the Massachusetts Rifle Association, will be decided on the respective ranges of the two clubs on the 26th, the result to be communicated by telegraph. The Massachusetts team will be a particularly strong one, and will consist of some of the best shots in the Association.

Newark.—The following is the weekly score of the Newark Amateur Rifle Club:

W C Gardner	5	4	5	4	5	5	5	5	5—48
Wm Hayes	5	5	5	5	5	5	5	4	4—48
J F Hill	5	4	5	5	5	5	5	5	5—45
The Felsburg	5	4	4	5	5	4	5	5	4—44
V Hesse, Jr.	4	5	4	4	4	5	4	4	5—43
W P McLeod	4	4	4	5	5	4	4	5	3	4—42
M Walsh	4	4	4	3	5	5	4	4	5	4—42
G L Fresche	5	5	3	4	4	4	4	4	4	4—41
J A Rodrigo	5	5	4	3	5	5	3	4	5	4—40
J Long	3	2	4	2	4	4	5	3	5	5—37

Columbia Rifle Association.—The first annual Spring Prize Meeting of the Columbia Rifle Association will be held

at the range, West End, N. J., Saturday, May 10. There will be five competitions. Programmes may be obtained of Major Henry Fulton, 283 Broadway, N. Y.

SOUTH CAROLINA—*Aiken.*—The heavy clouds over the city on the 15th did not prevent a very big turn out on the opening day of the Aiken Schuetzenfest, and the warm rays of a bright sun soon made all happy. At 10 o'clock the procession started on Park avenue with Capt. Wagener in command. The Schuetzen Club, of Augusta, Ga., were accompanied by the Clinch Rifles as a guard of honor. At the Schuetzen Park M. D. S. Henderson delivered an oration. There was music and flags and military display, and, more than all, the beauties of Georgia and Carolina were out in force. The shooting opened at 12 o'clock. The Edgefield Hussars defeated the Richmond Hussars with a score of 316 against 302. G. W. Walker, of the Edgefield team, made the best score (52), with Lieut. C. A. Fleming, of the Richmonds, next with 51. The second day was a very stormy one, and the crowning of the king was suspended until fine weather came on. The principal scores stood:

Team Prize—1st prize, German Artillery; 2d prize, Edgefield Rifles. General Target, 100 yards—J. A. Bohler, 66; J. H. Wagener, 35; J. G. Tompkins, 23; T. W. Coward, 22; C. Kupper, 22. Schuetzen Ring Target, 200 yards—John D. Hahn, Augusta, 95; A. Guilfuss, Charleston, 93; C. Seel, Charleston, 92; John Dryer, Augusta, 88; J. J. Bredenberg, Augusta, 86; D. Sancken, Augusta, 83; Jno. Staubes, Jr., Aiken, 78; J. Hertz, Augusta, 77; D. Gercken, Augusta, 76; Wm. Volker, Augusta, 76; Wm. Wessels, Aiken, 75; A. D. Beckman, Aiken, 75; E. Summer, Aiken, 75; C. F. Vonsprecken, Augusta, 71. Schuetzen Centre Target, 200 yards—J. J. Bredenberg, 38; D. Sancken, 34; John D. Hahn, 27; A. Guilfuss, 18. The following is the total of each team: Team No. 1, Clinch Rifles, 86; Team No. 2, Edgefield Hussars, 74; Team No. 3, Oglethorpe Infantry, 70; Team No. 4, Richmond Hussars, 124; Team No. 5, Edgefield Rifles, 128; Team No. 6, Clarke Infantry, 29; Team No. 7, German Artillery, 128. The Edgefield Rifles and German Artillery tie resulted in the following scores: Edgefield Rifles, 38; German Artillery, 60.

NEW ORLEANS.—Frogmoor Range; Crescent City Rifle Club; the first prize a canoe, the second a pool of $3, and the third a bottle of champagne:

Louis Hall	20
A Devi	19
L R LeBreton	18
M Cousin	17
F A Cousin	16
N A Lorlt	14
G DeBuys	13
F Tabary	12
J A DeBlanc	11

—The fourth contest for the Mobile Trophy, between teams of militia came off at Frogmoor range on the 13th inst. The Louisiana field artillery were the first holders of the prize, then for two seasons the Washington Artillery teams were successful, and now it passes back to the first holders. Shooting began at noon, with the wind strong and variable, and so continued throughout the evening, blowing down one of the 500-yard targets, which caused considerable inconvenience and necessitated the finishing of the match on one target. The trophy was won by the Louisiana Field Artillery by the following scores:

Louisiana Field Artillery.	200 yards.	500 yards.	Totals.
John Glynn, Jr.	3 4 4 5 3 5 4—26	4 5 3 4 4 4 4—28	54

John Glynn, Jr.	4 5 3 4 4 4 4 0 0 4 4 5 2 0 2—45

ILLINOIS—*Chicago, April* 12.—At the invitation of the Lake View Rifle Club, the members of the Thomas Post Club participated in the opening of the new range at Lake View today. It was as perfect a place of enjoyment for a rifleman as it is possible to find anywhere, and there was a banquet which preceded the shooting, and which was provided by the wives and sisters of our comrades at Lake View. The score stood thus (distance, 200 yards; position, off-hand; wind, none):

Cram	4 4 4 4 5 4 4 5 5 5—44
Tyrrell	4 4 4 4 4 4 4 5 4 5—43
Hobbs	4 4 4 4 4 4 5 4 5 4—42
Austin	5 4 4 5 5 4 4 4 3 3—42
Bradley	4 4 4 5 4 4 4 4 4 4—41
Drury	4 4 5 4 4 4 4 4 4 3—40
Schaeffer	5 4 4 0 5 5 4 4 4 4—39
Freeman	4 4 4 4 3 3 5 3 4 5—39
Henrolin	3 4 4 4 3 4 5 4 4 4—39
Macauley	4 3 4 3 4 4 4 4 4 4—38
McConnell	3 4 4 3 4 4 4 4 4 4—38
Tilt	4 4 4 4 4 4 4 4 2 3—38
Chenoweth	4 4 3 4 3 4 4 3 4 4—37
Burns	3 4 3 4 4 4 5 2 3 4—36
Bercherdt	3 0 4 4 4 5 5 4 4 4—36
Chatfield	3 2 3 4 4 3 3 3 3 3—32
Guerney	4 4 0 3 4 3 4 4 3 2—31
Hancheit	3 4 3 2 0 2 4 5 4 3—30

Lu.

OHIO—*Cincinnati, April* 11.—The Cincinnati Shooting and Fishing Club had their seventh competition for club prizes to-day; distance, 200 yards; position, off-hand:

First Class.		
W Caldwell	4 4 4 3 4 4 5 5 5 5—43	
D T Disney	4 5 3 5 4 4 4 5 4 5—43	
W Hall	4 4 5 4 4 5 4 4 3 4—41	
Second Class.		
A Koehler	5 5 4 4 3 5 3 4 3 5—41	
W Campbell	5 4 5 2 3 4 4 4 4 4—39	C.

First practice of Lake View Club at the new range, April 19, 200 yards:

Cram	5 4 5 4 5 4 5 3 5 5—45
Tilt	4 5 5 5 4 5 4 4 4 4—44
Macauley	4 4 5 5 4 5 5 4 3 5—44
Drury	4 4 4 5 5 4 4 4 4 4—42
Bradley	4 4 5 4 4 4 4 4 4 5—42
Henrolin	5 3 4 5 4 4 5 3 5 3—42
Colchour	4 4 4 4 4 5 4 4 4 4—41

RIFLE SCORE SCORE BOOKS.—For best improvement in rifle practice a complete record of all work done should be carefully preserved for study. The best thing yet devised for this purpose is E. A. Perry's "Green Book." We can supply the same. Price, $1.

—Lovers of off-hand shooting are likely to get enough of it, for there is a match on the tapis which will require the standing position at the very long range.

PRONE VS. BACK POSITIONS.—The circular of Major Jones, Secretary of the National Rifle Association, is drawing out opinions from all quarters on the matter of position for military shooting. This week we give opinions from the East and from the West, representing the ideas of two live rifle clubs. Next week we shall continue the discussion, and should be pleased to hear from those who have experience on the subject:

MILWAUKEE, April 14, 1879.

MAJOR JAMES H. JONES, SEC. G. N. R. A., NEW YORK:

Dear Sir—I have your favor of the 29th ult. asking my views in reference to permitting competitors in military matches to shoot in other than the prone position at distances over 200 yards. In answer, I would say that my views are very decided that any position should be permitted provided no artificial rest is used. There are three positions used in rifle shooting, to wit: the standing, off-hand position; the prone, lying on the face position, and the back position. I believe a good soldier should be able to shoot from all these positions. First—The erect off-hand position; regarding the use of this alone for the short ranges I believe there is no controversy. Second—The prone or lying on the face position is one which all soldiers should be able to use, because in actual warfare there may be occasions and circumstances in which it may be very desirable to call it into practice. Third—The back position is of all others the one which all long-range marksmen should be able to use, because in that position they can do far better shooting than they can on their face. The international contests between the American and the English, Irish and Scotch teams have shown conclusively the superiority of the back position. The Old Country riflemen are becoming gradually convinced of this and are now adopting it. At Wimbledon last summer, although more men shot from the prone position than from the back, yet of the sixty highest scores for the Queen's Cup forty were made from the back. Mr. Humphrey and some others, who had changed from the prone to the back position, showed a marked improvement in their shooting. The international contests at Creedmoor show that more rapid good shooting can be done from the back than from the face. The American team always got through first. The reason probably is that the marksman can on his back get more rapidly into a steady aim than he can on his face with his rifle resting on his extended left arm. In the latter position the rifle will wiggle. When awaiting orders to fire, the soldier can sit very comfortably in a position from which he can fall on his back in an instant, when, in order to get on his face readily, he must sit on his knees—a very uncomfortable position. Again, the soldier can spring to his feet more speedily from the back position than he can from the prone. Some object to the back position because they say that a soldier should always keep his face to the foe. This is mere sentimentalism. In the back position he keeps his eye on the enemy as surely as on the prone. The recoil of the rifle will punish the soldier more severely in the prone position than if he lie on his back. On the face, the rifle rests against the hard bone of the shoulder and the body is so braced that it cannot yield, while on the back, whether in the Fulton position or with the line in the arm-pit, the recoil of the rifle will not be felt so much as it is against the hard shoulder-blade. I think, however, the soldier should be able to shoot from the face, and it might be good policy to have one range—say the 500—at which he must shoot from the prone position. All soldiers, however, should be permitted to use the back position at the long ranges for the reasons above given, and others with which I will not detain you. It has been said that the soldier might as well shoot from a fence or the branch of a tree as from his back. Well, if he is sure that he will always have a fence to shoot from, he should learn how to shoot from a fence. But he cannot be sure of this; he can, however, be sure of always having his own body along with him, and hence he should be allowed to use it in such a position as will insure the best marksmanship. Therefore I say let the soldier use any position he sees fit over 300 yards.

Yours respectfully,

JOHN JOHNSTON,
Prest. Milwaukee Rifle Club.

BOSTON, April 17, 1879.

EDITOR FOREST AND STREAM:

I suppose the desire of the N. R. A. for opinions upon position for military matches at long distances is simply to get a vote from riflemen and see which side wins by the number and strength of the opinions. But it will not prove anything, as General Wingate almost exhausted the subject in favor of the front position. So if we say anything it must be for some other. I can say that I hardly care which side wins, as I am not a military man. I graduated in '63. My hobby is small-bore or match rifles. But as we have discarded the front, prone or belly position for one more firm, steady and sure, and we have proved most conclusively to the foreign teams that they must take the back position if they would compete with us, it almost seems folly to compel our soldiers to retain the discarded position for long distances. I always supposed that rifle practice was to teach the soldier to hit the enemy and to educate the citizen so that he would quickly drop into the ranks with a familiarity of the rifle that would make an efficient soldier of him in a short time. What is a soldier ready to do battle? What does he look like, and how is he accoutered? An old campaigner (many of us are familiar with the picture)—his haversack crowded with five days' rations, one hundred rounds of ammunition in his cartridge-box and stowed about his person, canteen of water, bayonet and rifle, his knapsack gone long ago or laid aside for the fight. It is the quartermaster's fault that his clothing is so dilapidated. The question is, what is the best position for him to take to hit what he aims at? Can this question be settled by opinions from us that know nothing about it? Would it not be better to have competition drills or matches? Have the men accoutered as they would be for regular work—as they were in '61-'65—not with a simple belt, carrying their cartridges in their hands. Let us find from actual practice which is the best position for the most effective work, and then teach all the soldiers to shoot in that position when on drill. I have practiced a little in a position which is very nearly the one that I use in long-range. It may help some one, so I will give it. The cartridge box will be brought to the front so as to be convenient to the right hand; seize the canteen and haversack with the left hand, holding the rifle with the right; first sit, then lie down partly upon the right side; cross the left leg over the right. You are now in a firm position. Lay the rifle upon the left thigh near the knee. You can put the butt in the right arm-pit or pass it back over the right upper arm, taking up the recoil with the gun-strap by putting it over the left knee or left foot. I prefer the left foot, as it is quickly done. This position has some disadvantages, but you can load and fire keeping the rifle in position, doing the whole work with the right hand. The left hand seizes the stock about six inches from the butt and steadies the rifle. You can remain in this position a long time, and if the neck becomes tired the right hand is close by to rest it upon, and the rifle does not have to be laid down in the dirt or upon the wet grass while you are resting. You can get into and out of the position very quickly, and shoot accurately nearly twice as rapidly as in the front position. Then what an advantage we of large feet would have. No need of digging a hole; put the feet together and lie behind the breastwork. Our army would look like the Zulus if when they went into action they unslung knapsacks and carried them in their left hands to rest their rifles over. A change of position, I fear, would rob them of their rests. If a soldier is to wear his knapsack into the fight he will have to take the front position; but "handle cartridge" would be a difficult manœuvre, and I should think that aiming would be equally difficult. Put the knapsacks on in the competitions and see what will be the result. The soldier could be taught the front position to include 500 yards and some better position for the longer distances. The off-hand position should be taught to include 300 yards. Then the soldier would be efficient and ready to take the position best suited to the circumstances, for we must never forget that the sole object in firing is to hit, and the soldier must be trained to that point alone. Misses never count five; the white disk tells its story. I hope to see a fair competition to decide the best position.

W. H. JACKSON.

THOSE GRIZZLIES.—*Dauphin, Pa., April* 21.—*Mr. Editor*: With reference to "Bear Paw's" letter in your last issue, I am very sorry to find that I did not give my companion credit for his share in the killing of the six grizzlies. I did not see my letter after it was published, owing to my absence from home and the paper's having been sent as usual to a friend in England. I fully intended to say "we killed" instead of "I killed," and I beg to apologize for my mistake. Then as to the two bears killed with one Express ball. The first was the one shot at a bait by our driver and myself, his ball being one from a '73 model Winchester, which, fired from above the bear, struck him in the chest, ranging down wards through the muscles and hitting no vital organ, did not injure him in the least, as the force of it owned, whereas my bullet killed him at once. The second was the bear on which my companion and I crept, hitting him in the hind leg and chest. The shot in the hind leg would certainly not have killed him, and my reason for claiming that in the chest was, that any rifle carrying nearly a drachm more powder made a much worse wound than my companion's, and the wound in the leg was not such a one as my rifle would have made. In any case, whoever fired the shot which killed him, it was a single one with an Express ball. To show the effect of such a ball, a bear killed by me and struck in the eye had the inside of the head smashed to pieces, the skull being very much cracked, and some of the lead finding its way through the bone and lodging under the skin at the side of the head. With reference to my opinion of Express rifles being formed from what others had told me of them, I have used three double Express rifles during the last eleven years as my only weapons for big game, two of them being 50 bores by Lang and Dougal and my present rifle, and on two trips my companion has also used a single Express by Lang, so that I may be said to have had some practical experience of them. The Express ball which I mentioned as expanding to ten or twelve times its own diameter, was that used in the 50 bore rifles I have mentioned, and I find that on referring to my companion's journal we three times cut out the ball from the opposite side of a deer, expanded so as to measure from 1⅝ to 2¼ inches in diameter, which would be larger than I stated. These rifles carried a coiled case, using only 4½ drs. powder or about 118 grains and a ball weighing 340 grains. My present rifle can be made to take 133 grains, and I never use less than 120 grains for a 260 grain ball, and I find that with this charge it smashes the bullet up much more than the 50 bores did.

VIATOR.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild ducks, geese, brant, etc.

CANADA—*Ontario, April* 15.—Two of our local sportsmen, Judge Jellett, of the neighboring county of Prince Edward, and Alderman R. Croft Hulme, of this city, had great sport among the ducks and swans at the St. Clair Flats last week. Their bag, most of which was made within ten hours, consisted of 180 ducks, principally red-heads, and 18 swans, the latter of which were got by torchlight.

B.

NEW HAMPSHIRE—*Second Lake, April* 18.—Snow four or five feet deep in the woods, and still snowing eight days in the week.

C.

Dover, April 14.—Robins, blue birds, and others have made their appearance in large numbers. Large numbers of black duck are shot at the beaches around us.

G. A. W.

MASSACHUSETTS—*Salem, April* 19.—Awful weather, with heavy rain, sleet and snow. Some scattering snipe along; Whipple got two on Miles River. Very wet on this ground.

Lower grounds pretty wet. Some half-dozen birds picked up thus far, Stevens, of West Newbury, got some fine wood drakes recently. The season is very backward. Bluebills quite numerous in Salem Harbor recently, also whistlers, old squaws and loons. Cherry birds about in flocks. Muskrat shooters are yet after the "critters." The recent heavy storm drove lots of fowl inside of Revas Beach into Lynn Marshes; they were very numerous and weather beaten. Woodcock are about in sunny corners. I have recently found albino feathers in necks only of woodcock, canvas-back duck and a crow blackbird. They occur much more commonly than some persons think, and are liable to occur in any species.
R. L. N.

Newburyport, April 17.—I had the honor of bagging the first Wilson's snipe in the place on the 14th inst.; followed with one on the 15th, and five to-day. Prospects seem fair for a good flight. The runs are in prime condition.
G. P. K.

CONNECTICUT—*Deep River, April* 21.—Our sportsmen are now enjoying the snipe shooting on the River Meadows near this village. H. C. Tyler and J. H. Waterman bagged 18 one day last week, also on Saturday, 19th, H. C. Tyler and Will Flint bagged 12 in about two hours; other parties have bagged quite a number. Snipe have not been so plenty for several years. H. H. B.

NEW YORK—*Kingston, April* 15.—Ducks of various kinds are quite plentiful, and a few of our local "shootists" made some very fair bags on good Friday. One of the policemen, while on his beat near one of our principal hotels in the very centre of our city, at about 4 o'clock A. M., had his attention arrested by a commotion among the telegraph wires, of which there were a large number overhead, and noticed a bird flutter to the ground. Upon examination it proved to be a woodcock which had struck one of the wires in its early morning tour. Its flight had been so rapid that its skull was quite crushed in by the contact. It was one of the first seen this season. AL.

Canton, St. Lawrence Co., April 14.—The Grasse River here is yet frozen over, except on the rapids. It has been closed continually since ice first formed last fall. Snow drifts and mud hold even hands, while cold, raw winds sweep the board. A few robins and blackbirds have put in an appearance, but none of them seem very happy over the situation. We look for a thaw in July. R.

Jayville, L. I., April 21.—A large number of snipe came on the meadows and remained during the storm last week. W.

NEW JERSEY—*Belvidere, April* 18.—Quail wintered well in this region, and the prospects for good shooting in the fall are better. H. S. H.

TENNESSEE—*Savanah, April* 15.—The prospect for shooting next season seems good. Many covies of quail have been carried over, and the birds seem to have all mated. Several turkeys have been killed here recently, but I do not hold with that kind of slaughter, misnamed sport. A negro living near town has a fine gobbler now two years old, sole survivor of a sitting of thirteen eggs brought from the woods. The eggs were placed under a brood hen and all were hatched, the young attaining maturity only to fall (with the above exception) victims to the insatiate carving knife. The gobbler of which I write is a magnificent specimen of *meleagris gallopavo*, and seems to have no desire to forsake the haunts of civilization. WILL.

MICHIGAN.—*Detroit, April* 19. R. Gillman and W. Jardine weredown to the Big Eight marsh on the 16th inst., and in four hours bagged 54 ducks. DRUID.

ILLINOIS—*Quincy, April* 12.—The ducks and snipe are plenty, but wild and poor; the former are almost unfit to eat. The snipe are getting fat, and we anticipate some glorious sport before the close of the season, May 1.

OHIO—*Chillicothe, April* 15.—The shoot between teams from Pike and Ross counties came off April 5; four men in each team; 20 balls; distance, 21 yards. Pike 63 and Ross 65, winning the match. Pedestrian match at Fair Grounds, April 12; 8 entries; distance 10 miles, go at pleasure, Seymour winning in 67m. 59s. Our duck shooting this season is very poor on account of scarcity of broadbills. The boys have put away their "shooting irons" and taken up the rod.
J. W. P.

Youngstown, Ohio, April 15.—Shooting matters are rather quiet at present. There are plenty of quail left for breeding. The new game law forbids shooting quail until after the 1st of November, 1881. There are plenty of ruffed grouse left for breeding. Saw two woodcock, March 30th; several snipe have just put in an appearance; ducks have been plentier than usual this spring; very few rabbits have been left after the winter; gray squirrels are very scarce. The sportsmen of this city own some good dogs; the Gordon setters seem to be the favorites, although there are several fine red Irish setters owned here.
BUCKEYE BOY.

MINNESOTA—*Morris, April* 19.—They are about to start a game protective club here, something that is greatly needed. We are killing any quantity of ducks. This country is alive with chickens; we will have any quantity of them next August. W. E. W.

WISCONSIN—*Baraboo, April* 14.—Ducks of all kinds are here on the big marsh; a few jack snipe, but scarcely any pigeons. The ice went out of Devil's Lake the 10th. The Cliff House will be open the 1st of May to accommodate tourists and anglers. ED. H.

KANKAKEE MARSHES.—The 15th of March we had about eight full days duck shooting on Kankakee Marsh, in Lake Co., Indiana. During that time we brought to bag 1,401—ducks and a few geese, red-heads, mallards and pintails, shooting down over decoys. The score of four shooters at Cumberland Lodge was: S. W. Beauclark, of Troy, N. Y., Thurs., 32; Fri., 74; Sat., 46; Mon., Tues. and Wed., 108; Thurs., 52 and 3 geese; Fri., 22 and 2 geese; Sat., 27 and 2 geese; Mon., 53; Fri., 23 and 2 geese; total, 437 and 9 geese. Harry Widdicomb, Grand Rapids, Mich., Thurs., 76 and 1 goose; Fri., 94; Sat., 18; Mon., Tues. and Wed., 81; Thurs., 61; Fri., 30; Sat., 20; Mon., 77; Tues., 46; total, 503. Joseph DeGolyer, of Troy, N. Y., Thurs., 33; Fri., 21; Sat., 12; Mon., Tues. and Wed., 110; Thurs., 52; Fri., 10; Sat., 7; Mon., 20; total, 270. Watts DeGolyer, of Chicago, Thurs., 29; Fri., 41; Sat., 40; Fri., 12; Sat., 29; Mon., 30; Tues., 10; total, 191. S. W. B.

IN A HOLE.—*Bridgeport, Conn., April* 21.—*Editor Forest and Stream:* In reply to the inquiry in the FOREST AND STREAM of the 17th, by "Druid," whatever designation you may give to that name, whether magician, geometrician, superintendent of morals and religion or judge, please say that his old friend Hobbs did not get a ducking, only dropped into a muskrat's run and came out dry. H.

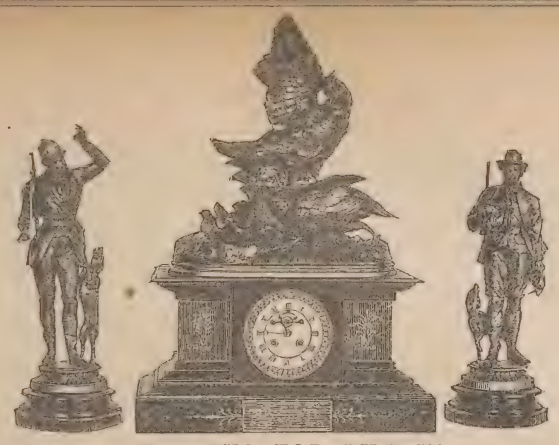
THE TARGET BALL CO., of Titusville, Pa., which manufactures Boughton's explosive ball for trap shooters, request us to inform our readers that they are delayed in filling their overwhelming orders for lack of requisite machinery, and beg the indulgence of their patrons for a few days longer. They made their announcement upon the promises of the manufacturers, and have been disappointed by them.

BOGARDUS' SHOOTING SCHOOL.—Captain A. H. Bogardus has opened a school in Chicago to teach the young idea how to shoot with shotgun and rifle at glass balls, birds, beasts and injuns. See his advertisement.

NOT AN OTTER—*Editor Forest and Stream:* I have lately missed one of the most exciting shots any old hunter ever saw. Our lake seldom freezes over for a distance of a hundred rods above the dam, and every winter, after all the small streams are frozen up, a family of otters will appear, fishing for land-locked salmon. The only place where they will show themselves is on the edge of the ice, near the bold shore, where it is quite difficult to trap them. I succeeded in trapping one the next morning after they came by measuring the water with a maple pole, then making a shelf four inches under water on the pole and covering with boughs for my trap, fastening the trap so that the ring would slide down on the pole, as they want to go to the bottom if in any trouble; but all the others I would see come out of holes in the ice within a few feet of my trap. Being where I could watch them, I would then in the middle of the day shift the trap to the holes where they were seen at in the morning; but I could not trap another.

I then cleaned out my old Springfield musket, that carries an ounce ball, put in three inches of powder and the first wad of tissue paper, ramming until the steel ramrod would hop out of the bore; then twelve buckshot, with a light wad. This means death at one end, and almost at both, if it is not held with all your strength against your shoulder with a pad on it. Then, when they came the next morning, I put on an extra amount of clothing and nearly buried myself in snow within thirty feet of the holes I saw them in last, creeping up when they were down fishing, and waited with the old gun all cocked, expecting to have a slide backward, also to kill one or two otter, and to kill them so dead that they could not turn around and dive; for if they did, the water being so deep, I would lose them. I had not waited more than five minutes when I heard a little noise of water in almost opposite direction from what my gun was pointed, and could see by turning my eyes three otters with their forward feet on the edge of the hole in the ice, with their body out of the water about a foot, two of them looking direct at the snow bank where I lay. I knew to move would drive them away for the season, so I gave them their time to go down again, then came into position for the hole where they were; but they have not been seen there since. A few years ago I shot one with the same gun and same size charge only a few rods above this same place, only I was lying flat on glare ice, with a sheet over me, with a small hole for the gun—and killing him so dead that he dropped the fish he had in his mouth when he came out of the hole, and giving me just time enough to get the old gun under the edge of the hole in the ice and over his back. Old hunter Lyford at the time, who has killed more bears than any one man in the State of Maine, told me I could not shoot an otter so dead, when they sat on the edge of a hole; that they would not turn and get under the ice. FRANK M. FORD.

Sebec Lake, March 11, 1879.



TIFFANY'S PRIZE CUP FOR THE STATE SHOOT.

The above is a cut of the beautiful prize—clock and mantel ornaments—offered by Tiffany & Company, for the New York State Tournament. The prize is valued at $250.

"THE ART OF SHOOTING ON THE WING."

SAN JOSE March 13, 1879.

EDITOR FOREST AND STREAM:

In the Chicago *Field* of Jan. 18 and 25 are some lengthy and elaborate instructions for learning the art of shooting. The author—T. S. Van Dyke—has, he says, "faithfully" considered the subject, and has laid down rules for becoming an adept in the art; but they are full of contradictions and, I would say, absurdities. But Mr. Van Dyke has a penchant for "kicking ponderosities." He tells us "that the royal road—the short cut—to perfect skill is about as far as ever from being discovered, but by following his directions, the shortest road will be found, and any person of sound sight and average gumption will make a crack shot and shoot as a reasonable being, by a combination of skill and judgment in the application of sound philosophical rules, and not by a blind, unreasoning mechanism of the muscles, engendered by incessant repetition and dignified by pompous and nonsensical names." "Blind, unreasoning mechanism of the muscles," like "the mobled queen," is good, but like the rest of the sentence, tends rather to mystify than enlighten. He also says: "There is nothing smart in shooting without aim, or shooting by instinct, by natural gift, intuitively, and such nonsense." I agree with him that shooting without aim would not be smart, nor apt to be successful; but no one will deny that there may be a natural gift without being accused of talking nonsense, for Mr. Van Dyke admits that "smashing glass balls at ten paces with a rifle is a superhuman gift." Again: "There are those who say 'Shoot without aim.' Look at the Indian with his arrow; he don't take aim, neither does the teamster with his whip, the ball thrower with his ball, or the carpenter with his hammer. He simply looks at the object and lets drive." And then he remarks with amusing simplicity: "But, my dear friend, can you tell me how much better that Indian could shoot if he could take aim?" I maintain that they all take aim, unless they keep their eyes shut. They may not, like Mr. Van Dyke, shut one eye and squint along the barrels through two rifle sights. He then tells us with much consistency "that the only rabbit shooting he ever enjoyed was when he had to use his gun precisely as he would an arrow or stone—by keeping both eyes open and hardly getting the faintest glimpse of any part of the gun barrels." In another part of the instructions we have this singular phrase, "dim, glimmering glimpse." Again: "It is amazing how many intelligent men think the sidewise motion of the gun will carry the shot along with it so as to cross the path of the bird where she will be when the shot gets there. Half the time there is little or no sidewise motion, and the gun is stopped by the sudden and involuntary bracing of the muscles of the body at the instant of pulling the trigger." Certainly; but many good shots will take care that the lateral motion of the gun is not checked; the art of doing that has to be acquired to make the finished shooter. Mr. Van Dyke says "he has known good duck shots who swear positively that they never hold ahead of a crossing bird, because the motion of the gun carries the shot." He shows great ignorance of natural philosophy when he says "that a gun barrel moved from a centre, like a wheel-spoke, or a radius motor, does not impart as much lateral motion to the shot as shooting from a horse or wagon or railroad car in motion." Shooting from a vehicle in motion makes little difference, because it is not equal to the flight of the bird, and one will miss equally the same unless the lateral motion is kept up; and he overlooks the principle that a slight movement of the gun at the radius will make a difference at the circumference, proportionate to the distance, and that his pendulum following at a foot distance amounts to nothing. As to the coarse rifle sights on shotguns recommended, he might as well tell us to go back to flint and steel. Again: "Shall he satisfy himself that the gun is pointed right? or, shall he disregard the old-fashioned way, and shoot only by sense of direction?" Pointing right is not an old-fashioned way, but the only way in which game will ever be killed. The "sense of direction" is merely the muscles carrying out the directions of the eye. Again: "The latter (sense of direction) has many more advocates than formerly, and to the mature as well as the youthful mind it must be confessed that there is something rather captivating in the idea of shooting by intuition, instinctively, on general principles, by a natural gift, by the aid of pure genius, of which we have heard so much lately, instead of the old pokey, pottering way condemned so vehemently by him whose memory is still so dear to us all." I also quote "Dinks"—no mean authority on sporting subjects—who says: "Never poke at a bird; that is, try to see him along the barrels. If you do, you can never be a good or quick shot. Fix your eye or eyes upon the bird; lift up your gun and fire the moment it touches the shoulder." And Col. Hawker says: "The perfection of the art is attained when you can knock over a partridge the moment it shows itself above the stubble in November."

Mr. Van Dyke is very indignant at "Oneida" for quoting J. D. Dougal—who more than once hit the dead centre with a rifle with both eyes open—and says "he ought to be ashamed to sit down and write out and print, deliberately, such a slovenly induction, and thinks more ponderosities ought to be kicked." So far from kicking "Oneida's" ponderosity for such an induction, it is perfectly legitimate and deducible from the facts. Mr. Van Dyke has a kind of "dim glimmering" notion that to prove anything "a man should shoot a match against himself," something like the right hand playing

against the left, or heads I win, tails you lose. And then, with strange inconsistency, says that "he is not advocating the closing of one eye, and thinks two eyes just as good."

The chief causes of missing mentioned by Mr. Van Dyke, are comprehensive and sound, for which I give him credit; but upon the whole his directions are whimsical, of little value, and not in accordance with the ideas of the best sporting writers nor the crack shots of the day. Other eminent writers like Mr. Van Dyke have been led by their imagination into poetical rhapsodies on the art of shooting. "Pliny" says, "Legere et scribere est pedagogi, sed optime collinere est Dei." "Reading and writing are taught by schoolmasters, but a crack shot is the work of God." And that beautiful writer, Cypress Junior, says: "Shooting, in its refinement and glory, is not an acquired art. A man must be born a shot as much as he must be born a poet. It requires an eye and a hand that science cannot manufacture." I differ with both. I cannot say, like Mr. Van Dyke, that I have considered the subject "faithfully," but I have had considerable practice at all kinds of game, and I give the result of my experience.

Shooting on the wing is a mechanical art, like billiard playing, boxing or fencing. There will, of course, be degrees of excellence; but any one with the full use of his faculties and the ambition necessary to success in anything, can acquire it. The secret lies "in the hand becoming subservient to the eye." The two must be connected by electricity. The eye is never at fault; if it were there would be little hope of improvement; but any one may improve the quickness of the muscles. Look at the expertness of professional card players and conjurers in the art of manipulation. The same practice applied to the gun will make the brilliant shot. One often hears it said "to be a good shot requires a quick eye." It matters not how quick the eye is, unless the muscles are educated to act in unison with it. Every one can see quick enough. Let out a bird from a trap before five hundred persons, and they will all see it at the same instant, but only the practiced shot can throw up a gun to his shoulder with accurate aim and a simultaneously pulled trigger before it has flown ten feet. Take the adroit fencer or boxer; he sees an opening and his practiced muscles obey the eye and send the thrust or blow home quicker than the unpracticed eye can follow. Of what use, then, is the sight on a gun? Very little, as is seen by the successful way gunners kill ducks when it is too dark to see the sight or hardly the barrels. A sportsman should shoot game the same as an Indian shoots his arrow, by looking at the object with both eyes open. It may be done by closing one eye, but there is nothing gained by it. There are two ways of shooting on the wing. One, to throw up the gun to the shoulder and pull the trigger at the same moment, termed "snap shooting. The other, equally good and better to begin with, and more certain upon the whole, particularly in open shooting, is to follow the bird, and, when covered, fire while the gun is in motion. But when you pull the trigger the other hand has a tendency to stop; that misses the bird. But education will teach it not to stop, the same as we teach both hands a different action while playing on the piano.

HOW TO ACQUIRE QUICKNESS.
